An enthusiastic demonstration occurred at the Lyceum Theatre on Thursday night, the occasion being Mr. Henry Irving's farewell performance. Mr. Irving made a speech, in which he announced his intention of settling permanently at home after a six months' American tour.

Henry Abbey and Maurice Grau have engaged Sarah Bernhardt for a tour of the world, beginning in 1886. She will play first in South America and then in the far West, reaching New York in the spring of 1887.

The opening exercises of the British Association for the Advancement of Science in Montreal on Wednesday were very successful. At 4 o'clock in the afternoon the city extended a formal welcome to its guests in Queen's Hall. Mayor Baudry made a short address, to which Sir William Thompson replied in behalf of the Association. Lord Rayleigh and Sir John MacDonald also said a few words. In the evening the first regular session was held. Governor-General Lansdowne gave the members a hearty welcome to the Dominion. Lord Rayleigh then delivered the opening address as President. He reviewed the progress made during the past year in electrical science, thermo-dynamics, and optics. Valuable scientific papers have been read at subsequent sessions of the Association.

In Lima, Peru, on Wednesday there was a storm of bullets for over six hours. Caceres entered the city with a rabble, who fired in the greatest disorder. The night before, all the Government troops were withdrawn into the cuartel and the palace, and the entry of Caceres was somewhat of a surprise. His men captured the cuartel and the churches of Merced and San Augustine, from which they kept up a fusilade. They also attacked the Guadaloupe station. About 150 persons were killed. Finally the Government troops made a sortie and drove out the mob. Caceres was accompanied by about ninety horsemen. Three hundred prisoners were taken. Caceres escaped. Quiet was restored on Friday.

The steamer *City of Merida*, of the Alexandre Line, was burned in the harbor of Havana on Friday, with all her cargo. The vessel cost $80,000, and was only partly insured.

THE TARIFF IN THE CAMPAIGN.

ALL the efforts of Mr. Blaine and the Blaine newspapers and orators to force the tariff question as a vital issue into the campaign have failed. The larger part of Mr. Blaine's letter of acceptance was occupied with the subject. The idea had evidently got possession of the writer that, inasmuch as the Republican politicians, in the campaign of 1880, by a dexterous and unexpected use of the words "for revenue only," which were embodied in the Democratic platform, had gained a considerable accession of strength, the tariff question would furnish the best issue for an aggressive campaign this year. If such were his expectation, it has been completely disappointed. Reports received from Ohio and Michigan, where we might look for considerable interest in the tariff, show that the people are quite indifferent to it. No audience is stirred by it. The pestilent interference of the Cobden Club and the annual distribution of British gold have ceased to alarm the natives. Even in the State of Pennsylvania we hear much less than usual of the perils threatening American industry from foreign competition.

The reasons for this apathy on the part of the customary dupes of "protection to home industry" are not far to seek. Home industry is enjoying at the present time the highest possible advantages which the tariff can confer, notwithstanding which it is in dire distress. Turning to the first trade journal which comes to hand (*Bradstreet's*, August 30) to learn the state of the iron trade, we find the following dismal account:

"There is some change to report in iron this week. Instead of being no better, and as dull as ever, it is distinctly less active. Prices are nominally unchanged for pig iron, but the demand appears to be falling away. The record for the past thirty years, following periods of depression, when a revival of trade was at hand, has shown a moderate gain in the demand in July, an increase in August, with continued improvement in September and October. This year no such gain has been shown. Trade is worse now than in July, and buyers appear as loath to go beyond their immediate wants as ever. Cuts in prices are made, and the Eastern furnace owners evidently propose to let the weakest go to the wall if such is to be the effect of continued production. The Western proposition as originally made, concerning the blowing out of all stocks for a limited period, has failed. Whether the West and South conclude to carry out the restriction among their furnaces or not, the East will continue at work. Scotch pig iron is held at former prices, notwithstanding the advance of from 1s. to 3s. at Glasgow on two brands. Receipts of Scotch at New York during the week were about 1,200 tons. Manufactured iron, except in one or two lines, continues quite as dull as ever. There have been some orders for plates and some for bars, but prices are at the lowest level, orders having been taken by mills for small lots without awaiting the intervention of the middleman. Steel rails are possessed of no new features. Sales have been made which netted but $26@$26 50 at the mill—one of 10,000 tons; and still the long-looked for upward turn is not in sight."

If this is the crowning result and triumph of twenty-three years' diligent effort to obtain prosperity through customs duties—if the net result has been to close three-fifths of all the iron furnaces in the country, to throw vast numbers of laborers out of employment, to spread bankruptcy throughout the trade from one end of the country to the other, what inspiration can a tariff orator find to garnish his parts of speech withal? A ready answer to anything he can say is found in the nearest blast furnace that happens to be out of blast, the nearest rolling mill that has ceased to roll. It is unnecessary to trace the relations existing between the tariff and the depressed state of manufacturing industry. It is unnecessary to show, as Mr. David A. Wells shows in his letter to Senator Hoar, that the tariff is itself one of the prime causes of the depression. The tariff and the depression exist side by side. Protection and her children are on exhibition everywhere. The dullest mind can see whether the progeny of a tariff averaging 42 per cent. is beautiful or not. It is no wonder that the enthusiasm fails to show itself in the midst of so large a harvest of low wages, bankruptcy, and discontent.

But if Protection has failed to make good times for manufacturers, what has it done for the farmer? Has his condition been improved by the enlargement of the home market for his products, which was to come about by taxing him 42 per cent. on the imported goods for which his exported wheat and corn are exchanged? Is he likely to throw up his hat when reminded how Protection brings the mills and furnaces to his own door, and enables him to save the cost of transportation to and fro? We have not heard of any Granger demonstrations in favor of protection this year. Wheat at seventy-eight cents per bushel in Chicago is not calculated to inspire the bucolic mind with ardor for the system which has nothing better to show at the end of nearly a quarter of a century of experimentation. If the price of wheat falls to 75 cents between now and the election, both Iowa and Wisconsin will be unsafe for the Republican ticket. No explanation of the state of foreign markets, no narrative of the extension of Indian and Australian wheat fields, no apology based upon the good crops in Europe, will satisfy the Western cultivator. It was Protection that was to protect him against these very evils, and it has failed to do so.

MR. BLAINE'S PLAN OF FINANCE.

MR. BLAINE'S plan for distributing the proceeds of the whiskey tax among the several States, as expounded in his letter of November 22, 1883, is supposed to be one of the measures or ideas upon which his friends rest his claims to be considered a great statesman. The plan was brought out as an alternative to another project mooted by certain Pennsylvania politicians, to distribute among the States "any surplus in the Treasury that may arise from redundant revenue," and in opposition to that project. In order to make standing-room for his own plan, it was necessary to show that the Pennsylvania scheme would be unwise. This Mr. Blaine did by arguing (1) that any surplus in the Treasury that may arise from redundant revenue must necessarily be an uncertain sum; (2) that under such a system Senators and Representatives would be under a divided allegiance, and exposed to a constant temptation to withhold appropriations for the general Government in order to obtain the largest possible sum for the States; and (3) that there ought not to be any redundant revenue, because redundancy implies taxation over and above the needs of an economical administration of the Government. For these reasons he was unable to give his assent to the Pennsylvania scheme of finance, and brought out his own plan as a substitute for it, which was simply that the Government should continue to collect the tax on spirituous and malt liquors as heretofore, and distribute the proceeds to the States according to population.

In order to make out a difference between the two plans, it is necessary to assume that the whiskey tax is not properly a part of the national revenue, for if it is such, then it is a part of the "redundancy" which, according to Mr. Blaine, ought not to exist, but ought to be reduced, either by lowering that tax or some other which is more oppressive to the community. If the tax on distilled and fermented liquors properly and justly forms a part of the public income, and if in consequence of its existence the revenue is redundant, the tax on sugar might be abolished, or that and other taxes might be reduced to the extent of at least $50,000,000—Mr. Blaine said $86,000,000. That the tax on liquors is a proper part of the public revenue Mr. Blaine argues in a variety of ways. Indeed, his whole scheme proceeds on that basis, since he proposes to retain it and merely change the direction and appropriation of it.

It appears, therefore, that the difference between his plan and the Pennsylvania plan is "mere fancy." The latter proposed to distribute the surplus revenue among the States, if there should be any surplus. Mr. Blaine proposed to establish a surplus beforehand, and then distribute it among the States. Because the revenue *is* redundant, but *ought not* to be so, he proposed that it should always be redundant enough to yield $86,000,000 per annum for distribution among the States. This was the mighty product of statesmanship which his genius evolved. Although his supporters have not given it the prominence which it deserves in the campaign, we think that it is fully up to the mark of his exploits in other fields of public usefulness, and that it will not suffer eclipse when brought into comparison with his South American policy. The only difference between his plan and the one which he condemned is, that his proposed a sum for distribution rather less indefinite than that proposed by the Pennsylvanians. His plan went upon the assumption, also, that one Congress could make a disposition of the whiskey tax which another Congress could not alter or repeal. Permanence, fixity, certainty constituted the crowning merit and distinction of his project as contrasted with the other.

We are bound to say that if there is anything to choose between the two plans, the Pennsylvania plan is the preferable one, since it would appropriate no more money to the States in any year than the Government could spare after its wants were known. But in truth both schemes are wild and dangerous, being utterly subversive of local responsibility for the disbursement of public money. The integrity and permanence of our institutions

in the last resort rest upon the care and watchfulness which the taxpayer exercises over the use which his State Legislature and local authorities make of the money taken from his pocket and counted out to the collector. If this annual ceremony is dispensed with, in whole or in part, his interest in the disbursement of public funds is necessarily relaxed. The proceeds of the whiskey tax, or of any tax, distributed among the States in the manner proposed, would constitute thirty-eight corruption funds simultaneously, involving every species of extravagance, demoralization, and waste. The useful tax in a republic is the tax which is felt, and which imposes upon the citizen the necessity of "eternal vigilance" in scrutinizing the public expenses.

WARS AND RUMORS OF WARS.

THE colonizing fever has so completely taken hold of France and Germany that international politics in Europe are again reaching the boiling point, and the newspapers are full of rumors of complications and difficulties of which nobody can see the end. The French irritation against England is now an old story, but the bitterness of the German press against England is a new feature in the situation, and is generally accepted as meaning that hostility to England has taken in Bismarck's mind the place of his hostility to France. There is much dispute over the origin of it. Some think it is due to the British failure to take counsel with him or lean on him more during the conference on Egyptian affairs; but the more generally accepted theory is, that his natural antipathy to Gladstone as a sentimentalist has been sharpened into positive irritation toward the British Government by his growing sense of the importance of German colonies. The German emigration, in spite of all the obstruction offered to it by legislation and otherwise, continues to grow steadily. It is now so widespread that it looks at times as if everybody in Germany who worked with his hands and could raise the money wished to get away from the country. Large numbers come here, but large numbers also go to South America and to the Cape of Good Hope, and they nearly all give the same reason—a desire to escape military service. In other words, Germany is helping to build up great empires beyond the seas in which in a few years the sound of the German tongue will hardly be heard, and the tradition even of German origin will be lost by men of German blood.

It is not wonderful that the founder of the German Empire should chafe under this state of things, and should wish somehow to keep this great German efflux under the German flag; but wherever he goes in search of a vacant island or bit of coast to plant a colony in and found a new Deutschland, he finds the English either in possession or in such force in the immediate neighborhood as to make his settlements feel overshadowed and uncomfortable. The French are not similarly situated, but they are in the same state of mind. They have no overflowing population. Frenchmen do not like military service any more than the Germans, but they do not emigrate to avoid it. To them the world outside of France is very like the ocean stream and the Cimmerian darkness of the ancient Greeks, so that the colonization movement is with them purely a Government affair, as the Algerian settlement has been and is. The army goes first and clears the ground, and then an attempt is made to bribe or coerce a few unfortunates into settling on it. The causes of the French colonial fever are in part the national uneasiness over the comparative decline of France in population and military strength; in part the hope that if better outlets were provided for bread-winners, French families might become a little larger; and in still greater part than all, the desire of the Ministry to show that the Republic too does something for the national glory. But the French are in all these enterprises exceedingly sensitive, as even more thick skinned people are when playing unaccustomed rôles, and they are particularly sensitive to British criticism or interference. They are apt to have the British navy standing by and sneering while they are bombarding and occupying, and are apt to find British traders and missionaries established in the most desirable spots, and ready to write home sad accounts of their cruelty and immorality. Then, also, the more they are pleased with their own exploits the more sure they are that the British are dying of envy and jealousy. Consequently an outbreak of the colonization mania in France has always been accompanied by "strained relations" with Great Britain. The present one furnishes no exception to the rule, and it is aggravated by the British success in seizing Egypt, which of course as a tidbit would have been worth two of Tonquin and Madagascar.

It would appear now, therefore, as if France and Germany were really being brought together by a common dislike, and as if Bismarck was disposed to try the wholly new card in his game of what the diplomatists call a "rapprochement" with France. It is only in this way that he can get the support of a respectable navy for any aggressive policy of any kind, and in a dispute with England all his legions count for nothing. The German navy is exceedingly good as far as it goes, but it goes but a very little way. In combination with that of France it would be formidable, and might put Great Britain to her trumps at sea in various remote parts of the world. But then it is most unlikely that the acrimony which now disturbs European diplomacy will go beyond newspaper articles, though these articles of foreign politics excite an amount of attention on the European Continent which is difficult to understand here, where every newspaper has a foreign policy of its own. The internal difficulties of both France and Germany are both very great. Germany has not yet been able to give the Parliament a comfortable and abiding place in the Government, and France has not yet made sure that a responsible Ministry can work with an Assembly that cannot be dissolved at the pleasure of the Executive. M. Ferry is doing well, and has got through with his Constitutional Congress with far less damage than was expected, but he has a great many irons in the fire, and may any day get bad news from various remote parts that would drive him from office.

THE BRITISH EXPEDITION UP THE NILE.

IT is now apparently settled that the rescue of Gordon is to be attempted at once and in good earnest, and not by Suakim or Berber, or any land route whatever, but by the old and much-travelled Nile. Lord Wolseley is going to lead a force of some 15,000 men up the ancient river in boats, with a contingent of Canadian and other boatmen to help him over the cataracts. There are some twelve hundred miles to be got over in this way before Khartum is reached, and the work must apparently be done before November 1st, as Gordon's supplies are said to be only sufficient to last till then. A more extraordinary enterprise the British Government has never engaged in. It is more extraordinary than the expedition to release the missionaries held in captivity by Theodore, the King of Abyssinia, because that was one of the common incidents of any intercourse with a barbarous potentate. Every now and then civilized men are laid hold of by such people, and have to be released either by threats, or bribery, or force, as the case may be. But the trouble in the Sudan was originally not a British concern at all. It was begun by an attempt of the Egyptian Government to get out of a country which it found itself unable to hold, and which was in a state of revolt. Usually when a province revolts successfully, and the odious government against which it revolts agrees to withdraw its garrisons, the rebels are filled with delight, and help out the operation in every way in their power. This is probably what would have happened in the Sudan if it had not been for the appearance of the Mahdi on the scene. He gave the revolt a tinge of religious fanaticism, which made the withdrawal of the garrisons impossible unless they acknowledged the Mahdi to be a true prophet. In default of this, they had, under the well-known Mussulman rule, to be killed. Accordingly they have been shut up in forts which they wish to evacuate, but cannot do so without being massacred or kept in a captivity which in that region is worse than death to men born in other climates.

Things were in this situation when the British Government, having taken charge of Egypt, felt bound to intervene in some way. So they hit on the very odd expedient of sending out another religious fanatic in the person of General Gordon, who made his entrance into Khartum really somewhat in the character of a Messiah. His first idea was to go and see the Mahdi, and settle the matter with him personally—prophet to prophet. But this he gave up on being convinced that the Mahdi would kill him. He then bethought him that if he could get three thousand good Mussulman soldiers from the Sultan, and could get some American and English capitalists to subscribe money for their expenses, they would soon "smash the Mahdi." But the authorities at home discountenanced this too. General Gordon then took up the plan of putting in his place as Governor-General at Khartum the greatest slaveholder in the world, Zebehr

Pasha, whose son he (Gordon), when formerly in command in the Sudan, had hanged for engaging in the traffic. This was thoroughly sensational, and might have succeeded, but Mr. Gladstone felt it would be too great a scandal, and refused. Gordon then asked for Indian troops and £100,000 sterling. This too was refused. Since then he has done little but urge the appointment of Zebehr whenever he has been heard from. Finally, in March, just before regular communication with him ceased, he threatened, in case his demand for Anglo-Indian troops was not complied with, that he would send all the Egyptian functionaries and the white troops now in Khartum to Berber, there to await orders, and he himself would resign his commission and go with the steamers and stores up the White Nile into the equatorial provinces, and place himself under the Belgian flag in the Congo region. Since then Berber has been taken, and whether the route to the equator be still open is not known. Stanley says since his return to England that it is. But the British Government has finally determined to rescue Gordon at whatever cost. He will probably, when brought home, be the most expensive acquisition in the shape of one subject the British Crown has ever made.

The appointment of Wolseley to lead the expedition will probably make it a bitter pill for the Tories and all the military Conservatives, although they have been long clamoring for the rescue. He does not conceal his high estimate of his own talents, which is irritating enough, but what is more irritating is that it has been in a measure justified by his performances. He has conducted to a successful issue the three most difficult military expeditions which Great Britain has undertaken since the Crimean war, except the Abyssinian—viz., the expedition to the Red River in Canada, the Ashantee expedition, and the occupation of Egypt. He is surrounded, moreover, by a body of intimates, whom he puts on his staff when in active service, and whose reiterated success excites a good deal of jealousy, and has procured for them in the army the sobriquet of the "Ashantee Ring." Then he is an Irishman with some patriotic sentiments, to which he gave vent by assigning what was considered undue prominence to the exploits of the Royal Irish Fusiliers in the fight of Tell el-Kebir, with the view, his friends said, of helping to soothe Irish political discontent. Moreover, he is a good and lively writer, and is thus able to be his own bard, which less successful military men find it difficult to forgive. Though last, not least, he advocates short service, which the Tories consider the ruin of the army, and they pit against him the Afghan hero, Sir Frederick Roberts, who stands up for long service, but is no match for Wolseley with the quill. Should he succeed in his present enterprise, the most difficult and important of all, he will probably silence all his detractors, but if he fails, there will be much delight in the military clubs.

A DISCIPLE OF MOST.

HERMANN STELLMACHER, who in June last was sentenced by the verdict of a Vienna jury to death on the gallows for several murders, and was hanged a few weeks ago, is a most curious phenomenon in the history of crime. He confessed himself guilty of one premeditated murder; he was convicted by a long chain of irrefragable circumstantial evidence of a leading part in a much more atrocious triple murder, his victims being two innocent boys of tender age; he was, in the confessions of Anton Kammerer, his principal associate, who is now on trial by a military tribunal, declared an actor in other deeds of the same character; he was repeatedly guilty of robbery. Yet he committed his crimes mainly, if not entirely, in the interests of socialism and anarchy, his object being the procuring of means for the anarchical conspiracy and propaganda and the spreading of terror among the upholders of order. Almost all his attention and labor seems to have been devoted to the underground struggle with law and property. He evinced some feeling of honor in defending himself, and considerable fortitude in facing the gallows, and died apparently in the belief that he was a victim of society, as now unnaturally constituted, and a martyr in the cause of universal justice. His story, with its ramifications, is a warning revelation of the monstrous abnormity of thought and practice to which the theories of anarchism are apt to lead the more hardened and passionate of its devotees. As such it is worth telling here in brief.

In June, 1883, Stellmacher and Kammerer met for the first time at Zürich. They had previously corresponded with each other, the former being chief manager of the *Freiheit* newspaper, then published in Switzerland, and the latter an officer of a laborers' association. Stellmacher was then nearly thirty years of age, married, and the father of two children. He was a native of Prussian Silesia, a shoemaker by trade, an ex-soldier both of the Prussian and the Saxon army, and for seven years established in Switzerland. In the autumn of 1883 the first number of a new Anarchist journal, the *Rebell*, published urgent appeals to the faithful to do all in their power to procure means for the good work. Stellmacher and Kammerer resolved to act. On October 20 they met again at Basel, and were there joined by a third worker. They left for Strassburg, arriving on the 22d, and agreed on robbing an apothecary's store, in order to get some drugs and poison needed for their schemes. After midnight they approached the door of the druggist Linhart. Stellmacher rang the bell and asked for a powerful narcotic. Linhart refused to prepare it, whereupon Kammerer entered and dealt him a blow with an iron instrument. The druggist fought desperately for his life, but in vain. The Socialists left in haste, with little booty, and succeeded in returning to Switzerland in safety, planning a new exploit. Schaffhausen was chosen as the starting, and Stuttgart as the objective, point of the expedition, in which they were joined by Michael Kumitsch, an agent of the *Freiheit* and *Rebell* in St. Gall. A banker, Heilbronner, was selected as a victim, and the deed executed early in the evening of November 21. Heilbronner and a visitor, Oettinger, were stunned by blows on the head with lead-filled hammers, receiving ghastly, though fortunately not fatal wounds, and the assailants escaped with money and bonds amounting to 17,000 marks. Kumitsch, who had come from St. Gall armed with a revolver and explosives, was tracked to Pforzheim and arrested after a desperate resistance. The other three made good their escape.

Stellmacher and Kammerer now determined to transfer their operations to Austria, the latter going there early in December. On the 15th of that month Franz Hlubek, a police official who had attended socialistic gatherings in conformity with the law on meetings, was murdered at Floridsdorf, a suburb of Vienna. Kammerer, whose days are now numbered, is asserted on good authority to have confessed himself the perpetrator of this deed. Money was again wanted, and the Stuttgart experiment was to be repeated. Kammerer reconnoitred a number of exchange offices, and the choice fell upon that of Heinrich Eisert, in the much-frequented Mariahilferstrasse. Stellmacher, informed of the scheme, hastened to join Kammerer in company with the third actor in the Strassburg murder. They arrived in Vienna on January 7, 1884. On January 10 murderous weapons were bought, and the work carried out between 6 and 7 o'clock in the evening. Kammerer was the first to enter the office, asked for change for rubles, and, after a few words, threw a bladder filled with sand into Eisert's eyes, and dealt him, while the latter tried to save himself, blow after blow, of which he died twelve days later. The Socialists had resolved to slay any person to be found in their way, and Stellmacher, who had in the meanwhile entered the place, accordingly struck deadly blows on the heads of Eisert's two boys, aged eleven and nine, and fractured the skull of their governess, a lady of sixty-five. Cash and stocks to the amount of 7,500 florins were successfully carried off. The stocks were sent to Pesth, to Arnim Prager, editor of the *Radical* newspaper, and the money realized in exchange was used partly for the support of families of imprisoned Socialists, and partly for that of the Anarchist press. Kammerer left for Switzerland in the middle of January, but returned in February to Vienna, and thence went to Pesth, to concert further action with his friends.

Early on the morning of January 25, Ferdinand Blöch, a police agent of the district of Floridsdorf, while going to his station through a field overgrown with bushes, was called by name by a man who had been lurking behind a fence, and, on turning toward him, was shot dead with revolver bullets. Several laboring people rushed to the spot, and in their sight the murderer ransacked the pockets of his victim before taking to flight. He was hotly pursued, defended himself with revolver shots, which wounded one of the laborers, but was finally overpowered. While being carried to the police station, he drew from under his coat and threw to the ground a tin case

filled with dynamite and small bullets, which did not explode, however, the concussion fuses, of which he had eleven with him, not having been inserted into the openings of the case. He confessed to have done the killing with premeditation, being impelled, as he said, by motives of just revenge for the injuries inflicted by Blöch, as a detective, on innocent Socialist laborers and their families. He refused, however, to give his name or to state his origin and condition. Photographs exchanged between the police of Vienna and those of Dresden established and made him acknowledge his identity with Hermann Stellmacher, before 1876 a non-commissioned officer in a Saxon grenadier regiment, and subsequently an active Anarchist in Zürich. Stellmacher's share in the triple murder in the Mariahilfer-strasse was betrayed by a peculiarly shaped fuse which had been found after the murder in the exchange office, and perfectly fitted the case of explosives thrown by him after shooting Blöch, being the twelfth of a dozen. Confessions of Prager and his associates in Pesth, to whom Eisert's stocks were traced, led to the arrest of Kammerer, and various things found in the latter's dwelling, and finally his own acknowledgments, completed the chain of evidence in regard to almost all the particulars of the tragedy. Stellmacher, however, till his last moment steadfastly denied his participation in it.

As to the acknowledged murder of Blöch, Stellmacher defended himself on the score of his convictions as a Socialist and reformer of society, speaking defiantly and aggressively, in a way which left hardly any doubt in his hearers that his crimes had emanated from a blind and crude fanaticism. In speaking of the wrongs sanctioned by the State and the Church, of the degradation and misery of the producers of wealth and the luxurious and wanton lives of the rich and idle, of the physical and moral ills which unmerited poverty laid the germs of even in the unborn child, or of the aims of his sect and the future redemption of mankind through fraternity in anarchy, he reproduced only — though with terrible emotion—the cheap talk of the Socialist pamphlets; but he made an impression when he related, amid tears and sobs, the misery—"to say plainly, starvation"—which successively carried off his father, mother, and sister, and his own sufferings as a child and degradation in the army. This impression was almost effaced when evidence was produced to the effect that he had made two attempts to betray to the German and Austrian Governments, for money, the whereabouts of the publisher of the *Freiheit*, with whom he had had a quarrel, and other secrets of that gospel of equal justice for all. Terribly disconcerted by this revelation, he made a feeble attempt to represent his action as an effort to mislead the enemy. When asked at the conclusion of the trial whether he had anything more to say in extenuation of his murderous deeds, he said: "High Tribunal! The crime of which I acknowledge myself guilty and the crime committed in Eisert's house are certainly horrible crimes. But, if children are already neglected and, so to say, murdered in their mother's womb, and obtain no education, and grow up to become the creatures that commit these crimes—that is certainly, according to human conceptions, the meanest of all crimes." After these words he sat down in great excitement, casting an enraged look at the public prosecutor. When the sentence was pronounced against him, he rose with a smile on his lips and turned to be led away.

A SCHOOL FOR ACTORS.

THE new Lyceum Theatre school for actors is to open on the first Monday in October. The aim of the school is to do for the American stage what the Conservatoire and the Théâtre-Français do in Paris. The course of study, it is announced in the *Times*, will be practical and technical, and will comprise the training of the body, the art of mute expression or pantomime, the training of the voice, the art of vocal expression, the art of imitation or mimicry, the study and understanding of plays and dramatic situations and effects, the study of character, and practical lessons in acting. As the students progress in the art they will be classified and formed into separate stock companies, each one being assigned to the line of work and the position which his ability or advancement enables him to fill. As soon as a stock company has learned to work well together and has thoroughly prepared itself for the work, public performances will be given, so as to test thoroughly the power of each performer in actual work before large critical audiences. All such as prove successful will then be pronounced ready for engagements and so entered on the books of the Lyceum Theatre. In other words, the school is to give diplomas in acting, which will be like diplomas in medicine or law, and are expected to have a professional value. We understand that the number of applications for admission to the school are very great, so that it starts with a fair prospect.

Whether the experiment will succeed or not depends so much on the details of the management that it is useless to venture any predictions. The conditions of acting here and in France are very different, and, to judge of the future by the past, there is no reason to believe that we shall for a long time have anything like the Français or the Conservatoire in this country. To begin with, there is no patronage of the dramatic art in this country by the Government, no funds set apart for its encouragement; and consequently any enterprise like a school for dramatic art must be undertaken on business principles—that is, for the purpose of making money. Now the very theory of "foundations" for the higher branches of learning taught in colleges, universities, and professional schools is, that it will not do to trust such matters to persons who go into them from the same motives which lead others to go into dry goods, or real estate, or "fancy goods." A sufficient fund must be accumulated—whether by taxation or gifts is a secondary matter—to place the whole establishment beyond the reach of injury from "dull times," which come in education as in all other branches of human activity, and beyond the temptation of furnishing a "poor article," which must beset those who go into education to make what they can out of it just as it besets those who go into cotton or coffee. We are glad to hear that the new school has "money behind it"; but it has not, we believe, any foundation. This, in the long run, will be found to be a *sine quâ non* for any establishment which is to rival the Conservatoire, and it is not therefore beside the point to express the hope that the managers of the new school may make so great a success of it that some Mæcenas of the future will be found to place it on a lasting and impregnable basis.

There are probably no countries in the world where good education in acting is more needed than in the United States and England, because there is no race at present so little gifted with a natural taste for acting as the Anglo-Saxon. We do not mean that there is not as much of what is called potential dramatic genius on our stage as there is on any other—there is no test by which potential genius can be measured—but that in ordinary life, off the stage, our race gives no indication of inborn theatrical tendencies. To take a single point, we do not use gesture to aid expression. We are the great non-gesticulating race. We even look upon gesture in ordinary life as odd and as a mark of inferiority. Yet in an Italian, a Frenchman, a Spaniard, or a German, it is as natural as the use of the voice. To mark the difference, it is not necessary to go to Europe: go into any of the foreign restaurants of New York and notice the difference between a table surrounded by foreigners and a table of Americans or English. One with its vivacity, its gestures, the vivid coloring of the intonations of the voice, is a little scene from the theatre in itself. The other is, in these respects, without form and void. Our dislike of all strong expression of feeling, our reserve, our entirely unaccented demeanor, is one of our great features as a race, one of the things which separate us as by a gulf from all the great theatrical nations of the modern world. The life and behavior of the theatre are further removed from our ordinary life and behavior than in the case of any of them, and hence we have greater need of education than any. Gesticulation and pantomime, it should be remembered, lie at the root of the matter. They are not, as we are apt to think, an ornament and decoration which may be added to good acting, like a handsome frieze to a good building; they are the natural and primitive language of expression. An actor who does not take to them naturally is in double need of education.

Another indication of the great necessity of education for English and American actors is that England and the United States are the only countries in which the theory is seriously advanced that acting can only be learnt by acting—that the way to learn is to go on to the stage and "plunge in." This is the theory of a practical age, but has never, we believe, found much favor either with actors or with audiences familiar with the unfortunate results of it on the stage. It is true enough of great actors that they are born, not made. Rachel would have educated herself if she had had no masters. The worst result of learning acting without any education is upon the countless host of inferior actors who

make up the stock companies, so many of whom, having neither genius nor education, have great difficulty in acting at all. Everybody knows that the total effect of a play is produced quite as much by the small parts as by the "title rôle." A theatre without preparatory schools produces a few geniuses, but an untrained and incompetent "support." This was the old "star" system, which it is the aim of all those interested in the theatre now to break up.

STEAMSHIP CUISINE.

S. S. ————,
Lat. 51° 40′ N., lon. 22° W., August 15.

THE revolution which the last forty years have produced in the passenger traffic on the Atlantic lacks still one important measure for its full completion. In the days of the old sailing packets the passengers were few on any vessel, and were of the company of the captain. They dined and lived together, and the whole economy of the ship was under his immediate attention and orders, so that whatever was amiss was as easily and as quickly corrected as in a country house where the master is vigilant and attentive to his guests. The ships had their individual reputation for comfort, and the captain was identified with it. The voyages were long and of uncertain duration, so that to be on a ship with an amiable captain and a good table was an important consideration in crossing the ocean. Now the steamers have developed into huge hotels afloat. Their trips are getting to be regular and short, and the hotel element prevails over the nautical. The captain is only the sailing master, and the object of all efforts is to make a short voyage, with slight suggestion as to comfort. The enormous increase in the passenger list leads to division of responsibility and attention, and considerations of economy prevail with the owners, who, having to provide for hundreds of mouths instead of the score of old times, draw the line as to providing on the side of saving rather than of excess. What is wanted to make this system satisfactory is the complete recognition of the hotel system, and the introduction of the "European" style of hotel keeping, *i. e.*, the restaurant.

This is impressed on me more than it ever has been before by the contrast between the food and the admirable qualities and outfit of this steamer, which we may take as the type of the new dispensation—so large that the motion is hardly perceptible in ordinarily rough weather, as rapid as need be in respect to general comfort, and tolerably certain as to her arrival, with every convenience in furnishing (except, perhaps, that the beds might well be a few inches wider), electric lights, pneumatic bells (which, however, fail to call a steward), a roomy and comfortably arranged dining-saloon, separated from the state-rooms so that the well may not be disturbed by the sufferings of the sick, a saloon for society and music, an organ and piano, a library, a magnificent deck for promenades, a refrigerator for the provisions, and every minor convenience which such a scale of outfit implies. The fare is simply the worst I have ever seen in many years of travelling by sea. It is such as would bankrupt the worst hotel in New York in a week. The provisions are poor, but the cooking is execrable, and the unanimity of the passengers on this score is unexampled. It is not merely cheap fare, but wasteful cookery, because, so far as the passengers are concerned, more food is thrown away from being uneatable than can be eaten. It is such that no reduction in the price of passage would induce me to risk it again, and I think that is the general feeling of those of the passengers who have been able to try the fare, and these, owing to the good sea qualities of the ship, have been the large majority. Nobody who has not tried it can conceive how bad it is.

The only answer to any observation on the subject would probably be, that competition is so sharp and the traffic leaves so little profit that there is no margin for table liberality. It is useless to discuss special cases like that of the wretched cookery of this steamer; a ship may be provided with as cheap food as ours, and have a cook who can make it palatable, which ours cannot. But it is necessary to find a system in which it is not for the interest of the owners to starve the passengers, and this is only to be found in making it the ship's interest for them to eat, *i.e.*, by separating entirely the passage question from the subsistence. As matters now stand, the less the passengers eat the better for the company, while under the restaurant system the reverse would be the case. I should be very glad now, after having paid for my "board," to pay extra for something which was really palatable, but I know that the cook cannot give me anything. I am a moderate wine drinker, but I am driven to abstention by the stuff they give me as wine. Having tried various kinds, I fall back on pale ale, and with this and the cheese I could get along if the bread were tolerable, which it is not.

Many of us will reach England not in a state to venture into the cholera-infected districts, and none will be benefited by the sea voyage as they ought to be. At sea, with a life of little physical activity and little excitement, the appetite rapidly becomes fastidious, and much food is not required. A simple bill of fare of good quality and attractive in its preparation tempts the passenger to eat, while the crude and uninviting manner of our cuisine offends the taste. The sea smells are against us, too; even those who, like myself, do not suffer in the least from seasickness are driven to revolt by odors which might be avoided on shipboard, but sometimes are not. These it would become the ship's interest to abate, like any other obstacle to the well-being of the passenger. As things are now arranged, nobody is concerned in the wretched condition of the susceptible traveller. If he lies in his berth only half incapacitated from enjoying his meals, no one cares to tempt him with a delicate morsel. Whether he eats or eats not is his own business, not the ship's. The sea, the owners, and the stewards conspire against him, and here the least hostile is the sea. As for myself, if I may particularize, I came on board with an excellent digestion, and I enjoy complete immunity from seasickness, but I am reduced to eating mainly eggs and bacon, and the eggs have a taste of mouldy hay, as if they had been packed in it, and the bacon is cooked to a crisp half the time. The roasts are generally too tough for me, and the entrées remind me of their flavor all day long; the fruits are uneatable, though nothing is more essential to people at sea than full supplies of good fruit. For all these ills the restaurant system provides a remedy, and I think most of us would willingly pay two or three dollars a day extra for it.

One of the passengers, remonstrating to a steward yesterday, received the significant reply: "There will be no improvement until somebody writes to the newspapers about it." So here they have it. There cannot be a better ship on which to begin the experiment of keeping a restaurant at sea than this, because there is probably none on which there is so little cause for seasickness, and because its accommodations are enormous and, on the whole, admirable and attractive.

W. J. S.

THE PAST SESSION OF PARLIAMENT.

LONDON, August 19.

EVEN among the barren sessions of recent years, that which has just come to an end has proved itself preëminently sterile. Laborious it has been, if labor be measured by the number of hours it has sat. But by far the greater part of its time has been consumed in resultless discussions, so that the harvest of legislation is scanty indeed.

It began in February with a very long debate on the address in reply to the Queen's speech, into the middle of which was interposed a vote of censure on the Government for their conduct in Egypt. More than a fortnight was thus spent. In March the bill for extending the borough franchise to country householders was brought in, met by an adverse resolution which was discussed at great length, and read a second time just before the Easter vacation. Although this measure was both short and simple, offering little opportunity for amendments and consequent debate in Committee of the Whole, it dragged on through the months of May and June, and did not reach the House of Lords till July. How it was snuffed out there your readers know. It had been the main business of the session, to which all the other measures of the Government had been forced to give way. At its death, therefore, died the life and value of the session, and the labors of three months were lost.

Indeed, like Samson, it killed more in its death than in its life. For Mr. Gladstone resolved to summon Parliament again in October, that the Franchise Bill might be sent up to the House of Lords a second time; and as this greatly abridges the usual Parliamentary vacation, he further resolved to abandon all the important bills then pending in either house, in order that the vacation might begin earlier than usual. Probably in this there was a notion that he would excite the displeasure of the people at the Upper House, by throwing on them the burden of destroying not only the Franchise Bill, but a number of other useful measures. However, the country, which was not as much interested in these measures as it ought to have been, has borne their loss with equanimity, and the session, notwithstanding their abandonment, has run on to nearly its usual length, thanks to the assiduity of the Irish members in debating with alarming minuteness every item in the Irish votes of supply. Among the bills so abandoned were that for the establishment of a new municipal government for London—a bill of vast size and extreme complexity, which the Government had so little chance of passing that many of their supporters blamed them for introducing it at all—and a bill for enabling the tenant-farmers of Ireland to buy up their farms from the landlords, which, like most reasonable plans for the pacification of Ireland, met with opposition from the Nationalists because it did not do enough for the tenants, and from the Orangemen because it did too little for the landlords. The House of Lords took its revenge on the Commons by rejecting two or three humbler but useful measures which were sent up to them at the end of the session, declaring that if the Lower House was going to drop its bills in order to render the Lords odious, they would not undertake to enter upon new subjects at the end of the session. Thus very little legislation of permanent value has been added to the Statute Book.

The most obvious cause of this breakdown has therefore been the dissidence of the two houses, or rather the hostility of the Upper House to the Ministry, which commands a majority in the Lower. This is the price paid for the maintenance of a hereditary house of wealthy men,

which, because hereditary and wealthy, is likely to be in permanent disaccord with the forces that usually sway the House of Commons. There are other causes, however, and chief among them the procedure of the House of Commons. It has been the fashion among Ministerialists to complain of Tory obstruction as well as Irish obstruction, and set down all the waste of Parliamentary time under that head. There was, however, little foundation for that charge in the session of 1883, and has been still less in 1884. Neither the Parnellites nor the Tories have filibustered (as you call it) this year, though now and then they have protracted discussion beyond the needs of the case. It is the rules of the House of Commons that are to blame—rules for which the Government is primarily responsible, because it commands the majority, and because it undertook, in the autumn of 1882, a systematic revision of those rules which made them scarcely better than they were before. Under these rules (not to mention other defects) debate on all contested matters ends on most days of the week at certain fixed hours, so that the strongest temptation is offered to those who oppose a bill to go on debating it (or the motion which stands next before it in order) until the fixed hour is reached and a division rendered impossible. In this way the minority, even a small minority, constantly balks the wishes of the majority, and many measures fail which could be readily passed under a system of "previous question" like that of your House.

A further reason for the waste of the session is to be found in the want of skill which the Ministry have this year shown in the arrangement and handling of their measures. Mr. Gladstone used to be a master of this art, so vital to a parliamentary leader. His former Ministry (1868–1874) passed an unusual number of large and difficult reforms. He is now, however, ten years older, and obliged by his age to leave to his subordinates more of the conduct of affairs in the House of Commons than a Prime Minister ought to leave. There is, therefore, less vigor, less unity of purpose, than the arduous work of leading the House requires. Supporters chafe, opponents are encouraged, the numerous small mistakes committed mount up to a heavy aggregate of loss in a whole session.

Lastly, much time has been spent this session in discussing the affairs of Egypt. Besides two protracted debates on resolutions formally censuring the Government, there has been an unusual number of petty discussions interpolated at odd times, and a great deal of questioning which has fretted and worried people, drawing off their attention from the main business of the day. It is true that debates on foreign policy must always be counted on in the House of Commons, which has become fully as much an executive as a legislative assembly, because the Ministers of the Crown are practically a committee appointed by the majority for carrying on the business of the country, and must be expected, as a committee, to make frequent interim reports and receive frequent directions. If startling events were continually happening in Egypt, or if the position of England there were a presently perilous one, nobody could complain of repeated debates regarding it. But neither excuse can be given for the time which the House of Commons has spent on this subject. The Ministry complain that the Opposition has been purely vexatious, seeking to embarrass their action, to prevent them from proceeding with legislation, and to prejudice the country against them. The Opposition retort that it is the reticence of the Ministry which compels them to renew their questions, the cowardice and irresolution of the Ministry which make it their duty to urge them to a more decided policy. An impartial critic, if he cannot acquit the Tory leaders from the charge of occasional factiousness, will also hold the Government to have been wanting both in foresight and in vigor. Had they given the impression of seeing their way ahead, and of following out a firm and consistent line, the Opposition could not have ventured to worry them as it has done. It is quite true that the Tory chiefs have not shown a patriotic spirit, true that they have never suggested an alternative policy, true that they would not be likely to extricate us from the shoals among which we have drifted, any better than, if so well as, Mr. Gladstone's Cabinet. But in a system of party government like ours one must not expect patriotism from opponents, nor any but a negative and sterile criticism. No Government can ultimately maintain itself by *tu quoques* against an Opposition, nor even through the follies and weaknesses of those who would be called upon to replace it.

That Mr. Gladstone's Government does maintain itself, and has ridden out in the course of this session two or three heavy gales, is attributed by the ordinary Tory journalist to its wonderful luck. Luck it certainly has. Fortune has dealt Mr. Gladstone some good cards just where he most needed them, but the tricks have more often been taken because the opponent threw away his best card. Setting aside, however, these considerations, the main strength of the Government has through this session lain, and does still lie, in two things. One is the desire to see the Franchise Bill carried. The whole Liberal majority is pledged to it. It is popular in the country. Blunders in the management of Parliamentary business, troubles always springing up afresh in South Africa, indecision in Egypt, needless combats at Suakim, all are overlooked for the sake of a measure which has the old ring of 1832 and 1866 about it, a measure which every secretary of a local Liberal association can understand, and by which every member of such an association expects to see his party strengthened. That this measure has been practically rejected by the House of Lords gives it, and the Ministry as its authors, a further claim on the loyalty of its party, which enjoys a brush with the Peers.

The other anchor by which the Government rides safe is the unbroken personal ascendency of Mr. Gladstone. Time, which adds to the record of Ministerial mistakes, makes this keen and strenuous old man a more interesting figure to that mass of the nation which does not follow the intricacies of politics, but has the instinct of personal attachment. Five sessions have now passed since he took office after Lord Beaconsfield's fall, sessions in which he has been tried by comparison with able and ambitious colleagues, men in middle life, whose superior vigor might have been expected to outweigh his longer experience. Yet everybody agrees that he overtops his colleagues even more conspicuously now than he did in 1880. It is not so much his eloquence that raises him above all rivalry except that of the far less active and passionate Mr. Bright; it is the sense of his unabated energy, eagerness, combative power, variety of endowment, sustained interest in all the movements of the world. That moral earnestness to which much of his popularity in the country is due is but faintly appreciated in the House of Commons, where the critical spirit is so highly developed by constant observation that it is hard for anybody to remain a hero. But those who listen daily to him, and who are quick to point out the mistakes for which they think him responsible, candid friends as well as open foes, are not less overawed than in earlier years by the overflowing volume of his intellectual force and the vehement ardor of his character.

Of the colleagues I have mentioned, none has greatly risen in public confidence, nor probably will so long as Mr. Gladstone remains on the scene. Some, and in particular Lord Granville, to whom as Foreign Minister our quidnuncs attribute the want of progress in Egypt, may have even lost ground. Lord Hartington is respected as a straightforward and courageous man, loyal both to his leader and to Liberal principles, but no one expects from him a constructive programme of liberal reforms. Mr. Chamberlain is becoming more and more recognized as the head of the Radical party, with whom moderate Liberals as well as Conservatives will have to reckon before long. He has become an excellent platform speaker; he gives the impression of firmness and clearness. Whether he will display tact in Parliamentary leadership, whether he will touch the imagination of the people, remains to be seen. No other member of the present Cabinet holds at this moment so important a Parliamentary position as a Liberal who has stood for the last five sessions outside of it—I mean Mr. Goschen; and many observers hold that the future of the Liberal party during the next ten years will mainly depend on whether he or Mr. Chamberlain leads it in the House of Commons when the death of Lord Hartington's father has removed that statesman, now recognized as Mr. Gladstone's heir-apparent, to the House of Peers.

Y.

THE CORRESPONDENCE OF GEORGE SAND.

PARIS, August 15.

THE sixth and last volume of the Correspondence of George Sand has appeared at the very moment when her statue was being uncovered at La Châtre, the little town near Nohant. The statue is the work of Aimé Millet, and represents her sitting in a thoughtful attitude, not very different from the attitude of the statue which is at the Théâtre-Français. The new volume begins with the war of 1870, and from the first day George Sand is not mistaken; she sees how artificial the war is, how unnecessary:

"The honor of France is not in the least imperilled in the diplomatic question [the question of Prince Hohenzollern]; and I am sure that it is the police which sings the Marseillaise in the streets of Paris, and the fools follow the police. . . . I augur very badly for the drama which is preparing, and I see in it the reverse of progress. I am very sad, and my old patriotism, my passion for the drum, is not awakened. The republicans make mistake after mistake; they have pushed the Government to an excess of susceptibility. . . . Everybody becomes mad. We must submit, and empty the cup to the dregs. When it is dry, it will fill itself with a new wine, I do not doubt. I do not doubt concerning the future; but the present is very ugly."

This is the tone of the last years, the despairing tone; and though the springs of life were very strong in Mme. Sand, you feel them slowly bending. Who could not be alarmed in 1870? The war was undertaken on the most futile pretext by a man who never believed in his success, but who thought himself obliged to make war from time to time, as the gambler thinks he must play. Mme. Sand had the courage to write from Nohant on the 26th of July, 1870, to her dear friend Flaubert: "I think this war infamous. . . . Men are ferocious brutes." Her only consolation and pleasure was in her grandchildren: "These dear little things are everything to old age; only life is spent in trembling for them. There is no repose, no perfect joy in this world, and nobody can dispense with great courage who accepts the mission of loving and

of devoting himself incessantly. . . . Your life will have its recompense in eternity, where you will be born again—under what form I do not know, but it will surely be a better one, a happier one."

It is difficult to imagine how a country at war is at once submerged in ignorance; everything becomes distorted. At Nohant Mme. Sand knew less than the inhabitant of London, who read in the *Times* the letters of "our war correspondent." She knew as little as the poor soldier who follows the army, camping here and there, led by the strategists he does not know whither. "I believe," she says one day, "that the *alliés*, with England at their head, are going to crush us, and will offer us peace with an Orléans as constitutional King; it would be the wish of the majority of the French at the present moment. . . . It would perhaps be better to have the Orléans at once; for the succession of this Empire is a condition in which a republic could not live." This was written on the eve of the great struggle. It is strange to see that the Empire was doomed at once: "I must tell you what is going on in our provinces, the most patient, the least revolutionary of France—what you do not know in Paris. Well, it is a consternation, a rage, a hatred against this Government, which fills me with stupor. It is not a class, nor a party; it is everybody, especially the peasants. It is a great sorrow and exalted pity for these poor soldiers who are their children or their brothers. I believe the Empire is lost, finished. The same men who voted the *plébiscite* would vote unanimously the *déchéance*."

Mme. Sand saw at once that the old passions of the first Republic could not come again into play. On the 18th of August she writes to her friend Prince Napoleon, who was then at the camp of Châlons: "Whatever may be the fortune of war—and I hope that our arms will triumph—the Empire is come to an end. . . . I tell you the fact as I see it: complete disaffection, fury, and despair on the part of those who voted the *plébiscite*. Those who did not vote it are more moderate. . . . Be sure that the Republic will not be born again." She advises him to become the citizen of a social state "which will have need of light, of eloquence, and of honesty." A few months later, after the downfall of the Empire, she writes to him again: "Do not believe what you hear of the consternation and of the disorder of France. The first movements were discouraged and disorderly, but everywhere union against the enemy has taken place with a promptitude which we did not expect; and now, if we save not our lives, we will save our honor." She explains to him that she has always been a republican in principle; she confesses that France is not as well prepared as herself for this form of government: "Will it last? Yes, if the Republic can beat the foreigners; no, if it does not succeed." The Republic did not beat the Prussians, and has outlived defeat. "So far," she writes to the Prince in December, 1870, "we are not really in a republic: we live under a dictatorship, and a very harsh dictatorship; and, with the help of the Prussians, we are made to submit to facts. I ask myself if a dictatorship will teach us the science of liberty. . . ." She calls for a regular government; she believes, as she always has done, in universal suffrage; and adds: "It may well be that the present trial will not succeed, and that the people will soon call for the Orléans." Gambetta frightens her by his temerity; "but who knows if this temerity is not our salvation in such exceptional circumstances? Personally, I do not know him at all. I hear that he is capable of great things."

During the siege of Paris her heart was in the capital, though she did as much as she could for her peasants. "Poor Paris!" she writes to a friend at Toulon, "it was half my soul. It is there that I enjoyed civilization with a few friends who could appreciate it, though they criticised it. It is there that my imagination was happy in a life of individual liberty and of pleasant excitement which cannot be found anywhere else in the world. You have not known Paris; one must belong to it and have lived in it in a certain fashion so as to appreciate the charm of the relations with all classes of society." She fancied that her small apartment in Paris was being shelled; that her friends were dead or dying. All seemed dark; the waves of the invasion kept her isolated. She gladly received the news of an armistice in January, 1871: "I can breathe; my children and myself, we embrace each other with tears. Away with politics! away with this ferocious heroism of the party of Bordeaux, which made us despair, and which conceals its incapacity under a fanatical, hollow, and soulless *lyrisme!*" She was very hard on the Government of Bordeaux: "This party is not the majority, but it is in power. It spent all the time of the siege in getting the places; it had no other serious preoccupation than to satisfy its creatures. It breaks those who have an opinion. It proceeds like the Empire, and more brutally. And France has borne patiently this dictatorship, and France will be calumniated by this incapable and proud party, to which she has given everything—men and money—to save the national honor." Mme. Sand wanted peace, immediate peace. She sided with Jules Simon, with Jules Favre, against Gambetta; she spoke with indignation of the attempt at a *coup d'état* which was made in Bordeaux by Gambetta and his friends: "The heavy hand of Jacques Bonhomme must hinder us from killing each other. Let us have the patience to bear the law of the simple-minded." This meant peace and a moderate and conservative republic.

Mme. Sand had not believed at first that the Republic could survive the capitulation of Paris; she was agreeably surprised when the Assembly of Bordeaux preserved the word Republic —"the only word which can honor our political misfortune." The old spirit was, however, sometimes the strongest, the spirit which had tied her once to Pierre Leroux, to Barbès, to the Socialists. On the 17th of March, 1871, she writes: "Yes, my great friend, a return to the narrow ideas of Orléanism is very possible, though M. Thiers seems decided to hinder its excesses. But will he be able to do so? The majority which we have elected, in order to escape the dictatorship of a mad party, is a reactionary and stupid majority." What she called the mad party was the party of Gambetta; what she called the stupid majority was the majority which had confided the power to Thiers. Instinctively, during the war, in the seclusion of Nohant, Mme. Sand had felt clearly that the great mass of the French peasantry wanted peace and order; when the danger was past, when she was allowed to come again into contact with her old friends, she began to attack the party which represented peace and order; her mind was confused, she did not know whom to believe, whom to trust. "How ignorant you are of the province!" she says on one of her lucid days. "The province has to make a great effort to accept Thiers, Favre, Picard, Jules Simon. It can only tolerate the Republic with them. Thiers has well understood it, as he wants a *bourgeois* republic, and he is not mistaken, alas! when he thinks it the only possible one. You ought to know, all of you, that the advanced republicans are in the proportion of one to a hundred on the surface of the whole land."

This was written on the day of the insurrection which began the reign of the Commune in Paris. "Paris makes the republics, we know; but it is also Paris which kills them." She opens her heart to Flaubert. The conduct of Paris fills her with distress and sadness:

"The ignoble experience which Paris is undergoing does not prove anything against the eternal progression of men and things, and if I have any acquired principles, good or bad, they will not be modified. I have accepted patience as one accepts the weather, the length of the winter, old age, misfortune, in all its forms . . . It is not this that makes me sad. When one tree is dead, we must plant two more. My sadness comes from a meekness of heart which I cannot conquer. I cannot console myself for the sufferings and even for the ignominy of others; I pity those who do wrong. Though I recognize that they are not in the least interesting, their moral state makes me wretched. We pity a little bird fallen from its nest; why not pity a number of consciences fallen in the mud? I suffered less during the siege by the Prussians. One loved Paris made unhappy by the faults of others; one pities Paris all the more now that one can no longer love it. . . . The contempt of France is perhaps the necessary punishment of the cowardice of the Parisians before a few adventurers."

What would Mme. Sand say now, if she still lived? Some of the Communists are in the highest places. The Commune has its historians and its legend; it has its anniversaries. Paris does not feel the contempt of France: it leads France, as it always has done for a hundred years. Mme. Sand had an elastic mind; she would probably write now as cheerfully as M. Renan. The great charm of her letters is the total absence of hypocrisy; they are the brilliant mirror of all her impressions, of her changing thoughts. And, after all, she was an artist; she was not a politician. Her mind could not long rest on political questions. She felt like a civilized person who has been wrecked, and who lives for a short time on an island of savages. The furious folly of the men who tried to burn Paris was no more to her than a nightmare. She wrote in 1871: "People say that we are going to fall under the rule of the Jesuits; I do not believe them so dangerous. I believe in dry, cold, and limited liberalism; it will not be an ideal, but we must accept it, or die in the mud and blood of the *Internationale*." This is the keynote of the correspondence immediately after the dark days of the Commune. But we shall see how the elastic mind of Mme. Sand soon returned to her cherished illusions and doctrines.

Correspondence.

MR. EDMUNDS'S OPINION OF MR. BLAINE.

To the Editor of The Nation:

Sir: The opposition in Vermont to the nomination of Mr. Blaine was to a great extent caused by Senator Edmunds. He has not hesitated to say that Mr. Blaine would be an unworthy and unfit candidate. Before the National Convention met in 1880, Senator Edmunds was urged by his friends in Vermont, who were opposed to a third term of General Grant, to allow them to present his name as a candidate. But he earnestly protested against it because, as he said, he did not want it, and also because he did not wish to weaken the support of General Grant, for it was necessary to strengthen Grant in order to prevent the nomination from going to Blaine.

His position and reasons for it were well understood in Vermont at the time. To one Vermonter who was prominent in opposing the third term, Senator Edmunds said that, however objectionable General Grant might be to any Republican, there could be no hesitation in decid-

ing between Grant and Blaine by men who knew as much as he did about the latter. He said: "If Mr. Blaine is nominated, we shall be obliged to defend him against charges which we know to be true." He intimated to this person, as he has done to other friends in Vermont, that he knew worse things about Mr. Blaine than had been published. Both in his conversation and correspondence Senator Edmunds has earnestly protested against the nomination of Blaine, basing his opposition to it upon his own knowledge of Blaine's conduct and character as a public man.

To people who have unlimited confidence in Senator Edmunds's integrity the representations which he made concerning Mr. Blaine could not fail to produce a strong impression, and these representations more than anything else turned the popular sentiment of the State, which was strongly in favor of Blaine in 1876, as strongly against him. The people reasoned in this way: "We have no personal acquaintance with Mr. Blaine, but Senator Edmunds has, and he would not say that Blaine is a corrupt man, a jobber, and the friend of the corporations which are trying to defraud the Government unless he knew it to be true; and we will take his word for it." And thus they became hostile, as the press of the State has clearly shown, to "the man from Maine." L. L.

August 28, 1884.

THE READING OF THE MULLIGAN LETTERS.

To the Editor of The Nation:

Sir: Mr. Schurz, in his recent speech, says of the Mulligan letters that Mr. Blaine "himself read them to the House of Representatives," and that he "did not permit the letters which he read to pass into the hands of the officers of the House so that their contents might have been verified. He promptly put them into his own pocket again and carried them away." But you said at the time that he "had them read by the clerk" (*Nation*, June 8, 1876). This is an unessential difference, so far as the letters published are concerned, which are certainly enough to condemn him so long as he persists in refusing to explain certain things in them. It is not unessential, however, if we are allowed to infer that the letters as published are not complete or authentic, and that the most damaging parts may never have seen the light. Will you inform your readers whether Mr. Schurz's statement is correct, and if so, how and in what shape the letters came to be published?

Again, in the extract from the Boston *Herald* in your paper for August 21, it is said that "several attempts have been made to buy these letters of Mr. Mulligan." What letters? Has he still letters in his possession, besides those stolen from him by Mr. Blaine? A.

[The *Nation* was in error. According to the contemporary report in the *Tribune* (issue of June 6, 1876, p. 5), Mr. Blaine, after holding up the package and saying, "I invite the confidence of 44,000,000 of people, and I will read these letters," "thereupon proceeded to read and to make passing comments upon and explanations of various points in the several letters." At the instance of Mr. Glover, Mulligan's memorandum was read at the clerk's desk.

We refer to Mr. Mulligan himself the second part of our correspondent's inquiry.—Ed. Nation.]

THE VOTER'S CRITERION.

To the Editor of The Nation:

Sir: I have not seen pointed out anywhere the close parallel which exists between Blaine's use of official position for private gain and the conduct of the bank officer who engages in private speculation with the funds of the bank. The one takes advantage of the great political trust which has been committed to him to make money for himself by betraying his trust; the other takes advantage of the great commercial trust which has been committed to him to make money for himself by betraying his trust. There is no essential difference between the two. Now, any close observer of public morals must recognize that this readiness to betray commercial trusts for private gain is one of the most rapidly growing and dangerous evils of the present generation. Is any conscientious man willing deliberately to cast his influence and vote in favor of declaring to the youth of to-day that the American people stand ready to forgive and forget such betrayal, and to load the betrayer with honors and gifts if only he is brilliant and successful, and to bear his share of the responsibility for the increased moral corruption which must follow?

A very considerable body of conscientious men answer this question with a most emphatic No! But they go on to add: "The moral influence of the election of the other candidate will be equally bad. It is admitted that at one time he lived an impure life. Personal impurity is one of the most dangerous evils of the present day. By electing him we shall say to the rising generation, 'If your political or business character is above reproach, we will commit to your hands sacred trusts and load you with public honors, although we may know your private life to be corrupt and impure.' Such a declaration will be inevitably followed by a great increase of private corruption, and the responsibility for this we positively refuse to assume." Whatever sound objections may be made against this statement of the case, it is unquestionably the position taken by thousands of conscientious men in all quarters of the land. They will vote for neither candidate, and if this were a full statement of the case, they might be right.

It is certainly the worst that can be said against Cleveland's election. But when we have pointed out the equally dangerous moral influence that will follow the election of Blaine, have we said the worst that can be said against that election? Certainly not. Besides the influence of this election upon social morals stated above, its influence upon the problem of government in the United States must also be taken into the account. We believe that we are working out here a problem in free self-government whose successful solving, if it be successful, will be of immense value to the civilization of the world. No thoughtful man will dare to say that success is at present assured. This question, then, is of primary importance in this campaign, of importance to the whole civilized world, and no man has a right to dodge it. Given to follow our present political situation, on the one hand, four years of such methods and results as the past record of Blaine leads us to expect from him as President, and, on the other hand, four years of such an administration as we have a right to expect from the political record of Cleveland, and what will be the influence of the one on the future Government of the United States and all that that involves, compared with that of the other? This is not a question of mere political expediency; it is one of vital significance. Let any conscientious man set before himself the alternatives stated in the first part of this letter and add to them the consideration suggested in this paragraph, carefully thought out, and see if he can justify himself on moral grounds in refusing to vote—or rather in leaving it to blind circumstance to determine for which one of the two candidates he shall be counted—which is what every one really does who refuses to vote.

Preston.

August 26, 1884.

THE MOTE AND THE BEAM.

To the Editor of The Nation:

Sir: This Presidential campaign seems so fairly teeming with moral anomalies that they must become wearisome to you, yet the following instance of ethical blindness is so particularly sad that I send it:

During a political talk the other Sunday with a friend of mine, he paused to forbid his children from their game of tennis. While admitting the harmlessness in itself and as an amusement for *them*, he said: "I cannot allow the country boys to think from your example that we regard Sunday as a day for mere pleasure."

Struck by this rather stern tribute to the power of example, my amusement was complete when he went on to say that while he believed Mr. Blaine to have been thoroughly dishonest in his dealings, yet the country could afford to overlook this in its need for a statesman, and should accept him as vouched for in the future by "the party of moral ideas"; and as far as he could, he would certainly work for his election! Could bathos be more profound?

The man, however, is a leader in his way—much respected and admired for his wealth and undoubted ability, but above all for his simple earnestness in what he believes his personal duty. He simply *cannot* see that while his children's example in an innocent game *might* bring about an indefinite wrong, *his* example as a confessor, harborer, and abettor of public knavery is infamous to his own generation, and leaves to these same children a legacy of approved corruption.

This story speaks for itself; but it must be with profound sorrow that one is forced to believe that upon the eyes even of some of the best moral cataracts have formed, resulting in cases of such well-defined ethical blindness.—I am, yours truly, C. B. Newbold.

Jenkintown, Pa., August 27, 1884.

THE GREELY EXPEDITION.

To the Editor of The Nation:

Sir: The reason why so much indignation is felt in regard to the Greely business is founded on the secrecy and concealment maintained over the remains of the dead. Studied concealment is generally indicative of fraud; and fraud, under the circumstances of this case, raises the presumption of crime. No sane mind will impute to Lieutenant Greely's fault that he and his party were reduced to the horrible resource of cannibalism, but the preconcerted scheme for concealing the dead bodies, together with one or two other circumstances, excites the suspicion of foul play. There was no necessity, in order to shield the dead from scrutinizing gaze, for enclosing them in heavy boiler-iron coffins, fastened with forged rivets set in lead. Good metallic burial cases could have readily been procured at St. Johns, which would have permitted a view of the features to relatives or friends disposed to look upon them, without exposure of the remainder of the bodies. Why, then, enclose them in such a manner that none but the cold chisel and the blacksmith's hammer could uncover them? In the reported interviews with Lieutenant Greely, he has had the temerity to resort to

an evasion in alluding to the charge of cannibalism. No one would expect him to avow it publicly, but the subterfuge that "no case of cannibalism came under my observation" is as bad as, if not worse than, an absolute denial.

But the worst feature yet come to light is the treatment of Lieutenant Kislingbury by his commander. After the departure of the *Proteus*, in August, 1881, when Kislingbury, having failed to get on board of her, had returned to Fort Conger, Greely not only suspended him from duty for a limited time (as possibly he had a right to do), but kept him suspended during the whole period of their sojourn at Fort Conger. This he would not have dared to do had they been within reach of superior authority. This action, of itself, was sufficient to breed dissension and excite bad blood. There must necessarily have then been two opposing parties in the expedition. Even if Greely's conduct were approved by Lieutenant Lockwood and the men (a most improbable supposition), Kislingbury was there, sullen, soured, and at bay. But most likely the latter had his supporters; and if that were so, they must have been hostile to Greely and the rest of the party. So long as sufficient food continued, such hostility may have been restrained within the bounds of decency; but after the food had failed, who can imagine the probable pandemonium that ensued? One man, it is acknowledged, was shot—for thievery, it is said. Is that true or untrue? If untrue, how many others were shot and killed, and upon what pretext and for what purpose? These are questions which none but a thorough and searching investigation can answer. The Government and people of the United States owe it to themselves and to the civilization of which they boast that such investigation should be made. JUNIUS.

August 24, 1884.

THE "CHATTERBOX" CASE.

TO THE EDITOR OF THE NATION:

SIR: The "Chatterbox" case referred to in No. 1,000 of the *Nation*, together with the *Nation's* remarks thereupon, is apt to be misunderstood by those who are not familiar with the differences between a trademark and a copyright. These differences are fundamental, depending, as they do, on the fact that, while the right to a trademark is given by the unwritten law which is common to England and the United States, copyrights are secured by the statutes of the United States in the United States, and of England in England.

By the common law there is no property in a literary production after it has been published. An author has a right of property in his manuscript which will be protected by a court of equity, but if he publishes his work, he thereby dedicates it to the public and gives the public the right to reproduce it. Our copyright laws were passed to make up for this alleged defect in the common law, and to enable an author to secure for himself for a time the exclusive right to publish his works. Our statutes have, of course, no power to protect him in England, and can have none except by treaty.

On the other hand, when a manufacturer had put a particular mark on his goods, he had by the common law a right to the exclusive use of that mark; and a court of equity would restrain any one else from using it, not so much to protect the individual as to prevent deceit upon the public. In a case of this kind it makes no difference whether the manufacturer is an alien or a citizen, or whether the trademark originated abroad or at home. (Taylor v. Carpenter, 3 Story, 458; S. C., 2 Wood. & M., 1.) In this case the plaintiffs were manufacturers in England of "Taylor's Persian Thread," and the defendant, in America, imitated their names, trademarks, envelopes, and labels, and placed them on thread of a different manufacture. The Court granted an injunction, and said: "An alien friend can bring, when injured, any personal action which a citizen can. And though he is not admitted to the same political and municipal rights which citizens are entitled to, the protection of his person and property against frauds and wrongs is due and is just. When, therefore, the marks to his goods are used by others, and sold by them on their goods as and for his, it is a wrong, and he is entitled to relief."

The decision, therefore, in the "Chatterbox" case was simply that the word "Chatterbox" is a trademark of certain manufactured books. On the same principle, although the inventor of an unpatented medicine has no exclusive right to make and sell the same, yet, if others make it, they must not sell it as the manufacture of the inventor nor adopt his label or trademark, nor one so nearly like it as to deceive the public.

Now as to Tennyson, Macaulay, etc. Just so far as Tennyson is a manufacturer of poems he would be protected here. That is to say, no one would be allowed to write poems and, signing them "Alfred Tennyson," publish them in such a way as to deceive the public and pass them off as Tennyson's. And, though there is nothing to prevent the publication of Tennyson's poems after they have been published in England by any American house, yet the American house cannot use the peculiar marks, names, etc., of any foreign publisher.

DAVID STEWART.

BALTIMORE, Md., August 29, 1884.

[Our correspondent may be right as to the grounds of the decision. In the particular case, however, the effect of it is to give a copyright protection.—ED. NATION.]

Notes.

WALTER BESANT'S lecture on the 'Art of Fiction,' of which we gave some account in July, has been reprinted as a pamphlet by Cupples, Upham & Co., Boston. The same firm have in preparation 'Rambles in Old Boston,' by the Rev. Edward G. Potter, illustrated by George R. Tolman—a quarto volume; 'Mortals in the Fairy Realm: a Translation into Verse of the First Three Sonatas by Beethoven,' by Miss Clara L. Wells; 'Sibylline Leaves,' an illustrated quarto; 'Heidi: Her Years of Wandering and Learning,' from the German of Johanna Spyri, by Louise Brooks; and 'Moonshine,' a novel, by Frederic A. Tupper, a recent Harvard graduate.

'Sayings, Wise and Otherwise: a Collection of Wit and Wisdom of Proverbial Philosophy,' by Marshall Brown, just published by J. B. Lippincott & Co., of Philadelphia, is a reprint of 'Wit and Wisdom of Proverbial Philosophy: Odd Comparisons,' by Marshall Brown, issued by the same publishers in the fall of last year, with the date of the present year on the title-page. The fact of its having previously appeared under a different title is not mentioned in the new issue of the book. Messrs Lippincott have in press three editions of Shakspere's 'Seven Ages of Man,' in which one may choose between wood-engravings after seven American artists and photogravures from their original drawings; and 'Our Young Folks' Josephus,' uniform with the Plutarch of last year.

Cassell & Co. announce 'Life and Labor in the Far, Far West,' a tourist's diary, by W. Henry Barneby; 'Photography for Amateurs,' by T. C. Hepworth; 'Principles of Perspective,' by George Trowbridge; 'Workingmen Coöperators: What They Have Done and What They Are Doing,' by Arthur A. Dyke Acland and Benjamin Jones; and 'Simon Peter: His Life, Times, and Friends,' by Edwin Hodder.

Funk & Wagnalls will publish immediately Joaquin Miller's drama, "'49," which has been considerably changed by the author; and 'A Yankee School Teacher in Virginia,' by Lydia Wood Baldwin, whose experience was of the reconstruction period.

G. P. Putnam's Sons have reissued in cheaper form, among their "Knickerbocker Novels," 'Hand and Ring,' by Anna Katherine Green.

Harper & Bros. also have issued an American edition of the first volume of Ranke's 'Universal History,' already noticed by us in the Scribner edition. The print is large and the volume handsomely bound.

Part 2 of Stormonth's English Dictionary, now publishing in the Franklin Square Library, reaches the word *bridge*.

The Orange Judd Co. will bring out this month 'The Forester,' a practical treatise, by James Brown, Inspector of Woods and Forests, Benmore House, Port Elgin, Ontario.

Thomas Whittaker will issue soon the volume of sermons by the Bishop of Peterboro, Dr. Magee, recently published in London. Its title is 'The Gospel and the Age.'

Mr. George William Curtis's memorial address on the late Wendell Phillips has, together with the other municipal proceedings, been elegantly printed by the city authorities of Boston. A steel portrait is prefixed to the volume.

The *Library Journal* for August does a good service in reprinting the substance of Mr. G. F. Winchester's report to the Trustees of the Free Public Library of Middletown, Conn., of which he is librarian, together with his tabulated statistics of thirty-six free public libraries in the United States. His own institution is endowed, but on that account seems to be unaided by the public, although its income barely meets expenses, exclusive of the purchase of books. Happily, this appears to be an exceptional case.

Circular No. 2 of the Bureau of Education, on the 'Teaching, Practice, and Literature of Shorthand,' gives twenty pages of tables to show where shorthand is taught. Nothing is said of the practice. A bibliography of American and English works on the subject takes up two-thirds of the volume, and is the most valuable portion.

Dr. Harrison Wright, of Wilkesbarre, Pa., has followed up his translation of L. Delisle's exposure of the stolen MSS. in the Earl of Ashburnham's collection with a brochure in which he prints a list of the libraries and newspapers favored with a copy of it. He adds the press comments, so far as they came under his observation. The American market for these MSS. must now be considered not good.

The Engineer Department, U. S. A., has just published Major David Porter Heap's report on the International Exhibition of Electricity held at Paris from August to November, 1881. A curious chapter is that describing Doctor Kaiser's dynamo-electric torpedo alarm, for indicating magnetically the presence of iron-clads over mines.

The Cincinnati Relief Committee have issued a pamphlet report on the flood in the Ohio River last February. Like its predecessor last year, this little volume is worth preserving as a memorial of public spirit and benevolence in a great emergency, no less than as a history of the event itself. It appears that the inconvenience was, thanks to past experience, greater than the loss; and that there is reason to expect ultimate exemption of the gas and water supply, if not of the railroad communication, from interrup-

tion by the annual overflow. The river business must always suffer.

Mr. Wm. B. Weeden's suggestive paper on "Indian Money as a Factor in New England Civilization" has been reprinted as No. 8–9 of the Second Series of the *Johns Hopkins University Studies.*

The sterling value of the series being notorious, the 'Annual Register' for 1883 (London: Rivingtons) calls for no special remark, unless the absence of the full text of public documents be noted; but in this matter the editor cannot go beyond his supply, and the year was not one of great Parliamentary achievement. The regular departments in Part II. are well represented—The Chronicle of Events, the Retrospect of Literature, Science and Art (Literature and Art in England only), and the Obituary of Eminent Persons. About one-third of the volume is devoted to British politics. Reviewing the state of parties in the United States at the close of 1883, the editor discerned "Sherman of Ohio" as almost the only one among the old Republican "coterie of leaders" who "was still actively posturing as a Presidential candidate." Blaine was not visible to him, and no wonder, as the Plumed Knight was pipe-laying and not "posturing" at all; nor did the editor hear any mention of Governor Cleveland among the Democratic candidates, and we do not think he should be charged with deafness on this account any more than with blindness on the other. His record is correct as it stands, and the situation into which we were plunged in June was as great a surprise to most of us as it could be to any foreign on-looker.

We have received from the office of the Colonial Secretary, New South Wales, a simple map of that colony, designed to meet the wants of intending emigrants. The space on the back, at the sides, and on the cover has been well utilized by means of other views, maps, statistics, and graphic charts. This example might commend itself to any of our Southern States or Western Territories which seek a larger population.

In the Transactions of the Royal Historical Society for 1883 is a valuable bit of diplomatic history, "The Triple Alliance of 1788," by Oscar Browning, M.A., of King's College, Cambridge. The paper is based upon the diplomatic correspondence of the time, chiefly upon the despatches of Sir James Harris, afterward Lord Malmesbury, preserved in the Record Office. The alliance negotiated by Sir James between England, Holland, and Prussia was primarily for the security of Holland against French agressions and for maintaining the Stadtholder against the revolutionary Estates; but it is also important as marking the reëstablishment, under the younger Pitt, of England's diplomatic influence with European powers, which had utterly deserted her during the war of the American Revolution. The alliance, again, was important for Prussia and Europe in general, because this combination of two great maritime powers with the chief military State controlled for a time the diplomatic situation. It checked France in Holland; made peace for Austria and also for Russia with the Porte; secured the Netherlands for Austria; and was really the historic germ of the great coalitions against revolutionary France, which began her conquests in the very regions the Triple Alliance of 1788 was designed to protect. The most striking part of Mr. Browning's study is that describing the way in which Sir James Harris succeeded in removing the Prussian King from French influences at his court, and in making the alliance directly with this sovereign, Frederick William II., without the intervention of his advisers—a rare triumph for English diplomacy.

Since issuing his critical commentary on the Psalms (2 vols., 1882–3), Professor Graetz, of the University of Breslau, has published in his *Monatsschrift für Geschichte und Wissenschaft des Judenthums* (1883) a long series of "Exegetical Studies on the Prophet Jeremiah," and he is now contributing to the same periodical "Exegetical Studies on the Proverbs of Solomon." These labors of the veteran Jewish historian are purely emendatory, and characterized by the same ingenuity and self-asserting positiveness which by turns strike and shock the student of his larger works, exegetico-critical or historical. Of some chapters of the Proverbs very few verses escape emendation at his hand, and every correction is offered as the only possible one. The references to what others have done before him are, as usual, scanty and generally aggressive. The editorial control of the learned *Monatsschrift* is now shared by Dr. P. F. Frankl, of Berlin. The *Zeitschrift für alttestamentliche Wissenschaft*, edited by Professor Stade, of Giessen, the scope of which is more limited and the scientific level rather higher, has just completed its fourth volume (*Jahrgang* 1884). Among the contributions to this volume are articles by the editor, Smend, Nestle, Nowack, Budde, and other Protestant scholars. Of the books of the Old Testament, Isaiah and Micah receive special attention.

The American Art Association, whose galleries are at 16 East Twenty-third Street, has obtained subscriptions toward a fund of $15,000 sufficient to insure at least three prizes of $2,500 each being awarded at its exhibition next March. A committee of ten or more gentlemen will decide upon the best paintings by American artists, and those thus honored will become the property (by lot) of the chief art museums of the country, being duly labelled as prize pictures.

Among the art institutions already interested in this scheme is the Chicago Art Institute. From the same city comes to us a circular issued by the Apollo Musical Club, which offers prizes of $100 and $50 for the two best four-part songs, with English text, for male voices unaccompanied. The conditions are, that composers must be now resident in America, and that the songs (occupying not more than eight minutes in performance) must be sent to the Chairman, Mr. Philo A. Otis, at No. 152 La Salle Street, on or before January 1, 1885. A sealed letter, with a return address, must contain the real name of the author, the MS. being signed with a fictitious name. The examiners will only learn the name of the successful competitor.

—The American Historical Association, which is to be organized this year in connection with the Social Science Association, will hold its first meeting at Saratoga in Putnam Hall on Tuesday, September 9, at 4 P. M. After a preliminary session, the friends of the new organization will adjourn for subsequent meetings, during the Social Science Convention, at such time and place as may be most convenient. Communications are expected from Professors Charles Kendall Adams, of Michigan University, and Moses Coit Tyler, of Cornell, and from representatives of Harvard, Yale, and Johns Hopkins. President Andrew D. White, of Cornell University, will be present at the meeting of the Association, and has been invited to address it. Dr. Frank Austin Scott, Professor of History in Rutgers College, and for a long time associated with Mr. George Bancroft, will present a paper upon "The Law of Constitutional Development in the United States." Other communications upon the progress of historical research in this country will be announced at the first meeting of the Association. It is hoped that this organization of American students and teachers of history will prove highly advantageous, not only for the promotion of historical study in new and profitable lines of inquiry, but also for the widening of acquaintance and good-fellowship among workers in the same field. It is not so much the reading of papers that advances science in these American and British associations—it is the association itself; it is the meeting of men and the exchange of ideas.

—The full text of Lord Rayleigh's address as President of the British Association contains much that is of interest, in addition to his review of the recent progress in physics. Some of these points have escaped general comment. Among other things, we notice his hearty commendation of American workers in the departments of science to which he is himself devoted —Willard Gibbs, Michelson, Graham Bell, E H. Hall, and Rowland being mentioned by name. He speaks of the magnificent gratings of the latter as "triumphs of mechanical art which seem little short of perfection," and of Gibbs's theory of the equilibrium of heterogeneous substances as "wide in its principles, and doubtless far-reaching in its conclusions." Americans are sometimes annoyed that their work attracts so little attention abroad; Lord Rayleigh evidently watches their investigations with an appreciative eye. So did Clerk Maxwell, his predecessor, to whose early encouragement two at least of the Americans above named were greatly indebted. Lord Rayleigh makes a pointed reference to the rapid accumulation of printed matter in these days—so rapid that there is danger of indigestion. By a fiction, whatever is printed in any language of Europe is spoken of as "known," when it may be more difficult to make a rediscovery in the library than it was to make the first discovery in the laboratory. The uncut pages of scientific transactions in our libraries too often confirm this sagacious remark, and give weight to his recommendation of abstracts and reports, as index-posts to elaborate memoirs. Toward the close of his address, Lord Rayleigh makes some remarks on education which are an authoritative contribution to the discussions of the last few months. While saying that he does not take the extreme position of those who think it "almost monstrous that the dead languages should hold the place they do in general education," he believes that French and German, properly taught, would go far to supply the intellectual discipline of the classics, and would yield acquisitions incomparably greater. History and English literature would supplement the literary training of those whose attention was chiefly directed to science and mathematics.

—The first article in the July *Antiquary* is an interesting paper by Rev. Precentor Venables, on "The Rules of the Carthusian Order, illustrated by the Priory of Mount Grace," in Cleveland, in the North Riding of Yorkshire. This monastery, founded by Thomas Holland, Duke of Surrey, nephew of Richard II., is the only well-preserved example of the monasteries of this order to be found in England. The order, indeed, was never popular in England, on account, as he says, of its extreme severity of discipline, and this country contained only nine Carthusian houses. It may be, indeed, that the unpopularity of the order in England was due to its want of practical or public beneficence, its object being "not the care of other people's bodies [as in the case of the Benedictines and especially the Cistercians], but the eternal salvation of their own souls." For this reason the Carthusian system was not, like that of other orders, purely cœnobitic, but combined with this the life of a hermit. "There was no common dormitory, no common day-room, no com-

mon workshop"; every monk lived as a hermit. As a consequence, "a Carthusian house is unmistakable: it can never be taken for anything but what it is." Its chief feature "was a succession of small cells—cottages, we may more properly call them—each of which was the separate residence of a single member of the confraternity." The general introduction is followed by an elaborate account of the remains of this monastery. The other articles have for the most part no especial value, although they contain much interesting detail. They are: "On Field-Name and Toponymical Collections," by F. E. Sawyer; "The Adelphi and its Site," by H. B. Wheatley; "The Coins of Venice," by W. Carew-Hazlitt; "Scarborough Corporation Insignia," by R. C. Hope; Part 1 of "Forest Laws and Forest Animals"; notes on rejected bills in Parliament; and a paper upon the birthplace of Joseph Addison. The paper upon "Forest Laws" promises to lead to a very important discussion, although most of the present article is familiar ground.

—J. W. Davis's "Glance at the Hungarian Capitals," in the September *Manhattan*, is a very attractive sketch. In the two or three days which the writer spent in Presburg—which *was* a capital—and in Buda-Pesth he can be said to have seen a good deal, and he renders his observations and impressions in a lively and sympathetic way, lacking neither color nor precision. He talks pleasantly about sights and monuments, ancient legends, strange popular costumes, gypsies and gypsy music, and the prowess of "the wild sons of the Puszta," or great treeless plain—of whom he only heard or read, however—about royal castles, national institutions, and famous patriots. Among the "distinguished-looking men, handsome in face and dashing in figure, in the magnificent dress of the magnates of Hungary," whose pictures he saw on the walls of the Academy in Pesth, he was struck by the appearance of Count Stephen Széchenyi, whose name is connected with the grandest institutions and structures of the capital. He seemed "the impersonation of that fine, passionate love of country which pervades the very atmosphere of Hungary." Widely different is the portrait, reproduced among the illustrations of the sketch, of "a plain, bourgeois-looking man, dressed carelessly in simple black, without even a ribbon in his buttonhole. His hair falls carelessly over his forehead, his small eyes look piercingly out from under his bushy eyebrows, and the whole figure gives the impression of character and force." It is Francis Deák. The tourist echoes the judgment of history when he says of this lamented statesman: "Calm, passionless, clear-sighted, and wise as the ancient sages, no one could have been better fitted to lead the councils and moderate the passions of the fiery, impetuous Hungarians." Less correct is the exceedingly flattering opinion expressed about Maurice Jókai—whose photograph is also copied—as a novelist. The often repeated name of this popular writer and liberal politician is unfortunately uniformly changed into "Johai" by the compositor, who, among other blunders, turns Kont von Hédervári into "Kout von Hédésvoái." The author is responsible for the superfluous "von," as well as for the Germanisms "Ofen" (instead of the Magyar and English Buda), "Franz" Deák, and "Alanen," and some other slips. Deák cannot be called "the late minister of Hungary"—he was in the Cabinet in 1848—nor was he ever "at the head of the state."

—A further instalment of articles by English playwrights on their art shows more conclusively than ever that there is no such thing as a collection of rules for play-writing, hardly even a consensus of opinion among play-writers on the most general principles to be followed. Mr. Hamilton Aidé writes advocating collaboration, and especially that kind of collaboration in which one of the partners is a man of letters and the other an actor and stage-manager. It is well known, he says in support of this opinion, that the plays of the late Lord Lytton owed their success very greatly to Macready's keen perception of what needed alteration or excision, and equally well known in theatrical circles that the failure of certain clever plays of late years (alluding, possibly, to works of Mr. Herman Merivale) was owing to the author's rejection of any suggestions on the part of the "management." And Mr. Henry Pettitt, whose principal successes have been secured in collaboration with Mr. Augustus Harris, actor, stage-manager, and proprietor of Drury Lane Theatre, gives as one of the rules of his art, "Listen to every suggestion made by manager or actor during the rehearsals, and accept every idea that is sensible, useful, and practicable." On the other hand, Mr. Herman Merivale writes to the precisely opposite effect. It is, he says, a great misfortune for the English drama that while nearly all French managers are literary men, whose sympathies, therefore, lie with literature, in England nearly all are actors, who do not profess to judge it. Hence, he adds, with very doubtful logic, the popularity of French adaptations and revivals of old successes. Mr. Merivale has appeared in print more than once in defence of his own "literary" plays, and this may be the explanation of his views concerning actor-managers, but most people will be inclined to attribute the popularity of French revivals to quite other causes. According to Mr. Merivale, play-writing has already once been taught systematically. Scribe, he avers, gave lessons in the art of technical construction, showing how a central idea or situation is the first thing wanted, and then how the "scenario" of the play is to be built up to, and down from, and around it, till it is ready for the writing. Scribe would place one of his complete plays in a learner's hands—and this is perhaps the most practical piece of advice that the whole discussion has produced—and tell him to pull it to pieces and deconstruct it, till he found the central starting-point, and could show how the construction was done. And Mr. Merivale states that he knows of one of the elder English dramatists who really learned how to make a play in that way from one of Scribe's collaborators, and learned it well. The same process of analysis may be applied to Sardou, in whose dramas the strong situation may always be looked for as a mathematical certainty at the end of the last act but one. The earlier acts get the personages into the necessary fix; the last hurries them out of it as fast as may be and produces anti-climax, though too quickly finished with to hurt success. Once or twice only, Mr. Merivale thinks, has Sardou risen to the power which produces the appearance or reality of spontaneity, and reserved his strongest impressions for what is surely their true place—the end of the play. Scribe's and Sardou's plays are to be had everywhere, so that this method of self-instruction may be tried by any aspirant for dramatic honors, and it can hardly fail to be very instructive, although by itself it will probably not quite suffice to make a playwright of him.

—It would not be easy to name another country where the production of poetry receives so much encouragement as it receives in Greece. This encouragement is due partly to the premiums awarded by the University of Athens in various poetical competitions, and partly to the readiness of rich Greeks to pay for the printing of the verses of penniless poets. The sense, thus shown, of the importance of national poetry and the desire to foster its development are creditable to the Greek people, but there is danger of over-production. Most modern Greek poetry is rhymed verse, and rhymes are only too easy to make, and are very apt to be monotonous, in a language where six different vowels and diphthongs are pronounced like *i* in *machine*. The volume of poetry which we now notice is of decidedly the better sort. It is a large octavo of 310 pages, entitled 'Ἀτθίδες Αὖραι' ('Attic Breezes'), by Γεώργιος Μ. Βιζυηνός (George M. Visyenos), and is published by Trübner & Co., London. It is beautifully printed on hand-made paper, and is bound in antique style in imitation of binding of the fifteenth or sixteenth century. The sides of the cover are of yellow, the back and corners of white parchment. The book, as a whole, is an exceedingly beautiful specimen of the printer's and binder's art, and is made still more attractive by a graceful etching which forms its frontispiece, the work of Alphonse Legros, the Professor of Painting in University College, London. The price of the book is not excessive, considering the quality of the materials and the workmanship, but it will be likely to limit the sale. The volume contains about a hundred poems; of these the most are lyrics, in some of which the manner of Heine has been well imitated, but there are also a fair number of narrative poems, in which some popular myth or saint's wonder is worked up with considerable skill. The poems give a good idea of the subjects which are most congenial to the modern Greek muse, and of the range of her flight.

—The *Saturday Review* recently published an article on short stories which, while agreeable and suggestive, is not, we think, altogether right in its conclusions. The writer is surprised that in England, which manufactures more fiction than any other country, "short stories" should be conspicuous by their absence. To maintain this view, he is obliged to assume that the term is so limited in its application as to include only a small portion of the stories which are short. The idea connoted by short story, he says, precludes that of love story, and he goes on to show by his illustrations that what he understands by "short story" is not a story at all, but an imaginary character sketch, or episode, which may be fantastic, extraordinary, dreadful, or even absurd, but which in any case must not, judged by the standards of every-day life, be natural. As masters of the "short story," as he understands it, our writer mentions no British author, but accords preëminence to Poe, Hawthorne, and Mérimée, omitting, it will be noticed, Björnsen—the author of what are probably the most perfect idyls in any tongue—as well as Turgeneff, who has written the most admirable bits of fiction produced in our generation, and the latter's countrymen, Pushkin and Sollohub, whose tales, though they do not always call forth the reader's sympathies in an equal degree, are distinguished by perfect literary art. The tales with which the British magazines are filled are here termed chapters of uncompleted novels, a remark which the writer would find hard to reconcile with the common and, it seems to us, accurate description of the works of many minor novelists as short stories artificially spun out, and thereby ruined, to suit the exigencies of the three-volume novel.

—Short stories, the reviewer remarks, are as common in this country as they are uncommon in his own, though the number of magazine stories is of course much larger in England. Agreeably to his theory that British stories are merely novels *manqué*, while with other nations, espe-

cially Americans, they are a distinct and perfect form of literary expression, he accounts for the fact by the supposition that Americans prefer stories to novels. This, we think, is altogether an error. In the first place, Americans do not prefer short stories, as is shown by the enormous number of British novels circulated among us; and, in the second place, tales of the quiet, domestic kind, which form the staple of periodicals like *All the Year Round* and *Chambers's Journal*, have here thousands of readers, where native productions, however clever and original, have only hundreds, since the former are reprinted by the country papers and in the Sunday editions of city papers as rapidly and regularly as they are produced at home. As to the magazines, the infrequency of novels is, we take it, due simply to the fact that the editors cannot get them; and the relatively large number of short stories is due to the same causes which make novels scarce—namely, that our writers wisely make the best of what materials they have, and, in view of the impossibility, in most cases, of producing acceptable novels, or even such simple tales of middle-class life as abound in the British magazines, they are fain to make cabinet pictures instead of landscapes; and the further afield they go in search of the startling and picturesque, the easier they find it to produce "studies" which are certain to attract notice by their loudness of color, but which often hold the attention thus obtained by the real ability, and sometimes, as in the case of Messrs. Harte and Cable, the sympathy, with which the subjects chosen are handled. It is pleasing to find a *Saturday Reviewer* disposed to admit that Americans can reach perfection in any intellectual effort; but we should not forget that England is the only country in which, since Fielding's time, have been produced an unbroken succession of novels dealing with the actual life of the better portion of the people, which, by their truthfulness, healthfulness, and humor, as well as often by the genius displayed in them, have materially contributed to the soundness of British society and the respect which it inspires abroad. British novelists have not to depend for material on the corruption of a court or of a prolétariat, nor are they driven by the Philistinism of the life around them to bury themselves in the imaginary feuds of Pharaohs or Cæsars. And along with their novels, which often are too long, they delight all those who love simple and natural fiction with short stories, which, if not abnormally clever and the reverse of startling in local color, happily take up the leisure not only of idle youth, but of tired men and women, throughout the reading world.

—There is a large output of new popular physiologies, and text-books much in advance of the older works on this interesting subject abound. We have already noticed several, and now two more are on our desk: 'The Eclectic Physiolcgy,' by Dr. Eli F. Brown (Cincinnati: Van Antwerp, Bragg & Co.), and 'The Essentials of Anatomy, Physiology, and Hygiene,' by Dr. Roger S. Tracy (D. Appleton & Co.). Both are good, and Dr. Tracy's work, like his 'Handbook of Sanitary Information,' is very good. Dr. Brown's remarks are not always happy, as when he defines the lungs (p. 82) as "two large soft lobes that fill the chest," and says (p. 137), "Disease is not something which comes upon us from the outside, but is the result of faulty nutrition or defective removal of waste matter"—which hardly explains the spread of measles and whooping cough, of smallpox and cholera, using these as types. He gives the advice, which it would appear difficult to follow, to "draw a wet woollen stocking over the head and face" as a protection in escaping from a burning house. It is curious that each author uses the same case, that of a man through whose head a tamping iron was blown, to illustrate exactly opposite conditions: one that the mind may be unimpaired after physical recovery from brain injury, the other that it is apt to be perverted. In this case, as generally, the latter was the fact. Dr. Brown's book is good, but greater care would have made it better. Dr. Tracy's is well expressed, clearly illustrated, abreast of the latest science, but not abstruse, and altogether worthy of study in schools and academies. Both books discuss at length the influence of stimulants, the 'Essentials' being the more temperate. If the rising generation sins against the body, it will do so with its eyes open. E. B. Treat, of New York, publishes the late Dr. George M. Beard's posthumous volume on 'Sexual Neurasthenia,' edited by Dr. A. D. Rockwell. The treatise is one that should be confined to a physician's library; but inasmuch as "neurasthenia" is translated in brackets on the title-page, we presume the publisher hopes for its circulation among the laity—to whom we do not commend it. The fitness of things is peculiarly observed when a native of India, Dr. D. N. Rây, prepares a homœopathic work on 'Cholera and its Treatment' (A. L. Chatterton Publishing Co.). This is presumably for his medical brethren, and professional discussion falls without our lines; although no one, perhaps, can help wondering how *lachesis* and *crotalus horridus* ever found therapeutic introduction anywhere. But as people will read every paper on the subject when the epidemic is imminent, it is proper to say that chlorinated lime is distinctly not fit to disinfect choleraic discharges, as recommended (pp. 72, 82). Such disinfection requires an acid not an alkaline agent. The index is a comfortable arrangement of medicines in groups, as "Remedies in Collapse," "Remedies in the Second Stage," "Remedies for Typhoid State of Cholera," etc., etc.—titles that imply a faith by the prescriber which we hope may be justified in the patient. The compilation does not appear to contain anything not heretofore known to students, nor is it of any particular value.

—Mr. Edward A. Freeman's American readers will be interested to learn that he has declared himself for the abolition of hereditary right in the constitution of the House of Lords. He took this stand, seemingly bold for an English historian, at what might be called a modern folkmote or town meeting, held recently in the open market-place in front of the Town Hall of Wells, with a wagon for his rostrum. Mr. Freeman presided over this meeting, which had been called in connection with the Mid-Somerset Liberal Association to "protest against the recent action of the House of Lords in virtually rejecting the Franchise Bill." The speaker took it for granted that some change must soon be made in the relations between the two houses of Parliament, and expressed surprise that the question had not been stirred years ago. He said there were now four different proposals with reference to the House of Lords: (1) Its utter abolition, (2) its limitation to a single veto, (3) its reform upon the present basis, (4) its reform by the substitution of a house of another character. Mr. Freeman opposed the first change as altogether too sweeping. The abolition of an upper house "goes in the teeth of a vast mass of existing European and American experience." The second proposal, which is advocated by John Bright, found even less favor with the English historian of politics, who maintained that the remedy for the bad working of this part of the Constitution lies, not in checking or degrading the Lords, but in reform. To Mr. Freeman the way of reform seems plain. "Do in this matter," he says, "as we have done in so much of the best legislation of modern days. Go back to the sound principles of our ancient law before the novelties of Toryism were heard of." The wisdom of the forefathers, in Mr. Freeman's opinion, was always on the Liberal side. The House of Lords, in its origin, was not an hereditary, but an official body; the Bishops are to this day a remnant of the original state of things. The King summoned to his council the great and wise men of his realm, those who held office or positions of dignity in Church and state. They were invited to appear in person; the people were asked to appear by their representatives from shires and cities. The notion of hereditary right to a seat in the House of Lords is, in Mr. Freeman's view, a usurpation. He stoutly maintains that there is nothing clearer in English constitutional history than the right of the Crown to create Lords of Parliament for life instead of for hereditary succession, nay, to summon them for a single Parliament only. He urges his countrymen to cast away the superstition of hereditary right, to reform the House of Lords on its old lines, and to strengthen "with new life the ancient assembly of our forefathers, the mighty gathering of the wise." He is clearly of the opinion that the reformed Lords, constituted by nomination or election, should not be restricted to the existing class. He says: "There have been times when the people needed the barons as leaders against kings who threatened both. But things have changed; the people can stand alone, and no longer need the care of a nurse or a tutor." The present attitude of the Liberal party in England with reference to the House of Lords is pithily indicated by John Morley's phrase, "Mend it or end it."

—In connection with the recent tercentenary festival at Emmanuel College, Cambridge, England, an interesting brochure has been published by Mr. E. S. Shuckburgh, the librarian of Emmanuel College. It consists of an account of Laurence Chaderton, D.D. (1536-1640), first master of the college, translated from a Latin memoir of Dr. Dillingham, one of his successors, and an essay on Richard Farmer (1735–1797), the master under whom the bicentenary of Emmanuel was celebrated. Chaderton was literally cut off with a shilling by his father while studying at Christ's—the most Puritan college before Emmanuel—for preferring to study the theology of the *Reformati* rather than law, and he became successively scholar, fellow, and dean of his college, and finally master of Emmanuel, when the latter was founded by his old friend Sir Walter Mildmay. Under his mastership the new college thrived greatly, and he seems to have inspired remarkable feelings of reverence and affection in the minds of a large number of eminent and noble persons. He was one of the translators of King James's Bible, and so pleasing a preacher that on one occasion when he had preached for two hours, and was about to leave off, having, as he said, tired his hearers' patience, the whole congregation is said to have cried out to him to go on, for God's sake. He was master for thirty-eight years, governing the college, his biographer says, "with the utmost fidelity, industry, prudence, and success," and adds: "As long as Emmanuel College shall stand, there will be Chaderton's statue in bronze or in gold." It is uncertain whether he died in his 102d or 104th year. Richard Farmer, D. D., the master of Emmanuel a hundred years ago, was a man of an entirely different stamp, fond of his glass and his pipe, and although a biblio-

maniac and profoundly acquainted with English literature, he left behind him no work of importance, except an 'Essay on the Learning of Shakespeare,' which is now rare and of which an account is here given. Mr. Shuckburgh's intimate acquaintance with the literature of the college has enabled him to gather together in this convenient form much information of importance and great interest concerning the history and influence of Emmanuel, that was previously scattered through a number of forgotten volumes or recorded only in the college books. The brochure is published by Macmillan & Bowes, Cambridge.

ARBER'S JOHN SMITH.

Capt. John Smith, of Willoughby, by Alford, Lincolnshire; President of Virginia, and Admiral of New England.—Works. 1608-1631. Edited by Edward Arber. [The English Scholar's Library, No. 16.] Birmingham: Published by the editor. 1884.* Crown 8vo, paper covers, 1,120 pages.

MR ARBER'S readers on this side of the Atlantic have noted with pleasure and satisfaction that the American portion of our common English literature is not to be overlooked in his admirable collections of reprints and exact texts. Some five years ago Prince's 'New England Chronology' made its appearance in Mr. Arber's *English Garner*. In a future volume of the same series will appear certain "Eye-witness accounts of the settlements in Massachusetts Bay." In another series, the *English Scholar's Library*, Mr. Arber announces the 'Works of William Bradford' and the 'Works of John Winthrop'; and it is in this latter series, moreover, that the present edition of Capt. John Smith's writings makes its appearance.

No one, perhaps, but an enthusiastic text-explorer like Mr. Arber would have undertaken the formidable task of reprinting the full text of these nine works, nowhere in any way abridged, though their almost unprecedented repetition of each other is well known. Yet the result is very much more than a literary curiosity. It makes it possible, indeed, to see how few of the incidents introduced in Smith's successive narratives lost anything in their second or third telling; but it also affords the historical student the opportunity of witnessing the gradual expansion of John Smith's conception of New-World colonization. No one can fail to be impressed anew in this volume with the characteristic thoroughness of Mr. Arber's researches. He has subjected "every one of the nearly forty thousand lines of this book to a most searching criticism." He has supplied marginal page-references at every turn, to guide the reader to such other parts of this composite volume as contain parallel passages or illustrative material. He has inserted dates with a most unusual freedom, and has thereby indicated not simply the time of publication, but the time to which the text relates. In those numerous instances where the accounts of other narrators are incorporated into Smith's narratives, the careful editor has studiously supplied at the top of the page the names and dates in question.

Mr. Arber's work has been done under the most favorable conditions as regards his materials. From Mr. Henry Stevens and son, of London, he has had the loan of original editions of Smith's various publications; but so thoroughly has he supplemented these by such other copies as possessed any noteworthy characteristics, that the bibliographical condition of John Smith's writings may here be studied as probably nowhere else. In the 'True Relation,' one sees at a glance the facts as to the three title-pages. In the 'Description of New England' the "extra page," containing Prince Charles's renaming of the coast (found in but few copies), is given in its proper place. In the 'Generall Historie,' the elaborately illustrated title-page and four maps are reproduced in facsimile. Nowhere have the facts in relation to the ten different states of the plate in which one of these maps (that of New England) is found, been more exhaustively recorded than in a memorandum representing the successive researches of the late Mr. James Lenox, of Mr. Charles Deane, and of Mr Justin Winsor. This memorandum Mr. Arber reprints, with due acknowledgment, from the 'Memorial History of Boston,' in addition to reproducing the map itself, which Mr. Winsor has justly pronounced "the real foundation of our New England cartography." The 'Generall Historie,' moreover, is shown never to have had any "pages 97-104"; the so-called "suppressed signature O" being proved a bibliographical myth by Mr. Henry Stevens. A complete list of Smith's various publications is furnished, arranged in the chronological order of their original issue; all the successive editions being entered in their own order. The question of authorship has been in each instance discriminatingly treated. Mr. Arber has been preserved alike from the error of Mr. Watt in 1824 and from that of Mr. J. Payne Collier in 1865, the former of whom credited the Virginia adventurer with two of the publications of another John Smith, while the latter declared the 'True Relation' to be none of Smith's composition. It should here be stated that on the reverse of each of the title-pages throughout the volume, the reader will find the bibliographical features of most interest briefly summarized. The pagination is continuous for all of the nine publications, but in every instance except the 'True Relation' (unpaged originally) the separate pagination is indicated by numerals of heavy-face type inserted in the text. In short, from a literary and bibliographical point of view, this admirable reissue of Smith's voluminous writings is almost beyond praise.

Thus to collect them in their literary and bibliographical integrity is one thing. It is quite another thing to establish, as Mr. Arber attempts to do, their unimpeachable character historically. The inherent difficulties in the way of such an attempt were never perhaps more clearly manifest than in these very pages, so painstakingly brought together by Mr. Arber. Of the counter arguments our editor is neither ignorant nor unmindful. In his preface, indeed, he courteously acknowledges that Mr. Charles Deane and other American scholars who have made "a life study" of the subject, "have probably forgotten more of this subject than [he says] we ever knew." Nor does he overlook the fact that a great part of Smith's narrative is of a distinctly *ex-parte* nature, and needs to be studied in the light of what was written by his contemporaries. He has therefore very properly brought together in his "Introduction" "all of the eye-witness testimonies of the state of the colony during the nearly thirty months our author was there." This comprises the whole of Wingfield's 'Discourse of Virginia' (printed in 1859 and 1860, with notes by Charles Deane); also the 'Relatyon of the Discovery of our River' (in Mr. Hale's reprint described as 'Captain Newport's Discoveries,' but here ascribed conjecturally to Gabriel Archer); also the valuable Spelman 'Relation,' which was not accessible to readers at the time of Mr. Deane's issues of Wingfield and Smith. Strachey's 'Historie of Travaile' is not included (falling as it does outside of the "thirty months" referred to); but other almost equally important authorities are supplied, and this valuable collection covers in all about eighty pages. These side lights, it need hardly be said, are of great value. They should help the careful student of the period to see with other eyes than those of Smith, and to correct various misleading impressions and conclusions. In the conclusion, however, at which Mr. Arber arrives, the high-water mark in the defence of Smith's trustworthiness would appear to be reached, namely, a "conviction not only of Smith's truthfulness, but also that in regard to all personal matters he systematically understates rather than exaggerates anything he did" (page xxiv). As regards "that *mauvais quart d'heure* about the 3d of January, 1608, when Pocahontas saved his life," our editor does indeed suggest that possibly Smith might say that "too much has been made of that Pocahontas matter" (page x). Let no one, however, infer from this language any disposition on the editor's part to slur this "rescue incident." Mr. Arber has the courage of his convictions, and so far from withdrawing to a less vulnerable position of defence, actually makes this incident the point of greatest prominence in his discussion.

It is of interest to note on what Mr. Arber grounds the position thus assumed by him in the different portions of his notes. The fact has been very generally commented on that while the 'True Relation' (printed in London in 1608, during Smith's absence in Virginia), and the third book of the 'Generall Historie' (published sixteen years later, in 1624) alike profess to give the incidents of the Chickahominy expedition, the later one alone recounts the most striking episode of that expedition—the rescue by Pocahontas. Its omission in the earlier narrative Mr. Arber would justify by reminding the reader (page cxviii) that this event was "but a very small one" in Smith's life, and that "the personal self-forgetfulness" it manifests "is only characteristic of the man." Yet the reader, still unconvinced, may ask how it happened that Smith's 'Generall Historie' (confessedly a gathering up into one volume of previously-scattered narrations) should include all of Smith's own, up to date, save only the 'True Relation.' It is certainly not irrelevant to ask, as has in fact been asked, whether the desire to avoid the palpable inconsistency in the Chickahominy narrative was not the reason for discarding it. But Mr. Arber would rejoin (page cxvii) that "it need only be said that that 'Relation' was not intended for publication by Smith." It is difficult to see how this statement (which, by the way, no one who has carefully examined the 'True Relation' would question) in any way meets the case. It was unquestionably meant by Smith to be his narrative of these transactions, whether a printed narrative or not. Had he been so inclined, Mr. Arber might have rendered his argument less inconclusive by pointing to the probability of certain parts of Smith's 'True Relation' having been suppressed by the friend who superintended printing it. This point has quite recently been urged with no little force by an American writer, Mr. W. W. Henry. But Mr. Arber (page cxvii) is "quite content to suppose he [Smith] never mentioned the Pocahontas incident at all in the manuscript." The next of Smith's publications to traverse the Chickahominy ground was the "Oxford tract" of 1612, which likewise is silent as to any rescue. Mr. Arber, when speaking of Part II. (in which the chapter in question occurs) takes occasion to mention that "Captain Smith is not named as an author of any portion" of it, and yet that "he would endorse it all," appearing as it did in a book of his own (page 86); and it may further be added, as regards the two chapters, of

* Price, 12 shillings and sixpence. To be obtained only by postal prepayment to Prof. Edward Arber, 1 Montague Road, Birmingham, Eng.

1612 and 1624 respectively (in the "Oxford tract" and in the 'Generall Historie'), that one is as much a "compilation" as the other, as may be seen from the names signed to each. Mr. Arber of course traces the appearance of the rescue incident, first in the letter to the Queen, of 1616, (not, however, preserved to us in earlier form than 1624); second, in a two-line mention in the second edition of 'New England's Trials,' in 1622; and finally, in its well-known fulness of detail, in the 'Generall Historie.' He has, however, placed these incidents in no unusual light; and the same is true of his citation of Strachey and others.

The story of the rescue is by no means an inherently impossible one, nor has it been asserted to be such. Inconsistency, rather than impossibility, is the almost inevitable conclusion from a careful examination of Captain Smith's own narratives. Nor is the inconsistency so superficial a matter as that of omission simply. To correct it would involve the reconstruction and readjustment of other portions of the narrative. Mr. Arber somewhat reproachfully declares (page cxviii) that "Mr. Charles Deane" "is responsible for the attack on Smith's veracity as regards the Pocahontas incident, by the notes to his reprint of 'The True Relation,' in 1866." That the notes in question tended to shake the reader's confidence in the rescue narrative, there can be no doubt. Yet it is doubtful if their general fairness has been successfully questioned; and Mr. Deane himself elsewhere, in a note to p. 35 of Wingfield's 'Discourse of Virginia,' disclaims "designing to impeach the general trustworthiness of Smith's original narrations." Whether his general trustworthiness is impeachable or not is, in fact, another question from that of the rescue story; and when Mr. Arber, intent on retaining the latter, declares that "the only possible way of resisting the story is to regard Captain] Smith as a confirmed liar" (page cxvi), it is impossible not to feel that he has chosen the weakest lines of defence. Few readers doubtless will be found to subscribe to the equally dogmatic assertion of Mr. Neill, that Smith's "writings are those of a gascon and beggar" ('Virginia Company,' page 211), but it is perhaps even more difficult to agree with our editor that "any doubt" Mr. Deane "may have raised will be set at rest by the present edition" (page cxviii), or to share his complete assurance as to Captain Smith's "unboastfulness" (page xv).

That Captain John Smith is one of the commanding figures of our early history; that he possessed unusual abilities within certain limits; that he was able to render great and memorable services to the infant colony of Virginia; that the subsequent exploration and settlement of New England are indebted to him for more than one noteworthy impulse; that his published narratives frequently possess the great merits of vigor, naturalness, and effectiveness; and that these fascinating writings comprise an almost unique collection of materials for history, very much of which may be readily accepted—all this may be cordially admitted. When, however, the question arises as to the extent to which these writings can be relied on, it is by no means necessary to adopt either extreme of statement. It is sufficient to say that they are characterized here and there—the Pocahontas story is not a solitary instance—by an unfortunate tendency "to write it large." To quote the language of Mr. Tyler, in his 'History of American Literature,' as a "story-teller, he [Smith] fell into the traveller's habit of drawing a long bow."

This carefully executed volume is not only remarkably free from errors of the type or pen, but is open to little complaint of any kind, in its external features. Mr. Winsor's name, cited above, is twice printed "Windsor," though elsewhere "Winsor." The Rev. E. D. Neill, already mentioned, is apparently classed (page xxiv) among the "New England writers," which is wholly wrong. While Mr. Arber's readers will be duly thankful to him that he has furnished any index at all, it should be added that an index like the one in question yields only the minimum of assistance to the reader. It contains no classification of the page-references—sometimes twenty or more in number—under any given entry. But these few shortcomings are slight indeed in comparison with the solid and substantial merits of the work. The materials themselves are placed before the reader, and if he should find it difficult or even impossible to reach the conclusions which Mr. Arber has drawn from them, still he will abate nothing in his admiration for so excellent a piece of work. Mr. Arber's American readers will look with interest for the writings of Bradford and Winthrop, already promised. Few things are surer than that through the determined study of these texts more light upon the colonial period of our history may be looked for.

GROVER CLEVELAND.

Early Life and Public Services of Hon. Grover Cleveland. Also, the Life of Hon. Thomas A. Hendricks. By Thomas W. Handford. Chicago and New York: Belford, Clarke & Co.

Life and Public Services of Hon. Grover Cleveland. By Hon. William Dorsheimer. Also, a Biographical Sketch of Hon. Thomas A. Hendricks. By W. U. Hensel. Hubbard Brothers.

Life and Public Services of Grover Cleveland. By Pendleton King. G. P. Putnam's Sons.

Life of Grover Cleveland. With Sketch of Life of Thomas Andrews Hendricks. By Deshler Welch. John W. Lovell Co.

CAMPAIGN biographies are not usually counted as literature, and those enumerated above certainly have slight claim to be. Yet one who shares the present widespread disposition to shake off the trammels of party and to make a proper use of the franchise will, on turning for information to these books, be agreeably surprised to find them much more readable and much freer from offensive faults than he could have expected. Mr. Handford's book, as being the fullest and apparently the most authentic, is the most useful, and makes recourse to any other biography almost superfluous. Mr. King's unpretending sketch is of value because it brings together in a convenient shape copious extracts from the veto messages and other public utterances of Governor Cleveland. Mr. Dorsheimer's 'Life' is well written, and derives interest from the fact that he is a townsman of the Governor and has known him intimately for more than a quarter of a century. The only feature of Mr. Welch's book that recommends it is, that it contains a long extract from Mr. Schurz's great speech in Brooklyn, and gives Cleveland's letter of acceptance.

Grover Cleveland comes of an English family which settled in Massachusetts about two hundred years ago. One of his ancestors, Dr. Aaron Cleveland, a graduate of Harvard and an Episcopal clergyman in Philadelphia, enjoyed the esteem and friendship of Benjamin Franklin, at whose house he died in 1757, and who published a brief notice of him in the *Pennsylvania Gazette*. His widow opened a small store at Salem, Mass., which enabled her to support and educate her large family. This circumstance is worth mentioning, as being typical of the career of the Cleveland family. Never rich, but never dependent; ready to turn to any worthy employment, however humble—we find them in alternate generations preachers, mechanics, and tradesmen, always more blessed with children han with wealth, but never losing their hold ont education and social position. The son of Dr. Aaron Cleveland, also named Aaron, was apprenticed to a hatter; at the age of thirty owned a business in Norwich, Conn., where, having cultivated a talent for writing and speaking, he was elected to the Legislature and introduced a bill for the abolition of slavery in Connecticut. He afterward became a Congregational minister, and died in 1815, after leading a truly American life in the best sense of the term. He left thirteen children, the youngest of whom became the mother of Arthur Cleveland Coxe, now Bishop of Central New York. The second of the thirteen, William Cleveland, Grover Cleveland's grandfather, was a watchmaker and silversmith at Worthington, Mass., where he made a reputation for honest and thorough workmanship which followed him in his migrations to Salem and Norwich. It is said that watches of his make are still in use and still serviceable. His son, Richard Falley Cleveland, was destined by his parents to be a minister of the Gospel, and with that view was sent to Yale College, where he graduated in 1824. Partly to better his health and partly from a spirit of independence, he obtained a situation as tutor in Baltimore, where he met his fate in the person of Anne Neale, the daughter of a well-to-do law-book publisher of Irish extraction, who had married Barbara Real, a German Quakeress of Germantown, Pa. He was unwilling to marry on the prospect of what his father could do for him, and determined to continue his education for the ministry. After another year spent in Baltimore, he followed the three-years' course at Princeton, and upon being offered a Congregational church at Windham, Conn., was married to Anne Neale in 1829. From Windham he went to Portsmouth, Va., where he remained about a year, in charge of the Presbyterian church, until in December, 1834, he removed with his family to Caldwell, N. J., and was installed as minister of the Presbyterian church in that village.

It was here that Stephen Grover Cleveland was born, on March 18, 1838, the fifth of nine children. He received his name in honor of the pastor who had immediately preceded his father in the church at Caldwell, but the "Stephen" was almost from the beginning discarded, and the boy was known simply as "Grover." In 1841 the family removed to Fayetteville, New York, Richard Cleveland having accepted a call from the church there. Here Grover grew up from his youth to his fourteenth year among the sturdy country boys, attending the district school from his eighth year onward. His father looked strictly after the education of his children, and it was his intention to send all his sons to college. After two years at the district school Grover was put into the Academy, but remained only a short time, and took a clerkship in the village store at a salary of $50 for the first year, to be increased to $100 the second if the young clerk proved worthy. Before the end of the second year, however, Richard Cleveland had become agent of the American Home Mission at Clinton, New York, where he received a salary of $1,000, which was more than he had ever had before. Grover entered the Clinton Academy to finish preparing for college, receiving in addition to the regular school training private instruction in Latin from Dr. Hyde, a retired clergyman. In 1853 his father was called to the church at Holland Patent, about fifteen miles from Utica, but had been there hardly a month when he died suddenly at the age of 49. This event made a complete change

in the situation and prospects of the family. The father's income, never very large, had barely sufficed for the support and education of his children, and it became apparent that such of them as were old enough would have to take care of themselves, and, if possible, help to take care of the others.

Grover, now in his sixteenth year, had to give up his hopes of going to college, and to earn his own livelihood. His oldest brother William, who was at this time a teacher in the New York Institution for the Blind, in this city, procured him a situation as clerk and assistant teacher in the establishment. William was a recent graduate of Hamilton College, and under his guidance Grover devoted his leisure time to studies in Latin and in English literature. At the end of the year for which he had been engaged he returned to his mother's house, where he spent the winter in continuing his mental culture, at the same time seeking employment. In Syracuse and Utica his search was unsuccessful, and he finally made up his mind to go West. On his way he stopped at Buffalo to visit his uncle, Lewis Allen, a stock breeder, who annually published a 'Herd-Book of American Short-Horn Cattle.' Mr. Allen did not approve of the Western project, and persuaded his nephew to remain in Buffalo, inviting him to assist in the preparation of the forthcoming volume of the Herd-Book, for which assistance he was to receive $50, and promising to procure him a place in a lawyer's office, as the young man had decided to choose the law as his profession. The latter promise took some time to fulfil, but at last, in August, 1855, at the age of eighteen, Grover Cleveland was allowed to take a desk as office-boy in the office of Rogers, Bowen & Rogers. He at once set to work, with dogged perseverance and unflagging industry, to master the rudiments of the law and to make himself useful in the office. Although living with his uncle, two miles out of town, he was always the first to arrive in the morning and the last to leave in the evening. His qualities were soon appreciated, and in the autumn of 1855 he was already in receipt of a salary of $4 a week. This was increased from time to time, and shortly after his admission to the bar, in May, 1859, he was promoted to be managing clerk at $600 a year, which had by degrees risen to $1,000 in 1863, when, at the age of twenty-five, he left the office to become Assistant District Attorney of Erie County. This position, like every public office he has ever held, came to him without any solicitation on his part, and found him reluctant to accept it. The salary was only $600, not much more than half of what he was earning; and as he was already practising great economy in order to aid in supporting his mother, it seemed to him that he could not afford the pecuniary sacrifice. He yielded, however, to the advice of friends, who pointed out to him the value of a public position in making a young lawyer known to the public and to the profession. He entered on the office with all the energy and zeal of youth, and as Mr. Torrance, the District Attorney, lived twenty-five miles out of town and was only too glad to leave as much work as possible to his assistant, the latter found ample room to develop his habits of industry.

"He was in attendance at every one of the twelve grand juries which met during each of the three years of his term of office, and presented in full a large majority of the cases. Nearly all the indictments during the period were drawn by him, and perhaps more than half of the cases he tried in court. On more than one occasion during those busy months he conducted four cases before a jury, won a favorable verdict in each, sat down at 8 o'clock in the evening to make preparations for the next day, and did not rise from his desk until 3 o'clock in the morning. Eight o'clock found him back again in the office, fresh for the day's contest with some of the best criminal practitioners in the county."

In 1863 he was induced to accept a nomination for Supervisor, although there was no hope of success, the ward in which he lived being always sure for the Republicans. He came within thirteen votes of an election, while the rest of the Democratic ticket was two hundred votes behind. In 1865 he was the Democratic candidate for the office of District Attorney of Erie County, but was defeated by Mr. Bass, one of his intimate friends and afterward his partner. In 1867 Mr. Dorsheimer, having been appointed by President Johnson United States District Attorney, offered him the position of assistant, but the offer was declined. At his suggestion the place was given to Mr. Oscar Folsom, who also subsequently became a partner of Cleveland. The latter, though still a young man, was now known as a leading jury lawyer, whose services were always in demand and who possessed the confidence of the community.

Mr. Dorsheimer relates that one day, in the autumn of 1870, Cleveland came into his office and asked for advice upon a personal matter. He had been offered the nomination for Sheriff of the county. For various reasons he hesitated to accept it. There were two reasons in favor of doing so: one was that the office would afford him some leisure time, which he could devote to self-improvement; the other, that it would enable him to save money, which he had as yet had no opportunity of doing, and would thus give him a pecuniary independence. Mr. Dorsheimer advised him to accept; others did likewise. He accepted and was elected. Mr. Dorsheimer adds:

"He used the opportunities of the position as he said he would. He made a considerable saving, and he gave his leisure time to professional and other studies. As soon as he returned to the bar the effect was noticeable; he was a stronger and a broader man than he had been before, and he at once took a higher position than he had ever held."

At the expiration of his term of office he returned to the practice of the law, in which he continued for the next six years with constantly increasing success.

In 1881 corruption in the city government of Buffalo had grown so rampant that it was felt an absolute necessity to take some decisive steps to check it. It came to be understood that if the Democrats would make an acceptable nomination, many Republicans would support it. The eyes of the community seemed instinctively to turn to Grover Cleveland, and, in spite of the opposition of some professional Democratic politicians, he was nominated by acclamation and elected by a majority of 3,500, while at the same time the Republican State ticket received a majority of 1,600. The event justified the choice. The new Mayor eagerly embraced every opportunity for grappling with the unclean elements in city politics. During the short time that he remained in office—being raised to the Governorship before the expiration of his term as Mayor—he saved the city more than a million of dollars by preventing the consummation of corrupt schemes and bargains by the City Council. He displayed indomitable pluck and grit, a thorough knowledge of the laws, a clear perception of the needs and rights of the city and of the best way to secure them, and a sincere determination to place the public interests above the claims of party. He showed how easily a man who is thoroughly honest and thoroughly in earnest can gain the victory over corrupt combinations. The limits of this notice will not permit much detail, and a single instance must suffice.

On assuming office in January, 1882, the new Mayor called the attention of the City Council to the dangerous condition of the Hamburg Canal, and suggested the urgent necessity of building an intercepting sewer. In February he recommended that the work be done under the direction of a commission of citizens, but this proposal did not suit the Common Council, who were not willing to lose so unusual an opportunity for stealing the public money. They advertised for proposals, and the lowest bid they received was for $1,568,000. Mayor Cleveland persisted in his plan, had a bill carried through the Legislature for that purpose, and nominated five commissioners to the Common Council, who at once rejected them. Instead of pocketing his defeat, as a weaker man would have done, he sent in the same identical five names to the next meeting of the Board, and they were confirmed by a vote of 17 to 8. This Commission put the work into the hands of Colonel Waring, under whose supervision it was done at a cost of $764,370, the saving of $800,000 representing the amount which the City Fathers would have divided among themselves under any other Mayor.

Mr. Cleveland's election as Governor of this State by the unprecedented majority of 192,000 votes, and his vigorous and honorable administration of that important trust, are events of such recent occurrence and general notoriety that nothing but a simple allusion to them is requisite at this time. Suffice it to say that he carried into his new office the same habits of industry, the same mastery of details, the same power of long-continued application, the same honesty of purpose, that have crowned all his life with success. He lives in the same simple, unpretending way to which he has always been accustomed. He accepts no free passes from railroads and keeps no carriage. At 9 o'clock in the morning he walks to the Capitol and takes his place at his desk. At half-past one he walks home to lunch and returns in an hour. By five he has cleared his desk and is ready to see any one who calls. He is accessible to everybody without the intervention of doorkeepers or clerks or private secretaries. After dinner he comes back to his desk, where he works with his private secretary from 8 to 11, and about midnight he walks home.

Such is a plain abstract of the information contained in the several volumes at the head of this notice.

Extempore Preaching. By Wilder Smith. Hartford: Brown & Gross. 1884.

THE subject of extempore preaching has attracted a good deal of attention during the last few years. It has been treated in several courses of university lectures at Yale and elsewhere; and a score or two of volumes devoted to its advocacy, more or less qualified, are easily within the student's reach. Mr. Wilder Smith's volume of 170 pages does not add much to the sum of wisdom that was accessible before he wrote, but he has had the benefit of acquaintance with the writings of his predecessors, as well as successful personal experience in extempore preaching. He has written a very sensible and attractive exposition of his theme, which will no doubt encourage many doubtful hearts to venture out upon the perilous sea, and may do something to correct the follies and mistakes of those to whom it is familiar already. An opening chapter distinguishes well enough the relative advantages of the extempore and written sermon. The author's advice to the preacher is that he should not confine himself to either form exclusively. Extempore preaching is sure to gain and keep a higher level if the preacher writes one sermon out of every three. In a couple of chapters upon general and special preparation, he makes it clear that by extempore preaching he does not mean "nothing but roaring," or, as Dr. Smalley said, "the ability to

talk half an hour about nothing." It is no escape from work. To be effective, it must take its rise out of the soil of long and careful studies of the preacher's proper subjects of discourse. Much careful writing must have helped to form the preacher's style, and to give him mastery in the use and choice of words. Nor will the particular sermon require less of special preparation than the manuscript discourse. Its thought, its order, its illustrations must all be determined in advance. But *memoriter* preaching is no more extempore than is manuscript preaching, and is far less to be desired. In extempore preaching the preacher relies upon the occasion for the language in which to express his thought. He will preach his sermon two or three times before entering the pulpit, but once there he will make no effort to recall the words that he has previously used.

There are special chapters upon "Arrangement," "Illustrations," "Style," "Memory," "First Attempts," "Delivery," "Physical Conditions," and so on, that contain a good many admirable hints. The chapter on "Spiritual Conditions" is the most important of all. No vice is charged on the extempore preacher so frequently as that of repetition. It is a different sort of extempore preaching from that for which Mr. Smith contends that is most liable to this abuse—the sort which has but little general and no special preparation. But it is our author's feeling that all great preaching will tend to repetition, and he quotes the examples of many illustrious preachers. He is not so confident as many are that success in extemporaneous discourse is easily within the reach of all. Under the most favorable conditions he insists that it is a difficult art, and for some to be acquired by no amount of patience. The lectures and the books may help a little, but the gift, when really potent, comes, as one said of reading and writing, not by study, but by the grace of God.

The True Theory of the Sun, showing the Common Origin of the Solar Spots and Corona, and of Atmospheric Storms and Cyclones, etc., etc., etc. By Thomas Bassnett. G. P. Putnam's Sons. 1884.

A RECENT economic writer calls to mind the fact that business affords an example of the most effectual elimination of the unfit and of the survival of the fittest: "The man who acts upon false theories loses his money, drops out of society, and is no longer a factor in the result. But there is no such method of elimination when the interests of society at large are considered. The ignorant theorizer and speculator can continue writing long after his theories have been proved groundless, and, in any case, the question whether he is right or wrong is only one of opinion." Mr. Bassnett and his book form a pertinent illustration of this truth; for not only do the tangible parts of his wildly-speculative theories show themselves at once to be utterly groundless, but his intangible fancies are of such a nature that he may safely persist with stout complacency to the end, for science can never prove the reverse.

His book is hardly more remarkable for its preposterous fallacies than for the pretentious spirit of self-inflation which is the characteristic feature of page upon page, culminating perhaps —though it is hard to say just where—in the author's sorrowful appeal to the past history of science; "for," he says, "I will not refrain from claiming for these discoveries of mine a place as high as any ever vouchsafed to man." These "discoveries" are plainly vagaries resulting from the over-contemplation of the few facts that appear to uphold a preconceived theory, in utter disregard of a host of opposing facts of equal significance; to say nothing of those cases in which, the deductions of observational astronomy not tallying with his "theories," the author proceeds with naïve composure to supplement the facts from his inner consciousness. All this, with no proper conception of the true interpretation of solar phenomena, and with a consistent defiance of physicists and the principles they have established by protracted research, goes to make up an insufferable bungle scarcely paralleled in the broad field of pseudo-scientific literature.

Mr. Bassnett says of himself:

"Our business is to establish a *theory* which, by explaining the most remarkable facts, gives the only reliable testimony which a theory can give that it is true. The learned may treat our theory of electric vortices [the seven electric vortices of his own invention, to which he lays claim as the only possible explanation of all the meteorological phenomena of the universe] as *nonsense*; yet in the very same breath they betray an evident bias in favor of far more nonsensical theories, which have not the stamp of true originality to recommend them."

Accordingly, he denies all further need of investigating the periodicity of the solar spots, for example; for, as long ago as 1853, "the author published the only possible solution of the problem" (page 129). It would be a waste of words to do more than express regret that such rubbish should have procured a respectable imprint.

BOOKS OF THE WEEK.

Allen, Dr. H. A New Method of Recording the Motions of the Soft Palate. Philadelphia: P. Blakiston, Son & Co.

Aldridge, R. Life on a Ranch. Ranch Notes in Kansas, Colorado, the Indian Territory, and Northern Texas. D. Appleton & Co. 50 cents.

Bergen, J. Y., jr., and Fanny D. The Development Theory: a Brief Statement for General Readers. Boston: Lee & Shepard. $1.25.

Carey, T. J. Excelsior Recitations and Readings. No. 1. Excelsior Publishing House.

Crawfurd, O. The World We Live in. A Novel. G. P. Putnam's Sons. Paper, 50 cents.

HENRY HOLT & CO., NEW YORK,

WILL SOON PUBLISH:

I. *TAINE'S FRENCH REVOLUTION.* Translated by John Durand. Vol. III., completing the work.

II. *THE RISE OF INTELLECTUAL LIBERTY.* A History. By Frederic May Holland. 8vo.

III. *GUIDE TO THE CIVIL SERVICE* of the United States, as classified under the Civil-Service Act of 1883, including information regarding examinations, lists of offices, with their emoluments, etc., also accounts of the Civil Service of such States as have adopted the Competitive System. Edited by John M. Comstock, Chairman of the Board of Examiners for Customs, New York. 12mo.

IV. *SHAKSPERE'S WORKS.* A new, handy edition. 7 vols., 16mo. (*Leisure Hour Series.*)

V. *CALLIRHOË AND ROSAMUND.* Poems, by Field. 16mo.

VI. *REPRESENTATIVE GERMAN POEMS.* The Original Texts, with close English versions by various translators. Edited by Karl Knortz. 8vo.

VII. *THE CHANSONS DE ROLAND.* Translated by Leonce Rabillon, of the Johns Hopkins University. 16mo.

VIII. *CAPTAIN PHIL. A Boy's* Experience in the Western Army during the War of the Rebellion. By M. M. Thomas. Illustrated, 12mo.

IX. *RALPH, THE DRUMMER-BOY.* A Story of the days of Washington. By Louis Rousselet. Translated by W. J. Gordon. Illustrated, 12mo.

X. *A SCHOOL HISTORY OF* the United States. By Alexander Johnston, Professor at Princeton, author of a 'History of American Politics.' 12mo.

XI. *THE HUMAN BODY. By* H. Newell Martin, Professor in the Johns Hopkins University. 12mo. (*American Science Series, Elementary Course.*)

XIII. *A BRIEFER GERMAN* Grammar. By W. D. Whitney. 12mo.

XIV. *A FRENCH GRAMMAR.* By W. D. Whitney. 12mo.

XV. *SINTRAM UND SEINE* Gefährten. By Fouqué. German text, for students' use. 12mo, paper. (*Unterhaltungs Bibliothek.*)

Le Français.

REVUE MENSUELLE DE GRAMMAIRE ET DE LITTÉRATURE.

THE FIRST NUMBER OF THE FIFTH YEAR WILL BE READY SEPT. 15.

All communications should be directed to the editor JULES LÉVY, Lock Box 3, Roxbury, Mass.
Specimen copies sent *free* on application until September 15.

WHAT THE NATION SAYS:

"*Le Français*, published monthly at Roxbury, Mass., by M. Jules Lévy, is by all odds the best educational French journal ever attempted in this country. We cannot too strongly recommend it as an adjunct wherever French is taught. Not less than one copy should be taken in every school having classes in the language. *Le Français* will not only assist in mastering idioms and pronunciation, but, thanks to the editor's cultivated sense for selection, in forming the taste of the learner."

Modern Horsemanship.

A New Method of Teaching Riding and Training by Means of Instantaneous Photographs from the Life. By E. L. Anderson. In one vol., demy 8vo.

"A master of the craft."—*Illustrated Sporting and Dramatic News* (London).

"A practical and very accomplished horseman. The fact is obvious from his book."—*Saturday Review.*

"The book is liberally furnished with instantaneous photographs, which illustrate and explain the author's text."—*St. James's Gazette.*

BRENTANO BROTHERS,
New York, Washington, and Chicago.

SHORT ROUTE TO LONDON.

NORTH GERMAN LLOYD

MAIL S. S. LINE.

The steamers of this Company will sail every Wednesday and Saturday from Bremen Pier, foot of Third Street, Hoboken.

RATES OF PASSAGE TO LONDON, HAVRE, AND BREMEN.

By Wednesday steamer—1st Cabin, $100 to $150; 2d Cabin, $60. By Saturday steamer—1st Cabin, $75; 2d Cabin, $50. Steerage at lowest rates.

2 Bowling Green.

Latest! Brightest! Best!

The "New National Series."

BARNES' NEW NATIONAL READERS.
Completed. The most *beautiful* school readers ever issued; also unequalled in practical timeliness and correct gradation. 'Watson's New Graphic Speller,' a new speller which combines written and oral lessons.

BARNES' NEW ARITHMETICS.
Presents a minimum of theory with a maximum of practice. It adopts the shortest and best methods.

BARDEEN'S COMPLETE RHETORIC.
The treatment is eminently practical. Rhetoric applied to daily life. $1.50.

MONTIETH'S NEW GEOGRAPHIES.
Complete two-book series wtth latest data, beautiful maps, new standard time and all other "modern improvements." Montieth's 'Boys' and Girls' Atlas' (25 cents), just published.

BARNES' BRIEF HISTORY SERIES.
Including United States, France, Greece, Ancient, Modern (each $1), and General (just published), $1. In many parts of the country more largely used than all competing Histories combined.

STEELE'S 14 WEEKS IN EACH SCIENCE.
Embracing Philosophy, Physiology, Chemistry, Zoölogy, Geology, Astronomy, and Botany. These books have attained a phenomenal success, and the demand is constantly increasing. $1 each.

STEELE'S NEW A[illegible]ONOMY.
The 'Story of the Stars' in [illegible]teele's best style, from new type and rewritten. $1.

STEELE'S HYGIENIC P[illegible]IOLOGY.
Fully complies with the law as to teac[illegible]he effects of alcohol and narcotics; already adopted by the State Boards of Education of Mich[illegible] Delaware, Kentucky, and Washington Territory, and by the majority of Counties in New [illegible]ork and Vermont. $1. Abridged edition, 50 cents.

SILL'S LESSONS IN ENGLISH.
A practical, systematic, and complete grammar. Useless verbiage eliminated. 60 cents.

BARNES' POPULAR DRAWING SERIES.
This new and beautiful system of drawing was prepared by a skilful teacher, and has many new and valuable features.

MARTIN'S CIVIL GOVERNMENT.
A knowledge of local and national forms of Government is incumbent upon all citizens and can be obtained from this work better than from all others. $1.

WORMAN'S MODERN LANGUAGE SERIES.
French, German, and Spanish on the natural method. "First Book" in each language, 40 cents.

THE NATIONAL SERIES comprises more than 300 publications, representing text books adapted to every grade of common school and college classes. Specimen pages sent free of cost to any address. Descriptive catalogue free.

The Good Literature Publishing Co.,
20 Astor Place, New York.

Johns Hopkins University,
BALTIMORE.

Programmes of the work proposed in the University and Collegiate courses for the next academic year will be sent on application.

SCHOOL BOOKS IN FOREIGN LANguages, Miscellaneous Books in Foreign Languages. Catalogues on application.
CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

G. P. Putnam's Sons,
27 and 29 West 23d St., New York,
HAVE NOW READY:

I. *A GRAMMAR OF THE GERman Language. For High Schools and Colleges.* Designed for beginners and advanced students. By H. C. G. Brandt, Professor of German and French in Hamilton College, formerly of Johns Hopkins University. 12mo, cloth, $1.50.

The HIGH-SCHOOL AND COLLEGE GRAMMAR is planned for teachers who feel the need of pursuing a more scientific method of instruction, and for pupils in grammar and high schools, academies, and colleges who have already some knowledge of grammatical rules and terminology, classical or modern. The strict separation of Inflections and Syntax in Part I. makes the book eminently fit for the beginner, while Part II. is mainly designed for the advanced scholar.

II. *A HIGH SCHOOL AND COLlege Reader of German Literature.* By W. H. Rosenstengel, Professor of German in the University of Wisconsin. 12mo, cloth, $1.50.

Planned for the use of students in high schools, academies, colleges, and German-American schools and seminaries, who have already studied an elementary reader, who are familiar with the main points of German grammar, and who are able to use intelligently a German-English dictionary.

III. *TABLEAUX DE LA REVOlution Française.* Selections from French Literature relating to the Revolution of 1789. Edited, with Notes, by Professors T. F. Crane and S. G. Brun, of Cornell University. With Introduction by Pres't A. D. White. 16mo, cloth, uniform with German Classics. Planned for the use of students in French. $1.50.

IV. *HERODOTUS FOR BOYS and Girls.* Edited, with Explanatory Notes, by Jno. S. White, LL.D. Quarto, fully illustrated, uniform with the Plutarch for Boys and Girls. $3.00.

*** *Putnam's Educational Catalogue sent on application.*

Dr. L. Sauveur's New Book.
GRAMMAIRE FRANCAISE POUR les Anglais. Written with a special view of overcoming the difficulties encountered by American students in studying the French language, and containing numerous practical exercises. 1 vol., cloth, 360 pages, $1 50. Key to the exercises, 50c.

N. B.—*Examination price:* On receipt of half the price, one copy will be sent post-paid to any teacher by the author. Address, 1715 Spruce St., Philadelphia, Pa.

Prospectus of Dr. Sauveur's Works, and Catalogues of Imported and American School and Text-Books for the study of Foreign Languages, mailed free to any address.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 11, 1884.

The Week.

In the death of Judge Folger the country loses a Secretary of the Treasury whose administration has been always prudent, judicious, and above reproach, a jurist of ability and integrity, and a citizen of exemplary and irreproachable life. Mr. Folger's abilities were not of the showy sort. He was a man of retiring disposition and equable temper, and his public honors were the spontaneous offering of friends and neighbors, whose confidence he had won by his usefulness and his fidelity to every trust reposed in him. The disaster which he suffered in the campaign against Governor Cleveland was in no sense a personal defeat, but rather a popular uprising against political methods which had become intolerable. Throughout the campaign no reproach was cast upon Judge Folger as a man. The result of the election could not be otherwise than humiliating to him, but the popular verdict, rightly interpreted, was not that he was unworthy to be Governor of New York, but that he had allowed himself to be placed in a false position by those with whose political interests he was identified. His conduct after this trying ordeal was discreet and dignified. He applied himself with renewed diligence, and perhaps too much labor, to his duties as the head of the most important branch of the public service. There he remained until failing health admonished him to take a period of rest. His death was unexpected, and will be regarded everywhere as a public calamity, and especially by the business community, whose confidence in his wisdom and caution has grown from day to day ever since he entered the Cabinet of President Arthur. The country will be fortunate if his successor shall prove as discreet and painstaking as he has been. We trust that Mr. Arthur will be governed solely by the interests of the public service in the choice of a Secretary to succeed Judge Folger, and not attempt to embroil the affairs of the Department with the political conflict now raging.

The "Irish vote" seems to have gone astray from the Blaine column in Vermont. Before election it was claimed that there was an Irish-American Blaine and Logan club of 300 in Rutland, all of whom had hitherto voted the Democratic ticket. When the returns came in for Rutland, however, the Republican majority was 200 smaller than usual. In Burlington, where great things were expected of the same Irish vote, the Democrats carried the city for the first time in its history. We are afraid that this will shake the confidence of Steve Elkins in the boasted strength of his Irish contingent, and lead him to doubt if the handsome rental which he is paying for the Irish-American-Dynamite-Blaine Headquarters in Fourteenth Street, in this city, is a good investment. The falling off in the Republican vote appears to be 12 per cent., in view of which the despatch which the Chairman of the Republican State Committee sent to Mr. Blaine, announcing a "glorious victory," was really a heroic piece of work. Even the *Tribune* was outdone in zeal by it, for in the leading Blaine organ we find an admission that the "Republicans of Vermont have not exactly covered themselves with glory," and an intimation that if Senator Edmunds had done his duty a much more cheering result might have been attained.

We have no desire to cut short the brief jubilation which Mr. Blaine's advocates have started over their "glorious victory" in Maine, but really they ought to be more truthful about it. They ought not to compare this year's vote with that of 1880, because that was the year in which the Greenback movement wrought a political revolution in the State, but with the vote of 1882, when parties were returning to their old lines, and when Robie was elected Governor by nearly 9,000 plurality. Everybody agreed before the election that the only reasonable basis for comparison was either the vote of 1882 or that of 1876. But the senders of all the returns from Maine, in some mysterious manner, appear to have reached an agreement to make comparisons only with the deceptive vote of 1880. This is done because it gives opportunity to claim a tremendous gain for Blaine. The simple facts in the case are, that after a campaign which, on the Republican side, exceeded in energy, thoroughness, and extravagant outlay any that even Maine has ever seen, and on the Democratic side amounted to no canvass worth mentioning, Mr. Blaine's own State has given the Republican candidate, who was already strong in having proved a most worthy executive, an increased Republican vote of possibly 2,000. The Democrats have from the outset taken the ground that Maine was a Republican State, and that Mr. Blaine was quite welcome to a hurrah over it. We are unable to see that a plurality of even 20,000 would, under these circumstances, help Mr. Blaine's prospects in other States.

In several ways the vote of Maine will tend to weaken his canvass. There is no sign of the promised labor or Irish vote in his favor, any more than there was in Vermont; but an ominous sign that the "protection dodge" is not working well this year is found in the fact that several factory towns, including Biddeford and Lewiston, have reversed their usual Republican majorities and have gone Democratic. The laboring man is discovering that a protective system which promises him high wages but does not give him work is a doubtful kind of blessing. Then there is the enormous majority of 30,000—the figures which reach us as we go to press—for the iron-clad prohibition amendment. That is not going to lessen the anti-prohibition opposition to Blaine in the West, and neither is the characteristic speech which he made on Monday, in defence of his course in "dodging" a vote on the amendment, going to help him with either the advocates or opponents of prohibition. His excuse is simply a very funny parody of Hancock's famous definition of the tariff as a "local issue," and is likely to prove equally disastrous. "By no act of mine," says Mr. Blaine, "shall any question be obtruded into the national campaign which belongs properly to the domain of State politics." But the prohibition question has been "obtruded" into the campaign, and is represented there by a Presidential ticket. Mr. Blaine's "dodge" will offend all the Prohibitionists, and the enormous majority which Mr. Blaine's State has given to the amendment will alarm and consolidate the anti-Prohibitionists. His explanation, given as it is with a barely disguised wink, only makes a bad matter worse.

The "Prohibition vote" is the subject of much solicitude in the Blaine journals now, and they are devoting more attention to it than they are to the dreadful dudes and pharisees. They are begging that the advocates of temperance principles will not desert the grand old party in this emergency, when it is so greatly in need of friends. Slowly but surely the men who thrust Mr. Blaine's candidacy upon the party begin to realize what they have done. It was perfectly apparent six months ago, to every observer of political currents, that the temperance question was destined to play an unprecedentedly important part in this and all campaigns in the immediate future. It was equally plain that it would weaken the Republicans and strengthen the Democrats. This was only another reason why the Republican Convention should be careful in choosing its candidate. It was recognized by everybody except the Blaine leaders that this was going to be a very hard year to elect any Republican candidate to the Presidency, from the simple fact that there would be barely enough Republican votes in the country to give him a majority.

The reëlection of Congressman Reed is hailed as a most gratifying feature of the glorious victory in Maine, and yet his success is a vindication of the spoils system. He was opposed by a large and intelligent portion of his constituents because he had violated all civil-service rules in forcing "his man" into the Portland Post-office. This was the main obstacle to his reëlection, and he only pulled through after a hard fight. The sincerity of the Blaine party's devotion to civil-service reform is shown by their rejoicing over his victory. An absurd claim is made that he was reëlected by an increased majority, when the facts are that he was elected at large in 1882 by a majority of more than 9,000, and that he ran on Monday for the first time in a new district, which the Legislature laid out in accordance with the requirements of the new apportionment. His majority in it is estimated at 900.

Reports from Ohio are all to the effect that the State is good fighting ground for both parties in October, and that neither can with

confidence claim a victory on the present outlook. There are more elements of uncertainty there than in almost any other State. There is the German vote, the Prohibition vote, and the anti-Blaine Republican vote. Last year the German vote went almost solidly to the Democrats, and gave their ticket a plurality of nearly 13,000. In that election there were bitter dissensions in the Democratic party over the nomination for Governor, but they had no effect upon the party vote on election day. This year it is claimed by the Republicans that part of the Germans are tired of their alliance with the Democrats and will come back to the Republican ranks. The Democrats deny this assertion, and say that the Germans are all on their side. It is impossible to decide which claim is the true one. Last year the Prohibition vote was over 8,000. This year there is no telling what it will be. The Republicans say it will be less than last year, because it always falls off in Presidential years; but this is not certain. The Prohibition question has greatly increased in importance within the past year or two, and the organization of its advocates is much more thorough, determined, and formidable than ever before. As for the anti-Blaine Republican vote, no man can measure that. In Ohio, as in most other States, it is mainly a silent vote, but it exists nevertheless.

The mistake the Blaine managers in Ohio made in writing to the late Lot M. Morrill, of Maine, as if he were still living, asking him to go out to Ohio to stump for Blaine, may fairly be called hideous. The letter said that the situation in Ohio was critical on account of the attacks on Blaine's character, and that Mr. Morrill, as a pure and upright statesman coming from Blaine's own State, could refute the charges as no one else could. Mr. Morrill was as pure and upright a man as ever lived—among politicians singularly so—and Blaine succeeded him in the Senate when he took the Secretaryship of the Treasury. His widow was naturally indignant that his death should have been forgotten by the Ohio Committee, and wrote a terrible answer, to which she has since added some further comments. They will serve to increase the amazement with which Blaine's nomination was received and is still regarded by tens of thousands. Such revelations as Mrs. Morrill makes were known to nearly all the politicians. It was known what Edmunds thought of him, and Morrill, and Hoar, and Hawley, and, in fact, nearly all the New England Senators, and what was thought of him, too, in nearly every newspaper office in the country; and yet his nomination was inflicted on the party which had a score of stainless men in reserve.

The peculiar tactics of the supporters of Mr. Blaine during the present canvass have excited a good deal of private discussion, as they are not very easy to understand. It seems to have been determined in the inner Blaine councils, after the nomination had been secured, not to notice the Mulligan charges in any way, except vaguely as "exploded calumnies" or "stale slanders." This was a very reasonable conclusion to reach in view of the failure of Mr. William Walter Phelps's defence before the nomination, and in view of the nature of the evidence, which was nearly all documentary, and most of it in Mr. Blaine's own handwriting. In fact, it was recognized fully by the shrewd ones at the outset that there was no defence which would not take on the character of a palliative plea, which is always half confession. Moreover, it was doubtless expected that the Independents would tire of talking about the letters, and that popular interest in them would die out. The *Tribune* adhered very closely to this policy for a while, but there seems to have been no concert between the writers and the orators, for, as soon as the canvass fairly opened, the orators found they had to say something in defence of Blaine's character, which, perhaps, passed off well enough at crowded meetings, but would not bear being printed and read in cold blood. The journalists were thus placed in the exceedingly awkward position of having either to depart from their policy and print defences which they knew would not hold water, or to expose themselves to the charge of being afraid to print what the principal campaign orators had to say on behalf of the candidate.

The journalists accordingly hit on a sort of compromise. They printed brief eulogistic mentions or summaries of what the chiefs said about the Mulligan letters, but nothing more—talking of Mr. Hoar's letter, for instance, as "convincing," but only reproducing a few lines of it. That this is a huge blunder is plain enough, but it is not so inexcusable or unaccountable as it seems on the surface. There was, in truth, in default of strict concert of action between the newspapers and the politicians, no other way out of the difficulty. The value of the original plan of total silence lay in the fact that the great bulk of the country voters take only one daily newspaper, and that usually a party organ of some kind. What does not appear in it they do not see at all, and we think we are within the mark when we say that a very large body of the Republican voters would not have known that the Mulligan charges were making any serious impression on the public mind but for the "defences" of the orators and the eulogistic reference to these defences in the Blaine papers. Thousands, for instance, would not have known that Mr. Hoar had ever answered Mr. Schurz if the *Tribune* had not said the answer was "convincing." After seeing this, however, every reader of that paper must have asked himself why the *Tribune* did not reprint it, and is probably waiting still, like the countryman at the stream, to have it do so; but he never will see it.

There is one thing connected with the defences, too, which is exciting some curiosity, and that is that hardly any of the defenders seem to have read the evidence. This is true of them all, beginning with Mr. William Walter Phelps. When he wrote his letter he had evidently not compared Blaine's speech in 1869 with the Mulligan letters, or the Mulligan letters with each other, and had not read the testimony taken before the Congressional Committee at all. The same thing may be said of the others, Hawley, Hoar, Morse, Mead, and Bliss. Mr. Dawes, it is due to him to say, never professed to know anything about the matter at all, so that he did not commit himself. This is the more surprising because Phelps, and Hoar, and Bliss, at least, are lawyers, and know the necessity of careful preparation for any argument based on facts. The explanation of this probably is that they have all along foreseen the possibility of having to defend Blaine, and knew that a lame defence is always best made by a man only partially acquainted with the circumstances. He is sure to appear honester and more straightforward than a man who knows all the facts: for the latter is sure, in spite of himself, to attempt some transparent casuistry and special pleading. The defenders refrained, therefore, from giving the record any careful study, and trusted to warm personal eulogy to fill in the chinks in their argument.

Mr. R. M. Morse's defence of Mr. Blaine's railway record, made on Wednesday week as President of the Massachusetts Republican Convention, had all the marks of unfamiliarity with the subject. The *Tribune*, however, says that "Mr. Morse referred to the charges preferred against Mr. Blaine, and showed their falsity and malignity," and then this most unaccountable organ suppresses every word which Mr. Morse uttered about the charges. This is unkind to Mr. Morse and most unjust to the *Tribune's* readers. These unfortunates are hungering and thirsting for some demonstration of the "falsity" of the Mulligan letters, but none comes. They are shown every few days that the Morey letter was a forgery, but they knew that long ago. The questions of the hour are, Are the Mulligan letters forgeries? and if not, how can it be shown that Mr. Blaine is not a dishonest man?

What does Senator Hoar mean by saying, in his speech before the Massachusetts Republican Convention, that the Independents "harp on civil service, and propose to vote for a man who says that the first thing to be done after the 4th of March next is to turn out 50,000 Republican office-holders on political grounds solely"? Will he be kind enough to give us the name of the candidate who has made that declaration, or anything which approaches it in meaning? Certainly Governor Cleveland has never made such a statement. Mr. Hendricks was accused of something of the kind, but the accusation was shown to be false. Mr. Hoar seems to have revamped the falsehood now, and to have used it in such a vague way that it would be applied to Mr. Cleveland. We are very much afraid that the exigencies of the campaign are too great a tax upon the Senator's nervous system. He is saying things which must make his friends very unhappy about him.

The recent action of the Master Plumbers' Association, in demanding that manufacturers and dealers in plumbers' materials should sell their wares to none but licensed plumbers, who should present certificates duly signed by the President and Secretary of their respective associations; that no manufacturer or dealer should figure on plans for

any person, whether the latter was engaged in the plumbing business or not; and that they should not become sureties for the fulfilment of any contracts—looks very much like an attempt to revive the ancient guild system so far as plumbing is concerned, by confining a particular kind of work to a particular number of persons, so that the inconvenience of competition may be avoided. In this respect their proceedings bear a close resemblance to those of the retail druggists, who recently sought to "boycott" the patent-medicine men who sold to druggists who had been found guilty of "cutting rates." The manufacturers and dealers in plumbing materials naturally object to a restriction of their market to persons now in the trade, or to those who may be subsequently admitted by a self-constituted guild. The architects are equally resolute in their resistance to this middle-age revival. All such attempts to suppress competition will necessarily fail, and we can think of no trade in which it will be less likely to meet with popular favor than that of plumbing.

The threat of some of the Government printers at Washington to "break from the Union and endeavor to disrupt it" will merely amuse the men who comprehend the strength and extent of the International Typographical Union; but the fact that such a difference should have arisen gives a new illustration of the all-pervading influence of the spoils system. The reason the Washington printers give for their dissatisfaction is the fact that an organized effort has been made by union printers in this city and elsewhere to "boycott" the principal Blaine organ. But why should workingmen and trades-unionists in Washington differ in sentiment from their fellows in all other parts of the country concerning this "boycotting" movement? The answer is very simple. The Washington Printers' Union is dominated by Government printers. Government printers get their positions not because of their skill in type-setting but through political influence, and they have therefore a stronger personal interest in maintaining the Republican party in power than they have in upholding their professed convictions as to the means by which the welfare of workingmen in general can best be served.

Reports from the West and Northwest show that the farmers are not inclined to sell their wheat at the prevailing low prices. Consequently the expected revival of trade has not made its appearance. Increasing attention has accordingly been directed to the corn crop, which promises to be the largest on record—some estimates putting it as high as 1,800,000,000 bushels. Notwithstanding this favorable outlook the price of corn is very firm. The warm weather of the past few days has gone far to put the corn out of danger from frost. The crop has matured in all the corn-growing country south of the meridian of Peoria, Illinois, and every day of warm weather carries this line probably fifty miles northward. The prospect is, therefore, extremely bright as regards that gigantic factor of the national prosperity. The *Railroad Gazette* thinks that the export value of the present year's corn crop will offset the loss in that of wheat resulting from the decline of price in the latter. "The largest estimate of the wheat crop," it says, "would make the excess over last year worth less than $100,000,000 at *New York* at present prices—at the farmers' stations probably not more than $75,000,000. But the probable increase in the corn crop, which, if we have no severe frost for two weeks, seems likely to be 300,000,000 bushels, is worth in New York about $175,000,000, and at the farmers' stations probably $115,000,000 more than last year. It will have a good effect for more than one year, just as the failure of the crop in 1881 is felt to this day."

The Marine Bank, the Second National, the Metropolitan, the Newark Savings, the Albion, the Wall Street, and the Bank of New Jersey have all been brought to grief by the misconduct of their principal officers, in the short space of six months. In three of these cases the president or cashier ran away; in one both officers committed suicide. In one, the president is in the hands of the law. In all the cause of the trouble seems to have been the same—the failure of the directors to make themselves acquainted with the condition of the assets of the bank. What is wonderful is that each revelation, as it occurred, does not seem to have led to the others—that is, no bank which has suffered seems to have been led to examine its affairs in consequence of what had occurred in any other bank. The exposure seems to be invariably brought about by accident or by the disappearance of the cashier or president, or his confession, and not by any precautionary action of the directors. Of course we do not know anything of the examinations which may have taken place and revealed no unsoundness, though they are probably numerous. But it is very odd that the unsoundness should all come to light spontaneously as it were. The Hill defalcation seems to have been revealed by the pertinacity of one director, but not by any concerted action on the part of the board.

The strength of "fair trade" as one of the factors of public opinion in Great Britain has been tested in the petition of the English sugar refiners for an import duty on refined sugar equal to the export bounty paid by governments on the Continent. This petition was presented four years ago, and was supported by arguments going to show that such a duty would not be in conflict with the principles of free trade, but would merely serve to put the British refiner on an equality with the foreigner in the British market. The Board of Trade have had the matter under advisement for four years, and have taken a great deal of testimony in order to ascertain how the various classes and trades interested in the price of sugar would be affected by the proposed duty. They have found among other things that the number of persons employed in making confectionery and in preserving fruits by the use of sugar exceeds the number of those employed in sugar refineries by three to one. Therefore, without taking into account the great mass of the people regarded as consumers, and the advantage which they gain from the Continental bounties—a gain estimated at $7,500,000 per annum—they consider that the imposition of a countervailing duty would be an injury and not a benefit to British laborers. They have accordingly denied the petition of the refiners. It is a noteworthy fact that in spite of the Continental bounty, which is equal to half a cent per pound, the sugar refining industry in Great Britain has steadily grown, and that the exports of the article from the United Kingdom have risen from 896,243 cwts. in 1879 to 1,155,787 cwts. in 1883.

Mr. Sims Reeves, the London vocalist, has been interviewed regarding his opinions on the operatic problem. With one exception, his views are dolefully pessimistic. Italian opera, he declares, is dying out, and in this he confirms the statement of all observers, which is further corroborated by the fact that next year London will have no regular season, but possibly performances from a "scratch" company. German opera, he believes, is not likely to replace Italian opera. In Germany it has entirely replaced it, but Mr. Reeves of course speaks of London only. His statement about German opera is only a prophecy, but, as experience shows, it is never safe to distrust a prophecy. Wagner's music, he says, does more harm to the voice in two years than other music in ten years; an opinion which is contradicted by Mme. Lucca, who is not an admirer of Wagner, but declares that all this talk about his music ruining voices is "mere bosh." Without Italian and German works the operatic stage of the future will be in a bad way. France is the only other country that has supplied the world with operas, and Mr. Reeves must therefore be looking to Offenbach and Gounod for entertainment in coming seasons. But this is not all. Not only are all the Italian and German composers, of the past, miserable failures in London, but the world is even worse off for vocalists than for operas. "In Italian opera," says Mr. Reeves, "only Patti and two male singers are fit to do the work. There is no bass." Nilsson, Lucca, Gerster, Sembrich, etc., are, of course, no singers at all. As for the basses, there never was one in the whole history of music. But once upon a time there was a great tenor. He still lives. His name is Sims Reeves.

The rapidity with which the French and Germans are taking up positions on the west coast of Africa is one of the most strking incidents in European politics. What these stations will amount to as colonies remains to be seen, but probably not much at present. German emigrants will not go to them as long as there is room in America, and there are no French emigrants to go anywhere. Kossuth's explanation of this colonizing activity is plausible enough—that Bismarck encourages it in order to divert the attention of France and England from the European continent which he governs himself. One thing is, however, certain, that the next twenty-five years will probably see Africa at last opened up to railroads and steamers, and it will probably be found that it has, as a field for emigration, been greatly underrated and the climate much slandered. There is no hardier or more vigorous race of men on earth than the Dutch Boers, after two centuries of life in the country.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 3, to TUESDAY, September 9, 1884, inclusive.]

DOMESTIC.

CHARLES J. FOLGER, Secretary of the Treasury, died at his home in Geneva, N. Y., on Thursday evening at five minutes before five o'clock. A sister-in-law, Mrs. Hart, of Auburn, was the only relative present. Secretary Folger has never been very well since defeated in the election for Governor. His arduous duties as Secretary, which have been performed with the greatest industry and exactness, have told upon him. A few weeks ago he grew very ill, and went to his home in Geneva. On September 2 he began to fail rapidly. He was conscious within five minutes of his death. His last words were, "My eyes are growing dim." Mr. Folger was born in the island of Nantucket April 16, 1818, a descendant of the best New England stock, embracing ancestors of Benjamin Franklin and Lucretia Mott. He went with his family to Geneva, N. Y., when twelve years of age, was graduated at Hobart College in 1836, and was admitted to the bar three years later. He was Justice of the Peace in Geneva, and in 1844 was appointed Common Pleas Judge of Ontario County. In 1851 he was elected County Judge of Ontario. He was, in early life, a Democrat, then a Free-Soiler, and afterward a Republican. By the latter party he was elected to the State Senate in 1861, and served eight years, most of the time as leader of his party. His record was without a stain. In the Constitutional Convention of 1867 he took a prominent part. He attracted notice in his Senatorial career by his antagonism to all stock jobbers. He was elected a Judge of the Court of Appeals in 1870, and ten years later succeeded Chief Judge Church, being appointed by Governor Cornell. At the succeeding election the people made him Chief Judge by their votes. He, however, left the bench October 27, 1881, when made Secretary of the Treasury by President Arthur. Against his wish he ran for Governor of New York in 1882, and was defeated by Grover Cleveland.

Secretary Folger's funeral took place at Geneva on Tuesday afternoon. President Arthur and all the members of his Cabinet, Governor Cleveland, and many other eminent men were present. The town was draped in mourning and the exercises were very impressive. He was buried in the cemetery of the town overlooking Seneca Lake.

Senator Anthony's funeral, in the First Congregational Church, Providence, R. I., on Saturday, was attended by President Arthur and many distinguished personages. The Rev. Mr. Woodbury delivered the funeral oration.

The will of Senator Anthony leaves to his sister and relatives the bulk of his fortune, amounting to about $200,000. Among the public bequests are $25,000 to Brown University and the Rhode Island Hospital; and a bequest of $30,000 in trust for Miss E. D. Potter during her life is given to the city of Providence for a fountain after her death.

Complete returns from the Vermont election give the following result: Total vote cast, 62,421. Of this number Pingree (Rep.) received 41,917; Redington (Dem.), 19,838; Soule (Greenback), 480; Independent and scattering, 186, making Pingree's majority 21,413. The proportional loss of the Republicans is about 12 per cent., and that of the Democrats 6.5 per cent. The reduction in the Republican majority is 3,599.

An election was held in Maine on Monday for Governor, four members of Congress, thirty one State Senators, 151 Representatives, and full boards of officers in the sixteen counties of the State. Returns from 267 towns give Robie (Rep.) for Governor 61,318, Redman (Dem.) 45,064, scattering 2,414; plurality 16,254. The same towns in 1882 gave Robie 56,195, Plaisted 47,510, scattering 1,467; plurality 8,685. The towns to hear from gave Robie 16,286, and Plaisted 16,411. Robie will have over 16,000 plurality in a total vote of about 140,000. For Congress Reed has a plurality of about 900, in the First District, with Dingley, Milliken, and Boutelle reëlected in the Second, Third, and Fourth Districts respectively, the last by an increased majority. The State Senate will stand 31 Republicans, and no Democrats. The House, as far as heard from, will have 117 Republicans and 34 Democrats, a Republican gain of seven. The prohibitory amendment was adopted by upwards of 30,000 majority. The Republican gains were made principally in large cities, where the party managers concentrated their efforts. It is significant, however, that the Democrats carried the two manufacturing cities of Lewiston and Biddeford, where the Republicans pushed the tariff to the front. Mr. Blaine did not vote on the prohibitory amendment, and explained his course as follows: "For myself, I decided not to vote at all on the question. I took this position because I am chosen by the Republican party as the representative of national issues, and by no act of mine shall any question be obtruded into the national campaign which belongs properly to the domain of State politics."

The Republican State Convention of Massachusetts met in Boston on Wednesday. It was small in numbers and enthusiasm. Robert M. Morse, jr., President, delivered a long address, in which he undertook to defend Blaine from the Mulligan charges. George D. Robinson was renominated for Governor by acclamation. The rest of the State ticket was completed with the names of the present incumbents of the respective offices. The platform commended the administrations of President Arthur and Governor Robinson, and warmly approved the national Republican ticket.

In Worcester, on the same day, the Democratic State Convention met. Colonel Jonas H. French was made Permanent Chairman, and delivered a stirring address. The voting for Governor resulted as follows: W. C. Endicott, of Salem, 385; S. W. Bowerman, of Pittsfield, 131; Leopold Morse, 105; Edward Avery, 95. This nominated Mr. Endicott. James S. Grinnell, of Greenfield, was named for Lieutenant-Governor. The nominee for Governor is an ex-Judge of the State Supreme Court who retired from the bench two years ago on account of ill health. He has never been active in State politics, and his nomination is especially acceptable to the Independent Republicans.

The Wisconsin Republican State Convention at Madison on Wednesday renominated the present State officers by acclamation. The ticket includes: For Governor, Jeremiah M. Rusk, of Vernon; for Lieutenant-Governor, Samuel S. Fifield, of Ashland. The Texas Republicans did not nominate a State ticket, but passed a resolution recommending that the Republicans aid "all Independent candidates for State offices favorable to the defeat of the Democracy." The Iowa Democrats on Wednesday completed the fusion ticket of the Greenbackers by nominating their share of State officers and electors.

The Wisconsin Prohibitionists on Thursday nominated Samuel D. Hastings, of Madison, for Governor, and E. G. Durant, of Racine, for Secretary of State.

Carl Schurz addressed an audience of 8,000 Germans in Milwaukee on Saturday night. The meeting was entirely under Independent auspices. He was received with great enthusiasm.

The Indiana Independents had a meeting at Indianapolis on Thursday night. John T. Dye, heretofore a Republican, in a speech of considerable length, gave the reasons why he and his associates cannot vote for Mr. Blaine. Lucius B. Swift, Secretary of the Independent League, presided, and said the Independents still clung to the good things in the Republican party, which they were not afraid to trust in the hands of Grover Cleveland.

The answer of the Indianapolis *Sentinel* in the Blaine libel suit was filed on Thursday morning. The defence admits printing the article complained of, and denies that it was false in any particular. Mr. Blaine's attorneys have filed an answer denying the truth of the charges.

John Kelly and the district leaders of Tammany Hall held a secret meeting on Saturday evening to discuss the political situation. The result was a determination to support the regular Democratic ticket. John Kelly made a speech in which he said that Tammany Hall had taken part in the National Convention and must support the national candidates.

At a meeting of the Tammany Committee on Organization on Monday evening, with John Kelly in the chair, a resolution was adopted providing for the appointment of a committee composed of one member from each Assembly district to prepare resolutions and an address to be presented at a meeting of the General Committee on September 12. The resolutions and address are "to explain and define the position of the Tammany Hall organization toward the Democracy of the State and nation upon the political questions now before the country, as well as upon the action and result of the late Chicago Convention." The Committee have endorsed Cleveland and Hendricks.

Governor Cleveland visited the fair at Elmira, N. Y., on Monday. He was received with great enthusiasm and made a short speech. Fifty thousand visitors were in the city.

Mrs. Belva Lockwood, the woman lawyer of Washington, has notified the California Woman's Rights Convention, which nominated her for President, of her acceptance.

William Walter Phelps was renominated for Congress on Thursday by acclamation in the Fifth District of New Jersey.

"Calamity" Weller has been renominated for Congress by the Democrats of the Fourth Iowa District.

The annual session of the American Association for the Advancement of Science was opened at Philadelphia on Thursday. The retiring President, Prof. C. A. Young, of Princeton, called the meeting to order and resigned the chair to Professor J. P. Lesley, of Philadelphia, President-elect. Governor Pattison, of Pennsylvania, delivered an address of welcome, to which the President responded.

In connection with the order prohibiting absolutely the importation of rags for three months after September 1, the Acting Secretary of the Treasury has decided that the order must be maintained, but that rags now in port and those en route, where the proof that such rags were collected in non-infected districts is complete and undoubted, shall be admitted.

A great fire broke out on Sunday evening, about seven o'clock, in a lumber pile in the yard of Woods, Perry & Co., at Cleveland, Ohio. A strong wind swept the flames westward, and the mills of the company were soon destroyed. Five million feet of lumber were burned in their yard. All the engines in the city were called out, but they were unable to cope with the flames, and aid was telegraphed for to neighboring cities. The flames extended west to the lumber yards of Potter, Birdsall & Co., and east to C. G. King & Co., extending from Scranton Avenue to Bee Line, and from the river to Carter Street, eating up 35,000,000 feet of lumber, twenty-seven cars of the Bee Line loaded with merchandise, and other incidentals, such as office buildings,

shanties, and stables. Among the other property destroyed were Sherwin, Williams & Co.'s works, G. A. Stanley's candle factory, Hubbell & Westover's lumber yard, the Variety Iron Works, Eynon & Co.'s machine shop, Davidson's box factory and planing mill, Woods, Perry & Co.'s planing mill, and the Howells Coal Co.'s coal yard. In short, the burned district covers fifty acres, and nearly one-half of the vast lumber interests of the city were destroyed or crippled. The total loss is estimated at about $1,500,000, of which Woods, Perry & Co. suffer $675,000; Potter, Birdsall & Co., $125,000; House & Davidson, $60,000. The insurance is about $400,000. The fire was under control at 1 o'clock on Monday morning.

Charles S. Hill, cashier of the National Bank of New Jersey, at New Brunswick, committed suicide on Thursday night. An investigation of the affairs of the bank showed an alarming deficit, report placing it as high as $1,000,000. It is probably about $300,000. The excitement over his death was intensified on Monday when it became known that Mahlon Runyon, the President of the bank, a man about sixty years of age, had cut his throat and had bled to death in a closet at the bank. It was said that he owed the bank $40,000, and that a warrant was out for his arrest. The excitement over the event became very great. The streets near the bank were blocked with a crowd, and threats were made to break into the bank.

J. Nelson Tappan, ex Chamberlain of New York city, and a member of Tammany Hall, died on Friday, at the age of fifty-two.

Bishop George F. Pierce, Senior Bishop of the Methodist Episcopal Church South, died at Sparta, Ga., on Wednesday.

FOREIGN.

Advices from China received on Thursday state that three Chinese armies are marching to invade Tonquin—one from each of the three southern provinces of China. The army from Kwang-si numbers 25,000 men, that from Yunnan 20,000, and that from Kwang-tung likewise 20,000. The Yunnan army will join the Black Flags at Lao-Kai, on the Tonquin frontier. There are said to be 10,000 Black Flags at that point. These combined forces will march down the Red River and attack Hunghoa. The Kwang-si army will march into Tonquin by way of Bacbinh, and, in connection with a portion of the Canton army now at Langson, will attack Bacninh. The above rumor has been derived from French sources.

It is believed that Admiral Courbet, with his fleet, is near Hainan, out of the track of passing vessels, and that he is engaged in making such repairs to his ships as the engagements at Kelung and Foo-Choo have rendered necessary. The attack on Kelung was prompted by the desire to obtain possession of the coal mines, which would prove extremely useful to the French in case war was declared and the neutral ports closed. The Chinese frustrated the scheme by flooding the mines and destroying the pumping machinery. The report that Li Hung Chang has been degraded from his rank is untrue.

There were rumors on Friday that Kelung had been again shelled by the French, but the Paris *Temps* explains that while Admiral Courbet, on board the gunboat *Bayard*, was inspecting the defences of Kelung, the Chinese fired from the fortifications upon the *Bayard*, wounding four sailors. The French man-of-war replied to this assault and demolished the Chinese battery, after which Admiral Courbet returned to the Min with the steamer.

It is said that Admiral Courbet will soon be promoted to full Admiral. His rank now is Vice-Admiral, and no French naval officer has held a higher rank than that for a great many years.

The *Pall Mall Gazette* says the Chinese Government has made a declaration of war in the form of a manifesto from the Emperor to the people. The Emperor declares that he regards the French action as constituting a state of war, and he calls upon his subjects to aid in repelling the foe. Admiral Courbet, it is asserted in Paris, insists upon an immediate declaration of war by France, and it is officially announced that it will soon be made.

Foo-Choo remains quiet. The Chinese are repairing their dismantled forts. The masonry was in some places thrown down, but has now been fully restored.

The English gunboat *Zephyr*, at Foo-Choo, was mistaken for a French vessel and fired upon on Sunday from the Kinpai forts. A sailor was wounded. The Chinese were distressed at their mistake, and made an ample apology.

A Foo-Choo despatch to the London *Times* on Monday announced that the Chinese officials there had been notified of the declaration of war against France. Shanghai has been declared a neutral port. The entrances to Woosung will be blocked, excepting that a channel will be kept for neutral Powers.

The Chinese have cut a military road through the French cemetery at Canton, destroying a mausoleum and rifling the tombs.

The Paris *Le Matin* makes the following statement on diplomatic authority: "Prince Bismarck has agreed to give France the support and influence of Germany in an attack upon China, on condition that the treaty with China of 1860 be revised so as to enable Germany to obtain equal concessions with England, America, and France. Bismarck asked the Pekin Government to give Germany such a concession at Shanghai, but the request was refused, on the ground that the consent of all the contracting parties to the treaty of 1860 was required."

There were rumors in London and Berlin on Wednesday that a second conference on Egyptian affairs would be held. The British Foreign Office denies all knowledge of any intention on the part of Germany to propose such a conference. On the contrary, despatches from the British Embassy at Berlin indicate the entire suspension of discussions on questions in relation to Egypt. The interview at Varzin between Baron de Courcel, the French Ambassador at Berlin, and Prince Bismarck resulted in the consent of France to postpone urgent measures looking to the speedy settlement of the Alexandria indemnities until the objects of the Earl of Northbrook's mission to Egypt had been developed.

General Lord Wolseley, commander of the British forces in Egypt, and Lord Northbrook, special High Commissioner, arrived at Alexandria, at noon, on Tuesday. They proceed immediately to Cairo.

The British Government has received official reports from Nubar Pasha, the Egyptian Foreign Minister, General Stephenson, and Gen. Sir Evelyn Wood, urging a reconsideration of the plans for the Nile expedition. Both Generals Stephenson and Wood maintain that the boat service and the commissariat arrangements are entirely insufficient for the needs of the expedition, and they recommend that the Government limit the expedition to a small force, whose duty it shall be to open communication with General Gordon at Khartum. The reports have been referred to General Wolseley.

Advices from Cairo are to the effect that the rapid fall of the Nile has increased the fears that General Wolseley's plan for reaching Khartum will prove a failure. General Wolseley in a conversation stated that it was his intention to arrive at Dongola personally, if only with a small contingent, and at any risk, by November 7.

Henry M. Stanley, the explorer, has accepted an invitation from General Lord Wolseley to join his staff in the expedition to Khartum.

The London *Telegraph* on Tuesday printed a private letter from Cairo, which refers to an impression there that Khartum has fallen and that the Gordon letters were spurious.

Colonel Colville telegraphed from Dongola on Monday that the Haroni tribe had surrendered, thus opening up the whole route from Meraweh to Dongola.

The Egyptian rebels recently attacked Kassala in great force, but were defeated with heavy losses.

Mr. Gladstone had a private conference on Friday in Edinburgh with ministers of the Free Church of Scotland. He promised them that if a distinct majority of the Scotch members returned to the House of Commons at the next election were pledged to disestablish the Church of Scotland, the Government would carry out the popular will.

The Liverpool *Courier* asserts that the authorities at Dublin Castle continue to receive alarming information relative to the operations of American dynamiters. It is alleged that bombs are being continually brought to the United Kingdom by the agents of O'Donovan Rossa, who obtain employment on the ocean steamers, and so evade suspicion. The steamers are being regularly watched, but so far as is now known nothing of a dangerous or suspicious character has been discovered.

A cholera panic prevails throughout Italy. Each town is taking measures of protection regardless of the Government. Many have closed their gates to every one. Villages have established armed cordons. The result is that in many parts of the peninsula anarchy virtually prevails, and travel and traffic are greatly interrupted.

Trade in Naples has been paralyzed by the cholera epidemic. More than ten thousand workmen are idle.

Clericals from all the provinces, to the number of many thousands, paraded the streets in Brussels, Belgium, on Sunday, amid the vehement hissing and howling of dense crowds of lookers-on. The latter, after the din began, soon became more demonstrative, and blocked the procession and tore down the banners. Fierce scuffles ensued, and 100 persons, including several policemen, were injured. One hundred and eighty-five arrests were made. Troops were stationed at various points to preserve order. Great excitement prevailed, and numerous riots occurred in Antwerp also. The gendarmes dispersed the mob and made four arrests.

The Czar, Czarina, Czarevitch, the Grand Dukes Nicholas, Vladimir, and George arrived at Warsaw on Monday, and will reside in Lazienki Park, which has already been closed to the public. The Emperors of Russia, Germany, and Austria will meet on September 15 at Skierniewice, Poland. It is generally expected in political circles that one of the principal topics which will occupy the attention of the three emperors at their approaching conference, will be the question what measures are to be taken against anarchists. This discussion may lead to the adoption of stringent international measures.

Sixty-four persons suspected of plotting against the Czar have been arrested at Warsaw.

Another Danish Polar expedition will start for the frozen North next summer, proceeding by way of Franz Joseph Land. It will be under the leadership of Messrs. Hoijaard and Gamel, commander and owner of the *Dijmphna*.

The British Association for the Advancement of Science closed its meeting in Montreal on Wednesday. Two special trains left that city on Thursday, one, containing 300 British scientists, for Philadelphia, to attend the American Association meeting; the other, containing 200 scientists, for the Rocky Mountains.

THE REPUBLICAN MANAGERS AND THE CIVIL SERVICE.

THE attitude of the Republican managers towards civil service reform in this canvass has not received the attention it deserves, owing to the preoccupation of the public mind with questions affecting their candidate's personal character. But it is one in every way suitable to his antecedents. The claim that he is a civil-service reformer, or in any way stands for civil-service reform, although advanced occasionally by his champions, is of course simply amusing to those who know what his private opinions about the whole movement have been from the beginning, and it is still more amusing to those who know the readiness with which he has always used the patronage of the Government to advance his political fortunes. About this, as about so many other things, he has, however, been discreet as well as wily, acting always on the great principle of "keeping my name quiet." In one case he did commit himself openly against the reform, apparently in a fit of mockery, by appointing, when in the Speakership, a Committee on Civil-Service Reform containing nine avowed enemies of the change, one of them Ben Butler, out of a total of eleven members. This committee did what he evidently expected they would do, by reporting against any appropriation for the expenses of the Commission, and President Grant accordingly abandoned the experiment.

The managers of his canvass are trying to follow the same course. They know perfectly well what is the true intent and meaning of the Federal law forbidding the levying of political assessments on Government employees, either "directly or indirectly," by persons holding Federal offices. The object of the Act was to supplement the provisions made regarding appointments to office by uprooting the idea that a Government clerk is under any greater obligation to contribute to campaign expenses than a man of any other calling, and to put a stop to the practice of threatening him with some undefined loss or damage in case he refuses to do so. For it must not be forgotten that the custom of calling on Government officers, as a class apart, to pay the expenses of the canvass, has always been a form of intimidation. It has never been pretended that they are more ardent Republicans than other men, or that they are better off pecuniarily than other men, or that they are more eager to give to the party than other men. The sole reason for singling them out for special taxation, and a reason which has never been in the slightest degree disguised, has been the fact that the political managers had, or were supposed to have, a control over their means of livelihood which they did not possess over that of any other class. Every solicitation addressed to them for contributions was therefore a threat. Were it not a threat of which the persons receiving it feared the fulfilment, the annual attack on the Government offices for election money would have been as absurd and as promptly and bitterly resented as a similar attack on the banks, or the grocery stores, or plumbers' shops.

It was to reform this abuse altogether that the recent Federal civil-service legislation was enacted. It was meant to deliver the Government clerks wholly from the special importunity for political purposes of persons having, or seeming to have, any influence over their private fortunes. It was meant to put them toward party politics in the position of other members of the community—that is, of men free to give or not to give of their substance to any charitable or philanthropic or political enterprise, without having to consider anything but their means and their inclinations. To accomplish this the act went as far as it could go in the way of precaution by forbidding all Federal officers, high and low—that is, all persons whose official position would be likely to give weight to their application—to solicit contributions from brother officers either "directly or indirectly"; that is, either by themselves or through others who would probably be considered their representatives by the clerks. The prohibition could in fact hardly have been made more explicit, or its object more clear.

Nevertheless, as soon as the canvass opened, the Republican managers went to work to evade it by every means in their power, all the while denouncing the Democrats for their hostility to the reform. The National Committee appointed in open daylight a subcommittee to collect assessments, evading the letter of the law by putting no one on it who was in the Federal service, but violating its spirit by appointing it so openly that the clerks should understand that its threats were as good threats as if they had emanated from the Committee itself, and that persons paying no attention to its applications should have as much to fear as if they came from persons in office, and by singling out the Government employees as persons specially bound to bear the brunt of the campaign expenses.

To this most discreditable and, as will, we believe, appear hereafter illegal, device, they have now added another, on which Mr. Dorman B. Eaton comments in a letter recently published—that of forming "State associations" in the departments, and compelling the members to pay five dollars each as an initiation fee or subscription now, in advance. That this also would be illegal, if the money were openly applied to campaign uses, there is little doubt. This attempt is, of course, also based on the intimidation which the law was intended to prevent. It can only succeed through the fear of the clerks that if they do not join and pay, they will be marked either for removal or non-promotion, and is thus another gross violation of the spirit of the law.

That a large body of the leading men of the Republican party should be engaged in an attempt to nullify an act of Congress, by fraud and subterfuge, and at the same time in an attempt to persuade the voters that they are the only persons who can be relied on to execute it, is a good illustration of the depth of the corruption—including under that term falsehood, insincerity, and hypocrisy—into which the party management has fallen, and of which "the support of Blaine," as now carried on by a large proportion of the newspapers and orators who were reviling him six months ago, is such a painful display. The show of indignation which some of them managed to get up over the threatening letter attributed to General Raum, and over which Raum himself was also amusingly wrathful, was of a piece with the anxiety and alarm about the national chastity which so many of them have of late been exhibiting. Raum was made to say nothing in the letter which he is not saying every day in more guarded language. It simply contained in direct terms a threat which his committee makes indirectly scores of times every week.

MR. BLAINE'S LATEST IDEAS OF STATESMANSHIP.

Two objections are repeatedly made to the stress which the Independents lay upon the Mulligan letters. The first is that they are "burnt powder"; the second is that if the worst that is said of them is true, they reveal only an isolated misstep in a long and useful public career, and are not, therefore, sufficient to justify a refusal to vote for Blaine. The first objection merits no consideration. If the charges based on the letters are true, they will remain true for all time, no matter how often they are brought up. The second objection has seemed plausible to a great many people, but we are unable to see why. We have dwelt with great and persistent emphasis upon the Mulligan letters, because we regard them as not in any sense revealing merely an isolated "deal," but as disclosing peculiarities typical of the man's whole career and character. While ostensibly serving his country, he has been very earnestly and assiduously serving James G. Blaine.

We have tried to induce either the Blaine journals or the Blaine orators to point out the distinguished public services which they claim are to be found in their candidate's twenty years' career in Congress, but none of them has done so. If the Mulligan letters are "exploded scandals," we have said, let us discuss Mr. Blaine's foreign policy, and his connection with the Calderon Government and the Landreau claim; but these also, we are informed, are an old story. Yet these have the same peculiar flavor as the railway transactions, and are as typical of the man. There are only two conspicuous revelations of Mr. Blaine's statesmanship which have been made since he retired from the State Department, and as these were both made within a year, we trust that they are not too far back to be discussed. In response to numerous requests, we will recite the facts about them.

1. His solution of the Virginia debt question. This is given in the published first volume of his history, 'Twenty Years of Congress,' and is therefore a most deliberate expression of opinion. In the latter part of the twenty-first chapter of his book he makes an elaborate and very "Blaineish" argument in favor of Federal aid to Virginia on account of the separation from her of West Virginia, which we condense as follows:

By the establishment of West Virginia as a separate State the "cause of the Union was aided by the addition of another loyal commonwealth," but "to the old State of Virginia the blow was a heavy one. In the years following the war it added seriously to her financial embarrassment, and it has in many ways obstructed her prosperity." "Virginia owed a large debt, held in great part by loyal citizens of the North and by subjects of foreign countries. The burden was as heavy as she could bear in her entirety, and dismemberment so crippled her that she could not meet her obligations." "If the United States were willing to place Virginia on the basis on which they magnanimously placed Mexico after the conquest of that Republic, a sufficient allowance would be made to her to compensate at least for that part of her public debt which might presumptively be represented by the territory taken from her. If it be said in answer to such a suggestion that it would be fairer for West Virginia to assume the proportional obligation thus indicated, the prompt rejoinder is that in equity her people are not held to such obligation. The public improvements for which the debt was in large part incurred had not been so far completed as to benefit West Virginia when the civil war began—their advantages being mainly confined to the tide-water and Piedmont sections of the State. *There is indeed neither moral nor legal responsibility resting upon West Virginia for any part of the debt of the old State.*"

This is the whole argument, and it is based either on ignorance so gross as to be inexcusable in an historian, or on deliberate falsehood. When West Virginia became a State its people adopted a Constitution in which they solemnly pledged themselves that "an equitable proportion of the public debt of the Commonwealth of Virginia prior to the first day of January, 1861, shall be assumed by this State, and the Legislature shall ascertain the same as soon as may be practicable, and provide for the liquidation thereof by a sinking fund sufficient to pay the accruing interest and to redeem the principal within thirty-four years." Mr. Blaine must have had a copy of this Constitution by him when he wrote, for he quotes from it and gives the large popular vote by which it was adopted—18,862 in favor and only 514 against. Under this Constitution, containing this specific pledge, West Virginia was admitted to the Union as a separate State. And yet Mr. Blaine, as an historian, says there is "*neither moral nor legal responsibility* resting upon West Virginia for *any part* of the debt of the old State," and his friends have been using that statement as a basis for claiming the vote of West Virginia for him for President.

In reference to Virginia's ability to meet her obligations, Mr. Blaine's assertions are equally false. In the new Constitution, adopted by Virginia in 1870, it was decreed that the Legislature should provide for adjusting with West Virginia the proportion of the public debt to be borne by each State, the sum received from West Virginia to be applied to the payment of the public debt of Virginia. In accordance with this decree, the Legislature of Virginia in 1871 tendered to West Virginia a proposition for arbitration upon the division of the debt. West Virginia making no response, the Virginia Legislature declared a division of one-third for the new State, and two-thirds for the old. It provided also for the funding and payment of the debt by the surrender of the old bonds and the issue of new bonds of Virginia for two-thirds of the principal and interest, certificates being issued for the remaining one-third, reciting that it would be paid whenever West Virginia provided for her share of the debt. In 1871 the entire debt of Virginia was about $45,000,000, making, when refunded under the two-thirds division, a new debt of $30,000,000. Mr. Blaine's argument, which is borrowed from Mahone, is that "dismemberment so crippled Virginia that she could not meet her obligations." The facts are that the true value of taxable property in Virginia in 1871 was $409,000,000, and its actual assessed valuation was $365,000,000. The annual interest on the debt as refunded in 1871 would be $1,800,000, or an annual tax of less than five mills on the dollar upon the assessed valuation of property. The ordinary State expenses of Virginia during the past ten years have been about $730,000. A tax of seven mills on the dollar would therefore pay the interest on the debt and all the State expenses besides. And Mr. Blaine has the "brilliant audacity" to say that the State was "so crippled that she was not able to meet her obligations." When he said that, he justified all the repudiation steps which the State, under the lead of Mahone, whom Mr. William Walter Phelps admiringly calls the "Little Napoleon of Readjustment," has taken. These are, first, to repudiate one-third of her debt on account of the loss of West Virginia—about $15,000,000; second, to repudiate outright nearly one-half the interest on the remaining two-thirds—about $900,000; third, to repudiate more than one third of the principal of the remainder and one-half the interest, reducing the debt at one stroke from $30,000,000 to $19,000,000, and the interest from six per cent. to three. All this Mr. Blaine justifies; he justifies also the direct breach of a solemn compact which West Virginia is guilty of, and rushes, in the true Blaine manner, to the solution of all the trouble by having the repudiated one-third paid out of the National Treasury.

2. The other statesmanlike proposition which Mr. Blaine has advanced since his retirement from public life is his scheme for the distribution of the surplus. This was published in the form of a letter to the editor of the Philadelphia *Press*, on November 29, 1883, and was greatly admired by the same editors who are now advocating Mr. Blaine's election to the Presidency. The entire letter was republished in the *Evening Post* of August 26. Its main idea was to distribute the whiskey tax collected by the Government among the States as a relief to local taxation. As the *Tribune* summed it up in an admiring article, "Mr. Blaine proposes to abolish State taxes in all the States except three, and State and county taxes both in about half of the States." Mr. Blaine's own picturesque language put it in this way:

"The amount yielded by the tax on spirituous and malt liquors last year was over $86,000,000. On the basis of the census of 1880 it would pay about $1 75 per capita to all the people. The tendency would be to increase rather than diminish this ratio as time wore on. Illicit distilleries would disappear when every State and every town should come to realize that it was being defrauded of its own revenue by permitting or winking at the violation of law. On the basis of $1 75 per head the relief to the States would be very great. I append a table showing what each State would receive on the basis of the present revenue. In considering the question, as I have very carefully for several months past, I have possibly overlooked objections which others may suggest. But the more I have reflected upon it the more evident it has become to my mind that it is wiser to tax whiskey than to tax farms and homesteads and shops, and that it would be an act of incalculable folly to remit the $86,000,000 instead of giving it to the States for the relief of oppressive local taxation."

Alabama	$2,208,000	New Jersey	$1,980,000
Arkansas	1,405,000	New York	8,893,000
California	1,557,000	North Carolina	2,450,000
Colorado	340,000	Ohio	5,596,000
Connecticut	1,088,000	Oregon	215,000
Delaware	255,000	Pennsylvania	7,493,000
Florida	470,000	Rhode Island	483,000
Georgia	1,598,000	South Carolina	1,742,000
Illinois	5,285,000	Tennessee	2,698,000
Indiana	3,461,000	Texas	2,785,000
Iowa	2,842,000	Vermont	581,000
Kansas	1,743,000	Virginia	2,646,000
Kentucky	2,884,000	West Virginia	1,081,000
Louisiana	1,644,000	Wisconsin	2,301,000
Maine	1,134,000	Arizona	70,000
Maryland	1,634,000	Dakota	236,000
Massachusetts	3,120,000	Idaho	57,000
Michigan	2,863,000	Montana	69,000
Minnesota	1,365,000	New Mexico	208,000
Mississippi	1,980,000	Utah	251,000
Missouri	3,794,000	Washington	121,000
Nebraska	791,000	Wyoming	36,000
Nevada	100,000	Dist. of Col.	310,000
New Hampshire	605,000		

The reception which the press of the country gave to this plan was evidently a great surprise to its author and his friends. His personal organs, the *Tribune* and the Philadelphia *Press*, were almost entirely alone in commending it. They were especially enthusiastic over the phrase, "It is wiser to tax whiskey than to tax farms and homesteads and shops," but the whole country literally rose in wrath against the proposition as unconstitutional, subversive of local responsibility, and in every way dangerous. The Western States protested against paying taxes for the Eastern States, and the absurdity of the scheme was demonstrated when it was shown that Maine, a State in which traffic in liquor is illegal, would be awarded $1,134,000 in the distribution. The storm of disapprobation was so overwhelming that precisely seven days after the *Tribune* had launched the plan with such jubilant hopes, it withdrew it from discussion in a very solemn article beginning as follows: "The question raised by Mr. Blaine in regard to the distribution of the amount derived from the whiskey tax belongs to the future." Word was sent from Washington also that Mr. Blaine was much amused at the storm which his proposition had created, since he only put it out in a tentative way, not thinking for a moment that it applied to the present situation; and yet in his letter unfolding it he had said that he had been "considering it very carefully for several months," and that the more he "had reflected upon it" the more he had been convinced of its wisdom.

THE PRESIDENT AS AN EXAMPLE.

Some years ago it was proposed, in New Jersey, to erect a statue to a favorite general killed in the civil war. We remember to have received at the time, from an estimable source, a protest on the ground of his notorious unchastity. What an evil example for the youth of the State, argued the writer, thus to honor a man whose immorality was so flagrant.

This reasoning did not seem to us to be so conclusive as to merit publicity, nor did it prevent the success of the enterprise. The statue was, in fact, made and set up, and if no clergyman took part in the exercises, we may be sure it was not because one could not have been had for the asking. The people of New Jersey asserted their right to discriminate among the qualities of their hero, to view him in one phase and neglect the other sides of his character, and to disavow all responsibility for honoring what they did not intend or pretend to honor. It would be easy to multiply instances of this sort. The statue of a great statesman of the last generation in Boston stands despite the incontinence and intemperance which were his two vices, not better known now to the candid historian than they were to the promoters of the monument. These admirers, nevertheless, had vainly sought to make him President, and were the accepted patterns of piety and morality in our neighbor city. Equally conspicuous there is another statue, of a household philosopher of the last century, whose effigy is stamped upon the medals he instituted for Boston school-boys. One may read in his autobiography on what pretence, as a young man, he procured a runaway passage to New York, and every one knows that in his later years he made this pretence a reality.

The bearing of these remarks will be obvious to our readers. They will, however, be misapplied if we do not go on to point out an essential difference between bestowing a statue and bestowing a public office upon an individual. The one is distinctly an honor *meant to be exemplary*, in the measure of the qualities more or less specifically commemorated. On the other hand, election to office, while popularly designated as an honor, is primarily merely a certificate of fitness for the duties imposed, and further there is nothing exemplary about it. The Presidency, for instance, is not a bauble, but a trust, and one which varies from administration to administration. Sheer admiration or national gratitude even would be no excuse for filling it with an incapable man, who might, nevertheless, already deserve a statue. The right man for the right place may be illiterate, uncouth, profane, intemperate, unchaste—we have had all such in the White House and in the electoral field as candidates—but he will be honored, *i.e.*, selected, for firmness, equity, military skill, legislative experience, right opinions on banks and tariffs, on slavery, reconstruction, and the civil service, and thus, and properly thus only, be held up as an example. His defects all the right-minded will deplore, but government would cease to exist if the fear of sanctioning these deprived a people of the freedom to avail itself of any man's talents and virtues.

It may well happen, especially in ordinary times, that a candidate's minor defects—minor in the sense that we have been considering—will assume something of the importance which they have in an absolute scale of morality. The voter's conscience stumbles over them, and he hesitates between his allegiance to the higher law and his assent to the political principle that he who can best administer an office should have it. Such a sensitiveness is most wholesome. If it did not exist, we might expect a progressive degradation instead of elevation of our politics. The President of the United States ought to be the noblest, purest, most perfect instrument of government at the disposal of his countrymen. That thousands of good men are today perplexed and grieved by the charge under which Cleveland labors, is one of the most hopeful signs of the times. Their perplexity, however, arises because their choice is not free—in other words, because the alternate candidate (there is but one in the range of possible election) is both unfit for the office in its abstract requirements, and has lost his character for probity. We have already asserted, what is a common belief, however seldom confessed, that probity is on a par with chastity, and is, in the present crisis of our political development, of the first importance. But if it were not, the question which the scrupulous voter ought to ask himself is, whether the cause of chastity will gain by the defeat of Mr. Blaine's antagonist.

There would be little doubt how this paradox ought to be solved if we were not confused by the notion that our chief concern is with the example that we set. The example which Blaine, as President, will set is, we take leave to say, of vastly greater consequence to the youth of this country. Whether we regard the acts by which, after public disgrace as Speaker of the House, after an empty and ignoble career in the Senate, after his reckless if not corrupt mismanagement of foreign affairs, he secured the nomination which he forfeited in 1876; or whether we regard the present fraudulent and debasing campaign which his supporters are now conducting in his behalf, and not obscurely under his direction; or whether we name over the Star-routers, the carpet-baggers, the repudiators—Dorsey, Kellogg, Mahone—who are attached to his fortunes, and who will have the most powerful claims on his "recognition"; whether we forecast the composition of his Cabinet or the tone which he will give to public life at the capital—we cannot deny that his inauguration would mean the revival of Grantism pure and simple—that is to say, the sum of the influences in this country adverse to honest government and disinterested politics. That such a revival can bring comfort to any good cause, or add a single prop to any virtue, public or private, is an idea which no rational man can entertain for an instant. There is no more sorrowful period in our recent history than that, under President Grant, when the White House became a nest of unclean birds. We blush yet to recall the conspiracy of his private secretary with the plunderers of the Government revenues, and still more the President's open familiarity with them. He was not proved cognizant of their corruption, though he was certainly the tool of it. His chastity has never, to our knowledge, been impugned, though he was surrounded by men to whom the atmosphere of the bar-room and the brothel was congenial and habitual. Can any moralist look with complacency on the return to the capital of Babcock and Joyce, McDonald and "Sylph," or their latter-day representatives—products all of the spoils system of which Blaine is now the forlorn leader, and which Cleveland is solemnly pledged by word and deed to oppose?

We have no desire to indulge in casuistry, or to weaken any sincere and clean-handed reprobation of Mr. Cleveland's offence against the moral law. He has himself put forward no plea in mitigation. Were his fault to cost him the Presidency, we have so much respect for his integrity that we do not believe he would deem the punishment too great, or refuse to say with Lincoln, when anticipating a yet more terrible visitation on the land for the sin of slavery—"The judgments of the Lord are true and righteous altogether." Our object is achieved if we induce our readers to weigh the results for the rising generation of four years of either candidate, and answer frankly which, in their judgment, is likely to make for morality.

THE POLITICAL WOMEN IN THE CANVASS.

We have received several letters arguing that the part which the political women in Boston who have an organ in the *Woman's Journal* are taking in this canvass, indicates in a marked degree the want of the political sense on the part of women in general. The deductions drawn from it all are unfavorable to the extension of the franchise to women. The *Woman's Journal* strongly supports Blaine, and as it is having a good deal to say about the candidates, people who are interested in the female-suffrage question naturally read it with some interest, with the view of getting an idea of the kind of part women would take in political discussion at exciting times, if they were as generally interested in politics as men are, or, in other words, of the sort of contribution to politics that female suffrage would be.

Of Cleveland the *Journal* is strongly denunciatory. It considers that to elect him after the offence of which he was guilty thirteen years ago would be full of "the gravest peril to all precious things," and would, indeed, put "society, the home, and the individual" in great danger. About his offence, it is, of course, fully informed, and apparently never heard of anything quite as bad before. After reading this, one would naturally expect that it had also examined the charges against Blaine before finally contrasting the two candidates. But here is all it has to say on this branch of the subject:

"A correspondent in the interest of Mr. Cleveland asks us to 'be impartial,' and not to lose sight of the charges against Mr. Blaine. We cheerfully affirm that no man ought to vote for a candidate whom he believes to be dishonest, or knows to be unchaste, simply as a choice of evils. The difference between the position of Blaine and Cleveland, however, is this: Mr. Blaine and his supporters utterly deny the charges of political dishonesty, and many excellent judges of evidence, like George F. Hoar and Edwin D. Mead, after thorough examination, pronounce these charges not sustained. Governor Cleveland and his friends, on the contrary, admit that he has been guity of the most scandalous immorality—immorality which unfits him not only for the Presidency, but for admission into respectable society. The fitness of Mr. Blaine, therefore, is an open question. Those who think

him dishonest will not and ought not to vote for him. But the unfitness of Mr. Cleveland is no longer an open question. No one can controvert it. In voting for Blaine, men will not endorse political dishonesty; but in voting for Cleveland, men will condone admitted personal immorality, and will affirm that crimes against women do not count in political life."

It will be observed that the editor here admits that about the charges against Blaine she has no opinion of her own whatever, and relies solely on "George F. Hoar and Edwin D. Mead." As long as these gentlemen deny everything, and Blaine backs them up, it is apparently all she asks. With the Mulligan letters or the evidence before the Congressional Committee she has not troubled herself. Nor has she read what Blaine's accusers say, in order to compare the Mead and Hoar answers therewith, and see whether they are responsive and sufficient, or whether they are not evasive and sophistical and defective. In fact, she has done, on what she considers a most important occasion in her career as a publicist, the very thing which mocking men say that female voters will always do—go to some man whom they like, to tell them which is the right side. The editor of the *Woman's Journal* probably knows Mr. Mead and thinks him a nice young man, and Senator Hoar a delightful old gentleman, and *they* say this talk about Blaine's lying and abusing his public trust is stuff and nonsense. So, although thousands of other respectable and able men whom she does not know say it is all true, she troubles her head no further about it.

Luckily the *Journal* has a man among its regular contributors, Colonel T. W. Higginson, who knows how States were founded and how they are maintained, and he supplies the women with chunks of political sense. The lesson he reads them in this last number is really one in the very elements of political science, viz., the absolute necessity of classifying the moral as well as the mental qualities in order to carry on any social organization except a monastery. There has never been a successful human society in which the virtues were treated, for its own purposes, as all of equal importance. Attempts have been made at various times to establish theocracies or sacerdotal governments, in which all sins would be treated as equally or nearly equally heinous offences against the community, but they have never succeeded or lasted long. All societies now existing have owed their success to the recognition of the fact that different virtues are of different degrees of value to the State, and that the standard has to be settled by the needs of society itself; and it is settled, if not by law, by common sense. Of a soldier it is exacted that he shall be before all things brave; of a judge that he shall be before all things just; of a treasurer that he shall be before all things honest; of a statesman that he shall be before all things faithful to the public interest as distinguished from his private interest; of a teacher of morals or religion that he shall be before all things truthful and pure and upright; of a woman that she shall be before all things chaste. Society has long been trying to settle the standard for editors, and will doubtless eventually succeed, though it has not yet done so. But it would seem *prima facie* as if it were above all things necessary that a male editor should not lie or pervert, or sham horror which he does not feel, or profess beliefs which he does not hold, and that a female editor should, before all things, examine public questions for herself, and not take her opinion from Edwin or George.

THE SUMMER HOTELS.

Reports come in from nearly every direction of the badness of the season at the summer resorts. There is hardly one of the great hotels, even at the most popular watering-places, which has not lost money. Very few, indeed, have made money. The best hotel at Bar Harbor, which holds its own in all seasons better than almost any resort along the coast, has been closed two weeks sooner than usual to save the proprietor from further losses. The leading hotel on the Catskills, which accommodates 1,200 guests easily, has rarely had more than 500. Several of the smaller hotels along the Connecticut shore, it is announced, have closed the season in debt. In fact, hardly any of them, unless aided by a cure of some sort, such as mineral springs, have paid their way. Those so near New York that people can rush out to them for the sake of one cool evening or cool night have perhaps done better. But as a general rule it may be said that the "summer-resort" business has this year been wretchedly poor, and it gets poorer year by year. That the condition of trade and the coolness of the weather have contributed to this in some degree, there is no doubt.

But the more powerful causes are more permanent. Some, such as the rapid growth of cottage life, we pointed out in these columns last year. This has literally killed the hotels in Newport, and is killing them in Bar Harbor and some other places. The cottages throw over the hotels a cold shadow in which people who mean to make a prolonged stay in a place do not care to live. To be in a place where there is a great deal of cottage life and have no share in it is not pleasant, and cottagers are compelled, in any place in which hotels are large and much frequented, to be somewhat chary of their social attentions to hotel guests, through sheer inability to meet the demands on them which any such attentions would soon create. But another and more serious cause of the difficulty of the summer-resort business may be summed up by saying that the managers of the small hotels do not know how, and the managers of the large ones attempt too much. In fact, the history of the hotel business in this country is the history of extraordinary and one might say precocious advance, followed by a period of almost complete stagnation. Fifty years ago the art of hotel-keeping shot far ahead in the United States of anything of the kind known in Europe, and for about half that period American hotels were the wonder of the Old World, and formed a prominent feature in the tales of all travellers who had crossed the Atlantic. Their size, the perfection of their organization, the luxury of their furniture, the lavishness and excellence of their table were constant subjects of admiration in the European newspapers. In fact, they were so much talked about that at last the belief was spread in England, and is firmly held in England by large numbers of people to this day, that all Americans lived in hotels, and that home life in a house was almost unknown on this side of the Atlantic. There was nothing in England which could at all approach them, or in France or Switzerland either, except a few very expensive hotels, at which great personages on their travels took "suites of apartments," and which no man of moderate means dared to enter.

Since then American hotels have greatly increased in size as well as in number, but the popular taste has changed a good deal, and hotel-keepers have not taken much account of it. One thing they have overlooked is, that the immense growth of population and the increased size of the cities have made that portion of the city people who can afford to go to the summer resorts much more desirous of quiet as part of their vacation than they used to be. The sole concession the hotels have made to this feeling is in the matter of waiting. Thirty or forty years ago the waiting at an American hotel table was made as noisy as possible. The waiters were often marched into the dining-room in single file, with the lock step and measured tread, holding the dishes in the air, which, at a signal from their chief, were deposited on the table with a loud bang, and the covers whisked off with a flourish, the guests sitting silent by, thrilled spectators of the manœuvre. During the repast, too, everything was done to make the service the chief feature, and the consumption of the food a mere incident and a very subordinate one. But all other sources of uproar are kept up. If the establishment can afford it, a bad brass band is kept going as many of the twenty-four hours as possible. The floors are so constructed that all walking shall necessarily be noisy. The lighting is done by gas, and it is a fixed article of the hotel-keeper's creed, that the more gas he can burn the better, so that in hot weather he keeps his parlors and halls as hot as the fire-room of a steamboat. Moreover, he has no toleration for people who do not like much light, and keeps glass over all his bedroom doors, so as to let plenty of light in all night long on the nervous souls who can only sleep in complete darkness and complete quiet.

In truth there are few great summer hotels in the country which are not conducted on the theory that all Americans like, whenever they leave home for recreation, a tremendous "racket," well lighted up, and a large crowd of people to enjoy it with. This is, however, a great mistake for a large and expensive hotel to make. Nothing is surer than that with the growth of wealth and population, there has been a great growth among Americans of love of silence and seclusion as a necessary part of summer recreation. The rapid increase of cottage life at the watering places, and of the practice of going to Europe for vacation, is a striking illustration of this. The shanties and tents which may be found all

along the coast, and in the woods in summer, testify to its growth also among the class which can neither afford to go to great hotels nor to Europe. The hotel belle, who went from one hotel to another, staying long enough at each to wear all her dresses, and then moving on with her huge trunks, known as the "rounder," was thirty years ago on the top of the wave. There was nothing more brilliant socially between June and October than she was. But now she excites nothing in society but pity or contempt. There are hardly any girls so poor as to do her reverence, for her hotel life indicates both that she has no cottage, and no cottage friends to ask her to stay with them.

As regards the smaller hotels, they are suffering from the fact that they are mostly kept by people who know but little about comfort and make no progress in producing it. When we compare them with the same class of houses in Switzerland, kept by men who have made a profession of finding out what people like and providing it, the stagnation of American hotel-keeping becomes painfully apparent. There are not many summer hotels now in the country which are not managed as if after a fixed type, which cannot be changed except in the direction of bigness and lavishness in the supply of food. There has been hardly any progress in the cookery as regards variety or care in preparation; but little in the furniture or arrangements of the bed-rooms, none in the bathing or washing privileges, and very little increase of common sense in the fitting and arrangement. Take one little illustration of what we mean. In nearly every summer hotel the bed-rooms all communicate by thin and ill-fitting doors. This was probably begun on the theory that it would often be a convenience to families or friends occupying adjoining rooms. Perhaps it proves so in ten cases in a hundred. In the other ninety, it results in the inmate of each room hearing the snoring, the conjugal quarrels, the early rising and washing, the stamping about on the uncarpeted floor, and the crying babies in the two rooms adjoining him. A more outrageous arrangement of a public house it would be difficult to devise, and yet probably every new hotel put up this year has had it. Then take the water supply. There is no greater luxury in summer than abundance of water and convenience for bathing in it. Many a man is reconciled to a summer in town by the possession of a bath in his house. But go where one will to the summer hotels all over the country, he will find that there are no bathing arrangements in the house, except one or two bath rooms, probably at a considerable distance from his room, and which can only be had at certain times and by previous engagement. Such a simple thing as the provision of a tub and a pail of water in his room at a small extra charge, is probably unknown throughout the country; we certainly never heard of it or met with it, and yet what a luxury it would be. How many hotel-keepers are there to whom one could mention it without having him shake his head over it as visionary or impracticable?

The truth is, the times are ripe for reform in summer-hotel keeping as in so many other things. We have fallen behind Europeans in this as we fell behind them in some other things, after having shown them the way in the beginning. If somebody of the hotel-keeping profession, some young man who does not believe that there is something eternal about serving vegetables in small bird dishes, will go to Switzerland and study closely there the provision made for travellers in some of the good small hotels, and get it firmly into his head that hotels were made for man, and not man for hotels, he may, if he can put up a building on a good site, and firmly distinguish in constructing it between what is essential to comfort and what is trumpery, achieve deathless fame as well as wealth. He will be what Bessemer is to steel, what McAdam is to roads, what McCormick is to reaping.

ENGLISH SUMMER AND AUTUMN RESORTS.

LONDON, August 30.

No event happening in a foreign country has for years past so much affected English domestic life as the appearance this summer of the cholera in southern France. Although this is not the season of the year when English tourists flock to the Mediterranean, the mere presence of pestilence in France affrights some, the idea that it will spread into Germany and Switzerland moves others, while those who do not fear the disease are repelled from foreign travel by the notion that tedious quarantines are likely to be enforced on the frontiers of the various European states. This is already the case in Italy; and as many people wind up an Alpine tour by a week or two in Italy, its virtual occlusion has told heavily. As there have been up to this writing no difficulties placed in the way of transit through northern France, Germany, Austria, and Switzerland, this panic among English pleasure-seekers is unreasonable; but it is proving as useful to the hotel-keepers and railway companies of the British Isles as it is injurious to those of the Rhine or the Alps. Thousands of families have this year turned their steps to the watering places of the southern and western coasts, or to Scotland, who in any other would have been found at Lucerne, Interlaken, Geneva, Bellagio, Venice. It may interest your readers to hear what kinds of summer resort England supplies, and what kind of life it is that people lead there; for these do not resemble either the holiday haunts or the holiday life of the United States.

Those who go abroad in autumn belong to what we call the upper middle and middle upper classes. Professional men, for instance, barristers, clergymen, and the richer attorneys and physicians, have a special penchant for the Continent; and to these one may add a fair proportion of families belonging to the higher walks of commerce and to the landed aristocracy. Those who take their pleasure in Britain, while drawing from these same classes, include persons belonging to the wealthiest and to the more humble classes. I begin with the former.

The nobility, and the classes who by their wealth stand on a level with the nobility, go by preference to Scotland. What is called "sport"—that is to say, grouse shooting and deer stalking—are the favorite amusements of the men, who pay enormous sums for the gratification of this taste. Four hundred pounds for a grouse moor, a thousand pounds for a deer forest, are not unusual rents to be paid, although the shooting season lasts for a few weeks only. The ladies of the family generally accompany their husbands or fathers, for nowadays every moor or forest possesses a well-built shooting-box, where comfort sometimes passes into luxury. The titled sportsman does not hesitate to sell his grouse, although what he receives from the poulterers of English towns recoups him for a very small part of the high rent. For a month after the 12th of August, the day when grouse shooting begins, all the trains from the north carry down into England vast consignments of grouse to Lancashire, Yorkshire, and London, while the newspapers chronicle the number of brace killed by each gun on each moor. The vanity of the sportsman, and the snobbish curiosity of the newspaper reader who hears how persons of rank and wealth are enjoying themselves, are equally gratified. Most of the large shooting lodges receive a succession of guests during August and September, who bring their guns and often their servants with them, so that the whole Highlands of Scotland, during the rest of the year deserted since the old inhabitants have been evicted or have emigrated, are at this time turned into one huge game preserve, where the crack of the fowling-piece or rifle is never silent. Although the climate of Scotland, particularly on the west coast, is changeable, with a strong predilection for wind and rain, it is wondertully healthy, and those who do not care for the scenery get their exercise in tramping after birds or deer.

While the upper class are thus amusing themselves in their private quarters, English tourists of an humbler order overflow the Scotch hotels and those coaches which, in some of the wilder districts, have not yet been replaced by railways. In spite of their exorbitant charges, these hotels are kept so full that one can rarely find a bed on the more popular routes unless by ordering it several days beforehand, and dozens of men sleep every night on the floor of the dining-room, or even perhaps on the billiard table. Why are not larger hotels built? Often because the local landowner does not like a swarm of tourists in his neighborhood. They ramble over the moors, or perhaps, if good walkers, they invade the recesses of the deer forest, and may now and then disturb the deer on a day when the proprietor or his sporting tenant intends to go out stalking. This would be so serious a misfortune that gamekeepers or gillies (as they are called in the Scottish Highlands) are posted at all the points where a path from the valley leads up into the hills, to turn back the pedestrian, be he geologist or botanist or artist, lest his intrusion should endanger the sportsman's pleasure. To keep these pedestrians away altogether is so desirable that in some places, as at Braemar, for instance, in the upper valley of the Dee, the landowners forbid any additional accommodations for visitors to be provided; so the two hotels, each of which would seem a cottage compared to those in the White Mountains of New Hampshire, are unable to receive one-tenth part of the visitors who desire to take their holiday in this prettiest and healthiest of all the nooks in the Eastern Highlands. There is no better instance of the extent to which the laws as well as the social usages of Great Britain have retained their aristocratic character, than the quiet submission which the Many thus render to the amusements of the Few.

Scotland, however, does not absorb the whole of the wealthy pleasure-seekers. Many have country houses in various parts of England, and even those who have first had some weeks' shooting in Scotland betake themselves to these country houses in September and October, the months consecrated to partridge shooting. Those who have not the good luck to own a residence, especially the younger people, go round visiting among their relatives and acquaintances, so that from the beginning of September till the middle of November one of these great country seats is

like a Swiss hotel, receiving and dismissing a troop of guests every two or three days, since visits which used to last for a week now rarely extend beyond three days. By November those who have commercial or professional engagements have begun to return to the cities. The children of pleasure turn to Brighton or Torquay, or, in constantly increasing numbers, to the shores of the Mediterranean; so that in December the country is left to fox hunters, and to those landowners who feel bound to fulfil the duties of local government and the local administration of justice, which still belong to the English justice of the peace.

The persons whose autumn engagements I have been describing are comparatively few in number, though important because they set the fashion and lay down the ideal of life to the other classes. What becomes of those other classes, of that large part of the upper middle class and still larger part of the middle class proper, which can afford neither shooting nor a country house, nor a trip to the Alps? Nearly all of them go to the sea. The villages of Cumberland and Westmoreland and Yorkshire receive a few in hotels or lodgings, but the vast mass flock to the so-called watering places on the east, south, and west coasts of England. Of these places Scarborough, Filey, and Whitby in Yorkshire, Cromer in Norfolk, Hastings and Eastbourne in Sussex, together with some towns of less account in Dorset, Devon, and Wales, are fairly fashionable. There are plenty of good hotels and a still larger choice of lodgings which a person of social standing may enter without derogation. The less fastidious part of the London middle class resorts to more crowded places nearer home, such as Ramsgate and Margate in Kent, Yarmouth, Lowestoft, and Harwich in East Anglia, while the Lancashire people have seaside spots of their own at Blackpool and Southport in Lancashire, in the Isle of Man, and on the north coast of Wales. These people use hotels but little, for the hotels are too dear, and they commonly go *en famille*. They crowd into small lodgings. The children play all day on the beach. The mothers sit watching them with a novel in their hands, while husbands and fathers come down each evening, if the place is not too far away from business, or if it is, content themselves with a fortnight's holiday, while the rest of the family obtains a month. Some sort of regular intermission from work has now come to be expected by everybody above the rank of a laborer; and as our successful business men more rarely indulge themselves with long trips abroad than those of America seem to do, they cling the more to having at least three or four weeks in every year.

It will be seen from the above how considerable are the differences between English and American summer habits. Our people use hotels far less than you do. They cling to some sort of privacy even on their holiday. On the other hand, there do not exist at the English pleasure resorts such groups of private villas as adorn Newport, or the coasts of Maine, or parts of Massachusetts Bay; it is only exceptionally, on the Clyde, for instance, or at some points on the picturesque shores of Devon and Cornwall, that one finds handsome cottages whose owners return regularly to them year after year. The distinguishing feature of the English autumn resort is the existence of an enormous number of furnished lodging houses. Sometimes the whole house is let, and then the family taking it bring their servants with them. More frequently the owner provides attendance and lets two or three or more rooms together, accommodating two or more families in the same house. The scale of expenditure in an English middle-class family is lower than that of a corresponding family in America, and it has less relish for the easy, open, half-public life of a hotel. However, even here a change is in progress. Hotels with a fixed weekly charge and a table d'hôte are increasing in number, and are more and largely used by single men—a class relatively larger in England than in America, because the average age of marriage is later. Y.

SCIENTISTS AT PHILADELPHIA.

PHILADELPHIA, September 6.

THE meeting of the American Association for the Advancement of Science is half over. To-day is given up to excursions to the mountains and mines by those who are interested in geology and engineering, and to the sea-shore by those who prefer a bath in the surf, or who wish to pay their respects to one of the oldest and most honorable of the scientific men of this country—Isaac Lea, of Philadelphia, who gives a reception at his cottage in Long Branch. The heat has been intense during the last three days, but this is the only drawback to the success of the Congress. The number of persons in attendance is very large, and among them are many of the distinguished foreigners who attended the meeting in Montreal. More are expected on Monday. Ball, the Astronomer Royal of Ireland; Preese and Blanford, delegates of the Royal Society, of London; E. B. Tylor, author of the 'Early History of Mankind'; Adams, the Cambridge astronomer; Captain Pym, of the Royal Navy and of Arctic fame; Barrett, a student of psychic phenomena; Prof. George Forbes, Professor Mactear, of Glasgow, and Professor Deurr, of London, are among the Englishmen whose faces have already been seen in the meetings; there are also other foreigners here, from Germany on the one side and from Japan on the other—for instance, Valentiner, of Carlsruhe, and Kakichi, of Tokio. There are excellent representatives from almost all the colleges, universities, and learned institutions of this country, although some of the older and more distinguished men have not yet appeared. It was venturesome to invite to Philadelphia, so early in September, so soon after the Montreal meeting, such large numbers of people; but the success of the hospitable summons is greater than could have been anticipated. The arrangements of the Philadelphians are admirable. The meetings are held in Broad Street, near the Pennsylvania station, and it is doubtful whether any city in this country could furnish so compactly all the requisites for a scientific congress—large hotels, a great auditorium, innumerable smaller rooms, a fine public library, a club house with all the elements of comfort and repose, telegraphs, horse-cars—in fact, every convenience for a crowd of critical and exacting, and not always reasonable visitors.

The chief addresses of the year have already been made. Not to speak of the welcomes and responses, there are annually at these meetings several elaborate discourses in which the public are supposed to be interested. Foremost among them is the address by the President of the previous year. Prof. Charles A. Young, the astronomer, who began his career at Dartmouth, and is now in the full vigor of his powers at Princeton, and who is a special authority in all that relates to solar physics, took for his Presidential theme the "Pending Problems of Astronomy." It was delivered to a large assembly in the Academy of Music, on Friday evening, but the extreme heat, and the necessity of having a large space in front of the speaker left free for a subsequent promenade, were serious interferences with the pleasure of the audience. But every one knew that a master was speaking, even if it was difficult to follow him. As the audience dispersed, printed copies were at command in the pages of *Science*. The perusal of this address will well repay everybody who takes an interest in the present state of human knowledge respecting the stellar universe. Young's style is admirably clear; light and order seem to have penetrated his brain through the studies in which he has been engaged. The strength of his address was in its survey of the present state of astronomy, and in its indication of the lines in which more profound and extended researches are desirable. Beginning with the earth, Professor Young called attention to the imperfect knowledge (for astronomical needs) which we have of its dimensions, and he intimated that "nothing short of a complete geodetic triangulation of the whole earth" would be quite satisfactory. The recent questionings of the uniformity of the earth's rotation, and the necessity of finding for scientific purposes "a new unit of time," were next referred to, and this was followed by an account of the observations which are to be made, at the instance of the International Geodetic Association, with respect to the constancy of the position of the earth's axis. Proceeding from the earth, the lecturer approached the moon, in order to point out the pending mathematical and physical problems in respect to our satellite. Incidentally to this elaborate part of his address, Professor Young (with a very gentle allusion to "those mathematicians who delight themselves in transcendental and n-dimensional space, and revel in the theory of numbers") avowed his greater interest in "the theory of functions and differential equations," from which he naturally expects more aid to astronomy.

It would quite surpass the limits of this letter to follow the astronomer as he called the roll of planets, and pointed out the limitations of human knowledge with respect to each member of the solar system. With regard to the sun, he says that he is less confident than he was three years ago of the correctness of the value 8″.80 for the solar parallax; he is satisfied with the generally received theory of the sun's constitution; he is sceptical whether the terrestrial influence of the sun's spots amounts to anything except in the direction of magnetism; he is guarded in his reference to Lockyer's famous hypothesis; and as to the controversy respecting the nature of the sun's corona, he gives a very fair statement of the opposing views, without committing himself to either of them. After an account of the present theory of comets, the discourse concluded with a defence of the science of astronomy, not because of its "uses," but because "in the study of the heavens the human intellect finds most invigorating exercise and most nourishing and growth-making aliment."

The addresses of the vice-presidents, which were given on Thursday afternoon, were nine in number. In the first section, mathematics, Professor H. T. Eddy, of the University of Cincinnati, pointed out, with unhesitating severity, the defects which exist in American schools and colleges with respect to mathematical instruction. We have been accustomed of late years to lamentations regarding the inadequacy of the current mode of teaching Greek and Latin, but it must have struck many persons with surprise to hear a mathematician, by inheritance, by education, and by profession, denounce with such vigor the existing theory and practice of mathematical tuition. He believes that repugnance to this branch of learning is simply due to bad teaching, to the employment of mathematics simply as an agent in intellectual discipline, without any suggestion of its relations to

the world in which we dwell, and without any recognition of its significance as "the most splendid instrument of research yet devised by the wit of man."

In the physical section Prof. John Trowbridge, of Harvard University, propounded the question, "What is Electricity?" And although he did not profess to answer it, he indicated in a very felicitous manner what is known of the manifestations of this force, and what is not known in respect to it, and dwelt upon some of the relations which exist between electricity and other manifestations of energy. The chairman of the section of chemistry, Professor J. W. Langley, of the University of Michigan, took for his theme chemical affinity; Professor Thurston, of the Stevens Institute at Hoboken, addressed the fourth section, that of mechanical science, on recent applications of science to the useful arts; in geology, Professor Winchell, of Minneapolis, spoke upon the crystalline rocks of the Northwest; in biology, the vice-president's address was given by Professor Cope, of Philadelphia, on catagenesis; before the histologists or microscopists Professor Wormley, also of Philadelphia, spoke upon the value of the microscope in the detection of poisons. The eighth section, anthropology, listened to a discourse from its chairman, Professor Morse, of Salem, on the geological evidences of the antiquity of man; and finally, before the section of economic science and statistics, General Eaton, United States Commissioner of Education, delivered an address on the value of science in the common affairs of life.

There has been but one day thus far for the ordinary reading of papers, and 102 titles were entered in the nine sections, but probably of these a great many were read by title only. One of the papers of most general interest was that of Professor Hilgard, of the United States Coast and Geodetic Survey, which gave a review of all that is known of the eastern continental line of the United States, and of its relations to the outlying islands. A knowledge of this configuration sheds much light upon the Gulf Stream. The lecture embodied a great deal that is absolutely new, the results of the long-continued researches of a most important branch of the scientific service of the Government. It was illustrated by an interesting relief of the ocean bottom off our coast, with that of the Gulf of Mexico and the Caribbean Sea. The storage reservoir of the Gulf, the confining ridge which connects Florida and Cuba, and the fall of the sea in the direction of the Gulf Stream, are made apparent on this model. One of the English visitors, Captain Pym, spoke of Professor Hilgard's paper as the most interesting he had ever heard before a scientific meeting.

There have been but a few papers to call forth spirited debate. Among the few may be mentioned one by Professor Alden, of the Worcester School of Industrial Science, on the proper training of mechanics. After he had described the methods pursued at Worcester, Messrs. Woodward, of St. Louis; W. P. Trowbridge, of the Columbia School of Mines; C. O. Thompson, of Terre Haute; Robinson, of Columbus, Ohio, and De Volson Wood, of Hoboken, took up the discussion. It was a pity that the views of such men, brought out in a sort of professional confidence, should pass unreported, for the problem in industrial training which they in different ways are endeavoring to solve, is of the first importance in American education.

One public lecture has been given since the Association met, and one more is announced. On Thursday evening Professor Newberry, of Columbia College, reviewed the geological history of the North American Continent. He made free use of lantern slides, by the aid of which he expounded very clearly his idea of the growth of this continent, and illustrated the series of fossil plants and animals by which so much of this history has been recorded. Next week the Astronomer Royal of Ireland, Dr. Ball, gives a public lecture upon the "Distances of the Stars."

There has been one evening reception or *conversazione*, and two or three more are projected, and there are a great many "side-shows," such as the electrical exhibition and conference, Muybridge's instantaneous photography, the microscopical soirée, the meetings of the mining engineers, and so on. Indeed, the week is too full. The most that any individual can do is to gather general impressions, hear a few papers in his own line, and cultivate the acquaintance of his fellows. For such purposes, which are, after all, the essentials of a scientific congress, the assembly at Philadelphia is a great success.

Correspondence.

ASSIMILATING THE DECALOGUE.

To the Editor of The Nation:

Sir: Apropos of the choice of candidates on the part of the New York *Independent* and others, allow me to offer the following suggestion:

A foolish tradition ascribes to the infant Christ a determination not to learn the second letter of the alphabet till he had fully comprehended the first. A too ready acceptance of this tradition may have led a part of Christianity to the conclusion that the injunctions of the decalogue were binding in the order of their occurrence. Certain it is that many Christian communities seem to have bolted the commandments anaconda-like, and (metaphorically) to lie with them half-swallowed. History, ancient and modern, bristles with instances of churches that could comprehend their duty toward God, but not their duty toward their neighbor. The existence of the duel and the barbarous killing-at-sight custom proves that there are communities which have ill-digested the sixth commandment; and, reasoning by analogy, we may expect to find in these communities crude ideas of the scope of the seventh commandment. At the North, Christians have, thank God! generally arrived at the conclusion that the seventh commandment forbids lawless indulgence of sexual passion, as well as a breach of the marriage vow. Some few recognize also a prohibition against pruriently gloating over vile newspaper "statements." Now, these people often have an imperfect understanding of the eighth commandment: the grosser forms of dishonesty should be condemned, of course, but high-toned embezzlement and breach of trust may be condoned and excused; and the idea that a Congressman should not embezzle the powers intrusted to him and use them for his private gain has not yet been assimilated. The ninth commandment has, of course, been scarcely reached, and only a sanctimonious "dude" or "pharisee" would venture to hold that false speaking, lying, and slandering were not permissible to Christians engaged in a political campaign.

W. J. Chase.

Chicago, September 3, 1884.

MINISTERS IN THE CANVASS.

To the Editor of The Nation:

Sir: It seems to me that "J.'s" remarks on "Ministerial Politics," in No. 1000 of the *Nation*, are of little or no account. As scientists would say, they are based upon too slender an induction. It is impossible for him to know the political sentiments of the rank and file of the ministry in this country, and, for that matter, for any one person to know them. It is, perhaps, safe to say that a vast proportion of the ministers in the North are Republicans. The great moral issue against slavery, and love for the country in her hour of peril, made them such. It is certainly to their credit that they could and did see the point involved in that issue, and had the courage to stand for their convictions. That party spirit in them should slowly decay is not to be wondered at, seeing they are nothing but human beings and never professed to be anything else.

If ministers are supporting Blaine in this canvass, I believe it is not because they are too morally purblind to see the points of the case against him, but largely because the facts have never been placed before them. They are busy men, for the most part, and read the daily paper nearest them. In none of the Republican papers have the Mulligan letters been published, nor will they be, and the average Democratic editor seems too ignorant of the facts to make as much use of these letters as he might. I have conversed with a hundred different persons, including ministers, of all political faiths, and have not found one who is familiar with these railroad and diplomatic transactions. A minister knowing I had the data of these affairs applied to me for them, and, after reading, returned them with the remark that they had decided him not to vote for Blaine. He at least could see the point, and, I doubt not, many others are impartial enough to render the correct verdict on the evidence if they had it before them.

But then, all the ministers are not supporting Blaine. They are not advertising their views widely, nor getting themselves into public print; but they will vote just as effectively in the right direction on election day as though they now made a loud noise and a great display. I know instances of this kind. In the city of Cleveland ministers alone have made an independent movement in politics and against Blaine. So far as I know, I, a minister, am the only anti-Blaine Republican in my town, though there are some lukewarm Republicans who may compromise by voting for St. John. It seems to me that a good electioneering enterprise on the part of the Independents would be to furnish every preacher in the United States—and their names and addresses are easily obtainable—with the *Evening Post* pamphlet, the speech of Schurz, and similar documents.

I should like to say, while at it, to any person who may get nervous over the attitude of the ministry on any moral subject affecting the public welfare, that ministers are steadily devoted to the promotion of the interests of a kingdom not of this world, and are but subordinately interested in anything else. And I cannot but think, notwithstanding the frequent advice from certain quarters that they should deal with "live questions of the day," it is best for all that they keep themselves to their specific domain. But interested they must be and are in public questions, in respect to which the public can safely assume they are with the best citizens in favor of all that is good. M. F. W.

Ohio, September 3, 1884.

CHARITY AS A FACTOR IN THE PRESENT CAMPAIGN.

To the Editor of The Nation:

Sir: In the present emergency men have been thrown into doubt at a time when they ought to be in a state of certainty. The necessity of choosing between the two candidates for the Presidency is pressing. What shall guide them?

Certainly some overruling principle that has not yet been made clear needs to be revealed. It is in the absence of this revelation that good men take refuge in policy. They know or feel they are doing wrong in doing so. Senator Hoar, for example, cannot gulp down Mr. Blaine for the sake of "the grand old party" without instinctive abhorrence, if it occurs to him, of the candidate's public character. He is politic when he wishes he might feel that he was principled. And what characterizes the Independent is this instinct, so conscious and operative in him as to serve as a preventive to a similar course of banqueting, and as a motive to look for something better or to resort to abstinence. Many an Independent sees the principle which is really the alternative to policy. That principle is charity. One would think that professing Christendom were almost devoid of it. The very ones whose office it is to preach Christianity, and to set the example of it, are of those who in word and example have so far in this campaign outraged the first grand principle which he taught after whom they are named. I would try to view these teachers charitably. They are moved in part by a disposition born of a regard for chastity as a safeguard to society. But after all these centuries they have not learned to prize equally the chastity of innocence and the chastity of reëstablished character. To be chaste and then be unchaste and to remain so, is a different thing from being chaste, and then being unchaste, and then, forsaking the unrighteousness, becoming upright with additional strength by reason of the fall and the recovery. It was to this latter sort of character that the Supreme man from whom sprang the name of Christian, looked with the forgiveness and the confidence which when fused are charity.

I am trying to write with absolute impartiality in regard to the application of this principle to the cases of the two leading candidates for the Presidency. Perhaps my tendencies as a physician might be considered as rather controlling in the effort to make out a diagnosis. The point is to have the fact. The welfare of a nation hangs upon a correct diagnosis. Between these two candidates, toward whom is the forgiveness, not only, but the confidence, to be shown? For if to neither, the emergency is critical.

The one candidate stands unquestioned in regard to his private life. It is there, I fear, where so many are caught. Every true man admires a chaste man. It is in his admiration of Mr. Blaine's private character, I fear, that so excellent a man as Senator Hoar loses sight of the candidate's public irregularities. Once he passed by the exhibition as something common and to be expected; but that which in the aspiring politician was a matter of course became angelic in the successful aspirant to the candidacy. Here is Gabriel: how could Gabriel be chargeable with "embodying most in American politics that is menacing to public morals and integrity in government"? He does not see that the young men who are coming on the scene would do the readier as his angel does because he appears as Gabriel. You may forgive him, but confide in him, how can you? How can the country do so while his adherents say he has not sinned when he has sinned; assert that he may go on doing as he has done and yet commit no sin? Will the country trust itself in the hands of a man who tries to hide his sin, and repents not of it, but seems to declare that he will do as he has done because it is no sin? Mr. Cleveland is a Democrat. I am sorry for that. And yet not sorry either, for the Republican party needs a check, that righteousness may come out of the evil. But Mr. Cleveland stands publicly for what is upright and strong. His past shows that he would not seek his own gain through official opportunity. About his private life he has told those who know to "tell the truth." And they have told it. His language and action are those of a man who confides in the perception of the people to see through him as one who was weak and is strong. And the choice of him above the other candidate depends upon the measure of charity that is in this generation. DEMOS.

September 6, 1884.

SOME INQUIRIES ANSWERED.

TO THE EDITOR OF THE NATION:

SIR: Will you be kind enough to inform me, through the columns of the *Nation*,

First—Whether your noteworthy article "What We Think About It Now," the report of the Committee of Buffalo citizens, the letter published by the editor of the *Independent* over his own signature, and Cleveland's letter to his brother of November 7, 1882, are or will be obtainable printed in connection with each other in pamphlet form? Such a collection would, I know, influence personal friends of mine who have read the *Tribune* almost exclusively for years.

Secondly—Have Hurlbert's letters to the *Herald* relative to Blaine's Irish foreign policy been reprinted anywhere? I was informed at the office that they were out of copies.

Thirdly—Has there been made any elaborate exposé of Blaine's South American foreign policy, following the line of thought of an editorial in the last *Nation*?

Fourthly—Where can I get trustworthy reports of the present status of the cotton, woollen, and glass manufacturing interests?

Fifthly—Where can copies of David A. Wells's various papers on the tariff be obtained?

If you will kindly give the room to answer the above questions, I am sure the information will be of use to many others who, like myself, are anxious to be of some service in the present struggle to purify our national politics.—Very truly, FRED HENDERSON.

BROOKLYN, September 5, 1884.

[1. No. Why do you not lend them your *Nation* now and then? Any good book on morals would do, however.

2. No, not in a collected form.

3. Yes, several.

4. We do not know.

5. From David A. Wells himself, Norwich, Conn., or perhaps from G. P. Putnam's Sons, New York.—ED. NATION.]

A WESTERN LIE ABOUT GOVERNOR CLEVELAND.

TO THE EDITOR OF THE NATION:

SIR: At a public meeting held in Creston last Thursday evening, the Hon. P. Hepburn (who is the Republican candidate for Congress from this district), in speaking of Governor Cleveland, said:

"A bill was brought before Cleveland for his signature, enabling any inmate of any hospital in the State of New York to call for the aid of any priest or preacher, of any denomination, to console him (*i. e.*, the patient) in sickness, or to smooth his pathway to the grave. This would have cost the State nothing, yet Mr. Cleveland vetoed it."

What is the bill about which Mr. Hepburn speaks?

Would you be kind enough in your next issue to state whether that bill, or one similar to it, passed the Assembly, and was submitted to the Governor, and if so, what were the reasons he gave for vetoing it? JAMES RYAN.

CRESTON, IA., August 29.

[The "Freedom of Worship" Bill, which is the one referred to by our correspondent, was never "brought before Governor Cleveland." It was defeated in the Legislature.—ED. NATION.]

Notes.

THE issuing of serial stories in parts (except in the magazines) has quite gone out of fashion, but Admiral Porter is about to revive it, publishing through D. Appleton & Co. a long romance called 'Allan Dare and Robert le Diable.' The parts will appear at fortnightly intervals. Messrs. Appleton will also publish in the usual way the fifth volume of Bancroft's revised 'History of the United States,' leaving but one more to come; the second volume of J. B. McMaster's 'History of the People of the United States'; 'Essays and Speeches of Jeremiah S. Black,' edited by Chauncey F. Black; 'The Story of My Life,' by the late J. Marion Sims, M.D.; 'The Three Prophets—Chinese Gordon, Mohammed-Ahmed, Araby Pasha,' by Col. Chaille Long; 'Louis Pasteur: his Life and Labors,' by his son-in-law; 'A Naturalist's Ramb'es about Home,' by Dr. Charles C. Abbott; 'The Cruise of the Alice May,' by S. G. W. Benjamin; 'Education in Relation to Manual Industry,' by Arthur MacArthur; 'Maxims of Public Health,' by O. W. Wight, M.D.; 'English Art in 1884,' text and sketches, by Henry Blackburn; 'Elements of English Speech,' by Isaac Basset Choate; 'Milton's Prose Writings,' in the Parchment Series; and the following novels—'Doctor Grattan,' by Dr. Wm. A. Hammond; 'Noble Blood,' by Julian Hawthorne; and 'The Black Poodle, and Other Stories,' by F. Anstey.

Harper & Bros. will publish 'Sketching Rambles in Holland,' illustrated by George H. Boughton and E. A. Abbey. The weekly instalment of 'Stormonth's English Dictionary,' in the Franklin Square Library, carries the work along to *circumvallation*. To the same series have been added Lady Jackson's 'Court of the Tuileries,' and the much older work, 'Georgia Scenes.'

Mr. T. W. Higginson's larger 'History of the United States,' most of the chapters of which have appeared in *Harper's Magazine*, will be published by Harper & Bros. next spring, with some additional chapters, bringing the history down to a later period. The illustrations will be nearly all retained, and their number increased.

'In Partnership' is the title of a volume containing eight "studies in story-telling" by Messrs. Brander Matthews and H. C. Bunner, to be published toward the end of this month by Charles Scribner's Sons, who will also bring out an American edition of John Rae's 'Contemporary Socialism'; 'Teachings and Counsels,' twenty baccalaureate sermons, by Mark Hopkins, D.D.; 'The Native Religions of Mexico and Peru,' by Prof. Albert Réville; and a cheap edition of Lange's 'Commentary on the Bible.'

Townsend MacCoun announces a 'Cyclopædia of Practical Floriculture,' and a seventh enlarged edition of Labberton's 'Historical Atlas,' in which American history is for the first time regarded, by the addition of nine maps to the series.

Mr. Austin Dobson's new volume of poems, 'At the Sign of the Lyre,' will be published early next year by Henry Holt & Co. More immediately this firm announces a 'History of Free Thought,' by Frederick May Holland.

G. P. Putnam's Sons have in press the 'Life and Times of Gustavus Adolphus,' by John L. Stevens, late Minister to Sweden; 'The Land of

Rip Van Winkle,' by A. E. P Searing; a "Zuyder Zee" edition of De Amicis's 'Holland,' sumptuously illustrated and printed; 'Half a Century of English History,' as told by 147 cartoons from *Punch*; 'Outlines of Roman Law,' by Prof. William C. Morey, of the University of Rochester; the 'Prehistoric America' of the Marquis de Nadillac, translated by "N. D'Anvers" and edited by W. H. Dall; and 'Myths in Medicine, or Old-Time Doctors,' essays by A. C. Garrett, M.D.

Julius Wise, M.D., 806 Olive Street, St. Louis, proposes to publish shortly in a large volume an 'Encyclopædia of Medical Wit and Humor, and Curiosities of Medicine,' and desires assistance in gathering material from any quarter.

Mr. Andrew Lang's 'Custom and Myth,' a series of studies in mythology, will be published early in the autumn by Longmans, Green & Co.

The quarterly bulletin of the Librairie des Bibliophiles (New York: J. W. Bouton) announces that M. Zola's 'Une Page d'Amour,' with drawings of M. Édouard Dantan engraved by M. Duvivier, will shortly follow in the sumptuous "Bibliothèque Artistique Moderne" the two volumes already issued, the 'Contes' of M. Daudet and the 'Roi des Montagnes' of M. About. In the low-priced but admirable "Nouvelle Bibliothèque Classique" the latest issues are the "Oraisons funèbres" of Bossuet, edited by M. Armand Gasté, and the poems of André Chénier, edited by M. Eugène Manuel. Rabelais and Montaigne are to be added next.

Through B. Westermann & Co. there comes to us Hachette's prospectus of a 'Paléographie des Classiques Latins,' edited by M. Émile Chatelain. This work, to be issued in ten parts at six francs each to subscribers, will consist of facsimiles of the principal MSS. of a long list of writers, from Plautus down. The buyer will of course get specimens only, not the *opera omnia*; but among these will be represented not less than 150 unpublished MSS. The varieties of script employed will add to the curiosity of the original text. This enterprise needs very few words to recommend it. That some of the manuscripts are illustrated is shown by the specimen before us, a heliogravure from Terence (Paris, 7899). A few pages of explanatory letter-press will accompany each *livraison*.

Under the title of "Battles and Leaders of the Civil War," the *Century* will begin with the November number of the present year, and continue without intermission (if possible), a series of separate papers, the object of which is to set forth, in clear and graphic manner, the life and spirit of the War for the Union. The main portion of the scheme will be papers of a popular character on the great engagements of the war, by general officers high in command at the time, either upon the Union or the Confederate side. In many instances the contributor will be the officer of first command, and in every instance a participant in the engagements under consideration. For instance, the battles of Shiloh and Vicksburg will be described by General Grant, who will contribute four papers to the series. The illustrations will receive the most careful attention, and in this particular it is thought that the series will possess an unequalled historical interest.

Funk & Wagnalls have issued in their "Standard Library" a second edition of Mr. Gersoni's translation of Turgeneff's 'Mumu' and 'The Diary of a Superfluous Man.' At the same time there appears (from Cupples, Upham & Co., Boston) 'Annouchka,' translated by Franklin Abbott from Turgeneff's own French version. No comparison between the two pieces of work would be fair, but one needs to know only English to see how well Mr. Abbott's is done. He has selected one of the slightest and at the same time one of the most characteristic of the short sketches. It is to the last degree delicate, pathetic, beautiful.

Professor Wilkinson makes rapid progress with his "After-School Series," and we are inclined to rate his last published volume, 'Greek College Course in English' (Phillips & Hunt), as the best of the three that have appeared. We have here eleven authors of first rank, and along with them some of the lesser authors—Æschines, for example, by the side of Demosthenes, Simonides and Sappho with Pindar. In one sense the task may have been easier, as the wide range of the authors allows more variety, and their greatness has tempted to more, and more successful, translations. The selections are certainly well made, as a rule, and the versions admirable. There now remains the 'Latin College Course,' which we suppose will complete the series.

Professor Atkinson's little work 'On History and the Study of History' (Boston: Roberts Bros.), is devoted to describing the aim and scope of this study, rather than its methods, for which he refers to Dr. Hall's recently published book. It does excellent work in exposing with great force the erroneous notions that prevail in regard to history; and the arguments and illustrations by which the technical student is shown that he too needs this study, as well as the student of the more general "disciplinary" courses, could not be bettered. He spends more time than is necessary, we should think, in attacking the orthodox courses of classical training, in regard to which he wrote so cogently almost twenty years ago; but perhaps the old methods retain more vitality than we have supposed. We think, too, that he somewhat underrates the real educational benefits of these methods—on page 45, for example, where he says: "The great majority of you came here with your senses and your powers of observation absolutely untrained." On the contrary, the powers of observation are trained in a remarkable degree in the work of translating a classical author. As we have seen it expressed recently, in this work the pupil is dealing at first hand with original authorities and actual relations; and it is certain that no method of teaching the natural sciences, *at the preparatory age*, has yet been devised comparable to the training in language and mathematics. The third lecture treats in some detail of the various branches which history must touch—religion, law, political science, etc. The book is one calculated to do much good.

We have received a thesis upon the subject of the 'Parliament of Paris,' by Miss Jane M. Bancroft, upon taking the degree of Doctor of Philosophy at the Syracuse University. As an indication of the growing requirement of solid work in the line of research for the conferring of degrees, it deserves hearty recognition. The author, finding no treatise in English devoted to this subject, has aimed to supply the defect, and with a very fair degree of success. The subject is well developed, and the views sound and well stated. We should say that the work, while not detailed enough for a treatise, is too wide in its scope for a thesis, which ought to be the working out of a single point from independent study. The subject here is far too extensive for this, and the result is that while we have the faithful and successful elaboration of materials presented by the French scholars, we find no indication of the use of the materials used by them—that is, of original authorities. The work seems to be wholly done at second hand—the references are to modern writers, hardly at all to the documents. We note certain inaccuracies resulting from want of care; for example, in reckoning Pépin-le-bref among the kings of the third race (page 3), and in the spelling Stephens (for Sir James Stephen) and Greene (for the English historian). On page 46 it is stated that "for over fifteen centuries Great Britain was peopled and governed exclusively by members of the great Teutonic family"—the period commencing, it would seem from a note, at "the first recorded appearance of the Saxons," in 287.

A new volume of the United States Census of 1880, the seventh, was issued from the Government Printing Office at Washington last week. It is the report on the Valuation, Taxation, and Public Indebtedness in the United States, compiled by Robert P. Porter, a statistician whose reputation as such cannot be said to have improved since the census was undertaken.

The Proceedings of the American Antiquarian Society at its Boston meeting in April contain papers on the Province Laws (of Massachusetts) and on the Stone Implements of Asia, the latter being illustrated, and a memoir, by Dr. Brinton, with a portrait, of the late Dr. C. H. Berendt, the Central American archæologist. The report of the Council also embodies a disquisition on the originality of the New England town government. The remarks subsequently elicited from Drs. George E. Ellis and George H. Moore on this subject are a valuable supplement to the view taken by the Council. Mr. Moore, too, indulged in an excursus on the tithing-men and the ancient mode of balloting with corn and beans, introducing some curious illustrative documents. His customary irony as a Massachusetts antiquarian was displayed when he said he would give more for the first edition of the laws of that colony in 1648 than for the lost books of Livy—apparently in order to complete the evidence of early fraud in voting. Dr. Staples's paper, by the way, on the Province Laws, has been issued separately, from the press of Charles Hamilton, Worcester, Mass.

Mr. Ad. F. Bandelier has terminated his remarkable explorations in New Mexico and the adjacent Spanish-American country, and tendered his resignation to the Archæological Institute of America. While this means repose from the great physical exhaustion of the past two years, it does not imply idleness or unproductiveness on his part. He has amassed an enormous amount of material, which he will now begin to put in order, and which, when published, will be a lasting monument to his scientific zeal and devotion.

The *Monthly Reference Lists* for August deals with Earthquakes (apropos of that of August 10, on the Atlantic coast), and with Early English Explorations of America. Under the former head a note is devoted to New England Earthquakes, and here Mr. Foster has overlooked the list now publishing in the *Granite Monthly*, of Concord, N. H.

A second number of the *Forestry Bulletin* has been issued from No. 9 Pine Street by B. E. Fernow, Corresponding Secretary of the American Forestry Congress, which met in Washington in May, and is to meet again in Saratoga on September 16. The demand for this publication, which is quite capable of being made useful, seems as yet rather indefinite.

We have received a copy of the *American Jews' Annual*, issued by the Bloch Publishing and Printing Company, Cincinnati, and the first of its kind. The literary contents are by no means exceptional in quality, and the commercial aspect of the enterprise is unpleasantly forced upon the reader by the interleaving of advertisements.

Dr. J. H. Trumbull writes to the *Critic and Good Literature*, in answer to a query as to the origin of a word now current in our political slang: "In the language of the Indians of Massachusetts and Connecticut, 'mugquomp' (or, as now written, 'mugwump') means, lite-

rally, 'great man.' It was the title of a captain or superior officer. In Eliot's Indian Bible it stands for 'captain,' and in one passage (Gen. xxxvi, 40-43) for 'duke' of the authorized version."

M. Jehan Soudan, who came to America in the train of Mme. Sarah Bernhardt, has recently published a volume called 'Histoires de l'autre Monde—Mœurs américaines,' which consists of a dozen and a half sketches of American life and character translated (or rather betrayed) into French without any specific acknowledgment or mention of the American authors, although M. Armand Silvestre, in the preface, declares that all the tales told by M. Soudan are of American origin. The collection is very curious. The first story, "Extrait du Carnet d'un Decavé," we recognize as the clever sketch which appeared in *Harper's Magazine* shortly after the *World* Employment Bureau offered to provide young men for evening parties. "Flirtation d'outre-tombe" (oddly misprinted "Filtration d'outre-tombe") is Mr. Frank R. Stockton's very clever tale of "The Spectral Mortgage." "Par Cartes Postales" is Mr. Brander Matthews's "Chesterfield's Postal Cards to His Son." "À tâtons" is an adaptation, much weakened, of Fitz-James O'Brien's gruesome "What Was It?" The rest are mostly comic sketches taken from *Puck*, illustrations and all.

Two errors escaped notice in our review of the campaign biographies of Cleveland last week (p. 205, third column). Bishop Coxe was assigned to Central instead of Western New York, and 1838 was given instead of 1837 as Governor Cleveland's birth-year.

—To say that the number of valuable reference books is no greater since the publication of Messrs. Lucky, Sergeant, and Logan's 'Political Handbook' (Philadelphia: W. H. Thompson, 1884) than it was before, would doubtless be an irrelevant criticism upon a work plainly not intended for speakers and writers. Its compilers' aim evidently was to furnish to the public in a cheap, convenient, and durable form as much as possible of that sort of statistical and historical information which people like to have at hand during a Presidential campaign. For this purpose the selection of matter seems to have been judiciously made. The statistical tables appear to be reasonably accurate, but not as much can be said for other parts of the book. There are a number of misprints, obvious enough, it is true, but still to be regretted in a work which will be consulted by those who have not sufficient experience to read critically. Except for the sake of exactness it may not be very important whether the Democratic electoral vote in 1872 is believed to have been 80 (as stated on page 179) or 66, as was the fact. A man would probably respect the Constitution as much if he knew that sixteen delegates who sat in the Convention of 1787 refused to sign it as he will if he gathers from the note to page 33 that there were only five who withheld their approval. Nobody is likely to miss voting for President because he is told on page 128 that the Constitution declares that the electors shall be appointed on the same day throughout the Union. Mr. Logan would not be injured if everybody was informed that there were seven votes against him in the Convention instead of but one, as page 191 has it. But there is no excuse for publishing a chart of the political complexion of the Congressional districts at the elections of 1878 so labelled as to lead everybody to suppose that it was intended to represent the condition of things at the time the existing House of Representatives was chosen. On page 213 there is a misstatement which perhaps was not altogether unintentional. It is there said that Mr. Blaine's unanimous election to the Senate by the Maine Legislature "should put an end forever to any discussion" of his record. In 1877 the Legislature of Maine contained 148 Republicans to 33 Democrats. The vote for Senator stood James G. Blaine, Republican, 139, William P. Haines, Democrat, 33. Instead of a unanimous election there was a strict party division, the only absentees being Mr. Blaine's own party friends.

—Since Varnhagen's 'Tagebücher,' no work has excited so much attention in Prussian society as a little book reprinted some months since from the *Nouvelle Revue*, under the title 'La Société de Berlin, par Paul Vassili.' It has many claims to attention: the style is exquisite; the sharp, and often malicious, characterization of all prominent members of the court circle, from the Emperor down, is full of shrewdness and truth, as well as wit; and, finally, curiosity as to the authorship stimulated the popularity won by the book's intrinsic merit. Its best advertisement was the fact that (as in the case of Varnhagen) the Government thought it worth while to "suppress" it; but suppression in Germany does not mean what it did under the Second Empire; and though the work was not displayed in shop-windows, it was readily produced from under the counter. The book has been read in this country also, as two translations have been published. The story of its authorship, as given in the *Berliner Politische Nachrichten*, is as follows: The original author, so to say, was the Empress's former French reader, Gérard, who used to write regularly to Gambetta, but without any view to publication. These letters were found among Gambetta's other papers by his literary executor, who saw at once that they contained valuable material for the *Nouvelle Revue*, of which she is editor. But to produce an effect, literary or political, color was necessary, and Gérard had produced only sketches. So, by the aid of the well-known Mrs. Novikoff ("O.K."), certain personal sketches made by an Alsatian named Weiss, who had been tutor in a Russian family, were worked into the original, while the editor, with the aid of a former secretary of legation, Otto von Loë, harmonized the parts, and gave the whole the literary finish and polish by which it is distinguished.

—The *Allgemeine Zeitung*, of which Doctor Döllinger has been availing himself as a kind of personal organ ever since the first publication of his 'Römische Briefe vom Konzil' (1869-70), and especially since he became, in 1873, President of the Bavarian Academy of Sciences, publishes *in extenso* the last of his lectures delivered before that body. The subject is "The Political and Intellectual Development of Spain," and the occasion of the delivery was the festive gathering of the Academy on the 25th of July last. The terseness of this production would do credit to a lecturer in the vigor of his manhood, and is all the more remarkable in a man who when he spoke had full eighty-five years of life behind him. The serene calmness with which he treats the history of a country so surpassingly Catholic, is in accord with the position which he occupies as a leader of religious thought who, from a passionate Ultramontane champion, became a stern opponent of Papal encroachments, called into life a new sect—that of the Old-Catholics—and has nevertheless remained within the original fold. This unimpassioned objectiveness, however, does not prevent him from dealing some very severe blows at what might be called the orthodox notion of Spanish history. No other nation, he tells his hearers, has annals so distorted and disfigured by palpable fictions, fantastic embellishments, and fables, as are the annals of Spain; and "nowhere else have the falsification of facts and the propagation of fables been carried out with so much conscious and persistent calculation." As samples of facts forged by chroniclers and generally repeated and believed in Spain down to recent times, he cites the story of Ferdinand the Great, the Castilian King's, march into Paris (about 1063), and his triumph there over a vast coalition of nations and monarchs, including the Emperor of Germany—in all of which there is not a particle of truth—and the introduction into the history of Aragon, for the sake of its greater glory, of a kingdom of Sobrarbe, which never existed, and of kings of Sobrarbe, who never lived. Nor was it possible in any other less vainglorious and legend-loving country that "a heroically brave but treacherous and cruel freebooter," who by turns fought against and for his countrymen, as ally or foe of the infidels, should become so idealized by tradition and poetry, and exalted into a national hero, an ancestor of kings, and a miracle-working saint, as was Rodrigo Ruy Diaz, the Campeador or Cid. And incomparably more glaring and numerous are the religious myths of Spain, invented and forged in the interest of the hierarchy, and their influence has been enormous. Every Spaniard asserts to this day, against the Bible and all the world, that the Apostle and fisherman James the Elder, or the Greater, having come to Spain to preach the Gospel, commanded there in scores of battles, riding on a white steed and chasing the heathen. Compostella owes its greatness to this patron of Spain, Sant-Iago. Let us add, what Doctor Döllinger did not know when he delivered his lecture, that the Roman Congregation of Rites has confirmed, by a decree published in the *Osservatore Romano*, "the discovery of the remains of St. James the Greater," recently found by the Cardinal-Archbishop of Santiago beneath the pavement of the apse of his cathedral, behind the high altar, where that saintly prelate had instituted diggings for the purpose.

—During the latter part of August the Saxons (that is, Germans) of Transylvania amused themselves, as well as guests from Cisleithan Austria and the German Empire, by a festive celebration at their chief city, Hermannstadt, commemorative of the planting of German colonies in that part of the country in the twelfth century. The affair was a patriotic demonstration of the Saxons against the Magyars, calculated to strengthen the sympathies which the struggle of the former for the preservation of their ancient privileges, bestowed upon them by the Kings of Hungary, and for national autonomy within the Hungarian Kingdom, of which Transylvania is now again an integral part, has recently roused in Germany. The time for the celebration seems to have been arbitrarily chosen, as the year 1884, so far as we know, contains no centenary anniversary of any great event in the history of the Saxon settlements, some of the principal German towns of Transylvania, including Hermannstadt itself, having been founded by immigrants from northern Germany some decades before 1184. Hermannstadt was selected as the real Saxon centre and former capital of all Transylvania, and partly also on account of its beautiful situation and in consideration of the fact that from its valley—the valley of the little river Zibin, or Cibin—the German name of the country, Siebenbürgen, is derived by recent scholars. Formerly it was explained as meaning seven castles (Ger. *sieben Burgen*), and having reference either to the principal seven walled towns of Transylvania (Hermannstadt, Klausenburg, Kronstadt, Bistritz, Mediasch, Mühlenbach, Schässburg), or to an early division of the Saxon territory into seven

juridical districts. Siebenbürgen is now asserted on documentary evidence to be a corruption of Zibinbürgen, a name which in the Saxon dialect originally designated the Zibin farms, and was subsequently applied to the whole country. The Latin name of Hermannstadt—a city said to have been founded by a colony under the head of Hermann, a citizen of Nuremberg—is Cibinium; the Hungarian, Szeben; and the Rumanian, Sibiu. The Latin name of the country is Transsilvania, by which the Hungarian kings designated the land lying beyond the forests (*trans silvas*) of eastern Hungary proper; and the Hungarian equivalent is Erdély (from *erdö*, forest).

—Poul Andræ's 'Via Appia, dens Historie og Mindesmærker' appears, from the account of it in the *Revue Critique*, to be somewhat of the nature of Bekker's 'Gallus' and 'Charicles.' He undertakes, after a short sketch of Roman roads, to describe public life as it appeared on the Appian Way at the height of the Empire, and then to relate the episodes which occurred or may have occurred there. As the historical data are very scarce, the account must partake very much of the nature of a romance. For instance, three short passages in the letters of Cicero speak of his dinner at the villa of his son-in-law Crassipes when he was reconciled to Crassus. On the strength of these three allusions, Andræ writes forty pages. What did Cicero and Crassus talk of? Probably not of politics, but of the lately-built theatre at Pompeii, of the old Greek pictures of Pausias and Nicias under its portico, of the famous torso of Hercules, and the celebrated gilded Hercules, which have been found in the ruins of that theatre and are now in the Vatican. Cicero had attended the inauguration, and no doubt discussed the combats of the Getuli and the elephants. Were there ladies at the repast? How were the guests placed? Again, Tacitus barely mentions a villa of Seneca four miles out on the Appian Way. Here is the occasion for seventy pages more. How did Seneca, who does not speak of this one among his many villas, get it? Describe the luxury in which Seneca lived; enumerate his probable visitors and reproduce their conversation. Such appears to have been the examination-paper which Andræ set himself, and he has made a very full reply. When the confectioner wants to make rock candy, he prepares a saturated solution of sugar and hangs some strings in it. Mr. Andræ's mind is saturated with Roman archæology of the time of the Empire. The Appian Way is the string which he has hung in it to serve as the occasion and guide for crystallization. The result is a book of over 300 pages of agreeable, varied, instructive reading, which might be worth translating into English, as was done with Bekker's archæological stories.

—M. Larroumet reviews at length in the *Revue Critique* the editions of Molière's 'Les Précieuses Ridicules,' by Andrew Lang, and of Beaumarchais's 'Le Barbier de Séville,' by Austin Dobson, published in the Clarendon Press series. He praises both, but with some reserves. Mr. Lang is not aware of the later discoveries in regard to Molière, which he might have learned by merely turning over the pages of the *Moliériste*, and he ought not to have said that "Molière is the greatest name in modern dramatic literature *after* Shakespeare." M. Larroumet cannot stomach the "after." Such geniuses, he thinks, should be placed side by side. Mr. Saintsbury's treatise on "The Progress of Comedy in France," which is included in both editions, does not satisfy him. Mr. Saintsbury should not have said that the development of French comedy has not been marked by such striking progress, nor, excepting Molière, by such glorious names, as those that illustrate the annals of French tragedy. There are only four great names in French tragedy—Corneille, Racine, Crébillon, and Voltaire. In comedy Régnard, Lesage, Marivaux, Beaumarchais, Destouches, Dancourt, Gresset, Piron, Sedaine illustrate a single century. And in the present century, when tragedy is dead, the whole glory of the French stage rests on its comedians. M. Larroumet is displeased that the *pudeur anglaise* has led to two omissions in the text of Molière, which must appear as absurd to a Frenchman as the New England limbs of a piano do to Englishmen. Mr. Dobson is praised for following very exactly the principal French writers on Beaumarchais, and is blamed slightly for not acknowledging that he has done so. Some errors and some insufficiencies in the notes to both plays are pointed out, but on the whole the editions are pronounced good introductions for English learners to two French masterpieces.

CHARLES GRAUX.—I.

Mélanges Graux. Recueil de Travaux d'Érudition classique dédié à la mémoire de Charles Graux. Paris, 1884.

THIS stout and extraordinarily ponderous volume of 823 octavo pages contains a series of articles on various points of philology—palæographical, geographical, chronological, epigraphical, metrical, or purely literary. The contributors are no less than seventy-two, and include the names of Cobet, Madvig, Mommsen, Blass, Comparetti, Egger, Delisle. A philologist to honor whom such eminent savants have united must have been no ordinary man; and it seems worth while, before attempting to review the 'Mélanges' offered to his memory, to give a brief sketch of his life, the materials for which are supplied by the biography of M. Lavisse, prefixed to the volume.

Charles Graux was born at Vervins (Aisne) on the 23d of November, 1852. There he laid the foundation of his subsequent eminence in classical philology, first as a pupil of the École Libre, afterwards at the Collège de Vervins, then under the direction of the Abbé Tourneux and containing eighty students. Greek, however, the language in which he was afterwards to achieve his principal distinction, he could learn only imperfectly at the college; fortunately the curé of an adjoining parish, M. Magnier, was able and ready to supply this deficiency by private lessons. In this way Graux was able, in the course of a two years' attendance, to read and understand Plato. In November, 1871, he began to study in the École des Hautes Études at Paris. For three years he attended the professional lectures there, studying Greek palæography and criticism under Tournier, Greek history and epigraphy under Robiou, Latin pronunciation, orthography, syntax, and metric under Havet. He was, besides, a pupil of Foucart, Boissier, and Léon Renier at the Collège de France, and of Hébert at the Faculté des Sciences; a course of lectures on Greek architecture at the École des Beaux Arts is also mentioned. For some of these lectures it was Graux's habit to prepare elaborately, as if he were the lecturer rather than the pupil. M. Tournier seems to have been his favorite professor; he would accompany him to his house as the disciples of Socrates accompanied their master. In palæography his progress was so marked that as early as the end of 1873 M. Tournier confided to him part of his own tuition; and a letter is still extant in which he describes the success of his first course on palimpsests. Meanwhile, he was practising photography with his friend Paul Garbe, or observing the action of chemicals on the material of MSS.—two branches of study for which many palæographers are contented to trust to others. Similarly he worked at mathematics with the practical object of comprehending the poliorcetics of the Greek engineers, and restoring by calculations the form and proportions of a balista or an helepolis, or again of fathoming by hydrostatics the complex machinery of Greek temples. He was a frequent visitor at the séances of the Association pour les Études Grecques and of the Société de Linguistique.

By a ministerial *arrêté* of October, 1874, Graux was appointed a teacher of philology and Greek antiquities in the École des Hautes Études. Here he continued to lecture till his death in January, 1882. His courses were on textual criticism, Greek conjugation and inflexion, syntax, palæography, literary history; all alike marked by careful preparation, methodic arrangement of subject, and the liveliness which the constant communication of new researches and discoveries never fails to produce. It is no wonder if he was a great success; his own words may doubtless be taken as representing the state of things his teaching introduced: "There reigns at present (1876) in the École a movement and an animation such as I have never seen. Our Greek courses are much frequented. A Russian from the University of Kieff, who has studied a year at Leipzig, has left Germany and come to study with us: he is enchanted with our system; what has attracted him is our mode of teaching textual criticism and palæography, neither of which has its counterpart in the German universities."

A palæographer such as Graux could not fail to be much consulted, much utilized. Many hours of his life were devoted to examining MSS. for savants in every part of Europe, or in communicating the results of his collations. Yet he found time to contribute a variety of articles to the *Revue Critique*, and in 1879 he succeeded M. Bréal as one of the directors of that journal. He was also corresponding secretary of the *Revue de Philologie*, and directed the excerpting of foreign philological journals, which, under the name "Revue des Revues," forms the largest part of its contents. It is not surprising then to learn that he went to bed at eight and rose at four.

Perhaps the most important part of Graux's life as a philologist was the time he spent on journeys of research abroad. The first of these was in Spain, from the end of August, 1875, to the middle of April, 1876. He had himself solicited this mission from the Minister of Public Instruction. He proposed to visit the libraries of Madrid and the Escurial, with the special object of collating two MSS. of the eleventh century, one of Stobæus, the other of Xenophon's 'Cyropædia,' besides another (of the 10th century) of Greek writers on engineering. He had projected an edition of Philon, one of the most famous writers on this subject, and had collated no less than eighteen manuscripts for the purpose. Graux has published the results of this Spanish journey in his 'Rapport sur une Mission en Espagne.' He visited as many as sixty libraries, and examined 450 MSS. which had either never been described before, or of which he made a reëxamination and corrected the previous descriptions. The Stobæus and 'Cyropædia' proved disappointing, but in their place he made a complete collation of Aristotle's 'Meteorologica,' of Plato's 'Euthyphron,' of Demosthenes's 'Third Philippic,' of the 'Breviarium Historiæ Romanæ' of Rufus, of the so-called 'Fifth Book of Philon.' He photographed two anonymous fragments on ancient Greek music, and copied entire

two inedited works of the rhetorician Choricius, a letter of Harpocration addressed to an Emperor, possibly Julian, and a military treatise by the Emperor Nicephorus Phocas. How indomitable was his patience in surmounting the difficulties to which a palæographical explorer is liable, if anywhere, in Spain, the account given of his visit to the Cathedral Library of Cordova (pp. 35-37) proves amusingly enough: the key, of course, could not be found, and when it was found new objections were raised. After all, no Greek MSS. were forthcoming; but the future researcher in Cordova may be glad to learn that the library possesses a number of excellent Latin MSS.

In the vacation of 1877 Graux visited Upsala, Stockholm, and Copenhagen. His object was twofold: to examine the libraries, and to establish philological relations with Madvig and the other Scandinavian professors. On his way he stopped at Brussels to see the collection of Greek MSS., and at Leyden, where he spent three days in the society of Cobet. Cobet had spoken of Graux in the *Mnemosyne* as *vir illustrissimus*, and gave him a cordial reception. Copenhagen he reached on July 25, after a delightful moonlit journey from Kiel to Korsör. At Upsala he took part in the centenary fêtes of the University, and encountered two compatriots, M. Gaston Boissier and M. Gaston Paris, who represented France at the ceremony. Of this mission Graux has given some account in three letters to Baron Watteville. He catalogued eighty Greek MSS. in the library of Copenhagen, and discovered a new and better codex of the Psalms of Solomon. At Upsala he catalogued sixty-three MSS. and examined an ancient codex of the Gospels, which led him to important results on the stichometry of the New Testament. Returning by Heidelberg, he inspected the famous MS. of the Palatine Anthology, a MS., by the by, which, considering its importance, has been too much neglected since the time of Jacobs.

His third mission was again to Spain. It occupied two journeys, July to October, 1879, March and April, 1880. Its most important result was the discovery at Madrid of a MS. of Plutarch's 'Lives,' which, to use his own words, must revolutionize the constitution of the text of that work. Here his knowledge of photography was brought into play. Copies were taken of various MSS. from the ninth to the fourteenth and fifteenth centuries. On the 8th of September, 1879, he wrote: "I have finished my first revision of the 580 Greek MSS. in the Escurial."

In May, 1881, Graux was commissioned to lecture at the Sorbonne twice a week on Greek Philology and History. He chose the treatise 'De Republica Atheniensium,' ascribed to Xenophon. The semester ended, he started on his fourth and last journey, to Italy. He seems to have travelled more leisurely than was his wont, and to have lingered over the attractions of Italian scenery and art—painting (to which he had been almost indifferent) no less than architecture. From Venice he passed to Ravenna, Bologna, Florence, and Rome. The Vatican Library, as is well known, opens at eight and closes at twelve. Graux was the first to present himself at the door, and on leaving it proceeded to the Barberini, where he continued his researches two hours longer. His primary object was to determine the question of the text of Plutarch's 'Lives,' and he was able to say (Nov. 24), "Plutarch is finished." He was, however, induced to remain a few days longer. It was important to have his opinion on the date of the Greek MSS. of the Palatine collection in the Vatican, the catalogue of which was just ready for publication. He remained, therefore, till December 18. On December 23 he was at Paris. On January 1 he took cold while attending at the Élysée with the deputation sent to convey the message of the Faculté des Lettres to the President of the Republic. Typhoid fever supervened, and he expired on the 13th of January, a victim, it is to be feared, to overwork. He was buried at Vervins. It was to France the loss of her most promising philologist, and may justly be pronounced irreparable.

EARLE'S ANGLO-SAXON LITERATURE.

Anglo-Saxon Literature. By John Earle, M.A., Rector of Swanswick, Rawlinson Professor of Anglo Saxon in the University of Oxford. London: Society for Promoting Christian Knowledge. New York: E. & J. B. Young & Co. 1884.

THIS volume is the first of a series of small works on "The Dawn of European Literature," projected by the Society for Promoting Christian Knowledge, and uniform with the Society's recent historical publications, so that it forms an indispensable companion volume to Prof. Grant Allen's 'Anglo-Saxon Britain.' A work of the kind was much needed, for the ordinary manuals of English literature either neglect the subject entirely or treat it very meagrely, so that the best treatment of it in English was heretofore found in Kennedy's translation of Ten Brink's 'Early English Literature'; and with the corresponding section of Professor Ten Brink's work this volume naturally invites comparison.

Prof. Earle divides his book into twelve chapters, the first of which is devoted to showing the dependence of Anglo-Saxon literature upon early mediæval Latin literature, in confirmation of the opening statement: "Anglo-Saxon literature is the oldest of the vernacular literatures of modern Europe; and it is a consequence of this that its relations with Latin literature have been the closest." This dependence is well shown, and a parallel is drawn between the influence of the Greek literature upon Latin classical literature, and of the new Latin literature upon Anglo-Saxon literature. But while without the foundation of Latin culture we should doubtless have had little or no literature of our Anglo-Saxon forefathers, it may be remarked here that Professor Earle seems scarcely to do justice to the native element in Anglo-Saxon poetry, the most original and most valuable portion of Anglo-Saxon literature.

In discussing the heathen period Professor Earle says (p. 59): "There is no book or piece of Saxon literature that can in any substantial sense be ascribed to the heathen period; for I cannot go with those who assign this high antiquity to the 'Beowulf.'" No scholar, so far as is known to the writer, now assigns this high antiquity to the 'Beowulf' in its present form, but that this poem, as well as others, "preserves many traces of heathendom," Professor Earle readily recognizes. He finds in the early annals of the Chronicles "some possible work of this period," and notices the genealogies, laws, and canons as "sources which preserve some relics of the old heathenism," which are seen also in the names of the days of the week contained in the rubrics of the Anglo-Saxon Gospels, or in the forms of heathenism denounced in the Homilies. Altogether apart from history, the literature alone is sufficient to prove the once heathen condition of the Anglo-Saxons, and although "the national profession of heathenism ended before our literature began," Professor Earle thinks (p. 78) that "it is perhaps a little too rigid to assume that the use of the Roman alphabet is to be dated strictly from the Conversion," and that "the Saxons may have begun to use it, at least in Kent, before the reign of Aethelberht." While "it is a debatable question whether any Roman culture lived through the Saxon conquest," the Kentish code of Aethelberht, "ordained in Augustine's days," is our earliest code of Anglo-Saxon laws, and "the Kentish dialect was the first literary form of the language of our Saxon ancestors." These laws, however, are not preserved in the Kentish dialect, but in the West Saxon, and the earliest instance of Kentish is probably the Epinal Gloss, dating from about 700 A. D., of which Professor Earle gives a specimen from Appendix B to Cooper's 'Report on Rymer's Fœdera' (1836), but the whole work is now accessible in Mr. Sweet's facsimile edition.

"The beginning of our vernacular literature, so far as it can be treated chronologically, lies between the years 658 and 680"; and however much there may be of the mythical in Bæda's account of Cædmon, or whatever may be the truth as to the poems in the West-Saxon dialect attributed to him, there is no question that Cædmon's short hymn in the Northumbrian dialect, preserved in a contemporary manuscript of Bæda's 'Ecclesiastical History,' is one of the origins of English literature. Its hoary antiquity dates back over 1,200 years, and along with it may be placed that other short hymn, assigned to Bæda himself by his pupil Cuthbert, which but excites our regret that Bæda did not transmit to posterity more of his writing in the vernacular. As to Cædmon's source, Professor Earle finds the nearest approximation to it in a Latin poem of Avitus, Bishop of Vienne, c. 500 A. D.; and he leaves it at least an open question whether Milton was indebted to Cædmon for some of his ideas. It is certainly probable "that Milton may have known of Cædmon through Junius," and not at all to his discredit that he chose to make use of this knowledge.

This Northumbrian or Anglian period was the blooming era of Anglo-Saxon poetry, and it is, therefore, the more surprising that when Professor Earle comes to discuss the poetry, he shows an unwillingness to attribute much of it to this early period. He divides the poetry into *primary*, or that "which is rooted in the native genius of the race," and *secondary*, or that "which is manifestly of Latin material." At the head of the first class he naturally places the 'Beowulf,' "the largest and in every sense the most important of the remaining Anglo-Saxon poems." Of this he gives an outline, quite full for the fights of Beowulf with Grendel and with Grendel's mother, but much condensed for his fight with the dragon, and with omission of the various episodes. He attributes to Ettmüller the credit of "first giving the study of the 'Beowulf' a German basis," overlooking Leo's earlier work; and while Müllenhoff's view of the composition of the poem is given briefly in a note, Professor Earle agrees with Grein as to the unity of the poem, "so far as unity is compatible with the traces of older materials" (p. 135). Grein's allegorical motive is rejected, and any allegorical design in the poem is disclaimed, but the suggestion that certain incidents in the poem "seem almost like reflections of evangelical history" appears equally untenable, though it is evident to even the most cursory reader that "the material is mythical and heathen; but it is clarified by natural filtration through the Christian mind of the poet." With respect to the date of the poem, Professor Earle is at variance with most scholars, thinking that "the close of the ninth or the beginning of the tenth century" is "in every consideration the most probable." It scarcely seems possible that the reign of Alfred, or even of his son Edward, could have produced the 'Beowulf,' when we consider the state of learning at that time as testified to by Alfred himself. "Every consideration" seems to the present writer to favor the

eighth century, and the first half of it at that, when Northumbria stood at the head of Europe in culture, and Anglo-Saxon poetry was in its vigorous manhood. Again, as to the Grettis-saga and its relation to the 'Beowulf,' so far from the Saxon poet having got his story from a Dane "after the Peace of Wedmore in 878," it seems decidedly more probable that the writer of the Icelandic saga got his story from the Anglo-Saxon poem long afterwards, if we must assume any necessary connection between the two. But the limits of this notice will not permit a further discussion of this poem.

A few other poems find a place in this chapter along with the 'Battle of Brunanburh' and the 'Battle of Maldon,' briefly noticed, and the titles of the poems in the Chronicles, the chapter closing with a very short notice of 'Widsith,' which deserves a fuller treatment and the place of honor next to the 'Beowulf' among the early remains of this *primary* poetry.

The bulk of the *secondary* poetry is that attributed to Cynewulf, and found in the Vercelli Book and the Exeter Book. While it is not yet possible to determine without question all the poems of Cynewulf, it is more than probable that this great poet lived in the eighth century, and that he was a Northumbrian rather than a West Saxon. Kemble's view, which is endorsed by Professor Earle, that he must be identified with "that Kenulphus who in 982 became Abbot of Peterborough and in 1006 became Bishop of Winchester," has been generally abandoned, as may be seen from the recent discussions in the *Anglia* of the poems of Cynewulf; but that Professor Earle should think proper to revive it shows the difficulty of arriving at a positive conclusion.

The chapters on the Laws, the Chronicles, King Alfred's Translations, and the Homilies of Aelfric, with their relation to the earlier Blickling Homilies and the later Homilies of Wulfstan, will give the reader an excellent idea of these portions of Anglo-Saxon prose literature. The importance of the Anglo-Saxon laws and other legal documents is well emphasized, especially when we reflect, as Schmid says, that "no other Germanic nation has bequeathed to us out of its earliest experience so rich a treasure of original legal documents as the Anglo-Saxon nation has" (p. 150). The position of the Chronicles in Anglo-Saxon literature is also well characterized, for Professor Earle himself has given us a most valuable edition of them, and is an authority on the subject. Pauli has suggested "that the whole mediæval institution of annal-writing came from Northumbria" (note, p. 189), and certainly no modern European nation can show in its vernacular works comparable in antiquity and value to the codes of Anglo-Saxon Laws and the body of Anglo-Saxon Chronicles, which last was characterized by Professor Ingram as "the second great phenomenon in the history of mankind," the Old Testament being, in his opinion, the first.

King Alfred's name has long held a most prominent place in English history and literature. Setting aside as mythical much that has been assigned to him, "when we come to his literary achievements we find no tendency to exaggerate or embellish the sober truth. His hand is manifest in the Laws, and strongly surmised in the Chronicles. In both these vernacular products we find a new start, a fresh impulse, under Alfred. But that which stamps a peculiar character on his Translations is that here we discern a new stride in the elevation of the native language to literary rank. Latin was no longer to be the sole medium of learning and education." And again: "Alfred deplored the low state of Latin—but then he could substitute his own language for it, and that not merely because he must, but also because the very scarcity of Latin had favored the culture of English." It was a necessity that Alfred should use Latin originals to promote the culture of his people, and his judgment is shown in the works which he selected for translation. An extract is given from the noted Preface to his translation of Gregory's 'Pastoral Care,' and we are fortunate in still possessing the very copy addressed to Waerferth, Bishop of Worcester. Gregory's 'Dialogues,' translated for the King by Bishop Waerferth, are noticed at greater length than any other work, for this translation is unfortunately not yet published. Alfred's translations of Boethius, Orosius, and Bæda are also noticed, and a short extract is given for comparison, in both prose and verse, of one of the Metres of Boethius. Wright's view that the verse translation, which is "merely a versified arrangement of the prose translation," is not by Alfred, seems to be adopted, and it certainly appears to the present writer the view which has most arguments in its favor.

Professor Earle rightly says: "We must be struck with the extent of this great muster of native literature. But we shall hardly do it justice unless we remember that this is the first national display of the kind in the progress of modern Europe"; . . . "of a varied and comprehensive literature in English or any other European vernacular, we find no trace until now." But the impetus given by Alfred was not followed up all at once, although to the first half of the tenth century is assigned the existing "mass of apocryphal, romantic, fantastic, and even heretical reading" that we possess in Anglo-Saxon. Passing over the Gospel of Nicodemus, the Dialogues of Solomon and Saturn, and the Apollonius of Tyre, we reach the Blickling Homilies of 971 A. D., the compendium of Church teaching "before the great Church reform of the tenth century, when the line was very dimly drawn between canonical and uncanonical, and when quotations, legends, and arguments were admissible which now surprise us in a sermon." This collection has been edited by Doctor Morris for the Early English Text Society, and Professor Earle says: "Perhaps there is no book which has been published in the present generation that has done so much for the historical knowledge of Anglo-Saxon literature." They throw light upon the Homilies of Aelfric, which seem to have been designed as a corrective for their teaching, and both point to a common source, "some standard collection of Latin homilies now lost." Aelfric's Homilies of 990–991 A. D. were published by the Aelfric Society some forty years ago, but his third series, known as the 'Lives of Saints,' has just been edited by Professor Skeat for the Early English Text Society. Aelfric's was the greatest name in English literature of this period, and Professor Earle thinks "the English of his Homilies is splendid; indeed, we may confidently say that here English appears fully qualified to be the medium of the highest learning." But Aelfric had a worthy successor in Archbishop Wulfstan, whose Homilies have just been edited by Professor Napier in the above-mentioned 'Sammlung,' and, with those of Aelfric and the Blickling Homilies, supply "a vernacular series of sermons that fairly represents the Anglo-Saxon preaching for a period of one hundred and fifty years."

Professor Earle's last chapter notices briefly the Anglo-Saxon medical and other treatises collected in Cockayne's 'Saxon Leechdoms, Wortcunning, and Starcraft' (published in the Rolls Series) and in Wright's 'Popular Treatises on Science,' and the last entries in the Chronicles (1154 A. D.); and it even goes beyond the Anglo-Saxon period to glance at Layamon's Brut, King Horn, Havelok the Dane, and the Bestiary, which, however, lie outside of his limit and were better omitted. While this work does not render any the less valuable the First Book of Professor Ten Brink's 'Early English Literature,' it is the best popular summary that we possess of Anglo-Saxon literature; and we would suggest only a more thorough and sympathetic treatment of the Anglo-Saxon poetry. When Wülcker's new edition of Grein's Library of Anglo-Saxon Poetry is completed, it is to be hoped that some one may supply this, and may furnish also a translation for English readers of the whole body of Anglo-Saxon poetry.

The Synoptical Flora of North America. Vol. i. Part 2. Caprifoliaceæ to Compositæ. By Asa Gray, LL.D. New York, London, and Leipsic. 1884.

THE claim of the United States to have produced one of the three leaders of systematic botany who occupy, at the present time and in their generation, the position which Linnæus held in his, and which Brown and the elder De Candolle filled in the early part of this century, is well founded and will not be disputed. When the history of the development of systematic botany is written, it will appear, perhaps, that in the amount and quality of his work, and in the difficulty and volume of the task which he early in life set himself to perform, the author of the work named above did not occupy a position inferior to either of his great contemporaries. When, moreover, the opportunities and advantages enjoyed by these three men are contrasted, the position and accomplishment of the American botanist will appear still more striking.

Professor Gray's latest publication is in many respects the most important among the long series which have fallen from his pen during the fifty years in which he has been actively engaged as a botanical author; and it is upon this, rather than upon earlier publications of a similar character, that his claims as a naturalist will largely rest. He here gives to the public his mature and final views upon the largest and, all things considered, the most difficult family of American flowering plants, which has always occupied his attention, and which very largely he has known, so to speak, from the beginning; that is, he has himself first described a large part of the plants now systematically arranged in this volume. Great changes have occurred in the botany of North America since Professor Gray first began to investigate it. Previous to that time two Floras of North America had appeared. The earliest of these was published in Paris in 1803. It was prepared by the French botanist Michaux, or at least bears his name upon the title-page, and was based upon his own observations and collections made in this country, whither he came in 1785 under royal auspices. Michaux died in Madagascar in 1802, and the preface to his Flora is signed by his son, F. A. Michaux, the author of the classical book upon the 'Forest Trees of North America.' Michaux explored the American continent from the shores of Hudson's Bay to the northern portions of Florida, and from the Atlantic seaboard to the Mississippi River. He enumerated in his 'Flora' 1,530 species of flowering plants and ferns, divided among 528 genera, including 193 species of compositæ in 47 genera.

The second attempt to write a Flora of North America was made by Frederick Pursh, a native of Siberia, who reached this country toward the close of the last century, when he made the acquaintance of Muhlenberg, Bartram, Marshall, Barton, and other American botanical worthies. He became gardener to William Hamilton, whose gardens at Woodlands, near Philadelphia, were then the most famous in the United States. He remained in this situation

during three years, and then, after several years devoted to botanical research in the eastern portions of the continent and in the West Indies, Pursh returned in 1812 to England, where, two years later, under the auspices of the famous Mr. Lambert, his 'Flora' appeared in two volumes. Pursh was able to include in his 'Flora' a few plants from the Pacific side of the continent, collected by Menzies during the voyage of Vancouver, and by Lewis and Clark in their journey to the mouth of the Columbia River, as well as several plants collected by Bradbury during his journey to the upper waters of the Missouri. These and additions to the Eastern flora enabled him to nearly double the number of plants described by Michaux only eleven years before. Pursh's 'Flora' contained 3,076 species of flowering plants and ferns in 740 genera. He knew 418 species of compositæ in 75 genera.

Fifty years ago John Torrey, of this city, undertook the preparation of a Flora of North America, associating with him the young botanist, from the central part of the State, whom men of science in every part of the world now know as Asa Gray, and who was busy preparing some portions of the first volume of this new venture as long ago as 1835. Two parts, or one-half, of the first volume of this important work were published in 1838; and the remainder of the volume appeared two years later, to be followed in 1843 by a second volume, including and ending with the compositæ elaborated by Gray, who then knew 1,054 species, divided among 199 genera. It was found necessary, with the completion of the second volume, to abandon the undertaking. Explorations in the western and southwestern portions of the continent were bringing to light such numbers of new plants that the authors' time, already broken into by new and engrossing duties, was more than occupied in studying and arranging new material and preparing the way for a more comprehensive Flora than it had previously been possible to attempt. Such botanical work occupied Mr. Torrey for the remainder of his life; and it was only twelve years ago that his younger associate, at last freed from all professorial interruptions, was able to turn his undivided attention to putting into permanent and final form his real life work. He published in 1878 the first instalment of this, being part 2 of the second volume; that is, the quarter of the Flora which follows the second volume of Torrey and Gray's 'Flora' of 1843. Another part has just appeared, being the second part of volume i, in which the ground covered by the old second volume is again gone over. One-half, therefore, of the entire work is thus completed. It still lacks the beginning and the end.

Professor Gray's new volume, like the second one of the old 'Flora,' is largely devoted to an elaboration of the order of the compositæ, which comprise about one-eighth of all the growing plants of this country, and which, it will appear, have been greatly increased of late years, through discoveries in the West, where this order is widely and largely developed. Michaux knew 193 species of compositæ; in this new study of the order 1,610 species, divided among 237 genera, are described, or more than a third more than Gray included in his first elaboration forty years ago, although at that time even the plants of Texas, the Rocky Mountains, and portions of the Pacific Coast were fairly known. The new 'Flora of North America,' when completed, may be expected to contain something like 13,000 species. This growth in our flora is all the more interesting, with reference to the volume before us, from the fact that it has been made, so to speak, under the author's eye—that is, the numerous botanical explorers and collectors who have been engaged during the last fifty years, from one end of the continent to the other, in furnishing material for the new 'Flora,' have been largely inspired and directed by the enthusiasm and sagacity of the author, who has for the most part also published the results of their discoveries. Not only has Professor Gray written the 'Flora' of the country, but he has planned, or at least inspired, the surveys, and gathered and described the material which has made the preparation of such a 'Flora' possible.

Half of this great work, and certainly the most difficult portion, is completed, and the material for the remainder is at hand. There still is a half to finish before we can possess a complete Flora of North America. The preparation of such a work is slow, laborious, and difficult, and its appearance will be eagerly watched by the students of botany, who feel how much the value of these parts will depend upon their completion by the skilful hand, or at least under the immediate direction, of the man who has already devoted a long and laborious life to the elucidation of this subject. It is needless, perhaps, to call attention to the fact that in simplicity and clearness of arrangement, elegance and terseness of style, and perfection of printing the 'Synoptical Flora of North America' will compare favorably with the productions of any of the great masters of descriptive botany. It is a book of which every American, whether a man of science or a layman, has just cause to be proud.

Indian Myths; or, Legends, Traditions, and Symbols of the Aborigines of America compared with those of other countries, including Hindostan, Egypt, Persia, Assyria, and China. By Ellen Russell Emerson. Boston: James R. Osgood & Co. 1884. 8vo, pp. 677.

In preparing this collection of myths and legends, our author's purpose, as she herself tells us, was "to make more evident" the capacity of the American Indian for moral and intellectual culture. She seems also to have intended it as an argument in favor of the unity of the human race; for though she assures us, in high-flown but somewhat obscure language, that "the oneness of the origin of diverse races is not less apparent than the singleness of the origin of the rainbow-light broken upon a cloud," yet there can be no question that the bearing of the comparison which she institutes between the myths of the American Indians and those of certain African and Asiatic peoples, if it is to have any logical significance whatever, must be in this direction, and none other.

In regard to the first of these propositions there will not, we imagine, be any very great difference of opinion. The capacity for intelligent self-culture is usually recognized as being a necessary attribute of man, no matter what his race or condition, and all the arguments that can be forged will not make the fact any "more evident." Not so, however, in regard to the theory of the unity of the origin of the human race. This is still a disputed point, and while, individually, we are disposed to accept it, yet we must in justice admit that there is a large and influential school of anthropologists who are not of this way of thinking, and whose opinions, we are sorry to say, will not be changed by anything that can be found in the present volume. The truth is that, in the present state of our knowledge, we doubt whether it is possible to prove anything as to the origin or descent of a people by a study of their myths and legends, considered simply as such and without any reference to the language in which they are clothed. Unquestionably such an investigation may tend to show that at some time in the far distant past there was intercourse of some sort—be it either warlike or commercial; but beyond this it is unsafe to go. Even in the case of those myths which appear to have been the most widely distributed, and about the interpretation of which there is not so much dispute—as, for instance, those connected with the sun, the lightning, etc.—the fact that these phenomena, visible as they are to all, were used as bases for these stories even by the most diverse races, will hardly justify us in concluding anything as to the origin of the people or peoples among whom they were current. All that this uniformity proves, granting that it exists, is, that at a certain period in the mental development of a people, similar occurrences give birth to similar trains of thought, just as in the material world the same wants and desires give rise to the same means for their gratification.

Being thus to some extent prepared for the collapse of our author's argument, we should have been content to dismiss it with a verdict of "not proven" were it not for the fact that in the treatment of the subject she has fallen into methods which, considered either from a logical or an historical point of view, are believed to be faulty. Thus, for example, in a work of this character it is not safe to throw out a drag-net and accept as genuine all the myths and traditions that can be gathered, regardless of their authenticity or of the trustworthiness of the author from whom they are taken. Such a course inevitably leads to error, and Charlevoix, who knew its dangers, and was perhaps as familiar with the "uncertain and contradictory" character of Indian tradition as any one who has ever written on the subject, warned us against it some hundred and fifty years ago. This caution, it is true, was intended to apply more particularly to the accounts of past events, as handed down among our Indians; but to any one who will take the trouble to examine the present volume carefully, it is needless to say that it is equally suited to their myths and legends, and that it is as necessary to-day as it was when it was first uttered. As a matter of fact, there are myths and myths, just as there are authors and authors; and it is in the ability to discriminate justly between them—to know which are genuine and which spurious—that the chief merit of the compiler will be found to consist. Tried by this test, our author is sadly deficient. Myths that are so evidently colored by foreign ideas as to be practically useless for purposes of comparison are treated as if they were of pure Indian origin, and writers like Cusick, whose statements, to say the least, not unfrequently stand in need of confirmation, are accorded a rank to which they are not entitled. Indeed, we are told that the history of the Six Nations, in which this writer carries the records of that famous confederacy back to the third or fourth century of our era, "is quoted as authority equal if not superior to that of any English writer of the period, not only on account of his kinship of race, but because of the unembellished veracity" of his statements. To any one who has studied the method of thought, or who is acquainted with the bibliography of our American Indians, errors like these may not be productive of harm, though there can be no doubt that they betray a degree of ignorance, or perhaps it might be more correct to say, a want of discrimination, that bodes no good to the average reader.

We may also object that it is scarcely fair to speak of a myth or a legend in such a way as to lead to the inference that it was common to all our American Indians, when, so far as we know, it was confined to a single tribe, or at most to a single stock or family of tribes. In an argument of the character of the one we are now considering, a myth, like a tradition, derives much of its force from the extent of the area over which

it was distributed; and to treat it as if it were far more generally known than it really was, is to give it a weight to which it is not entitled. Finally, we must not forget that very often, perhaps in a majority of cases, the interpretations put upon these myths are purely arbitrary: they may or may not be correct; and that, therefore, any conclusion based upon them, even when logically drawn, is as doubtful as are the premises from which it is deduced. Against all of these canons our author offends more or less seriously, and hence it is that we cannot accept her argument as valid, though, as has been already said, we do not object to so much of the conclusion as refers to the unity of the human race. For reasons other than those given, this unity is not only possible, but very probable; and we accept it as being the most satisfactory explanation of certain well-known facts that has yet been given. But while cheerfully admitting this, we do not by any means go so far as to hold with our author that the Indian is older than his Asiatic neighbor. This theory has at times met with some little favor, but it is, we think, without any warrant either in fact or logic. The American continent may, it is true, be the older of the two, but this does not necessarily carry with it the conclusion as to the priority of the Indian. Indeed, the evidence seems to point the other way; and while we cannot assert it as a fact susceptible of scientific demonstration, yet it is not perhaps going too far to say that the tendency to-day among anthropologists is to the belief that the Indian is descended from Asiatic progenitors, and hence that he must have appeared upon the scene at a later day.

In a concluding chapter our author treats of some of the religious beliefs of the Indians, and, following Adair, she argues from the similarity of the word *Yowah* or, as he terms it, *Yohewah*, the Great Spirit, with Yaveh, the Jehovah of the Hebrews, that the two peoples worshipped the same God. To some extent this may have been true, for the Indians, as we are told by Lafitau, "without the exception of a single tribe, adored the sun," and it is more than probable that the Hebrews, in some of their lapses into idolatry, may have indulged in the same form of worship; but that our Indians alone had attained to the sublime monotheistic conceptions of the Old Testament is not for a moment to be admitted. The idea of the Great Spirit was altogether foreign to their methods of thought, and was an outgrowth of the teachings of the early missionaries. In the language of Parkman, "the primitive Indian yielding his untutored homage to One All Pervading and Omnipotent Spirit is a dream of poets, rhetoricians, and sentimentalists."

Our Famous Women. Hartford: A. D. Worthington & Co. 1884.

Of these thirty biographies only six when written were of the dead. With hardly more than a single exception, however, the delicacy of writing about the living has apparently not been felt by the more or less famous women whose names are attached to these sketches. Mrs. Cooke, indeed, writes of Mrs. Spofford, and Mrs. Spofford of Mrs. Cooke, each laying it on with a trowel; while Miss Maud Howe's portrait of her mother is a model of impropriety. Mrs. Stowe's account of her sister Catherine Beecher is not open to criticism in this respect, although it is faulty in omitting all mention of Miss Beecher's opposition to the anti-slavery movement, and especially to the participation in it of her own sex. The "list of her published works" given in a foot-note, as supplied by the Messrs. Harper, will be generally taken as a complete bibliography, though it only goes back to 1845, and consequently does not include the 'Essay on Slavery and Abolitionism, with reference to the Duty of American Females, addressed to Miss A. E. Grimké,' in 1837. Mrs. Stowe's own attitude on the woman question, by the way, is suggested in her rather scrappy sketch of Mrs. Whitney, when she says that this writer "has nothing to say, of course, against those women evidently called by exceptional talent and exceptional circumstances out of the common walks of womanhood, but she gives a strong weight of influence against a general drift of womankind in this direction." We take this to be a sentiment unfriendly to female suffrage, whereas the prevailing tone of these biographies is distinctly the reverse. The only other exception to the rule that we have noticed happens, curiously enough, in Mrs. Rose Terry Cooke's sketch of Mrs. Stowe herself: "Yet she [Mrs. Stowe's mother], with all her charity of mind, her fulness of lofty thought, and keen enjoyment of literature and art, never cried out for her 'rights,' or clamored for suffrage." Considering that Mrs. Lyman Beecher died in 1816—the birth-year, by the way, of Mrs. Stanton, who, according to Mrs. Bullard, was the first to set on foot the movement for woman suffrage—her failure to cry out cannot be thought surprising.

The frequent omission of the birth-year (and there are thirteen instances of it) is one of the feminine traits of these biographies. Miss Phelps exhibits it in writing of Mrs. Livermore, and Mrs. Livermore in turn in writing of Miss Whitney without more regard to locality than to chronology. Partly the subject is to blame for an inability to "give latitude and longitude," as Mrs. Whitney says in the case of Lucy Larcom. Mrs. Terhune (Marion Harland) entreats Miss Sanborn—"Please don't give a *post-mortem* [*ante-mortem?*] air to your paper by recording the date of my birth, with a blank left for death." But in general we may infer a carelessness or indifference as to dates which is womanly because women's lives and training are unfavorable to order and precision. To the same cause we should be inclined to attribute the want of proportion manifested by the great majority of the contributors to this volume. This defect is the more striking because the literary art to which most of the writers have some claim—often a very high claim—should have gone far to correct it. Might we not, too, have expected from the novelists among them some fitness for the analysis and portrayal of character in the form of biography? They furnish, on the contrary, the most conspicuous instances of incapacity. Doubtless, for one thing, they missed the scope and freedom of the indefinite compass which fiction enjoys. Mrs. Howe's business-like account of Miss Mitchell, Mrs. Moulton's restrained and well-ordered sketch of Miss Alcott, and the three lives from Mrs. Runkle's pen, easily surpass in literary form all the rest which deal with living persons. On the whole, we feel inclined to offer this volume (in spite of the interest of its contents) as an argument for the higher education of women, made all the stronger by the undoubted and just eminence, in various intellectual fields, of the writers whose shortcomings we are pointing out.

On this chapter of the higher education we gladly quote from Marion Harland (p. 648):

"So far from the election and study of professions by women acting unfavorably upon domestic life, I believe firmly, after a tolerably thorough examination of arguments and examples on both sides of the question, that the highest and purest interests of the home are promoted by these. She who need not marry unless won to the adoption of the state of wife by pure love for him who seeks her, is likely to make a more deliberate choice of a husband than she who has done little since she put off long-clothes but dream, and long, and angle for her other half."

To this we may add an extract from Mrs. Stanton's tribute to Miss Anthony, apropos of what she calls the latter's "love-life" (p. 63):

"She has often playfully said, when questioned on this point, that she could not consent that the man she loved, described in the Constitution as a white male native-born American citizen, possessed of the right of self-government, eligible to the office of President of the great Republic, should unite his destinies in marriage with a political slave and pariah. 'No no; when I am crowned with all the rights, privileges, and immunities of a citizen, I may give some consideration to these social problems; but until then, I must concentrate all my energies on the enfranchisement of my own sex.'"

The Life of John Kalb, Major-General in the Revolutionary Army. By Friedrich Kapp. Henry Holt & Co. 1884.

Dr. Kapp's 'Life of Kalb,' composed in 1862, was privately printed in 1870, and has too long been kept from the reading public. John Kalb, more commonly known as the Baron de Kalb, was born in the little principality of Bayreuth in 1721. He was not a nobleman, but the son of a Franconian peasant, and, after receiving a little schooling, at the age of sixteen he became a waiter, and as such went abroad. Nothing is known of his history until six or seven years later, when he turned up as Jean de Kalb, Lieutenant in one of the numerous German regiments which formed part of the French army under Louis XV. He remained in the French army for twenty years, serving under Marshal Saxe in the campaigns in the Netherlands, and afterward fighting against Prussia in the Seven Years' War. At the close of the latter war he became dissatisfied with certain promotions which he thought did him injustice, and upon marrying a wife of considerable fortune he retired upon his pension of Lieutenant-Colonel and settled near Paris. Soon becoming restless, however, he offered his services to the Portuguese Government, but they were not accepted. In 1766 the Duc de Choiseul, then at the head of the French Ministry, sent him on a secret mission to America, to observe the condition of affairs in the colonies, and see whether the growing hostility of the latter to the mother country afforded any opportunity for France to gain an advantage over her ancient rival across the Channel. On his return from America he was promised advancement in the French army, but failed to receive it, and he passed several years in retirement at his country seat near Paris.

The accession of Louis XVI. brought back to power some of Kalb's influential friends. By their aid he was restored to active service in the army, and in 1776 they introduced him to Silas Deane as an officer well fitted by his talents and experience for service in America. Together with Lafayette, he signed an agreement with Deane for that service in December, 1776, and, after some difficulties, succeeded in leaving France in a vessel owned by Lafayette, and reached America in safety. He was made a Major-General by Congress, and assigned to the command of the Maryland Division. He was constantly with the army in Pennsylvania and the Jerseys for the next three years, but was not engaged in any battle. In the summer of 1780 he was ordered to march with his division to the Carolinas, to relieve General Lincoln, then besieged in Charleston. He was unable to arrive in time to prevent the fall of Charleston, and on hearing of that event Congress appointed General Gates Commander-in Chief of the Southern army. Three weeks after his arrival Gates brought on the disastrous battle of Camden, in

which Kalb fought most desperately to stem the tide of defeat, but without success. In the midst of it he fell, pierced with eleven wounds, and died a few days later.

The book before us clears up for the first time, and in a manner which leaves no room for doubt, the mystery which has hitherto surrounded the birth and antecedents of Kalb. So little was known of these that Congress, in ordering a monument to be erected to his memory, made a mistake of eleven years in his age; and so generally was his assumption of nobility accepted that Mr. Kapp himself, in his 'Life of Steuben,' published in 1859, always speaks of him as "Von Kalb." New light is shed, too, on the purposes of France in her policy with reference to the colonies. Possibly Mr. Kapp hardly does justice to the Gallic enthusiasm of which Lafayette was the exponent; but certain it is that the French Ministers and the ruling class in France cared but little for the colonies and their aspirations, and intended to use them merely as a means of doing injury to England and of achieving personal renown for themselves. The Comte de Broglie, who was Commander-in-Chief at Metz, and who had introduced Kalb to Deane, writes to Kalb just before his departure a long letter, in which he charges him to impress upon the Americans the necessity of obtaining a commander-in-chief from Europe, a man of exalted rank, "who would unite the position of a general and president of the council of war with the title of generalissimo, field marshal, etc.," and who would not consent to expatriate himself for more than three years, but would expect "large pecuniary considerations." It is hardly necessary to add that, on his arrival in America, Kalb "was convinced of the utter impracticability of De Broglie's projects, and buried them among his papers."

Of Kalb's own character a most just and moderate estimate is given. He was a man of fair talents, of considerable ambition, fond of work, and faithful to his duty. He was devoted to his wife and children, and led an upright life in an age of profligacy. He was an adventurer and a soldier of fortune, but these words are not used in an offensive sense, for in the age and the circumstances in which he was placed they give no offence. He had no country:

"A state in duodecimo, like the Bayreuth of that period, where the individual has no attraction but that of brute force to fasten him to the body politic, where the inhabitants have not a single higher interest in common, and where the payment of taxes and blind obedience are the sum of human life—a parish pound like this is not a country, and can never arouse the sentiment of patriotism or national honor. . . . Had Kalb remained at home his birth and lineage would have hopelessly excluded him from any career of military ambition higher than that of a corporal in one of the two regiments of his liege lord. Perhaps the latter would have sent him into foreign parts like so many of his neighbors before and after him. Among the Anspach prisoners taken at Yorktown are two privates of the name of Kalb. Possibly they were nephews of the General."

The assumption of a title to which he had no right does not stamp him as an impostor. He adopted this, as he would follow the fashions of the day in dress, as a necessity, because the privilege of holding commissions in the army was then limited to the nobility; and in an age when the nobility comprised all good society, it was natural that "the favored class of that day good-naturedly acquiesced in the nobility of any one who managed to assume the title and the external badges of the order, without inquiring closely into his pedigree."

A man of Kalb's antecedents and temperament, at the age of fifty-six, has few of the illusions and but little of the enthusiasm of a Lafayette at the age of nineteen.

"The struggling colonies were always of secondary importance to his ambition; they furnished Kalb with the opportunity to display his devotion to the French King, from whom he expected more substantial reward and recognition of his efforts in their behalf. In his eyes they were but the steps of the ladder of fame and distinction, on which he desired to mount for the purpose of achieving in France still higher honors and benefit."

Yet "Kalb was a soldier and in every respect a man of honor in the military sense and spirit of his time." He came to America in no hope of pecuniary gain, but at great pecuniary sacrifice; and his letters to his wife constantly expressed the fervent wish to be able to return to his family and the comforts of his home at an early date. To his mind his service in America and the sacrifices engendered by it were necessary steps to his military advancement. But, having accepted that service, he gave to it his best efforts, impelled by a sense of duty no less powerful in its influence than the lofty aspirations of Lafayette or the stern patriotism of the native generals; and he "fell nobly fighting on the field of the soldier of honor, happy in the accident which identified this honor with the interests of freedom." He was worthy of the admirable memorial which his countryman has here reared to him.

Modern Reproductive Graphic Processes. By James S. Pettit, First Lieutenant First U. S. Infantry. [Van Nostrand's Science Series.] 1884.

WHAT determined the selection of the author of this little manual for its composition it is difficult to conceive, since there is no internal evidence of his fitness. Of his literary abilities slight notice may be taken—they merit no more; but it does not appear that he has the least practical knowledge of any one of the processes his book is intended to teach. These are the various forms of photography, chromo-lithography, sundry copying processes, etching, engraving, lithography, the callographic processes, woodcutting, etc., etc.; even stereotyping being introduced. The carelessness in compilation even of the second-hand information, which seems to be all that the author has on the subject, may be seen from the statements on two pages regarding that chimera, photography in colors:

"The *science* of photographing colors is not yet fully developed; enough has been accomplished to show the possibility of it, and we may expect the discovery of the secret at no very distant day. In fact, a German photographer has succeeded in taking some good color work, but it fades out very quickly" (p. 64). "The discovery of a means of photographing color has been announced at stated intervals, but investigation has revealed the fact that the color has been introduced in the printing and was not found in the negative" (p. 123).

The practical directions surpass in absurdity and profound ignorance anything of the kind we remember:

"If, then, we make three negatives, interposing between the sensitive plate and the object, first a green glass, then an orange, then a violet one, we will get plates upon which for the first the red rays will have had the least effect, for the second the blue, and for the third the yellow rays. The process, then, as used by M. Gros and M. Ducos du Hauron, consists in the production of three negative plates, as described above, preserving the same dimensions in each. The negative obtained with the green glass serves for the printing of the red monochrome, the second for the blue, and the third for the yellow."

There is no explanation prior to this except the remark, in connection with photography in colors, "It may be interesting to learn something of the work already accomplished"; and we are left to suppose that the results above described have some basis in fact, whereas the whole thing belongs to the region of fantastic empiricism.

Of the negative in preparation the author says:

"It (the plate) is then ready for the *collodion*, which is *almost universally* used for a body, as it is particularly suitable for holding the *precipitable salts* of silver. [On p. 68 he says: "The *gelatine* bromide of silver process is destined to take the lead in photography," which is true, as collodion is almost out of use.] . . . As soon as the collodion stiffens, the plate is immersed in the nitrate of silver bath. This is accompanied by a chemical change. The iodine and bromine salts change *properties* with the nitrate of silver, and give birth to the iodide and bromide of silver and nitric-acid salts."

A great part of the book is made up of off-hand pseudo-scientific talk like this.

Of wood-cutting we read:

"Wood engraving has in the past thirty years grown into a wonderful degree of excellence, and has widened into a range of application that covers almost all degrees of artistic reproduction. As a 'process' it is not surpassed by any known invention, *unless perhaps it be the photogravure process*, etc. . . . Photographs of paintings, engravings, etc., have frequently to be much reduced in size, and it is very difficult to work out an exact copy of the original."

We give at random a few of the dicta of the author, some of whose conclusions remind us of the epitaph of Lady Mary Burke: "The electrotyping of objects of the most delicate nature, such as daguerreotypes and negatives (*which are metallic*), is now done with perfect ease." The brackets are the author's, the italics ours. "Wood engravings may be electrotyped by coating the surface with a wash of black lead, and then placing the block in the current [what current?] by a connecting wire." "For depositing silver a solution of *cyanide of silver* in *cyanide of potassium* is used." Gelatine plates "are prepared with *an excess of the sensitive salt*, preferably the bromide of silver." The gelatine "is *then dried and is warmed and poured on the plate.*"

This is pretty much what we might call "science as she is wrote." We have given more attention to the book than it is worth, but had the publishers given it as much it would never have appeared in print.

Journal d'un Bourgeois de Paris pendant La Terreur. By Edmond Biré. Paris: Jules Gervais; New York: F. W. Christern.

M. BIRÉ has not attempted to describe the blood-curdling scenes of that fearful period of the French Revolution which has been so aptly named "The Terror." By a careful study of the journals and pamphlets published in those days, and of documents of every kind collected during many years of diligent research, he has penetrated, so to speak, behind the scenes, and seen the actors in their undisguised character. He supposes himself to be a good citizen of Paris of the Revolutionary period, who writes daily in his diary his observations on men and things; and the minute details he has noted give an appearance of reality to this assumption, which greatly enhances the interest of the book. A royalist of the deepest dye, the author sees nothing good in the Republic; he does not believe that form of government possible in France, and it is evident that, while assuming to write from the standpoint of a royalist of the ante-Revolutionary period, his arguments aim at the arraignment of the present Republic. But, in his appreciation of the men of the Convention, he indulges in no vague denunciations: his allegations are supported in every case by well-substantiated proof—the testimony of contemporary writers, the official records of the Government, and often the public declarations and writings of the individuals themselves. This careful sifting of evidence enables M. Biré to correct the mistakes—not always involuntary—of several historians of the Revolution, particu-

larly of M. Louis Blanc, whom he takes to task more than once for misrepresenting facts.

It is strange to think of Robespierre, Danton, Camille Desmoulins, Billaud-Varennes, Saint-Just, and other terrorists of that ilk, proclaiming their devotion to the monarchy as late as 1791, and even 1792; yet their declarations stand on record. Pétion, in his accusation against Robespierre, avowed that when the insurrection of August 10 was undertaken, "there were but five men in France who wanted the Republic." The conclusion arrived at, after a careful examination of the facts, is, that the greater part of the Convention wanted the Constitution of 1791, and consequently the monarchy, while a minority were working in the interest of the Duke of Orleans ("Égalité"), in whom they hoped to find a pliant tool. The struggle of ambitions led to crime, and, in the words of the republican Baudot, they "obeyed fatally this necessity: to kill in order to not be killed."

As might be expected, the author makes a panegyric upon Louis XVI. He endeavors to show by numerous documents that this unfortunate King acted in good faith when he accepted the Constitution of 1791, and that his whole course subsequently was dictated by the sense of the obligation he had contracted, and was not the consequence of a weak or vacillating mind. The mass of authorities quoted is so great that the notes form more than half the bulk of the volume, showing the author's indefatigable industry and regard for truth. The student of French history, if not the general reader, will find much to interest him in this unpretending book, and though it may dispel some of his cherished illusions with respect to the Girondists, who died victims of the Terror, he will recognize in it the work of an honest man.

BOOKS OF THE WEEK.

Acland-Jones. Workingmen Coöperators. What They Have Done, and What They are Doing. Cassell & Co. 40 cents.

Barneby, W. H. Life and Labor in the Far, Far West. Being Notes of a Tour in the Western States, British Columbia, Manitoba, and the Northwest Territory. Cassell & Co. $2.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 18, 1884.

The Week.

A GOOD many Republicans are trying to fortify themselves in their support of Blaine by not reading the Mulligan letters; but no voter can honestly, and with a proper sense of his duty to his country, neglect any published information as to a candidate's character which is shown to be sufficiently weighty to have affected the judgment of a large number of intelligent and honorable men. No one ought to vote next November without having examined the charges against Blaine in the light of the evidence against him; and this evidence, it must be remembered, is not letters written about Blaine, or written to him, but his own letters. This makes the charges against him more serious and solid than any ever before made against a Presidential candidate. No charge against such a candidate has ever before been based on his own correspondence and accounts. It is therefore every voter's duty to examine it, carefully comparing the letters with each other, and with Blaine's statements in Congress.

We should like to have seen the faces of Messrs. Hoar, Hawley, and Dawes when the "coyote cry of Mulligan, Mulligan," reached them on Monday. What are they going to do about it? Will they go on explaining that everything is all right, that personally they are convinced of Mr. Blaine's honesty, and that if he gave an ugly-looking reason for a doubtful public act it was simply because he really had a perfectly honest reason in reserve? What has Mr. Hawley to say about these new revelations of the way in which his candidate has "connected his private business with his public business"? Does he still regard it all as a "hasty thing," and is he any more sorry than he was that Mr. Blaine allowed himself to do it? Probably all three of these defenders will go on defending still. They will claim that these letters are merely a fresh instalment of the same old slander, and are of no worse character. In that they will be entirely right. Any man who could accept the first letters as innocent, ought to have no trouble in disposing of these. The tone and character are the same in all. They show that the Republican candidate for the Presidency used the Speaker's chair as a stock-jobbing office for his private gain, that he told falsehoods about his transactions whenever it was necessary to do so to conceal them, and that he was smart enough to make a fortune out of the business. For all persons who like that sort of a candidate Mr. Blaine is just the sort of candidate they have liked from the first, and will continue to like to the end, no matter how many more letters Mulligan and Fisher may have in reserve.

Mr. Hamilton Fish has written to the *World* correcting its statement of Saturday, that he was not going to vote for Blaine, by saying that he "expects" to vote for him in spite of his "want of concurrence as to the wisdom and policy of some parts of his administration" of the State Department. We presume, however, that after reading the remainder of the Mulligan letters published on Monday, Mr. Fish will see reason to change his intention, in spite of his dislike of "putting the Government of the nation into Democratic hands," particularly as he reiterates the expression of the "great respect for Governor Cleveland which he sincerely entertains, and his approval of the general tone and conduct of his administration of the State Government."

Mr. Blaine's decision to take the stump for himself was announced simultaneously with the publication of the new batch of Mulligan letters. He is now on his way to Ohio and Indiana. It has been hoped by his friends that his visit to Ohio would dispel the apathy which afflicts the Republicans of the Western Reserve. His entry into the State has been planned as dramatically as possible, the intention being to have him go first upon a private visit to Mrs. Garfield, and after that to take the stump in his familiar rôle of Garfield's heir. Can he, in the face of these new letters, appear upon the stump anywhere? In all probability he can. A man who, with his record, had the stupendous audacity to become a candidate for the Presidency, is not likely to shrink from anything. Yet we doubt if his friends will venture to bring him to this city.

There are some very stirring campaign mottoes in the new Mulligan letters which are not likely to be deadheads in the enterprise, as there are various channels in which they may prove useful. The old injunction "to keep my name quiet" is now reinforced with: "I note what you say about the importance of my keeping all quiet here." "No one will ever know from me that I have disposed of a single dollar in Maine." "I have endeavored in writing not to be indelicate." "It will be in my power to 'cast an anchor to the windward' in your behalf." "I will make it all right with you." "I will sacrifice a good deal to get a settlement." "Pray let me know what I am to expect." "Burn this letter."

Tammany has given its consent to support Cleveland in precisely the way that all friends of Cleveland, as the candidate of good government, most heartily desired. The old story of objections to him is told over again in the address, and no man can read it and not feel new respect for the candidate who excited such antipathy in such a quarter. It is very evident that Kelly and his associate leaders have been brought to the support of the party ticket, not by any yielding to their demands for "terms," but by the force of party discipline and pressure. The only alternative was to go out of the party, and they are too shrewd politicians to make that mistake. Their action means simply that they will give an open support to Cleveland, but that if a good opportunity offers to "knife" him without danger of discovery it will be accepted. The removal of the confirming power from the Aldermen has greatly lessened the opportunities for "deals" with the Republicans, and we apprehend that the sum total of the Tammany defection this fall will be the contingent which Grady is able to lead away to Butler.

Judge West, the blind man eloquent of Ohio, who nominated Blaine in the Chicago Convention, made a defence of the Little Rock bond transaction in Brooklyn on Thursday night, and the *Tribune* suppressed every word of it, as usual. It is altogether the weakest defence which has been made by anybody, and is only explainable on the ground that nobody has read the evidence to the Judge. Nobody seems to have reminded him, either, of the remarkable prediction which he made in his nominating speech, and to which his descendants will point with pride when the history of the present campaign is written. "Who shall be our candidate?" he asked. "Not the representative of a particular interest, of a particular class. Send the great proclamation to the country labelled 'The Wall-Street Candidate,' and the hand of resurrection would not fathom his November grave." He little thought when he said that that the only prominent business men in this city to hail Mr. Blaine's nomination with delight would be Jay Gould, Cyrus W. Field, and Russell Sage.

The accession of Dorsey to the list of supporters of Blaine in the character of an indignant moralist is very droll, but not more so than the accession of the Rev. E. D. Winslow, of Buenos Ayres, to which the Boston *Advertiser* calls attention. Winslow was a Methodist minister of a speculative turn in Boston some seven years ago, who fled after committing extensive forgeries, and made good his escape. He is now editor of a paper called the *Herald*, in Buenos Ayres, and even at that distance feels the influence of Blaine's magnetism, and is disgusted by the "holier-than-thou" air of the Independents, on whom he thus severely comments:

"There is another class of persons in American politics, found in both parties, but chiefly in the Republican party, whose badge is inscribed with the legend, 'I am more holy than thou'—mere political Chadbands, whose sanctimonious professions they count will pass current; men who assume superior virtue because they never stole what they could not reach, who have found it easy to be virtuous in politics, having had no chance to be otherwise . . . The Massachusetts Independent (?) movement has its origin among these political Pharisees. We know these men thoroughly, individually and politically, and they are inflated frauds."

Whereupon the *Advertiser* intimates that if Winslow will come back to the United States, some of the Independents will make an application of the "holier-than-thou" principle to him personally which will still further illustrate their methods, but will probably also give him a home in the Concord State Prison. One thing which makes the support

of Blaine so attractive to the notorious financial rascals is, that it gives them a chance to affect great alarm about the national chastity, and about "the home," in case Cleveland should be elected. Such another chance of appearing virtuous will probably never offer itself to them, and the season closes for them early in November.

Mr. Henry C. Bowen, in the *Independent* last week, had a leaded article advocating "the great principles of morality," and denying that he had "made a bargain," or would be "bought to support James G. Blaine, or any other man of that sort." So he is going to "support" ex-Governor St. John. He proposes, too, as the best test of what a man really is, "an inspection of his private character." He does not say, however, who the "inspectors" are to be, and who is to inspect the inspectors themselves. Nor does he make any provision for the protection of other people than the candidate—innocent women, for instance—from being included in the inspection which he is to undergo. In fact, the scheme, as at present propounded, seems to us a trifle vague. In James G. Blaine's case the inspectors were saved all trouble by documentary evidence furnished by himself. So, also, when Mr. Bowen was last inspected as a moralist and teacher, the work was facilitated by his written contract with Jay Cooke & Co. to lend his "editorial columns" to help them sell their Northern Pacific bonds, many of which and much stock he received in compensation. In fact, he was no deadhead in the enterprise, and found many channels in which he was useful. We are glad to hear from him that he "will not be bought" this time, but he must feel much sympathy with Blaine.

Mr. H. H. Hadley, the reputed author of the Morey letter, has been on the witness stand for some days testifying in a law-suit involving the question of his compensation for services in procuring testimony to prove that the letter was genuine. Being asked whether he had formed any opinion, as the result of his investigations, whether it was a genuine letter or not, he declined to answer. He seems to be endowed with as fine a sense of humor as the culprit who, being required by the Judge to plead guilty or not guilty to an indictment for pig stealing, said: "How can I tell, your honor, till I have heard the evidence?" Mr. Davenport, in his pamphlet, says that such forgeries as that of the Morey letter are not punishable by law. We suppose he is right, but it is to be hoped that contempt of court is punishable, and that such a solemn mockery as this man Hadley has been making of the forms of civil procedure may meet its due reward, even if the forgery of the Morey letter remains unwhipped of justice.

The review which the *Times-Democrat* (New Orleans) gives of the industrial and educational condition of the Southern States from the Potomac and the Ohio to the Rio Grande shows a continuing growth and prosperity in that section. Last September it was shown by that paper that the assessed wealth of the twelve States embraced within the limits mentioned above had increased since the census year, which was the beginning of a new era in the material improvement of the South, over $640,000,000—an average annual increase of more than $160,000,000. If the figures for the past year secured by the *Times-Democrat* can be relied upon, this great prosperity has not been retarded by the financial troubles which have occurred, for they indicate an increase of more than $205,500,000. The greatest increase has taken place in the States (mentioning them in the order of their relative increase in wealth) of Texas, Kentucky, North Carolina, Arkansas, Alabama, and Virginia. Each of these has gained more than $20,000,000 in the past year. The reduction of taxes, it is gratifying to relate, has accompanied this increased wealth. In North Carolina all taxation, it is said, has just been suspended, enough money being in the treasury to defray all the expenses of the State. A comparison with the taxes of last year shows a reduction throughout the South of five-twelfths of a mill, and with those of 1870 a reduction of more than seven mills. It is not at the expense of public education, it should be said, that this reduction is made. The *Times-Democrat* maintains that the South is spending to-day twice as much for education as it spent five years ago, and four times as much as it spent in 1870, when the rate of taxation was three times as great as it is now.

All this is a most gratifying confirmation of the views of those, like ourselves, who have steadily maintained that it was material progress which was to eradicate the social and political evils left by slavery. There was a large body of people at the North who maintained for many years after the war that coercion and denunciation and cultivated distrust were the only proper instruments of social regeneration at the South. Coercion they were compelled to give up at an early period, because it threatened free government at the North as well as at the South; but they held on tenaciously to denunciation and distrust. It was not till 1880 that Republican candidates for office at the North were able safely to omit from their speeches and letters strong expressions of hostility to the white people of the South, and of disbelief in their good intentions, and in their desire or ability to make any real progress, either industrial or political. They were to be driven into industry and peaceableness and acceptance of the blessings of American polity apparently through vituperation and exclusion from Federal offices.

The fuss made over the marriage of Mr. Morosini's daughter with his coachman, as a "mésalliance," is discreditable to the press, considering that this is by no means a dull season and topics are plenty. Mr. Morosini was, we believe, a very few years ago, a brakeman on a railroad, out of which position he was taken by Jay Gould to be a sort of body guard, when that financier used to be threatened by divers irate persons with assault and battery. He has since then come into possession of a good deal of money, and is doubtless living in a way which makes a coachman seem a very inferior person, and it is no doubt afflicting to have one's daughter elope with an inferior person. But there is no such inequality between the parties in origin, or condition, or education as to make the marriage in any way a social phenomenon, or an illustration of anything in the world except the inclination of young men to marry young women, and of young women to let the young men marry them.

The famous English Claimant will be released in a few days, at the expiration of his term of fourteen years' imprisonment, and the cable informs us that so much enthusiasm still lingers among his adherents that they have taken a furnished house in Hampshire for the reception of himself and his two daughters, and provided a handsome allowance for him. His case is probably the most extraordinary, whether of unmerited wrong or outrageous imposture, to be found in judicial annals. He got a considerable number of people who ought to have known him, to believe he was really Sir Roger Tichborne, through mere likeness and by some scanty reminiscences, but there was no formal intellectual test that could be applied to him which did not break him down. If he were a true man it would have been a most remarkable case of mental deterioration. The enthusiasm which he excited among the working classes was, however, the most extraordinary part of the affair. Large numbers of them, who hated all orders of nobility, were devoted to him as a baronet who was kept out of his rights, and nobody has ever been able to persuade them to this day that he was not entitled to leave his calling as a butcher, and live in idleness and luxury as a landowner.

The Marquis of Ripon is coming home from the Governor-Generalship of India a very weary man. He was sent out when the Gladstone Ministry came into power in order to undo as far as might be the follies of Lord Lytton, his predecessor, the picturesque but light-headed poet whom Disraeli put in the place when he was rearranging the Empire on the theatrical plan. Lord Ripon had to contend from the beginning with some unpopularity caused by his sudden conversion to Catholicism at a very mature age—a step which the English people do not readily forgive to an elderly public man. In fact, it made his appointment to the government of India seem to a great many a piece of Gladstone's mischievous and maudlin sentimentality. He had no sooner settled the Afghan troubles than he found himself plunged into a ferocious controversy with the English in India over the Ilbert Bill, a piece of legislation intended to put Englishmen and natives on an equality before the courts, by making the former amenable to native judges. The opposition to it was so fierce that it ended in a compromise and brought out an amount of savagery, not to say ferocity, on the part of the ruling race, which recalled Macaulay's account of the attacks on him, when Legislative Member of

the Council, for similar leanings toward the native side.

Lord Dufferin's appointment to succeed him is a sign that the home Government is deeply impressed with the increasing delicacy of the relations of the two races in India. The condition of the people is not improving, while the education of all classes, especially the upper classes, is increasing greatly, and their discontent becomes more articulate. The native press is already a source of considerable anxiety to the Government, and so are the armies of the dependent native princes. In dealing with all these matters without coming to loggerheads with the resident English population nothing is more necessary than tact, and this Lord Dufferin has in a great degree, to say nothing of the higher qualities of judgment and practical sense.

The French dispute with China is not growing more respectable for the French as the facts become better known. It originated in what the French said was an act of treachery on the part of the Chinese, in resisting the advance of a small French column on its way to occupy Lang-Son, one of the small towns in Tonquin ceded by the treaty of Tien-Tsin. It now appears from General Millot's report, which the French Government has published very tardily and reluctantly, that the Chinese were in the right, and the blame of the affair rested wholly on Colonel Degenne, the officer in command of the column. The Chinese commander when they met distinctly informed him, as the French now acknowledge, that he had no orders to surrender the place. If this had occurred in Europe, Colonel Degenne would have telegraphed for further instructions to his superiors in the rear. Instead of this he instantly attacked the Chinese, and was repulsed after an affair in which many lives were lost on both sides, and the world was told not only that the Chinese had acted treacherously, but that they had actually prepared an ambuscade for the French force, and instant preparations were made for war, and an enormous indemnity was demanded, which has since been reduced to one-third of the original amount.

Admiral Courbet's performances subsequently do not seem, from the moral point of view, to have been much more creditable. Knowing full well that he was going to begin hostilities within a few days, the Admiral sent his gunboats into the Min River, above Foo-Choo, which the Chinese—relying on his peaceableness—allowed him to do, and he was thus enabled to take the fortifications on the banks in reverse when he opened fire, and easily silenced them. Under the law of nations, hostilities without war must be reprisals for a distinct and definite wrong for which redress has been refused. General Millot now confesses, however, that no such wrong has been suffered, or rather that the wrong was all on the French side.

The French and Chinese are both still in trouble over the exact state of their relations. Every one can see at a glance that they are not at peace, but they both deny that they are at war. The French deny it because they want to circumscribe the area of hostilities, and wish to avoid raising questions of neutral rights, and the Chinese because they do not think themselves yet ready for a general fight. The French publicists are consequently arguing laboriously that they are in a "state of reprisal," that is, a state of limited war, having for its object the obtaining of satisfaction on one point of minor importance. They cite as a precedent for the French position a seizure of Neapolitan trading vessels made by the British in 1840, as reprisal for wrong done to some English subjects by the infringement of some concessions previously made to a sulphur mining company; the blockade of the Greek ports by Palmerston in 1850, to avenge the wrongs of Don Pacifico; and the seizure of the island of San Juan by the United States in 1859, pending the settlement of a dispute as to the boundary-line. None of these things were treated as acts of war. One writer goes so far as to maintain that pitched battles may be fought by Powers who are not actually at war. The battle of Navarino, for instance, was fought and the Turkish fleet destroyed in 1827, without putting the victors, France, England, and Russia, in a state of war with Turkey. In 1846, France fought the army of Morocco commanded by Abd-el-Kader at Isly, and bombarded Tangier without going to war with Morocco. In fact, according to this view, there is hardly any amount of damage which may not be done to an enemy without going to war, as long as no formal declaration of war is made.

There is, however, an enormous amount of sophistry about all this. In the first place the object of the reprisals is in the present case undefined. The French have since the bombardment of Foo-Choo acknowledged that they were in the wrong in the Lang-Son affair, and this is the only wrong there is. Moreover, it is not at all likely that war would be carried on against China on a more extensive scale than they are carrying it on now, even if war were formally declared. France is not at all likely to send an invading force into the country, and if it did, it could accomplish but little beyond what the ravages of the fleet along the coasts accomplished, so loosely are the provinces united to the central Government. The interruption to the commerce of neutrals, too, is just as great in a state of reprisals as in a state of war, and their position more uncertain. Nevertheless, talk of arbitration, to which the Chinese seem willing to resort, is sternly repudiated by the French.

The rumor of a formal declaration of war by China against France, which will probably come soon, if it has not come already, has set the French thinking seriously about the consequences of a Chinese resort to privateering. The French are cut off from this resource by the treaty of Paris in 1856, but the Chinese are not, and, ever since the career of the *Alabama*, the maritime Powers have a great dread of what privateers can do. One French newspaper, the *République Française*, Gambetta's old organ, takes the ground that the Treaty of Paris does not bind its signatories in the matter of privateering when at war with a Power which did not adhere to it; but this is certainly new doctrine. The same journal goes so far, moreover, as to proclaim that unless Chinese privateers are commanded and manned by Chinamen, they will be treated as pirates, which is preposterous. The commission covers both crew and commander. All Powers have always been held free to employ foreigners both by land and sea in military operations, saving the subjects of the other belligerent, who have to take their chance of being treated as traitors if caught.

The presence of King Humbert at Naples, where he went to stay while the virulence of the cholera lasted, is causing unpleasant comparisons to be made by the Italians between his course and that of the Pope, who remains in one of the most luxurious palaces in the world, thoroughly isolated from all plague and pestilence and scenes of human suffering. The difficulty the Pope has to contend with in going about is, that it exposes him to insults from persons who do not believe in him; and this to good Catholics is something too shocking to be thought of. If he were to start out as a philanthropist, however, Naples would be a good place to begin, for in no other part of Italy are the people so faithful to the Church. One of the great difficulties of the existing situation there is the difficulty of getting the people to resort to any better mode of defence against the plague than religious processions in the streets and offerings at the shrine of saints.

The fastest sea-going war vessel afloat is the new Chilian cruiser *Esmeralda*, which recently obtained the mean speed of *eighteen and one-quarter knots* per hour on a sea trial. The British cruiser *Isis*, hitherto the fastest man-of-war, has a maximum speed of eighteen knots per hour; she is, however, unarmored and comparatively lightly armed. The *Esmeralda* may be described as a casemated monitor with high freeboard and every essential to make her seaworthy for any voyage. She carries 10-inch, 25-ton, breach-loading, very long-range bow and stern guns that sweep through more than 180° of the horizon, protected with steel shields and capable of penetrating *twenty* inches of iron armor. Besides these she carries on each broadside three six-inch breach-loading rifles, capable of penetrating *eleven* inches of iron armor. These powerful guns are worked by the most perfect system of labor-saving hydraulic machinery yet devised. The *Esmeralda* carries in addition to the above Hotchkiss's revolving cannon, Gardner and Gatling repeating guns, mounted in every available place, even in her tops (mastheads), all protected with steel shields. These latter weapons are mainly for defence against torpedo boats. The striking features of the *Esmeralda* are her moderate size and comparatively light armor and small draft of water, her high speed, and her powerful armament. It is an open secret that she was designed with especial reference to the possibility of trouble between the United States and Chili, and to the opportunity offered to raid our defenceless Pacific ports. Compare the *Esmeralda* as she is with the *Chicago* as she is promised. But comparison is impossible. The *Esmeralda* could as easily whip the *Chicago* as the *Merrimac* did the old *Cumberland* in the beginning of our war. By the way, how does the *Chicago* get on?

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 10, to TUESDAY, September 16, 1884, inclusive.]

DOMESTIC.

ASSISTANT-SECRETARY CHARLES E. COON has been designated by the President as Acting Secretary of the Treasury for ten days from Monday, September 15. L. P. Morton, of New York, Minister to France, who is now on his way to this country, is mentioned as likely to be appointed Secretary of the Treasury.

The clerks in the Treasury Department at Washington have received circulars during the past few days from the New York Civil-Service Reform Association, warning them that if they contribute to the campaign funds of either party, in violation of the Civil-Service Act, they will be liable to prosecution under the law.

Four hundred and sixty towns and plantations in Maine give Robie (Rep.) 78,642, Redman (Dem.) 58,452, scattering 3,659. The vote compiled from all but eighteen small towns gives a Republican plurality of 19,709.

The Connecticut Greenbackers have nominated James L. Curtiss for Governor. The Massachusetts Prohibitionists have nominated President Seelye, of Amherst College, for Governor, and Henry H. Faxon, of Quincy, for Lieutenant-Governor. The Convention was one of the most noteworthy ever held by the Prohibitionists of that State.

The Missouri Republicans have made a fusion with the Greenbackers, and nominated Nicholas Ford for Governor. Three places on the ticket out of nine are given to the Greenbackers, namely: Secretary of State, Register of Lands, and Railroad Commissioner.

John M. Hill was nominated for Governor by the New Hampshire Democrats on Wednesday.

Benjamin H. Eaton has been nominated for Governor by the Colorado Republicans.

Henry Cabot Lodge has been renominated for Congress by the Republicans of the Sixth Massachusetts District. Frank Hiscock has been unanimously renominated by the Republicans of the Twenty-fifth New York Congressional District.

Mr. E. J. Ellis has not been renominated for Congress by the Democrats of the Second Louisiana Congressional District because he supported the Morrison Tariff Bill. They have nominated Judge W. T. Houston.

There was a great crowd in Union Square on Monday evening to see and hear General Benjamin F. Butler, who appeared as the candidate of the "People's party" for the Presidency. Three stands had been erected for speakers, and music and fireworks assisted to swell the gathering. General Butler, who was received with cheers, spoke at length on the subject of railroads and canals. Ex-Senator Grady made a speech abusing Governor Cleveland because of the veto of the Five-Cent-Fare Bill and other acts of his administration.

Thomas A. Hendricks, the Democratic candidate for Vice-President, made a notable speech at Toledo, Ohio, on Wednesday evening, to a large audience. He was especially severe in criticising Mr. Blaine's attitude on the Irish suspect cases. General Logan made a reply at Toledo on Thursday night.

General Logan made a speech to 5,000 people in Grand Rapids, Mich., on Monday evening.

Senator Bayard addressed an overflowing meeting of Democrats in the Brooklyn Rink on Monday night. He was received with great enthusiasm. He arraigned Mr. Blaine and denounced his public record in severe terms. He praised Governor Cleveland as a man who had always done his whole duty in his public career, and who, he prophesied, would continue to do so. Gov. Leon Abbett, of New Jersey, also spoke.

Carl Schurz is announced for ten speeches in Ohio. Mr. Schurz spoke in Central Music Hall, Chicago, on Thursday night, before 2,500 people. The meeting was a very successful opening of the Independent campaign in that city. He addressed a large audience on Monday night at the Park Theatre, Indianapolis. The meeting was entirely under Independent auspices. Before Mr. Schurz began his speech an address in favor of Cleveland was read, signed by thirty Germans, headed by Peter Lieber, formerly a Republican, but who left the party in 1882.

Benjamin H. Bristow, ex-Secretary of the Treasury; Francis H. Walker, ex-Superintendent of the Census; and Edward Eggleston, the novelist, have all come out for Cleveland, and have repudiated Blaine.

A tornado at Clear Lake, Wis., and vicinity, on Wednesday, destroyed property to the amount of $250,000. Three persons were killed.

The Eau Clair and Chippewa Rivers, in Wisconsin, rose rapidly on Wednesday and Thursday, destroying railway bridges and other valuable property worth more than $1,000,000.

Burger, Hurlbut & Livingston, sugar refiners and dealers of this city, made an assignment on Thursday; their liabilities are about $400,000.

The financial troubles of the Bankers' and Merchants' Telegraph Company have resulted in the rupture of the pooling agreement which was entered into last July by representatives of the Baltimore and Ohio, Postal, and Bankers' and Merchants' Telegraph Companies.

It is believed that the surplus in the National Bank of New Jersey, at New Brunswick, will be more than sufficient to cover all deficiencies caused by Cashier Hill's defalcation, and that depositors will be paid in full. The bank will probably soon resume under a new charter.

J. H. Squier, a Washington banker, who made an assignment a few months ago, committed suicide on Thursday morning at his residence in that city by cutting his throat with a penknife. It is said that he had been reading accounts of the New Brunswick suicides, and was temporarily insane.

Five men were killed and eight seriously injured by the explosion of a boiler at a cotton compress in Eufaula, Ala., on Monday afternoon. Four men were killed by the explosion, on the same day, of a boiler in a mill in Tazewell County, Ill.

The golden wedding of the Rev. Dr. S. F. Smith, author of "My Country, 'Tis of Thee," was celebrated at Newton Centre, Mass., on Tuesday evening.

Robert Hoe, of the firm of R. Hoe & Co., of this city, died at his summer house, in Tarrytown, on the Hudson, on Saturday, in his seventieth year. Mr. Hoe was born in New York city, and was the son of Robert Hoe, an Englishman, who came to the United States in 1803, and founded the house well known as manufacturers of printing presses. When quite a young man the late Robert Hoe, with his brother Richard M., succeeded to the business established by their father, which has become the largest of its kind in the world. He was always a public-spirited, liberal-minded citizen.

William Earl Dodge, son of William E. Dodge, jr., and grandson of the late merchant and philanthropist of the same name, died on Sunday at Riverdale. He was only twenty-six years of age, was a member of his father's firm, and prominent in business, social, and philanthropic circles.

FOREIGN.

One thousand arrests of suspected people were made at Warsaw during the visit of the Czar. Thousands of copies of a Nihilist proclamation were circulated in the city. Before departing from Warsaw for Wilna the Czar and Czarina gave a state dinner at the Lazienki Palace. A hundred guests were present, including only five Polish ladies. These belonged to the nobility. The Czarina was especially attentive to the Poles.

A Nihilist named Stanislaw was arrested on a railway train as he was going to Cracow, Russia. He attempted to commit suicide after the arrest, and confessed that he had been assigned to kill the Czar during his stay at Warsaw.

The Emperor Francis Joseph of Austria arrived at Skierniewice at 2 o'clock an Monday afternoon, and was received by the Czar and Czarina and their retinue very cordially. After the Austrian Emperor had been formally introduced to the members of the Czar's staff, he inspected the guard of honor, and the party proceeded to the palace. General Shuvaloff met Emperor William of Germany on the frontier, and the latter arrived at Skierniewice at 4 o'clock, where he was met by the Czar and Czarina and their retinue with the same ceremonies with which the Emperor Francis Joseph was greeted and escorted to the palace. A grand banquet was partaken of by the three Emperors in the evening. The three Ministers —M. de Giers for Russia, Prince Bismarck for Germany, and Count Kálnoky for Austria— were also present. The only persons visible from the railway train which bore the Emperors from Warsaw to Skierniewice were soldiers. Nobody was allowed on the platforms at the stations, and the railway officials were ordered to close the windows of their houses. Polish gendarmes guard Skierniewice, and nobody is allowed to remain there without a permit signed by General Gurko. It is reported in Vienna that one subject which will engage the attention of the three Emperors is the advisability of the partial reduction of the great standing armies which are now maintained. The *Journal de St.-Pétersbourg*, which speaks with some official authority, says: "The events at Skierniewice are dominating the whole political situation. The meeting of three closely-united sovereigns, accompanied by confidential statesmen, indicates a policy of peace. There is no question now of formal alliances or of special agreements, but this meeting will confirm the understanding already happily existing on all great questions, in order that every question outside the present *status quo* may find the monarchs acting conjointly where their interests coincide, effecting harmony where they differ, employing their solidarity to preserve order, law, and peace, and respecting the rights of all, but keeping a watchful eye on those who disturb the existing order of things—the anarchists who prowl about in the dark and aim to destroy all institutions."

The situation at Naples grew alarmingly worse on Wednesday. In the twenty-four hours ending at 9 o'clock that evening there had been 937 fresh cases of cholera and 365 deaths. On Thursday the epidemic increased hourly in virulence. The misery and suffering among the poor were appalling. King Humbert continued to visit the afflicted. The Catholic papers of Italy unite in eulogizing his bravery. The King gave $60,000 for the relief of the sufferers. During the twenty-four hours ending Friday evening there were in Naples 809 fresh cases of cholera and 430 deaths. King Humbert announced that he would not leave the city until the epidemic waned. There was a slight increase in the death rate on Monday.

King Humbert arrived in Rome on Sunday from Naples. He was received with great enthusiasm by the people. From midnight of Friday up to 4 o'clock Sunday afternoon there were 1,299 cases and 687 deaths from cholera at Naples. Since the beginning of the outbreak there have been 3,297 deaths. Heavy rains which visited Naples on Sunday and Monday were followed by a notable decrease in the number of new cases. The Pope has given $6,000 to the cholera relief fund. At Marseilles, France, there are still an average of two deaths daily. At Toulon there were fifteen deaths on Sunday and Monday.

It is believed in Rome that the Pope is about

to issue an important encyclical against liberalism, especially in Italy, sustaining the ecclesiastical thesis that it is the Church alone that has power to grant real and lasting liberty.

The Belgian Senate on Wednesday, by a vote of forty to twenty-five, adopted the new bill on primary education.

The Brussels *Official Gazette* announced on Saturday that the King had signed the Educational Bill. The *Gazette* makes a strong appeal to the Liberals to maintain calmness. There were riotous demonstrations on Sunday at Alost between a number of Brussels peddlers and the inhabitants of Alost.

A rumor has gained currency in Brussels that King Leopold will dissolve the Chambers in order to end the political antagonism now prevalent.

Emperor William, in a letter conferring the Order of Merit upon Prince Bismarck, says: "During two wars you have stood by your Emperor as the most careful adviser in your military capacity. I know your heart and soul are so much those of the soldier that I hope to give you pleasure by conferring upon you this order, which your predecessors held with pride. I give myself the consolation of allowing the man whom God has given me for a support, and who does such great things for the Fatherland, to receive also as a soldier that recognition of his services which he has so well earned."

Official communications have passed between the English Foreign Office and the German Government upon the reported annexation by Germany of the African coast from Angra Pequeña to Cape Frio. It is reported that Prince Bismarck, in his reply to the English communications, repudiates the authorization of such annexation.

Mr. John M. Francis, the new American Minister to Austria, presented his credentials on Thursday to Emperor Francis Joseph.

A steamer reached San Francisco on Sunday bringing Hong Kong advices to August 14. Information had reached Canton of a frightful inundation in the province of Kiangsi. The floods lasted four days, and the entire country was submerged to the depth of sixty feet. Whole towns were swept away. It is believed that fully 70,000 persons perished. It was feared that a pestilence would follow. Cholera had broken out at Amoy.

It was reported on Wednesday that the Chinese were blocking the Woosung bar with junks filled with stones; but apparently nothing has been done beyond making preparations to that end.

The Chinese on Thursday took steps to blockade the harbor of Shanghai. The Shanghai Chamber of Commerce telegraphed on Friday to London that the threatened blocking of the river excited strong indignation in that city. The Chamber addressed a communication to the Consuls and Ministers of foreign Powers there resident urging them to prevent such action, and suggesting that Shanghai be made neutral. The Chamber requested the London Committee to do everything possible in support of the suggestion.

A monster mass meeting was held in Shanghai on Tuesday, in which the whole English community took part. The meeting strongly deprecated the prolongation of the present desultory hostilities on the part of France. Their effect was simply ruinous to commerce. The meeting resolved to urge the home Government to make an effort to procure the settlement of the difficulties between France and China by mediation.

The French Government on Thursday denied that China had declared war. The Chambers will not be summoned to meet before October 15.

The Tsung-li Yamen, or Chinese Council of Mandarins, in reply to the French ultimatum of July 12, announces that in accordance with the second article of the Tien-Tsin provisional treaty, China is prepared to withdraw its garrisons from Tonquin after the expiration of a month, and that China respected the terms of the second article. France, they say, ought to respect the third article. The French demand for indemnity, they claim, is not in accordance with the five articles of that treaty, is in prejudice of their friendly relations, and contrary to international law. The Tsung-li Yamen ask if the Government of France cannot wait until China withdraws her troops from Tonquin, when a complete treaty will be arranged. They also aver that, if the question of indemnity is not considered as being settled by the Tien-Tsin treaty, the demand for indemnity is opposed to the third article. The forcible taking of a guarantee and an indemnity is contrary to the treaty, and compels China to give the treaty Powers a history of the Tonquin question, together with the protest of China, and the latter's Government awaits an opportunity to discuss the question. The Tsung-li Yamen request that M. Patenotre, the French Ambassador, shall come to Tien-Tsin, arrange a definitive treaty, and strengthen the friendly relations between the two nations. This would be the proper mode of procedure according to international law. The address also deplores the refusal of France to accept America's offer of mediation, and says China is willing to submit her case to any friendly Power.

A French Cabinet Council was held on Saturday, in accordance with previous announcements, for the discussion of the Chinese question. Prime Minister Ferry distinctly confirmed the report that China had not declared war. Admiral Peyron, Minister of Marine, read despatches from Admiral Courbet, which stated that he would resume operations as soon as he received reinforcements and a fresh supply of provisions. The question of convoking the Chambers was left to be decided by the Cabinet Council of September 23. Prime Minister Ferry, after a conference with the Secretaries of War and Marine, telegraphed to Admiral Courbet to resume warlike operations at once. General Campenon, Minister of War, refused to assent to the despatch of more troops from the *cadres* in France unless war against China should be declared. His advice was that the number of reinforcements should be limited to 1,000 men, and that these should be sent from Algiers. Admiral Courbet, on receipt of M. Ferry's despatch, left Matson with his whole fleet and started for the North. The Cabinet Council is said to have been a stormy one, some members urging an immediate calling together of the Chambers.

A Hong Kong despatch to the London *Times* on Tuesday said that Admiral Courbet's plan of campaign is now supposed to be to flank Kelung and march upon Tamsui, thus forcing the Chinese army southward, where the hill tribes are hostile. The despatch states that this campaign will probably be a failure, as a thousand troops from Tonquin will be inadequate to take Kelung, and the road to Tamsui is a mere ravine. The Chinese operations in Tonquin have been suspended.

Admiral Courbet estimated that his bombardment of the arsenal near Foo-Choo and of the forts along the Min River did damage to the amount of $10,000,000.

Advices from Tamatave, Madagascar, of August 30 state that the French had bombarded and temporarily occupied Manuru, a town on the coast some distance south of Tamatave.

The death of M. Jean Augustin Barral, a well-known French chemist and physicist, is announced. He was sixty-five years of age.

General Lord Wolseley and Lord Northbrook were received by crowds on their arrival at Cairo. On Wednesday Lord Northbrook had an audience with the Khedive, and presented to him a letter from Earl Granville, British Secretary of State for Foreign Affairs, requesting the assistance of the Egyptian Government in solving important questions, chiefly of a financial character, which England is now considering in relation to Egypt. The Khedive expressed himself as highly satisfied with the declarations of Lord Northbrook.

The resignation of the Marquis of Ripon as Viceroy of India and the promotion of the Earl of Dufferin to that post were simultaneously announced by the British Government on Wednesday.

General Lord Wolseley advised the British Government on Thursday that it was his intention to adhere to the Nile route in his expedition to Khartum. He urged the importance of immediately forwarding the flotilla and commissary stores. Preparations are to be made, however, so that, if necessary, the expedition can proceed from Debbeh to Khartum by the desert route.

General Lord Wolseley will proceed to Wady Halfa as soon as the troops and transports have passed the Second Cataract. From that point the expedition will proceed to Dongola by water, and at Dongola it will be decided what route to pursue in the further advance to Khartum.

Major Kitchener telegraphed from Debbeh on Tuesday that the chief clerk of the Government at Darfur had arrived at Debbeh, having reached that town by way of Berber. This man reports that there are 2,300 prisoners at Berber. The rebel garrison there is 3,200 strong, and is armed with rifles. Abu Hegel, the chief of the Robatat tribe, he says, has 6,000 armed men under his command. The Mahdi's forces extend as far south as Ambukol. The most of the tribes, however, are growing tired of the continuance of misrule, and are inclined to rejoin the Government. The British War Office is preparing to reinforce General Wolseley with 1,000 men.

A report reached Cairo on Monday that General Gordon had taken two islands near Sennaar, and that the Sheikhs of Dengli had several times defeated the Mahdi.

The Mudir of Dongola telegraphed from Debbeh on Thursday that numerous rebels from Kordofan and Meraweh, under the Mahdi's Ameers, had been defeated near Ambukol with great slaughter. The military resumed the hauling of steamers up the cataracts, and hope for success despite the state of water in the Nile.

Recent advices report that the Mahdi is in South Kordofan with an army of 14,000 men, and that a detachment of 4,000 troops has been sent to reinforce the army besieging Khartum.

A fight occurred on Friday near Suakim between 4,200 of Osman Digna's rebel forces and 1,000 friendly Arabs under Mahmud. The latter lost his son and a number of followers. It is feared that the friendly tribes will be driven to cast their fortunes with the rebels unless the Government quickly comes to their assistance.

It is reported that England has offered to guarantee a loan to the Egyptian Government if Egypt will place the mosque property under English control as security.

Principal Dawson, of McGill University, Montreal, has received the honor of knighthood from Queen Victoria.

Mr. Dennis Duggan, a prominent Fenian, who was one of the party that rescued James Stephens, the Fenian head-centre, is dead.

A dynamite cartridge has been found at Leeds, England, in a petroleum cask which came from America.

The race for the St. Leger stakes at Doncaster, England, on Wednesday, was won by R. C. Vyner's bay colt, The Lambkin.

The Rajah of Tenom has submitted to the requests of the Dutch Government, and released all the members of the crew of the British steamer *Nisero*, who were captives on the island of Sumatra.

Reports up to September 6 from the interior of the United States of Colombia state that a revolution has been set on foot against the State Government by prominent leaders of the opposition. Fighting is reported from the cities of Socorro and San José de Cucuta, and a general disturbance is apprehended throughout the State.

MORE LIGHT FROM MULLIGAN.

THE new batch of letters which have been given to the public by Warren Fisher and James Mulligan close up most of the gaps caused by the untimely end of the Blaine investigation. Very little is left to the imagination. The new parts fit into the old scaffolding to a nicety, and the whole constitutes a framework of fraud and falsehood on the part of the Republican candidate for President which ought to leave him without an electoral vote in November.

The new points and the evidence which goes to establish them are mainly these:

I. Two letters of October 4 and 5, 1869, showing Mr. Blaine's intense anxiety to get something out of Caldwell in addition to the percentage he had already bargained for with Fisher. Two letters of October 4, 1869, on this subject had been published previously, in one of which Mr. Blaine had asked Fisher to acquaint Caldwell with the fact that he (Blaine) had done him (Caldwell) "a great favor" by making a certain ruling as Speaker, setting forth all the details, and showing how he saved the bill from the total defeat which threatened it at the hands of Julian, of Indiana. The other letter in the original batch repeated the same suggestions with greater urgency, enclosing also a copy of the *Congressional Globe*, and adding: "I am bothered by only one thing, and that is definite and expressed arrangements with Mr. Caldwell. I am anxious to acquire the interest he has promised me. But I do not get a definite understanding with him as I have with you." The third letter of October 4, 1869, encloses a lot of subscriptions which Mr. Blaine has induced his friends in Maine to make for Little Rock and Fort Smith securities, and recalls Mr. Fisher's attention to the Caldwell matter, with a suggestion that nobody need know that he (Blaine) has been selling any bonds on commission. If Caldwell knew that Blaine had already received, or was to receive, $130,000 land bonds and $32,500 first-mortgage bonds as a percentage for selling $130,000 first-mortgage bonds, he might think that that was enough for the service rendered. The letter of the following day (October 5) again calls attention to the copy of the *Globe* to be shown to Mr. Caldwell, and says: "I have endeavored in writing not to be *indelicate*." So it appears that there were three letters written in one day and one on the following day to impress Caldwell with the idea that he ought to do something for Blaine on account of the great favor which Blaine had done him "without knowing it"; and that any favor returned by Caldwell would have been over and above the commission already obtained from Fisher.

II. Three letters, dated November 18, December 7, and December 9, 1870, showing how he (Blaine) could help Caldwell to get an allotment in a new distribution of national bank circulation. "It will be," he says, "to some extent a matter of favoritism as to who gets the banks in the several localities, and it will be in my power to cast 'an anchor to the windward' in your behalf if you desire it." He adds: "They are very profitable, say $250,000." Of course the Speaker of the House could easily cast an anchor to the windward whenever there was any good thing going. In all the disclosures made by these and the former letters we have seen nothing more unblushing than this offer to use the "favoritism" which belonged to his official position to secure a good bank charter. It is immaterial whether the bank turned out to be profitable or not. Mr. Blaine thought that it would be "very profitable."

III. Letters from Fisher to Blaine, November 10, 1871, and April 15, 1872, explaining the source of the money which Blaine, as he said, "turned over within forty-eight hours" to the parties in Maine to whom he had sold bonds, after the bonds had depreciated in value. In the letter of November 10, 1871, Fisher says: "But taking into account the $100,000 bonds *you sold to Tom Scott*, and the amount of *money* you received on the Eastern contracts, our relative positions financially in the Little Rock & Fort Smith Railroad bear a wide contrast." In the letter of April 15, 1872, Fisher says:

"Owing to your political position you were able to *work off all your bonds at a very high price*, and the fact is well known to others as well as myself. Would your friends in Maine be satisfied if they knew the facts?"

To this Blaine replied three days later (April 18, 1872), as follows:

"The sales of bonds which you spoke of my making, and which you seem to think were for my own benefit, were entirely otherwise. I did not have the money in my possession for forty-eight hours, but paid it over directly to the parties whom I tried by every means in my power to protect from loss."

The charge against Mr. Blaine, upon which the investigation was founded, was that he had "worked off" $75,000 of these bonds on the Union Pacific Railroad for $64,000 at the time when Tom Scott was President of the company. This was the charge which Mr. Blaine passionately denied, adding in his speech of April 24, 1876:

"*I never had any transaction of any kind with Thomas A. Scott concerning bonds of the Little Rock and Fort Smith Road, or the bonds of any other railroad, or any business in any way connected with railroads, directly or indirectly, immediately or remotely.*"

While Mr. Fisher's letter of April 15 does not specifically mention Tom Scott as the person upon whom Blaine had worked off bonds at a very high price, yet his letter, when read in connection with that of November 10, 1871, shows that Scott was one of the parties referred to. But the material point is that he tells Blaine that he (Blaine) worked off the bonds "by means of his political position." This was the gravamen of the whole charge, and Mr. Blaine tacitly admits its truth by explaining that the money which he obtained in this way did not remain in his own pocket, but went to others. It is of course immaterial to the public what he did with any money which he obtained in that way.

IV. A letter and a telegram dated April 16, 1876, disclosing a shameless attempt to induce Fisher to tell a lie or a series of lies in order to cover up Blaine's transactions in Little Rock bonds. "I want you to send me such a letter as the enclosed draft," says Blaine, with a memorandum at the bottom, "*Burn this letter.*" The enclosed draft is a form of a letter to be addressed by Fisher to Blaine, first scouting the idea that he (Blaine) had ever obtained any of the bonds as a gratuity, and then saying that he (Blaine) had bought $30,000 of the bonds "on precisely the same terms that every other buyer received, paying for them in instalments running over a considerable period just as others did." As this was a lie, Mr. Fisher, of course, never copied it or put his signature to it. That it was regarded by Mr. Blaine as a most damaging communication is shown by his repeated adjurations to Fisher to keep it secret. "Regard this letter as strictly confidential," he says. "Do not show it to any one," he adds; and then he closes with the solemn admonition to "burn it."

V. A letter from Fisher to Blaine, dated October 24, 1871, saying that Blaine had sold at 60 cents on the dollar $50,000 of land bonds which he had received as collateral for a loan of $25,000, realizing more than the amount of the loan. This is the loan which Mr. Blaine subsequently collected from the reorganized Little Rock Company, through an award of commissioners appointed by the United States District Court for the Eastern District of Arkansas. It sustains the charge made in the Boston *Herald* that in this transaction Mr. Blaine was paid twice, and that the court was deceived by a concealment of the fact that there was collateral security for the loan. The existence of such security was a fact of the first importance to the commissioners who were called upon to adjust the claim. They give a careful résumé of Mr. Blaine's statement of the nature of his claim, but no mention is made of the collateral. Mr. Blaine himself acknowledged its existence in two letters to Fisher, written subsequently to the date of Fisher's letter in which the sale of these collateral bonds is mentioned.

VI. A letter of June 14, 1871, in which Mr. Blaine says that there are still $70,000 of land bonds due him under the Fisher contract. As the contract called for $125,000 of this class of bonds, it appears that $55,000 had already been delivered. These, added to the $50,000 of similar bonds held as collateral, were more than sufficient to account for the $75,000 found in the Union Pacific Treasury. In the investigation Mr. Blaine endeavored to show that he could not have had a sufficient number of land bonds to make up the amount, and in his speech of June 5, 1876, he emphasized this point strongly. It is now proved that he had more than sufficient. He had at least $105,000 of land bonds. Mr. Fisher, in his letter of November 10, 1871, speaks of Blaine's sale of $100,000 to Tom Scott as a matter well understood between them, and Blaine makes no denial of it.

VII. The letter from Blaine to Fisher of November 8, 1871, and Fisher's reply of November 10, show that Blaine was in need of bonds for some purpose other than to deliver on his contracts with parties in Maine. These contracts, Mr. Fisher tells him, had all been fulfilled, the securities delivered and receipts in full taken from the subscribers. But the amounts deliverable to Blaine as commissions on sales had not all been delivered, and could not be until certain sections of the road were completed. These letters explain the frequent complaints of Mr. Blaine that he alone had failed to get

bonds which had been long ago "paid for." Fisher's letter alluding to Blaine's facilities for selling his own bonds at a very high price by reason of his political position explains his anxiety to get hold of the bonds still due him under the contract. The bonds were of very little value in November, 1871, to anybody who had not political position to sell with them.

VIII. The character of the letter which Blaine prepared for Fisher to sign, suggests that the other letters produced in Mr. Blaine's speech of April 24, 1876, from Rollins, Dillon, and Scott, and the subsequent cable telegram from Caldwell, were all concocted in the same way—that is, written by Blaine for the others to sign. It was proved that the Caldwell telegram was cabled without signature from Philadelphia to London, with a request that it should be cabled back to the Chairman of the House Judiciary Committee. As this was Mr. Blaine's method of getting vindication, it is not difficult to fix the parentage of the whole series of letters. They are all written in the same style, and in the style of the proposed Fisher letter, and in the style of the speech. The letter sent to Fisher to be copied and returned has an air of remarkable brazenness when read by the light of the next preceding letters of the series (Fisher to Blaine, November 10, 1871, and April 15, 1872), in which Fisher speaks of Blaine's selling $100,000 of bonds to Tom Scott, and obtaining "a large amount of both bonds and money free of cost." In the letter which Fisher is asked to copy and return he is made to say that Blaine had only $30,000 of the bonds in all, and that he obtained these by purchase like any other buyer, "paying for them in instalments." Instalments of what? Mr. George Bliss would probably say instalments of influence.

These letters, like the earlier ones, and even more than those, show Mr. Blaine in the character of an adventurer, to whom public measures as they arise instantly assume the shape of dollars. If there is an amendment to the Northern Pacific Railroad Act or a new deal in its management, his "first and best impulse" is to get an interest, or, as he calls it, "a small flyer," for friends who can help him in their turn. If there is an amendment of the National Banking Act, his first thought is that something can be made out of it by the "favoritism" which goes with the Speaker's office. If he has made a ruling advantageous to a railroad company, his mind turns naturally to the thought that the beneficiaries may be induced to let him have an interest if he presses the ruling with sufficient earnestness on their attention. These are illustrations showing what shape public measures naturally and instinctively take in his mind.

"KEEP MY NAME QUIET."

THERE are many odd things in the existing political situation, but nothing odder than the presentation of Mr. Blaine to the voters as a bluff, outspoken, aggressive, and impulsive person, who wears his heart on his sleeve, and is always ready for a fight. The truth is that he is one of the coolest, most calculating, and least impulsive of men, who never takes a step without maturely estimating the consequences, and never offers to fight until he has found all the doors locked and the key in his adversary's pocket. He rarely does anything as a public man for anybody without seeing what it is likely to bring him in. Most such men, however, frequently overreach themselves. Years of successful intrigue breed a love of intrigue, which leads them to intrigue too much, and thus get entangled in the meshes of their own nets. He is no exception to the rule. Ever since he became ambitious to be President, he has been laying his plans to catch votes, but has never been able to make up his mind which voters he needed most, or could best dispense with. He has consequently for years been trying to catch them all, except the free-traders, and he would have tried to catch them if he had not thought them so small a body.

A policy of this kind cannot be long pursued, however, either in public or private life, without getting a man into terrible scrapes. In private life he has to tell different stories to different people, and occasionally they meet and compare notes, and are infuriated by finding that they have been the dupes of a double-dealer. In public life the case is worse, because he has to perform his tricks openly, and has nothing to rely on to save him from exposure but popular forgetfulness and the devotion of newspaper organs. In fact, a good lying organ is as indispensable to a demagogue of this kind, who is trying to be all things to all men in rapid succession, as a confederate to a confidence man. There is no use in leading the old gentleman in from the street, to see the knave receive payment of a lottery ticket, unless there is some one in the office to acknowledge the debt and hand over the money

Nothing has given Mr. Blaine so much trouble in this campaign as the liquor question. His own State, which must stand by him to give him any chance in the national arena, has long been prohibitionist. It was easy enough for Mr. Blaine to be a prohibitionist as long as he desired nothing which the State could not give him. But as soon as the votes of other States became necessary to him, and in some of these the anti-prohibitionists were powerful, his situation became most perplexing. When Mr. Blaine's situation becomes perplexing in any matter, however, he does not act as the bluff, hearty, aggressive man, which those who do not know him are led to believe him to be. He does not, in other words, choose one of two courses, and send the critics and carpers to the devil. The last thing he thinks of is calling for his horse and spear and asking where his enemy is. His first thought always is whether he cannot disappear—whether there is no place in which he can hide till the trouble blows over, after having left general directions to "keep his name quiet, mentioning it to no one except Mr. Caldwell." If there are letters, he steals them and locks them up. If there is a troublesome witness, he urges him to leave the country or hold his tongue. If there is a committee sitting, he says they are a lot of rebels, and refuses to take any notice of them. What he always longs for, in fact, when people are making inquiries about him, is quiet and seclusion.

His management of the prohibition perplexity has, however, been over-dexterous—so dexterous, in fact, and characteristic as to be absolutely amusing. The Elkins-and-*Tribune* "Jim Blaine" would, of course, have said he would vote on that issue with the people of his State, come what might—that he was not the man to shirk or dodge. But the real James G. Blaine, as known to those who have had most dealings with him, did nothing of the kind. He determined to get out of the difficulty by sheer humbug. After thinking it over, he apparently came to the conclusion last year that he could humbug both sides by one stroke, so he wrote in November his famous letter, in which he proposed that the general Government should levy a heavy tax on whiskey drinkers all over the country, and apply the proceeds to paying the local taxes of those who hated drink. When he produced this, with a flourish, he evidently thought he had got out of his trouble, and could meet both the liquor and the anti-liquor men with a hearty shake of the hand, and magnetize them all by one operation. When it failed, and had to be withdrawn, he was worse off than ever. He then appears to have decided that he would meet each exigency as it arose—that is, humbug first those who first bothered him, and then humbug the others afterwards. So, being badgered by poor Neal Dow, the veteran Maine Prohibitionist, immediately after his nomination, to know how he stood on the great question which was agitating his State, he appears to have deceived the old man into writing the following letter, and he can hardly have deceived him without some old-fashioned Little Rock lying:

PORTLAND, July 14, 1884.

DEAR SIR: I am just home from the East and find your note of the 11th. I have been constantly receiving letters like yours of inquiry about Mr. Blaine. My earliest answers were that he was not a teetotaler, but was a friend of prohibition, and had done us good service many times; that he was also a friend to the proposed constitutional amendment, *and will vote for it.* I afterwards learned that he has been an abstainer for several years. Very respectfully,

NEAL DOW.

In this way an excellent campaign document was provided for local use, which would help to keep up the State majority to a point that would give promise of victory in November, and as such it was copiously circulated up to the day of election. The delusion that Blaine was going to vote with the vast majority of his fellow-citizens of Maine on a matter which they consider vitally important to their peace, happiness, and prosperity, was thus kept up until the afternoon of Monday week, when the votes were nearly all cast, and the Prohibitionist ladies who were waiting for the big, hearty, and impulsive creature at the polls, had been driven home by the rain. He then set to work to humbug the Germans and other anti-Prohibitionists of the West, who he knew were waiting and watching, also, to see what he would do,

and boldly announced, when he was sure of his local majority, that he would not vote on the Prohibitory Amendment at all. A serenade having been arranged to enable him to complete the job by explaining his abstention, he said:

"For myself, I decided not to vote at all on the question. I took this position because I am chosen by the Republican party as the representative of national issues, and by no act of mine shall any question be obtruded into the national campaign which belongs properly to the domain of State politics. Certain advocates of prohibition and certain opponents of prohibition are seeking to drag the issue into the national canvass, and thus tending to exclude from popular consideration the questions which press for national decision. If there be any questions that belong solely to the police power of the State, it is the control of the liquor traffic, and wise men will not neglect national issues in the year of a national contest. Judicious friends of a protective tariff, which is the practical issue of the campaign, will not divert their votes to the question of prohibition, which is not a practical issue in the national campaign."

Considering that he was himself the author of a scheme to make the United States levy and distribute a tax on whiskey large enough to pay the expenses of local government all over the country, and that there is a Prohibitionist Presidential ticket in the field, his refusal to vote on the most important of State questions, at a State election, lest he should be the means of "dragging the issue into national politics," must, all things considered, be set down as the funniest of all his attempts to "keep his name quiet." He evidently wishes his connection with the liquor question, like his connection with the Northern Pacific, to be "mentioned to no one but Mr. Caldwell." But how much more of this charlatanry can the country swallow?

THE STANDARD OF OFFICIAL MORALITY.

THE *Times* says, very aptly and forcibly, that discussing the impropriety of Mr. Speaker Blaine's speculation in Little Rock securities with people like Mr. George Bliss, is very like "attempting to demonstrate the impropriety of the Mother Hubbard dress to a naked Hottentot." The cause and origin of the Blaine nomination, which is breaking up the Republican party, is in fact the loss by a large portion of the party managers of the old standard of official propriety. It is consequently very difficult to argue questions of political ethics with them, for want of a common rule of decision. As Mr. Charles R. Codman says in his recent letter, the difficulty which they have in seeing anything wrong about their candidate is "something worse than individual immorality, and is a symptom of the wholesale corruption of the Republican managers"—that is, not only is Blaine unfit to be President, but his supporters have apparently forgotten what fitness is, and, if they had not nominated him, would have been quite capable of nominating somebody else just as bad.

This decline began with the war, and indeed may be said to have been one of the usual and almost inevitable consequences of a great war. The difficulties of the situation during the war were so great that everybody's help was welcome without regard to his character. Cheating and stealing, if not on too great a scale, had to be overlooked for want of time to pursue and punish them. Contractors became great public benefactors by merely forwarding their supplies in season. Keeping the Republican party in power was as necessary as keeping the army in the field, and the work had to be done just as remorselessly and unscrupulously as the fighting of a battle. When the war closed and the nation had time to take breath and ascertain the damage to public morals which the struggle had wrought, a cruel fate had deprived the country of the great civilian who alone, of the public men of that day, had the power as well as the will to bring the country back to the ancient ways of official probity. The four years after his death were passed in a fight between Congress and Andrew Johnson, and then there entered the White House a man who, in spite of his great military merits, had probably a lower standard of official rectitude than anybody who has occupied a high place in any Christian country within the present century. There have been officers more corrupt, and who winked at more corruption, but not one, we venture to say, who was so insensible to the scandal and mischief of corruption, or who had so little comprehension of what the people meant who inveighed against the class of persons with whom he surrounded himself, and whom he sustained against the denunciations of the press. Moreover, both under his Administration and under his successor's, the condition of the South furnished the corruptionists, who had grown more powerful and more solidly entrenched every year, with a ready means of diverting public attention from all questions of internal reform, and of familiarizing the public mind with the spectacle of politicians "on the make." Blaine's nomination came, therefore, as it were, naturally. The men who made it could not be got to understand before it was made why it was objectionable. They had forgotten the standard of public life which used to exist in this country, and still exists in others; and, when it was reproduced by the Independents, they looked on it as a new-fangled contrivance of a parcel of dilletanti.

Another most striking and impressive illustration of the depth to which the party demoralization has gone, is to be found in the support now given to Blaine by a large number of men, of good standing in the party, who were opposed to Blaine's nomination before it was made, for precisely the same reasons for which the Independents are now opposed to his election. We could mention a dozen of them who believed on the 1st of June last that Blaine was morally disqualified for the Presidency, and made no secret of their belief, but who are now on the stump maintaining that he *is* morally qualified for the Presidency—and this not through any change of belief or any new light on the facts, but through willingness to evade, prevaricate, suppress, and in some cases to lie boldly, for the sake of the party. We say deliberately that greater disgrace than these men are to-day inflicting on American Government and society has not been witnessed in modern times. When Mr. Cabot Lodge, for instance, alleges on the stump that Cleveland is a weak man, he says something which he will have as much difficulty in getting people to accept as his sincere belief as when he says that Blaine is an honest politician; and yet Mr. Lodge has had every advantage in the way of training, and every encouragement to maintain his personal dignity and integrity, that American society can offer. And when ex-Governor Long, also a Harvard graduate, gets up and says that Gladstone or Bismarck might have done without discredit what Blaine has done, he will get but few to believe that he does not know better; that he does not know right well that to have had the Mulligan letters produced against them would have covered either of these great men with an ignominy from which nothing but death could have relieved them. Blaine probably cannot understand anybody's filling such positions as they fill without making money out of them by any means that offers; but Mr. Long has had better opportunities than Blaine of understanding the public morality of other countries. Of the spectacle of moral degradation presented by the Blaine press in many parts of the country, and particularly in Cincinnati and Chicago, we do not need to speak. We know of nothing approaching to it in the history of popular agitation. A more impressive warning to the young men of the country that the time has come to save the Government from a party which does not hesitate to compel its organs and orators to make public confession of their own want of principles, and convictions, and even of self-respect, we could not wish for.

A SCIENTIFIC TARIFF.

MR. CARROLL D. WRIGHT'S paper on the "Scientific Basis of Tariff Legislation" appears on first examination to be a very thorough treatment of the difficult subject to which it relates, and equal to his reputation as a statistician, but we cannot consider it either conclusive or specially helpful. Briefly stated, Mr. Wright proposes to settle the tariff question as to any particular article by determining what rate of duty is needed to put the American manufacturer on an equal footing with the foreigner in the American market. To use his own illustration, it is desired to ascertain what is the absolute cost to the manufacturer of a yard of broadcloth in this country, and what is the cost of the same to an English or French producer. Then, by adding the cost of transportation, we should know exactly what rate of duty would be necessary to put them on an equality, so that, as Mr. Wright puts it, "the American manufacturer would have no inducement to abandon his factory in America and move to England or Canada."

In so far as Mr. Wright seeks merely to place information before the people to enable them to determine whether it is worth their while to pay $1 more per yard for broadcloth than it is worth in a free market, in order to

make good the losses which would otherwise be sustained by makers in this country, his plan would be commendable if it were susceptible of execution. But the results attained would be inconclusive, and would fall short of a scientific basis for tariff legislation, unless the inquiry were extended so as to show not only the encouragement given to one industry, but the discouragement given to others. To illustrate: the English Government was asked to impose a duty of one farthing per pound on refined sugar, in order to put the English refiner on a footing of equality with the Continental refiners, who receive a bounty of one farthing per pound from their governments. Nothing could be clearer than the proof offered that an inequality existed, since it was reached by a mere comparison of figures. The English Government, however, did not consider that the whole of the case. They extended the inquiry so as to see how other industries would be affected by the farthing additional on the pound of sugar. They found that the confectioners, the fruit preservers, the brewers, the chemists, the bakers, and various other trades, far outnumbering the sugar refiners, would be injured greatly more than the refiners would be benefited. The petition of the refiners was accordingly denied. Incidentally it was learned that, in spite of the Continental bounty, the English refiners were doing remarkably well and extending their business and their sales from year to year.

Here appears to be a case where all of Mr. Wright's statistics, if he should succeed in collecting them, would be at fault, because they would lead to an erroneous conclusion. Prima facie the English sugar refiners were at a disadvantage. All the data collectible under the seventeen heads which Mr. Wright tabulates could not make the case clearer, nor would all the data embraced in these specifications have enabled the Government to ascertain whether there was any good reason for imposing any duty on foreign sugar. The bare fact that sugar refining went on in England, despite the foreign bounty, was worth more than an ocean of statistics. It could have been proved by tabular statements and by *à priori* reasoning, undoubtedly, that sugar refining could not be carried on in England at all under the discouragements created by the Continental bounties. Yet it was carried on successfully. Some element or elements entering into the production of the article other than the bounty and other than wages, which are higher in England than on the Continent, enabled the English producer to hold his own. Probably this element was free trade itself, which is, like the atmosphere, everywhere present but invisible, impalpable, and not susceptible of tabulation by statistics.

Let us take another illustration. Some years ago a revision of certain portions of the tariff was made by the Committee of Ways and Means at Washington. They found among other things that two kinds of cotton thread of the same sizes were taxed at different rates, one at 25 per cent. and the other at 50 per cent. ad valorem. It seemed incongruous, and the impulse was a natural one to put both on the same footing; but before venturing upon a change the consequences of which could not be known with certainty, they sent for an expert in the cotton industry—a gentleman having the widest reputation for knowledge and the highest standing for sincerity and disinterestedness—and put the question to him: "Is there any reason why one of these articles should stand at a higher or lower rate of duty than the other?" The gentleman thus interrogated took time to consider, and eventually answered that he could see no reason for the difference in the rates. They accordingly raised the thread standing in the 25 per cent. schedule up to the 50 per cent. schedule, and the bill became a law. Some weeks after the adjournment of Congress, the expert, while busy in his own office in Boston, received a call from a stranger, who inquired whether he (the Boston gentleman) had had anything to do with the change in the duty on thread. He replied that he had, and narrated all the circumstances. "Well," said the stranger, "all I have to say is that you have ruined me and turned out of employment all the hands in my factory. I am a manufacturer of elastics for gaiter shoes. The thread upon which you have doubled the duty was used in my trade. It was fit for nothing else. Since the duty has been increased it is cheaper to import the elastics already made." The Boston expert, who had performed what he deemed a public duty at some considerable sacrifice of time and labor, vowed that he would never again undertake to trace the consequences of an import duty through the ramifications of industry, either in his own trade or any other, with the view of making himself responsible for such consequences.

No statistical treatment of the tariff can be satisfactory which does not trace the consequences of each duty to and through all the industries related to it. Such a task is impossible of execution.

THE CROPS AND THE STATE OF TRADE.

THE anomalous situation of trade and industry, consisting of a great abundance of everything needful to human comfort, and the lowest range of prices known for thirty years, but characterized by stagnation, low wages, a low rate of interest, and lack of employment, continues to puzzle the student of economic science as well as the experienced man of business. The large crops of the present year, the most bountiful, perhaps, that the country has ever known, have failed as yet to revive or stimulate trade in any marked degree. It would seem as though the country were suffering from too much of everything, and not, as in former periods of commercial dulness, from too much of some things and not enough of others. The disproportion of industry which was the marked feature of the period from 1873 to 1879, no longer exists. There is an excess of production in manufactures now as there was then, but no deficiency in agriculture. There seems to be now an excess of both, and, in addition, an excess of the means of transportation, whereby the results of human labor are exchanged for each other.

Notwithstanding this seeming incongruity and negation of the principles of economic science, it must be true that a country's prosperity is grounded upon the abundance and not upon the paucity of its industrial products. It must be true that a nation grows rich by riches and not by scarcity. It must turn out that the great harvests of the present year, and the great productive power now partially idle in other branches of industry, will yield eventually and before long that condition of things commonly described by the phrase "good times." The intervention of money, and of prices computed in money, serves to obscure the real workings of commerce; but the processes are and can be in no wise different from a state of society in which trade should be carried on simply by barter, except that barter is made easier with money than without it. All trade is the exchange of product for product, money serving only to grease the wheels.

Keeping this fact in view, let us take a glance at an isolated community and a primitive state of society in which the conditions of industry should be analogous to those now existing in the United States. In the primitive state all persons obtain from the soil everything needed for their own support. As soon, however, as a surplus of food is accumulated, a portion of the inhabitants engage in employments other than agricultural, and exchange their products for a portion of the surplus raised by those still employed in the production of food. This is the beginning of civilization, and as the surplus of food is augmented, civilization widens through diversification of industry, the wants of men increasing with the increase of means for gratifying them. It is evident that in an isolated community having an abundance of land there could never be any such thing as distress except from a failure of crops proceeding from drought or other natural causes. Distress resulting from too great abundance of the products of agriculture would be impossible. Distress resulting from too great abundance of other products would be corrected by the taking up of new land by the unemployed producers of the things found to be in excess.

The existing situation of the United States fulfils all the conditions of the imaginary state we have described, except that money and prices and foreign trade have been introduced to obscure and complicate the problem. Whatever would take place in an isolated and primitive community living under the rule of barter will take place here and now. Whatever would be the effect of large crops and a superabundance of everything needful to man in the one case will take place in the other. The movement among fifty-six millions of people will be slower than in a village community of antiquity, or of Northern India of the present day, but it will be the same in substance. The excess of agricultural products when it comes to market will revive and stimulate every other branch of industry. The mere anticipation of such excess will not do this. The crops of 1884 are not yet in the market. They will not come in perhaps till next year. Farmers who have become accustomed to a

certain range of prices for their products will hold them back for a time if prices are unsatisfactory. They make no account of the fact that the things they buy are correspondingly as low as or lower than the price of wheat; that they can get more cloth, iron, sugar, books, sewing-machines, and parlor organs for a given quantity of wheat at 75 cents per bushel than they could when it was selling at one dollar. But such is the fact. One dollar is to them an ideal price, and so it will be until necessity forces them to sell at what wheat is worth under the altered condition of things. It may be that the world has entered upon a permanently lower scale of prices than has been known since the gold discoveries in California and Australia. There is no harm in this, except that the transition is painful. This transition, it appears to us, has already been accomplished, and the pain endured. We look for improvement in all branches of trade, beginning with the present harvest, for we cannot think that the world is coming to an end through an excess of everything which conduces to man's happiness and to the progress of civilization.

A NEW HISTORICAL MOVEMENT.

THE American Historical Association, which was called to its first annual meeting at Saratoga on September 9, under the auspices of the Social Science Association, has shown its American character by declaring independence and adopting a constitution. The object of the new association is the promotion of historical studies in this country, not in a narrow or provincial sense, but in a liberal spirit which shall foster not merely American history but history in America. There are already many historical societies throughout the land, but they are devoted to interests more or less sectional or local. There are State historical societies, County, and even Town societies, that for many years have been doing historical work of great value, although they are necessarily restricted in most cases to the historical ground represented by the society's name. There is clearly room for an historical society which shall be neither local nor sectional, but truly national. We understand that this enlarged idea of an American historical association, representing all parts of the country and history in general, is the outgrowth of the catholic spirit represented by some of our American colleges and universities, where students from various sections learn national and liberal ideas and catch glimpses of the world through the science of history. The American Historical Association is not, however, to be restricted to academic circles; it will open its ranks to historical specialists and active workers everywhere, whether in this country or in Europe, in State or local historical societies, or in any isolated individual field. In the words of the constitution, which is remarkable for its brevity, "Any person approved by the Executive Council may become a member by paying $3," which is the annual fee. The payment of $25, under the above condition of executive approval, secures life-membership and exemption from the annual dues. This form of discounting the future, and of settling with the treasurer of an active and growing association with promise of long life, would be good economy for young American specialists in history.

There were enrolled at the organization in Saratoga forty-one active members, one of them for life. No honorary members in this country are to be elected, and none in Europe have as yet been chosen; but the Executive Council has selected 120 well-known American students of history, living in different parts of the country, to whom invitations to accept active membership will shortly be extended by the Secretary. This number of select members will be increased during the coming year by the Council, which has full power to pass final or suspensive judgment upon nominations that may be communicated to this body through the Secretary. The Council consists of the regular officers of the Association, viz.: the President, Andrew D. White, President of Cornell University; two Vice-Presidents, Professors Justin Winsor, of Harvard College, and Charles Kendall Adams, of the University of Michigan; Secretary, Dr. Herbert B. Adams (whose address is Johns Hopkins University, Baltimore); Treasurer, Clarence Winthrop Bowen (whose address is the *Independent*, New York city); and four associates in Council, Mr. Charles Deane, Cambridge; Mr. William B. Weeden, of Providence; Professors E. Emerton, of Harvard College, and Moses Coit Tyler, of Cornell University. In this Executive Council, which has entire charge of the general interests of the Association, the academic element appears to dominate, but men of affairs are also represented, and the name of Charles Deane is of itself sufficient to command the confidence of State historical societies throughout the country.

It may not be known to many of our readers, for it certainly was known to but few members of the American Historical *Association* at the time of its organization, that there was once in this country an "American Historical *Society*," having its seat in Washington, D. C., and occasional meetings in the House of Representatives at the Capitol. The Society was founded in the year 1836. Its first President was John Quincy Adams, and its most active member was probably Peter Force, to whom this country owes a great debt of gratitude for the publication of many rare tracts relating to our early colonial history, and for his laborious work in collecting the 'American Archives.' A large portion of the first volume of the Transactions of the American Historical Society, which was exhibited at Saratoga by Doctor Parsons, delegate from the Rhode Island Historical Society, consists of reprints by Peter Force of such ancient memoirs and historical tracts as appear in his own well-known collections, so that we may properly associate the work of the first American Historical Society with the most valuable line of historical publication ever undertaken in this country—for the individual work of Peter Force, in connection with this society of Washington residents and politicians, who met in the House of Representatives, developed into a national undertaking. Although publication of the 'American Archives' by the general Government was long ago suspended, it is important to remember that many volumes of state papers collected by Peter Force yet remain for publication, and that possibly some influence can be exerted upon Congress by the new Association toward the resumption of a good work left unfinished. The old Society, while national in name, was really a local organization of residents in Washington city, with a few honorary members in the individual States and in various European countries. The new Society is to be a national association of active workers from many local centres of academic learning and corporate influence. Although without a local habitation, it will doubtless soon have a good name in the land which gave it birth, and it will probably enjoy a longer life and greater usefulness than did its Washington predecessor, a society whose life-work was confined to a few annual addresses by distinguished politicians and to reprints of papers not its own.

An active, creative spirit is the one thing needful in the American Historical Association which is now to be. Other societies, together with the State and national governments, will continue to attend to the publication of archives; but this new Association is designed for original work. A pamphlet will soon be issued by the Secretary containing a report of the proceedings at Saratoga, September 9, 10, the constitution of the Association, abstracts of all the papers read, and President White's public address on "Synthetic Studies in History," which advocates the synthesis of special work into general forms—an idea quite in harmony with that of the American Historical Association, which is but a general union of the best elements of all our special societies and our local schools of history. Other publications will follow, probably in the form of separate monographs, which may be ultimately combined into serial volumes. For this purpose the annual fees of a large society, with few current expenses, will no doubt accomplish much, but the endowment of research in special lines, and the establishment of a publication fund, are imperatively needed.

A PROPHET AMONG THE PAINTERS.

LONDON, August 31.

THE decline of criticism in England which has been going on for years was long ago noted in your columns, as it has been the subject of much comment and discussion among thoughtful people here; but the discontent at the progressive degradation of the critical standard has never produced an effective revolt, or a serious attempt to raise a higher standard of criticism. It is possible that the people who perceive most clearly the decadence, and might raise the most effective protest, are those who are the most indifferent to criticism good or bad; and the lesser people who suffer unjustly by the system of puffery and personalities which has taken the place of criticism feel, that, in the absence of the greater names, their own would give no force to a protest, and would only add ridicule to neglect. Now and then some one raises a personal outcry, which dies away when uttered, and is forgotten before any other takes it up; but the tone of all English life, social, literary, and artistic, has grown so egoistic, become so utterly absorbed in the struggle for individual advantage, that nothing but a social cataclysm can open the way to a reformer in any branch of thought.

This conviction inclines me to attach small ultimate importance to what is in itself a noteworthy personal revolt against the inanity and impotence of English art criticism—the entry of William Morris into this field, where his shafts, driven with real knowledge of art and artists, with profound conviction and purpose of utility, and weighted by the persuasion that art is an indispensable element in the social reforms to which he is so much devoted, hit to the very heart the preposterous and empty art of the day—*i. e.*, if it have any heart or other indispensable organ of vitality. Mr. Morris has every qualification for an art critic which a sound theory of art instruction can require. He is practically conversant with art in various phases, is a competent master of his means of expression, and for many years the fellow-student with the best painters of the artistic school of England. Even the most correct critic in differing with him must do so with respect, and under the rule that tastes may differ on condition that they *are* tastes and not mere ignorant preferences. A difference between him and Ruskin, for instance, would be based rather on antagonistic theories or doctrines of art, and in such case Morris would be the more likely to be right, as holding more securely to the general artistic view of the function of art. But between Morris and our press critic there is an unfathom-

able abyss; for if the former is not the most infallible of critics, the latter is the most incapable, and only worth talking of because, in the crass ignorance of art which lies on the general public like one of our November fogs, the weight in influence of great journals (after all deductions made, the most serious and upright of our day) is given to the perpetuation of that ignorance and the perpetual misleading of public taste. There is no knowledge of art in the public, and therefore no respect for art among the artists, because there is no care on the part of the controllers of the press as to whom they intrust with the power over public opinion which they wield, and the sole criterion of the praiser is probably his personal liking for the praised, and, at best, his personal preferences for a certain kind of subject and a manner of treatment not above his understanding.

I regret not to have at hand a copy of the *Times* which contains one of the Academy criticisms; but as the *Pall Mall Gazette* puts its notices in a pamphlet form more handy and permanent than its daily issue, I am able to refer to some of these which are neither better nor worse than the rest of the press opinions. This is a sample taken at random of what it offers for criticism, and in sculpture, too, where the conditions are of the simplest:

"1682, 'Bless me, even me also, O my father.' Mr. Roscoe Mullins, whose work has a *rocky* character which distinguishes it from that of most English sculptors, has achieved a signal success with this group. Esau presses forward to win Jacob's blessing so that his body is parallel with the reclining figure of the patriarch. This is a very vigorous piece of modelling well carried out."

And then of painting:

"1539, 'Heave Away.' This hangs just at the same point where the painter, Mr. W. L. Wyllie, made his great success last year with 'Toil, Glitter, and Crime.' His picture of this year, barges shooting Rochester Bridge, is less gloomy in color, but also, we are afraid, a little less impressive. 1552, 'Conquest.' A captured maiden following a middle-aged warrior into a castle keep. This is an example of the romantic survival in our art which bewilders modern foreign critics. The painter of this old-fashioned composition is Mr. Blair Leighton. 1554-6, 'A Love Story.' The history of the woes and joys of a servant-maid, humorously drawn and somewhat crudely colored by Miss Maria Brooks, in three scenes. Not very elevated art, perhaps, but more 'on the spot,' surely, than Mr. Blair Leighton's deeds of chivalry."

And so on with vacuous platitudes *ad infinitum et ad nauseam*. This is what the enterprising, outspoken, and generally well-conducted organ of English progress offers to its readers as art-instruction. It is with this chaff and Blackburn's 'Academy Guide' (*par nobile*) in hand that the docile English public wanders through the Academy exhibition seeking art-culture by the critic's mediation. This is the kind of encouragement which an earnest young artist may look forward to as the reward of merit. A work which, like Mr. Blair Leighton's, is at least a conscientious effort towards pure "art for art's sake," is certainly less "on the spot" to such critics than a crude bit of chaff on servant-girls' life like Miss Brooks's. And if an innovation in the way of thoughtful and courageous criticism could be hoped for, it would be to the *Pall Mall Gazette* that we should look for it.

Naturally, Morris turns his back on the general public, and, having embraced Socialism and the cause of labor, he gives his culture where he thinks it may bear fruit, to the Socialistic public, in *To-Day*, the organ of his sect. But his is the only piece of thoughtful criticism which the Academy has called out of journalism this year. Some of his more generalized criticism in "Art under Plutocracy" treats of the influences which attack or favor art in the larger sense in the same thoughtful tone. I have left myself only room to speak here of the former. This is the general criticism on the *ensemble* of the Academy exhibition:

"Skill of execution is the first thing we must seek for, since without it a picture is incapable of expressing anything, is a failure and not a picture. Well, there are signs here and there on the walls of the Academy of skill of a certain kind, but what does it amount to? Does it give us any reasonable hope of establishing by our present method of artistic life a workmanlike traditional skill, continuous and progressive, so that while there may be hope for a man of genius for pushing forward the standard of excellence, no one, be he of genius or not, need waste half the energies of his life in half fruitless individual experiments, the results of which he cannot pass on to others? What signs are there of collective skill, the skill of the school which nurses moderate talent and sets genius free? Scanty signs, indeed; at best a plausible appearance of workmanlike execution, a low kind of skill which manages to get through the job, but in so dull and joyless a way that one's eye almost refuses to rest upon the canvas or one's brain to take in any idea it may strive to express. That is all, I fear, that can claim to represent anything like traditional workmanlike skill. What other skill of execution is visible is chiefly, almost entirely, an amateurlike cleverness, experimental, uncertain, never successful in accomplishing real work, in expressing a fact as an imagination simply and straightforwardly, but often enough succeeding in thrusting itself forward and attracting attention to itself as something dashing, clever, and—useless; the end, not the means. Of this kind of skill there is a good deal; and, to speak plainly, it is on this quality, such as it is, that most of the pictures must rest their claim to attention."

The qualities of English art have not been, *me judice*, so well told in so few words by any writer on art. I must limit myself to two or three special criticisms on the *sommités* of English art:

"The first of these is Mr. Orchardson's 'Mariage de Convenance,' which is certainly clever enough to force the attention of the passer-by; but on what terms? The subject, which is trite enough to have been let alone, is repulsive; but I will let that pass, although it is of itself enough to condemn the picture in the eyes of a reasonable person. It may be said that it is dramatic, and it is, but again at what an expense! The drama is laid on with a trowel. . . . But once again, granted that it was necessary to make the luckless pair . . . attain to the very height of repulsiveness, and that the black ugliness of the surroundings was also necessary, was it essential that the coloring and execution should be thoroughly repulsive also? . . . Does the wretched color help the drama really? . . . The fact is that Mr. Orchardson was determined at any cost to attract attention, and has chosen to do so by heaping one ugliness on another, from the laying on of the paint to the subject and its dramatic treatment, and so has achieved his end, indeed, but in so doing has insulted art and produced a monstrosity.

"Near this picture, so worthless in its aim and so false in its method, hangs another—a sorry sight indeed; the record of a ruined reputation, of a wasted life, of a genius bought and sold and thrown away—Mr. Millais's 'Idyl'; the subject of which, when we first heard of it, seemed good enough for a painter of whom it must be said at his best that his treatment of a subject reconciles us to the subject itself. But the first glimpse of the picture made an end of any hopes the subject had given us. It is true that the drummer-boy, both face and figure, does recall, not Millais at his best, but yet Mr. Millais as one yet hoped he might be; although he has made not the slightest attempt to temper into something tolerable the horrible red and yellow of an English drummer's coat as worn to-day, though not, if Mr. Millais knew it, in the Pretender's time. But beyond this one figure there is absolutely nothing in a biggish canvas; the heads of the three Highland girls are mere caricatures of the artist's former work; the glen in which they are seated, the glimpse of the royal army, the drummer's companion are so much meaningless scrabble; the very drum is painted without pleasure; the canvas is filled up, and since it has Millais's name on it, is now ready for the market—that is all. . . . It is no use playing with the question—those who wish to have art in these passing days must forget 300 years and go to school with the craftsmen and painters of the fifteenth and sixteenth centuries; the alternative is to accept as art the useless cleverness of Mr. Orchardson or Mr. Fildes, or the meretricious platitudes of M. Bouguereau, and I say emphatically that this is not art."

Imagine the sensation Morris would make as critic of the *Times*—the unsettling of all the profound convictions of imbecility, and overturning the precedents of opinionless propriety, in the pachydermatous English public!

THE CORRESPONDENCE OF GEORGE SAND.

PARIS, August 30.

THE last letters of Mme. Sand are to a Frenchman very interesting. She was, in the generation of 1870, the representative of another age; she was a Romantic, lost among the Naturalists and the Realists—a Socialist and a republican of the school of Rousseau among the positivist republicans. She was at a loss to understand the new men and the new doctrines. Her good sense told her to stand by M. Thiers, whom she had always hated and despised as a *bourgeois;* her good heart filled her with indignation at the cruel men of the Commune and at the people of Paris, though the people of Paris had been the idol of her whole life. She had attributed to the *people* all the virtues which she did not find in the bourgeoisie, and she was horrified when she found it wanting in patriotism, in humanity, in justice—as mad as a man seized with delirium. She consoled herself at times by thinking that the Empire was the great culprit, that the Empire had corrupted everything: "The Empire has set the example of turpitude and of madness." Let us do her justice—she had not a moment's sympathy with the Commune; she did not try to palliate its horrors: "To-day we must recognize a sincere republican by his horror for a certain school. Those who try to excuse it and to explain it by the faults of the National Assembly and by the spirit of the province, are hypocrites in politics or imbeciles." Mme. Sand would have had no sympathy with those dilettante radicals of England who tried to prove that the French Commune was only a reaction against Versailles, and that the fire was set to the monuments of Paris, not by the men who fought under the red flag but by those who fought under the tricolor. She was too honest, she was too human; she knew and felt that the Commune was the outburst of the most indefensible passions and instincts of an unchained populace. Her testimony is all the more important in that she had no sympathy with the men of Versailles.

"I believe," she says, "in the sincerity, in the honor, in the great intelligence of M. Thiers and of the moderate nucleus which joins its efforts to his efforts. It is nevertheless sad to recognize that it will be absolutely necessary to proceed through this great moderation, which is an instrument of slow and cold progress, instead of counting on the young forces of the public spirit. How much power will it now be necessary to chain for fear of disorder and of madness?"

Moderation always seemed to Mme. Sand something a little too bourgeois; she was an enthusiast, and remained so to the end. She took great flights and often fell heavily to the ground. The *people* seemed to her like her own child. "How painful it is to be angry with your own child." She was angry, however, during the dark and bloody days of the Commune; she tried to console herself. "Well," she writes to Prince Napoleon, "in these horrible crises, the mind wanders, madness supervenes. The republic in theory is the sun; in fact, for the present, it is nothing but hail, darkness, and wind." At times she had a very clear vision of the future. She writes to Prince Napoleon: "It is all over with us if we do not become men. The parties will eat us up; what ought to be done is to create a republic without parties—that is to say, without republicans in the state of a party; a laborious, trading, democratic society in the good acceptation of the word. France is artistic enough, idealistic enough to resist this state of things without get-

ting brutalized." It is quite true that even when the republic is the legal form of government, many republicans consider themselves mere partisans. They seem to regard their tenure of power as an accident; they have the temper of an Opposition, and of an Opposition that can never be satisfied. They feel instinctively that the ground may at any time give way under their feet, and have not the good humor, the quiet assurance of men who are born to the purple and know that they will die in the purple. Fourteen years of the republic have not yet cured all the republicans of their uneasiness, and it is to this uneasiness (I cannot find a better expression) that many mistakes are attributable.

Mme. Sand's letters to Flaubert are always her best, because they are the most spontaneous:

"What will be the consequence of this infamous Commune? Napoleon or Henry V.? or will the anarchists triumph? I see nothing but darkness. I judged others a little by myself. I had gained much over my own character. I had put an end to useless and dangerous ebullitions. I had strewn my volcanoes with seeds of grass and of flowers, and the seeds had prospered and I believed that the whole world could become more enlightened, could contain itself, amend itself, that the years spent on myself and on others could not be lost to reason and experience; and now I wake from my dream and find a generation divided between idiocy and delirium."

How true the comparison is! Yes, she was an extinct volcano—like those volcanoes of Auvergne, which she had so admirably described—and some rare flowers were growing in the coated lava. She was a good friend, a charitable woman, a good mother, a good grandmother. Some of her friends, many of her friends, were perhaps not worthy of her affection; but she saw them through her imagination—she had an inexhaustible fund of sympathy. I do not know many better letters than this short note to complaining, unhappy, and dissatisfied Flaubert:

"One must not be sick, one must not be cross, my old troubadour. One must cough, and spit, and get well. Say that France is mad, humanity stupid, and that we are unfinished animals; one must, however, love one's self and one's species, especially one's friends. I also have sad hours. I look on *my flowers*, those two children who always smile—on their charming mother, and on my good, ever-working son, whom the end of the world would find hunting, cataloguing, doing his every-day work, and always as cheerful as Punch during the rare hours when he rests. To live with a few people banishes reflection. You are too much alone. Come and allow yourself to be beloved with us."

This cataloguing son she speaks of is Maurice, her good and excellent Maurice, who has been writing a very complete catalogue of the plants and insects of Berry. The two *flowers* are her grandchildren, who were the joy of her last years. When she wrote these letters to Flaubert, so good, so warm, she did not know the cause of the frightful misanthropy of Flaubert. We have only learned it recently by the revelations of Maxime Ducamp.

Mme. Sand never had any literary vanity. She says to Flaubert: "You wish to write for eternity. I think that in fifty years I shall be completely forgotten. It is the law of things which are not of the first order, and I never believed myself of the first order. I have only tried to act on my contemporaries, and to have them taste my ideal of softness and of poetry." Her influence on her contemporaries was certainly great, especially at her début, and it must be confessed that it was not a good one. She was imbued with the ideas of Rousseau: she believed in the sanctity, in the impeccability of passion. She did not see the necessity of curbing the human passions. She was in this respect a note in the concert of the Romantic school, which was essentially the lawless school. She, like Victor Hugo, took her heroes from among the bandits. By degrees her talent became more chastened: she was never vulgar—she became delicate; she painted low, humble lives with a subtle touch; she became more and more a lover of nature. As a landscape painter she is without a rival in our day. Nature had a soul for her, and became her idol.

"I have had compliments enough in my life," she says to Flaubert. "I have always feared them when they came from unknown people; they made me doubt myself. As for money, I have made money enough to be rich; if I am not so, it is because I did not want to be. What I should really like would be to give myself wholly up to botany; it would be to me Paradise on earth. But it must not be so: it would only be good to me, and if sorrow is good for something, it is because it protects us against egotism; therefore we must not condemn or despise life."

Such is the note of all the letters of the latter days—a sort of cheerful resignation. Mme. Sand was a spiritualist, and believed in immortality:

"There is no vengeance, there is only justice and goodness in God, and in Him we shall live eternally, under whatever form and with whatever title. It is the ignorance of the fate which is reserved to us which makes the merit and the sweetness of our confidence in Him. Those only will be damned who believe in damnation; and this damnation, which they dream eternal and terrible, can only be a new trial, of limited duration and supportable."

Her philosophy was always at war with Flaubert. She tried to make him patient and contented, and he was impatient and discontented. She felt instinctively that the moral state of Flaubert was disease.

"I am not contented with your being always angry. It lasts too long and it is a kind of malady. Forget; can you not forget? You live too much in yourself, and you refer everything to yourself. If you were an egotist, a vain man, I should say that it was a normal state; but with you, so good, so generous, it is an anomaly, an evil which must be struggled with. Yes, be sure that life is ill-arranged, painful, irritating for everybody; but do not ignore the immense compensations which it would be ungrateful to forget."

Her great compensations were her grandchildren. She was a real grandmother, even in her letters: she tells us all the doings and sayings of Aurore, of Titine: "Ah! the children; I could speak of them all my life; the older we grow the more we love them." The conscious and tender smile of old age, looking on unconscious infancy, the shadow of things to come mingling with the shadow of things going, and going forever; the little victims playing before the sacrifice; the deep, sad, awful thoughts of later days amid the toys, and the laugh, and the ebullition of childhood—all this is found in these last letters. The last two letters of the volume are dated May 28, 1876. In one of them she speaks of her granddaughters: "They are as good and as gentle as angels, and I live to love them." The other is addressed to her doctor in Paris; she describes to him her state of health (she suffered much from a chronic disease of the intestines). Two days afterwards she was obliged to remain in bed, and after ten days of great suffering she died on the 8th of June, 1876, at the age of seventy-two.

Correspondence.

WOMEN IN POLITICS.

To the Editor of The Nation:

Sir: As a constant reader of the *Nation*, and one who, if not "a political woman," is a woman deeply interested in politics and somewhat identified with the woman-suffrage movement, I beg leave to make a few comments on your editorial of the 11th inst., entitled "The Political Women in the Canvass." Like many other women interested in the suffrage cause, I have been considerably mortified by the want of moral perspective shown during the present canvass by some of our most respected leaders, and I deprecate the present position of the *Woman's Journal*.

But the editorial of the *Nation*, while just in some of its criticisms, draws several very unwarrantable inferences. There is no reason to suppose that most women, or even most women "suffragists," favor the election of Mr. Blaine, and thereby exhibit their want of judgment in politics and their unfitness for political rights. Many women have been led to advocate woman suffrage because they believe in prohibitory liquor laws; and these, as well as many not interested in woman suffrage, would be glad to secure votes for Mr. St. John. Setting these aside, if women take their opinions from men, and if the political expectations of the *Nation* are well-founded and Mr. Cleveland is likely to be elected, is it not probable that more women are in favor of his election than of Mr. Blaine's? Also, if women's views are derived from the men with whom they are associated, are not their estimates of relative values in morals likely to be about as correct as those of men?

But if the necessary qualifications for the franchise include even an elementary knowledge of all important political subjects, and a full appreciation of the value of strict probity in public life, where shall the rank and file of our voters be found? Among some millions of male voters, a few thousands are really politically independent, a few hundreds are politically well-educated. Among some thousands of women who aspire to become voters, a fairly proportionate number are equally independent, and are striving to become equally educated. Their opportunities for formal education are not even now equal to those of men, but political education implies something more than can be attained by the study of books or newspapers. Only through discussion and the sense of responsibility for political action are most men led to value the political knowledge which comes by reading and study. And, without the right of suffrage, women do not feel much responsibility, nor have they many opportunities for discussion.

Objecting, then, to woman suffrage because women now are not, as a rule, well informed or independent in politics, is like objecting to people's going into the water because they do not know how to swim. But women cannot be prevented from having an influence in the formation of public opinion, and even a direct influence upon votes. It therefore seems best to the present writer that they should be educated in politics and thus in morals on a large scale, and also, that men's political education should be advanced by the great impulse it would receive from a common study of public affairs by men and women together.

In the meantime it is to be remembered that we do not "claim" that a woman by wishing or working for the right of suffrage becomes herself an example of all the benefits to be derived in the future from a possession of that right by the whole sex. As one representative of the discontented sisterhood who will "clamor for their rights," I grant at once that we are, compared to what we might be, ignorant and narrow-minded. But what is the duty of the *Nation* in the premises? Will not wider liberty and greater opportunity tend to enlarge and enlighten our minds? A high-minded paper may indulge in occasional ridicule of those with whom it differs, but a continual belittling of the woman's-rights movement, which has accomplished so much in the improvement of the legal condition of women and been supported by so many persons of the highest ability, simply lowers the tone of the *Nation*.

Adelaide A. Claflin.

Quincy, Mass., September 13, 1884.

[There was, in the article referred to, no in-

ference drawn that "most women," or "even most women 'suffragists,' favor the election of Mr. Blaine," or anything like it. We expressed no opinion on the matter whatever. What we said was, that many correspondents drew from the utterances of the *Woman's Journal* inferences "unfavorable to the extension of the franchise to women." We then proceeded to reproduce these utterances and comment on them, and pointed out that the editor had done, apropos of Blaine's candidacy, "the very thing which mocking men say that female voters will always do—go to some man whom they like, to tell them which is the right side." In fact, the article was wholly a criticism of the *Woman's Journal* and its editor, and was not in any sense an article on female suffrage or women in general. Our correspondent's concluding observations, as to "the duty of the *Nation* in the premises," strike us as highly irrelevant. The premises are the *Woman's Journal* article on Cleveland and Blaine. In these we have done our whole duty. Of course, "no high-minded journal ought to continually belittle" anything, but we do not know of any high-minded journal that has done so.—Ed. Nation.]

STEAMSHIP CUISINE.

To the Editor of The Nation:

Sir: Your correspondent "W. J. S." voices the sentiments of numerous fellow-sufferers. The efforts of steamship stewards seem to be all for display, not for comfort. Who would not be glad to exchange the whole elaborate bill of fare for one good, daintily-cooked dish? I have met old travellers who always carry tea, butter, fruit, and other things which they have found they cannot get of good quality from the ship's stores. There was good ground for the remark of a fellow-passenger of mine on the voyage from which I have just returned, that the steward must have contracted for all the old and tough fowls in Liverpool.

My first experience convinced me that the restaurant plan is the only remedy for this evil, and each subsequent trip has confirmed this belief. It would bring, also, many incidental advantages. For example, congenial persons, now separated by the hap-hazard allotment of seats, could arrange to take their meals together. And it would aid the appetite and digestion of rational beings by lessening the gluttony, which disgusts a person of any refinement, and makes him almost ashamed to acknowledge his physical necessities. The number varies, but there are always some passengers who seem to think it their duty to eat as much as possible in order to "get even with" the ship. As was remarked by an elderly Scotchman, who was so sickened by this and other discomforts that he gave up his intended trip to the United States and went ashore at Queenstown: "They actually think they're making money by it." I have seen carried to people who were unable to get out of their berths, meals which would satisfy a ploughman or a hunter, which in many cases were swallowed only to be thrown up. Now, much of this waste and hoggishness would be stopped if people had to pay for what they eat and waste. It would then, as "W. J. S." says, be to the interest of the companies to furnish the most tempting viands; and passengers would readily pay the highest prices if they could get what they wanted. It is evident that the maximum of comfort (or the minimum of discomfort) in ocean travel can never be attained until our great steamers separate their charges for travel and meals. If "writing to the newspapers" will bring about the reform, I am very glad to second the motion, which I think will meet with a chorus of "ayes," the loudest votes being from passengers just landed.—Respectfully, F. M. C.

Public School Library,
St. Louis, September 13, 1884.

A PERTINENT INQUIRY.

To the Editor of The Nation:

Sir: Why did Blaine insist that the Landreau guano claim should be recognized by the Government of Chili in the treaty with Peru? Did the United States Government have an interest in that claim? James Hay.

Madison C. H., Virginia, September 6.

[Why did he want an interest in the Little Rock Railroad, and why did he "control" an interest in the Northern Pacific? The United States Government had no interest in the Landreau claim.—Ed. Nation.]

THE TRUE TEST.

To the Editor of The Nation:

Sir: There are many conscientious Republicans now hesitating as to which way they should rightly cast their votes. Such should consider that Mr. Cleveland, judging by all his antecedents, would give us a pure, honest, economical administration, whereas Mr. Blaine is surrounded by a set of foul birds who *must* be the leading spirits of any administration of which he may be the head. The intolerable jobbery that he would countenance would not be its worst feature. The men who are managing his campaign will not be satisfied with mere money—they have that already. What they want is place, and power, and social position, and recognition attainable by them only through place and power. Therefore they would claim places in Mr. Blaine's Cabinet. Do we want "Steve" Elkins and "Pow" Clayton as Secretaries? If so, we can have them by voting for Jay Gould's man Friday. M. C. L.

Intervale, N. H., September 8, 1884.

Notes.

The fall announcements of the publishers are now multiplying rapidly. We make our usual selections from them as follows: *Houghton, Mifflin & Co.*, Boston: 'Life and Letters of Bayard Taylor,' by Mrs. Taylor and Horace E. Scudder, in two volumes; 'Memories of Verse,' selections from Mr. Taylor's lyrical poesy; a posthumous work by the late Rev. Samuel Johnson, 'Persia,' completing his series on 'Oriental Religions, and their Relation to Universal Religion'; 'The Destiny of Man, Viewed in the Light of his Origin,' an essay read by John Fiske before the Concord School of Philosophy; 'Continuity of Christian Thought,' by the Rev. A. V. G. Allen; 'Some Heretics of Yesterday'—Tauler, Wiclif, Hus, etc.—lectures by the Rev. S. E. Herrick; 'Thirty Portraits of American Authors,' with biographical letterpress; lives of Emerson, by Dr. Holmes, of Edmund Quincy, by Sydney Howard Gay, and of Poe, by George E. Woodberry, in the "American Men of Letters" series; 'John Adams,' by John T. Morse, jr., in the "American Statesmen" series; 'Maryland,' by William Hand Browne, 'Kentucky,' by Professor N. S. Shaler, 'California,' by Josiah Royce, and 'Kansas,' by Professor L. W. Spring, in the "American Commonwealths" series; 'Choy Susan, and Other Stories,' by Wm. Henry Bishop; 'In War Time,' by Dr. S. Weir Mitchell; 'An American Politician,' by F. Marion Crawford; 'On the Frontier,' by Bret Harte; 'Two Compton Boys,' by Augustus Hoppin, author of 'Auton House'; 'Fresh Fields,' by John Burroughs; a new edition, thoroughly revised, of Mrs. Botta's 'Handbook of Universal Literature'; 'The Algonquin Legends of New England,' by Charles G. Leland; 'Twenty Letters from England,' with reference to the life of English workers, by Miss Florence Kelley; 'In the Lena Delta'—the search for Captain De Long, by Geo. W. Melville; a new and completer edition of Lucy Larcom's 'Poems'; 'Illustrated Poems of Oliver Wendell Holmes,' an octavo volume of selections made by the poet himself, and illustrated by a number of well-known American designers; 'The Rubaiyát of Omar Khayyám,' with fifty illustrations by Elihu Vedder, a quarto volume, of which much may be expected; 'Songs of the Silent Land,' by Elizabeth Stuart Phelps; and finally, 'The Works of Christopher Marlowe,' edited by A. H. Bullen for the "Elizabethan Dramatists" series.

James R. Osgood & Co., Boston: 'Nathaniel Hawthorne and his Wife,' a biography in two volumes, by Julian Hawthorne; 'Stories and Sketches by Edmund Quincy,' edited by Edmund Quincy, jr.; 'The Genius and Character of Emerson,' lectures at the Concord School of Philosophy; 'Thomas Bewick and his Pupils,' by Austin Dobson; a 'History of Presidential Elections,' by Edward Stanwood; a 'History of the Andover Theological Seminary,' by the Rev. Leonard Woods; a 'New Bible Concordance,' by the Rev. J. B. R. Walker; 'The Light of Asia,' with illustrations, 4to; 'Marmion,' in the style of the same publishers' 'Lady of the Lake'; 'Leisure Hours Among the Gems,' by Augustus C. Hamlin; 'From Opitz to Lessing, a study of Pseudo-Classicism in Literature,' by Thomas S. Perry; 'Sheridan's Comedies: 'The Rivals, and the School for Scandal,' edited with a biographical sketch by Brander Matthews; 'A Sea Change, or Love's Stowaway,' a comic opera by W. D. Howells; and 'Dr. Sevier,' by G. W. Cable.

'A Manual of Preaching,' by Professor W. Franklin Fisk, of the Chicago Theological Seminary, is in the press of A. C. Armstrong & Son.

Profiting by the present interest in China, Chas. Scribners' Sons have issued separately the new map of that country which accompanied the last edition of Dr. Williams's 'Middle Kingdom.' The approaches to Canton and to Amoy are shown in side-maps on a larger scale, and more useful than a map of the whole empire would be one of the coast region with plenty of room for details. It will be long before the transliteration of Chinese as of other Oriental languages becomes fixed by the action of scholars, and one who consults the present map must expect occasional perplexity.

The same firm have published Rae's 'Contemporary Socialism,' which we lately praised when reviewing it in the English edition.

Coleridge's 'Aids to Reflection,' with his posthumous 'Confessions of an Inquiring Spirit,' and the 'Essay on Faith,' 'Notes on the Book of Common Prayer,' and 'Nightly Prayer,' extracted from his 'Remains,' have been gathered into one volume of Bohn's Standard Library (London: Geo. Bell & Sons; New York: Scribner & Welford). An essay on the 'Aids,' prefixed to an American edition in 1829 by the Rev. James Marsh, President of the University of Vermont, is also incorporated with the foregoing. For an American reader this essay may well be the most interesting part of a volume whose contents are all somewhat antiquated. Witness Mr. Marsh's complaint that "the philosophy of Locke and the Scottish writers" has been so fully accepted in the United States and combined "with our religious interests and opinions" that they have come to be considered as necessary parts of one whole, both by those who base speculative systems

upon that philosophy, and by those who regard these speculations as "at war with orthodox views of religion."

There have been up to the present time ninety odd editions of Walton's 'Complete Angler,' and to add to the number is a legitimate aspiration of many of the best publishers. Thomas Y. Crowell & Co. have recently brought out a reprint of John Major's London edition of 1844, which, barring what Mr. Westwood calls "the obnoxious introductory essay," is the best by far of the various Majors. The reprint is fair, and the numerous and excellent illustrations, though not very well reproduced, add to its attractiveness.

Harper & Brothers have added to their Franklin Square series the fourth part of 'Stormonth's English Dictionary,' and Frank Smedley's 'Frank Fairlegh,' a novel read with delight by an earlier generation of boys than that now upon the scene.

M. de Bussigny's 'Hand-Book for Horsewomen' (D. Appleton & Co.) has the riding-school in primary view, and is designed for the teacher quite as much as for the pupil. The author advocates the third pommel and the rising trot—the latter because the horse's back is thus relieved of one-third of the weight, and by so much its liability to become sore is lessened. He pays a compliment to "the moral qualities of the American horse," as being "really astonishing when looked at from the point of view of animal character." But his remarks on "bucking" indicate an unfamiliarity with the depravity inherent in the real equine sinner as met with even in America, away from the kindlier influences. His description of bucking, and his remark that it "is very unpleasant" "without being particularly dangerous," leads one to doubt whether he has ever studied a bucking in contradistinction from a plunging horse. Men have been killed by bucking pure and simple, and the best advice as to what to do when a horse begins to buck was given by an experienced rough rider, namely, "Get off." The little book has a slender table of contents and no index.

The American whom one would rather not have met abroad has embalmed himself in a fat and vulgar volume, 'Rapid Ramblings in Europe' (Lippincott & Co.). The complacent author gives his own portrait and those of some of his remarkable companions, such as "Dick" and "Charley," not omitting the ladies. The names of the party are also recorded without disguise, together with their conversation—a liberty which, in more sensitive breasts, might have been expected to lead to proceedings like those instituted against 'Cape Cod Folks.'

The latest and one of the very best discussions upon 'Sewerage Systems and the Epuration of Sewage by Irrigation and Agriculture' is a reprint from the *Boston Medical and Surgical Journal*, entitled as above. Dr. H. J. Barnes read before a scientific society a paper upon that subject, reaching the conclusion that the epuration of sewage as indicated was both desirable and practicable. In it and the succeeding debate the present condition of sanitary and agricultural science on this point was well set forth, and the whole is a convenient and apparently trustworthy résumé of what has been done. It is a condensed but not fragmentary view of a subject whereon all opinions do not agree, interesting to engineers, farmers, and urban taxpayers and residents.

Col. George E. Waring's system of sewerage is in brief the employment of special pipes of very small calibre with excellent special ventilation and automatic flushing apparatus, for the exclusive carriage of sewage proper, leaving storm-water to be cared for otherwise. This has been successfully employed in Memphis and elsewhere, and lately has been introduced into a quarter of Paris (du Marais) particularly foul and under topographical disadvantages. M. Ernest Pontzen, a civil engineer, has given an account of the Parisian experiment in a little brochure, 'Première application à Paris en 1883 de l'assainissement suivant le système Waring' (Baudry et Cie.), of twenty-two pages, with four large plates of the sewers in longitudinal and cross sections. Both professionally and financially the work appears to have been successful, and in view of its recognized economy and efficiency under certain circumstances it would be well if this departure from the old ways were more widely known at home.

The clearness of expression and practical good sense which characterize the writings of Dr. Billings are again found in his 'Principles of Ventilation and Heating,' a remodelled edition of his 'Letters.' The book is not written for the trained architect or the skilled engineer (although both classes would probably read it with interest and profit), but for the instruction of those people who without training are constantly building dwellings, school-houses, and public halls, and as a rule are making a good many others uncomfortable in consequence. Its analysis would lead us beyond our bounds, but careful examination warrants the assertion that every one to whom the supply, under the conditions of the American climate, of suitable indoor warmth and fresh air is of interest would read it with entertainment and advantage. The *Sanitary Engineer* of New York publishes it, and it would be a public benefit if all building committees, for instance, were required to study it before erecting more pens for school children.

The Marquis of Lorne's 'Canadian Pictures Drawn with Pen and Pencil' (London: The Religious Tract Society) is a drawing-room compilation not remarkable in a literary sense, yet capable of being read with pleasure, and embodying no little information. Some hint of the extent to which the mother country would have carried its exploitation of the colonies that made the American Revolution, is given in the chapter on Newfoundland. This island was dedicated exclusively to the fisheries, and down to 1811 no houses could be erected without written permission, lest the fishing interest might be injuriously affected. "And even now the same almost incredible state of affairs exists along what is known as the 'French shore.' . . . Neither they [the French] nor the Newfoundlanders are allowed there to erect dwelling-houses, except as necessary for fish-curing operations. No settler may have his farm on that forbidden territory." A map accompanies the volume, and there are numerous illustrations of a good order.

We have received a specimen of *Descriptive America*, "a Geographical and Industrial Monthly Magazine," published by Geo. H. Adams & Co. in this city. The size, a folio, is ungainly, but it permits a double map on a large scale to be given. The number before us is devoted exclusively to Michigan, and it is, we suppose, the scheme of the publication to take up the States in turn.

The *Brooklyn Magazine* is announced to be issued on October 1. It will be purely literary.

Though the climate of Siberia tolerates at its extremes the tiger and the polar bear, the name of the country is usually associated with low temperature. There was, therefore, a certain refreshment in the title of the leading article in the *China Review* for May and June, received during the recent hot spell—"An Itinerary of the Siberian Overland Route." Col. T. W. Knox is conspicuously *the* American who has tried this route and written about it, but he has not indulged in details so minute and useful as those given in the *Review* by Mr. James Acheson, whose journey, moreover, was performed in the summer of 1882. Mr. Acheson does not, by the way, overlook Mr. Knox among his predecessors. He praises the scenery along the Amoor, the endless variety of the vehicles, the courtesy of the Russians of all classes, and declares the journey to be a fairly safe one, as respects highwaymen. But clearly there is much occasion for the particulars he gives in order to avoid hardship and imposition. The most interesting portion of this number of the *Review*, from a literary point of view, is the series of Hakka songs, translated by Mr. E. H. Parker. They are all in the amatory vein. "I happened," says one of them, "to stroll carelessly past that east window, when I saw a remarkably pretty girl. If I could only make a match with you, my lass, your father would have to call me son-in-law."

The eighth part of the English-Spanish 'Diccionario Tecnológico' (N. Ponce de Leon, 40 Broadway) carries this useful work on to the prolific word *head*.

Ginn, Heath & Co. add to their "Guides for Science Teaching" a thirteenth, 'First Lessons on Minerals,' by Ellen H. Richards. This little series is published under the auspices of the Boston Society of Natural History.

Thirteenth, also, is the latest of the Society for Political Education's "Economic Tracts," namely, 'The Standard Silver Dollar and the Coinage Law of 1878,' by Worthington C. Ford.

Mr. Edward Channing's Toppan Prize Essay for 1883, on 'Town and County Government in the English Colonies of North America,' has been added as No. 10 to the second series of the *Johns Hopkins University Studies*.

The Trustees of the Public Library of Taunton, Mass., send us, along with their brief (18th) annual report, a Second Supplement to the Catalogue. The volumes now exceed 21,000 in number.

B. Westermann & Co. send us specimen pages of the newly projected 'Dictionnaire Français Illustré des Mots et des Choses,' which we have already described. The appearance is quite that of a French Webster, the cuts being interspersed in the text, and being both numerous and good. The page is in three columns. This dictionary will also serve the function of a gazetteer, as the article and map under *Côte d'Or* show.

—In the September number of the *Princeton Review*, Dr. Noah Porter returns to the Greek question, and, having previously bombarded Mr. Adams, now subjects Mr. Eliot to a heavy fire. In the course of his argument, the Yale President brings out one or two points which, we believe, are new in the discussion, and which may be admitted even by those who, on general principles, favor the new departure at Harvard. President Porter, of course, thinks the changes at Harvard all wrong; but even if they were not bad intrinsically, they are revolutionary, and involve the repudiation of time-honored obligations. "Neither Harvard College nor any other college has any exclusive property in the degree of Bachelor of Arts, nor any right to dispose of it as it pleases. . . . Any measure which tends to make doubtful their significance, or diminish the respect in which these degrees are held, affects the interests and rights of all the institutions which give them, and is in a certain sense an offence against the common faith and common understanding which exist among educated men." Doctor Porter deprecates giving the A. B. degree to those who have only a slight acquaintance with Greek, and before long, he thinks, to those who have none at all, not only because the degree is, "in a certain sense, common property, a kind of trade-mark or certificate," but also because "the change seems specially uncalled for, in view of the fact that the degree of Ph. D. has already come into general use, and . . . that it does *not* require the study of the Greek language, but

does require a competent knowledge of one modern language." We suppose the Harvard answer to this would be that very few students are able to study for a doctor's degree, and that the change is in the interest of the great number, whose time for non-professional study is limited to seven years. And as the candidate for the doctor's degree now begins his course after obtaining his A. B., we do not see how it could be given at the end of a course parallel to that for the bachelor's degree without a change fully as revolutionary as that which President Porter opposes. Moreover, the Ph. D. degree is open to the same objection as the A. B. will be under the new régime, viz., that the meaning of it is altogether too vague, since it is given for proficiency in any of the countless branches of knowledge, except the three strictly professional ones—law, medicine, and divinity. Doctor Porter overlooks a third plan adopted, we believe, by certain Western colleges, namely, that of giving a degree for modern languages, history, philosophy, etc., called Bachelor of Letters, in imitation, perhaps, of the Bachelier ès Lettres, though this in France implies an almost exclusively classical curriculum. Doctor Porter's main objection, however, that of pouring new wine into old bottles, is not affected by this side issue. As regards the article in its general aspect, we notice that while the writer, after devoting the greater part of his space to refuting the statement in President Eliot's *Century* paper, does not fail to fire a parting volley at the contributors to the appendix to the last edition of Mr. Adams's pamphlet, and especially at Mr. G. S. Merriam, a Yale graduate, and Prof. James, of the University of Pennsylvania, he does not even allude to the article on the same side by Professor Sumner of his own faculty.

—Part xix. of Grove's 'Dictionary of Music and Musicians' (Macmillan) extends from "Sumer Is Icumen In" to Tirarsi. The longest and most important paper is "Symphony," by Mr. Hubert Parry, whose articles are among the very best in the Dictionary, being accurate, free from bias, and very readable. In these three points they differ conspicuously from those of another frequent contributor, Mr. W. S. Rockstro, to whom are generally assigned the most abstruse and uninteresting subjects, for the reason, perhaps, that his manner of treatment is sure to harmonize with the nature of his subject. Mr. Parry traces the gradual development of the symphony, from the time when that word was used to indicate any instrumental passage in a work of which the chief interest was vocal, to the present period, in which, as he thinks, the symphony "stands at the head of all musical forms whatever"—an opinion in which we cannot entirely concur, for reasons repeatedly given in these columns. As in other forms of evolution, there has been a gradual individualization and specialization both in the instruments and groups of instruments used in the symphony. Not only was the number of instruments at first small, but the violas, *e. g.*, played the same part as the basses. Clarinets are but once used in the first thirty-nine symphonies of Mozart, and Beethoven's fifth for the first time introduced trombones and contrafagotto into modern symphony. In the Haydn-Mozart period the object of the symphony was simply to please and entertain, not to stir the audience with deep emotion. Their works were short, and did not contain a great amount of musical material. Mozart wrote fourteen in less than two years. With Beethoven the symphony became a much more serious matter. The slow movements became more charged with emotion; the formal element had to yield more and more to the free and natural development of the ideas; and the last movement, which in the early symphony was very light, and served to dismiss the audience in good humor, becomes, in Beethoven, Schumann, and their successors, more of an imposing climax to the whole work. The simple minuet was, in like manner, superseded by the scherzo, embodying the "grim humor of Beethoven, sometimes verging upon irony, and sometimes, with evident intention, upon the grotesque." With Beethoven, too, "first clearly appears a proportion between the forces employed and the nobility and depth and general importance of the musical ideas." About the symphonic works of Schumann (which he places next in importance to Beethoven's), Spohr, Mendelssohn, Schubert, Raff, Rubinstein, and Brahms, Mr. Parry has many interesting things to say. We widely differ, however, from his view that Brahms is the greatest living symphonist. Rubinstein's "Dramatic Symphony" contains many bars, but they are all bars of pure gold, such as could not be made up with all the gold-dust scattered throughout Brahms's orchestral works. Scant justice is done to the subject of "Symphonic Poem," which Mr. Grove disposes of in less than half a column. A reference should have been made at least to the article "Liszt," where the subject is more adequately treated.

—Among the biographic articles in this number, the most important are Svendsen, Tartini, Tausig, Thalberg, Thomas, Suppé (with the accent unaccountably omitted). Half a column is devoted to Miss Emma Thursby, who has no claims whatever to appear in such a work. The difficult subject of "Temperament" is lucidly treated by James Lecky, who concedes that with all its defects equal temperament has its great advantages, and that an improved system of tuning would only be employed as an occasional relief from the monotony of equal temperament. Franklin Taylor's article on "Tempo" is also worth reading. He points out the changes in the meaning of the same terms that have taken place in course of time. The words expressing a quick movement now signify a still more rapid rate (at least in instrumental music), and those denoting a slow tempo a still slower movement than formerly; one of the causes of the first being found in the increased powers of execution possessed by modern performers, and of the other in the increased capacity of modern instruments for sustaining tone. A few mistakes in German and Italian occur in the article on "Symphony": page 29, eine*n* for eine*m*; page 25, fioritur*i* for fioriture; and elsewhere that common English mistake, Leitmotiv*en* for Leitmotive (nom.-plural). Another number will probably complete the Dictionary. It will contain the names of the two greatest of all opera composers, Wagner and Weber, and it is to be hoped that Mr. Grove has not deviated from his usual custom, but assigned these names to writers who are in sympathy with their subject.

—In the last number of that attractive illustrated monthly, *Vom Fels zum Meer* (New York: F. W. Christern)—the number is dated October, 1884, though it came from Stuttgart in August—Herr Gustav Karpeles exultingly compares himself with Schliemann. The latter has excavated Troy; Herr Karpeles has unearthed "Poland"—"out of a million of books," presumably in a metropolitan library—the 'Poland,' namely, of him who is now Fieldmarshal-General Count Moltke, the "*opus primum* of an author whom posterity will glorify, not only as a hero of battles but as one of the greatest writers of the century." That *opus*—in form a short pamphlet, which the enthusiastic discoverer himself calls an essay—was published in Berlin in 1832, when the author was thirty-one or thirty-two years of age, and was probably written by him while engaged as lieutenant in engineering and topographical work in Posen or Silesia, during the feverish excitement in favor of Poland roused all over the Continent by that country's struggle for independence in 1831. It is, however, neither an appeal to the sympathies of Germany for a nation heroically fighting and uselessly bleeding away, nor the attempt of an unfeeling looker-on to prove that all the generous enthusiasm is wasted upon a well-deserved fate, but an impartial and close objective treatise on the institutions, component classes, and political life of the Polish people before its fall, such as might have been written by a student of history long before there was a desperate grapple between Pole and Muscovite at Ostrolenka or at the earthworks before Warsaw. This strict objectiveness of the little work was probably the cause of its rapidly disappearing from the book market, amid the flood of writings on the same subject which appealed to sympathy or prejudice. It disappeared, in spite of its striking merits, without leaving a trace in literature, including the numerous biographical sketches which have since been written of its author, though none of his biographers forgets to mention that admirable work, 'Der russisch-türkische Feldzug in der europäischen Türkei 1828 und 1829 dargestellt durch Freiherrn von Moltke, Major im Königlich Preussischen Generalstabe.' Slightly doubting the identity of the lieutenant with the major and fieldmarshal-general, though recognizing "ex ungue leonem," Herr Karpeles wrote to Count Moltke himself, who readily acknowledged the paternity of his production, upon which, in fact, even a Moltke can look back with satisfaction after half a century. The discoverer now republishes the essay, in parts, in *Vom Fels zum Meer*, and no dweller between the Alps and the Baltic who may read it—be he a German or Pole—will refuse him his thanks.

—There has been for many years in European diplomacy a standing "Danubian question." This has assumed new importance since the young kingdom of Rumania decidedly opposed the claims of Austria-Hungary to a chief place in the international superintendence of the navigation between the mouth of the great river and the Iron Gates (near which it leaves the Hungarian territory to become the border stream between Rumania and Servia, and, further below, between Rumania and Bulgaria). The question of the Danube delta was formerly of great interest in the political relations between Austria, Russia, and Turkey, the two latter Powers sharing the banks of the various mouths, and Austria contending for their preservation in good condition and for untrammelled navigation. It led to the establishment by the Paris treaties of 1856 of a European Commission for the superintendence of the Danube below Izaktcha, the powers of which have since been repeatedly renewed and considerably extended by the Conference of London in the spring of 1883. This Conference, to which Rumania vainly tried to be admitted with a more than consultative vote, created a new permanent international organization, the Mixed Commission for the regulation of Danubian affairs between the Iron Gates and Braila, giving the presidency of it to the representative of Austria-Hungary. This decision Rumania refuses to submit to, deeming it a sacrifice of the natural and national rights of the riparian states—Servia, Bulgaria, and herself—to the commercial interests of a great Power, as such. In defence of her attitude she has appealed to the opinion of Europe, and especially of international jurists, and in response quite a little literature is springing up on the subject. Of publications by Germans favoring the Rumanian view, may be mentioned the historian Dahn's 'Eine Lanze für Rumänien' (Leipzig, 1883), Geffken's 'La question

du Danube' (Berlin, 1883), Von Holtzendorff's 'Rumäniens Uferrechte an der Donau' (Leipzig, 1883), and Theodor von Bunsen's 'Die Donau' (Berlin, 1884). Each of these productions has particular merits of its own, but that of Professor von Holtzendorff, who was directly asked for his opinion by the Rumanian Ministry of Foreign Affairs, is the most exhaustive from the standpoint of international law, and remarkable for the vigor and warmth of its advocacy of free navigation and of its condemnation of a policy of interests as opposed to that of right. A French edition of it has just appeared under the title of 'Les droits riverains de la Roumanie sur le Danube—Consultation de droit international' (Leipzig, 1884). It is rich in documentary and other supplements.

GREG'S MISCELLANEOUS ESSAYS.

Miscellaneous Essays. By W. R. Greg. Second Series. London: Trübner & Co. 1884.

Mr. Greg was the embodiment of 1851 and 1852. His writings are a permanent record of that era, and that era explains Mr. Greg and his manner of thought. The epoch itself had no dramatic interest, but it was a time which will always remain noteworthy in the history of opinion. The fervor of 1832 which produced the first Reform Bill had passed away. Of that stir and stress which is traceable in the records of Carlyle's early life, in Mill's reminiscences of the Utilitarian propaganda, and in Mozley's recollections of the tractarian movement, scarcely a trace remained in 1851. The revolutions of 1848 had everywhere ended in a real or apparent failure. The Chartists of England had suffered a defeat so crushing that their cause had become not only unpopular but ridiculous. The fiasco of the 10th of April was, as any one will see who examines a file of newspapers for 1849 or 1850, a constant subject of rather insolent jokes on the part of writers who represented the sentiment of the middle classes. Abroad there was reaction; in England genuine conservatism assumed the form of moderate Liberalism. To speak plainly, the enthusiasm which had produced reform had passed in 1851 into solid satisfaction at the results of reform, and was very near passing into outrageous self-satisfaction with the general merits of English institutions and the preëminent common sense of the English nation. In one line only the middle classes, who gave the tone to English public life, displayed something like enthusiastic zeal. There was predominant to an extent which at the present day is hardly credible, a belief in the successes which had been achieved, and the still greater triumphs which were to be gained, by strict adherence to sound economical doctrine, or by devotion to the arts of industrial progress. The great Exhibition, the very name of which is now unfamiliar, was, in the eyes of its founders, much more than a mere show. It was meant to be, what it was often termed, a Temple of Industry, and in that temple it was hoped that all the world might come and celebrate the reign of universal peace. If any one will take the pains to turn over Mr. Buckle's Remains, he will find an account of that so-called philosopher's emotion at the sight of the Exhibition. Mr. Buckle was, as all the world now knows, not a very profound or subtle thinker; but he caught the feeling of his time, and many wiser men than he thought that 1851, which, in fact, nearly coincided with the outbreak of a series of wars, would be the opening of an age of peace.

Now, the noteworthy thing in Mr. Greg's posthumous essays is, as we have already intimated, the singular fidelity with which they reproduce the tone of the period to which they, for the most part, belong. Their predominant characteristic is, at bottom, self-satisfaction with the modes of feeling and thought to which the author and his contemporaries were accustomed. The unamiable or the offensive side of this sentiment is shown in the two articles on France since 1848, and France in 1852. Never was a great nation so lectured and taken to task as is France by Mr. Greg. The ability of the writer is shown in the fact that almost all the criticisms he makes on the follies of the French Assemblies are, as far as they go, true. There are very few of his remarks which, taken singly, can be contradicted or even questioned. But the limitation of the writer is seen in the utterly false point of view from which his whole survey of French politics is made. The sum and substance of his censures on men like Lamartine, Thiers, Tocqueville, or Cavaignac, is solely and simply that French statesmen did not conduct themselves after the manner of intelligent Conservatives. It hardly seems to occur to Mr. Greg that the leading men of a great nation cannot all have been fools, and that if French politicians made, as they certainly did, gross blunders, it was quite possible that even their blunders were no worse than the errors which any politicians are liable to commit during a period of revolution. Still less does Mr. Greg appear to see that if France could learn something from England, it was at least possible that England could learn something from France. "Every old five-franc piece contains," he writes, "what we should call an Irish Bull. All the money coined under the Empire bears '*République Française*' on the one side, '*Napoléon Empereur*' on the reverse. The face of the coin affirms a fact; the back gives it a pointblank contradiction." This sentence, with its decision, its smartness, its rather mechanical antithesis, is Mr. Greg all over. We could produce scores of such sentences from his articles on France. The sentences are undoubtedly telling; their defect is their total want either of insight or of sympathy. Bagehot wrote a good deal about the French President and about the Republic of 1848 with which few of his admirers can cordially agree, but Bagehot's censures are the censures of a man who really tries to understand the position of the people whom he criticises. Mr. Greg, as regards the French, is never in strictness a critic at all. He is always a judge pronouncing sentence with the dogmatism and without the impartiality which are in place on the judgment seat.

If Mr. Greg's attitude toward foreign nations displays the unamiable side of his preëminently English satisfaction, his survey of "England as It Is" shows the more agreeable but hardly more philosophic aspect of the same quality. We doubt greatly whether at the later period of his life our author would have written of England, or indeed of any existing society, in the tone which he and his readers felt to be quite natural in 1851. An author, Mr. William Johnston, whose name, we take it, is now entirely forgotten, had attempted to prove on very inadequate grounds that the prosperity of England was on the decline. Mr. Greg takes up the challenge in his most vigorous and slashing manner. He shows point by point, with all the force of accumulative statistics, that English prosperity has increased, is increasing, and is destined to future and apparently unlimited increase. We do not for a moment assert that, as against Mr. Johnston, Mr. Greg was in the wrong. We have, indeed, very little doubt that Mr. Greg came far nearer the truth than his opponent. But we do assert that a writer of Mr. Greg's capacity could not nowadays display anything like the tone of confident self-satisfaction which marks every line of "England as It Is." Yet we do not suppose that either Mr. Greg himself or any reader of the *Edinburgh Review* saw anything unphilosophic or intellectually reprehensible in the general tone of Mr. Greg's article.

The reason why far less able men than Mr. Greg would at the present time find it impossible to write about national prosperity in the manner which was natural to him is, that two or three things were hidden from even wise men in 1851 which are well enough known to very ordinary persons in 1883. We know, for example, that the defeat of the Chartists meant something very different from the final overthrow of the cause which the Charter very vaguely represented. We know that in the lower classes of English society there was, as Maurice and his friends discovered, an amount of discontent and bitterness which was utterly unperceived by statesmen and capitalists. We further know (and this is perhaps the chief intellectual change which has taken place during the last thirty years) that the political and economical doctrines which lay at the basis of Mr. Greg's criticisms are not quite the absolute and immutable truths which they appeared to the thinkers of 1851. We know, in short, that the view of life and progress which then prevailed throughout England was, to say the least, imperfect and incomplete. The clean, hard, telling dogmatism of Mr. Greg is based upon absolute conviction in the truth of an economical creed. The curious disintegration of beliefs which has marked the course of English opinion since the time when Mr. Greg wrote his 'Miscellaneous Essays' has modified many things, but there is nothing which it has modified more profoundly than the tone of criticism, and Mr. Greg as a critic retained at bottom the now obsolete tone of 1851.

Every generation notes with severity the defects of its immediate predecessor, and it is easy enough for readers of to-day to perceive the intellectual deficiencies of Mr. Greg and his contemporaries. It is more difficult and equally important to appreciate fairly their virtues. The thinkers of 1851 possessed two merits which deserve cordial recognition. They had a firm grip of a certain number of economical principles. They held an exaggerated idea, both of the certainty and of the universal applicability of the doctrines taught by such writers as Ricardo or M'Culloch. But Mr. Greg and writers like him stood by the doctrines on which they rested their political beliefs with a tenacity unknown to a generation which, like the present, is apt to sympathize with every creed without firmly believing any. It is quite impossible to conceive of Mr. Greg as playing with Socialism after the manner of teachers who, without asserting that Mr. George is in the right, and indeed, on the whole, inclining to think that his views are fallacious, yet appear to hold that even the fallacies of a well-intentioned enthusiast deserve respectful consideration. For errors Mr. Greg had no respect whatever, and if he saw, or thought he saw, a popular fallacy, he exposed it and denounced it as little better than a piece of intellectual fraud. This sincerity is not after the taste of to-day, but it is, nevertheless, an admirable quality, rising at times to the height of a great virtue. The men of 1851, again, if they did not see very far before them, were on the right road. Whoever likes to waste his breath may denounce or deride the triumphs of pacific industry, but the prophet who indulges in such denunciation does, after all, only waste his breath and lead astray the disciples who listen to him. For it is perfectly certain that the progress of mankind does in the long run depend upon the maintenance of peace, the cultivation of industry, and the development of the pacific arts. Mr. Carlyle's rhetoric has not benefited the workingmen of England a tenth as much as the repeal of the Corn Laws and all that the policy of free trade meant and involved. Indeed, Carlyle's chief claim to statesmanlike insight arises from the consideration that, in his earlier works, he used rhetoric and humor to promote the very

causes of which in his later life he appeared to be the opponent. The teacher who denounced diplomacy, who recommended the repeal of the Corn Laws, and who insisted on the fact that the cry for the Charter had a deep significance, was not at one period of his career so far removed as might at first sight appear from Cobden and Bright.

Carlyle's attitude is worth notice, because it exemplifies a general principle. The very teachers who most vehemently opposed that absolute belief in the good results of material progress which characterized the era of the great Exhibition, could themselves suggest no practical methods of benefiting the great mass of mankind other than the measures advocated by the wisest economists and the most enlightened of practical statesmen. But if this be so, the conclusion inevitably suggests itself that the economists and the politicians who gave practical effect to economical theories had, whatever their mistakes, hit upon the road by which alone mankind could advance. This is no small merit, and may be fairly claimed by the class of thinkers of whom Mr. Greg will always remain a noteworthy type.

RECENT FOREST PUBLICATIONS.

Forestry in Norway. With Notices of the Physical Geography of the Country. Compiled by J. Croumbie Brown. Edinburgh. 1884.

Practical Forestry. By Andrew S. Fuller. Orange Judd Co. 1884.

Review of the Forest Administration in British India, for the Year 1882-83. By W. Schlich, Inspector-General of Forests to the Government of India. Simla. 1884.

THE forests of Norway, inasmuch as they now supply Great Britain, the largest consumer of imported forest products, with a very considerable portion of certain grades of the lumber which she consumes, are of special interest to Americans. The value of the deals, boards, and other lumber sent last year from Scandinavia to British ports was five millions sterling, and the volume of such exports is still rapidly increasing. If the Norwegian forests can maintain their present rate of production, the export of lumber from North America to Great Britain will not increase very rapidly; but when once these forests cease to produce, or are greatly reduced in productiveness, the forests of Canada and the Northern States—the only other forests in the world fully able to supply Great Britain with cheap lumber—must suffer a new and terrible drain upon their rapidly-disappearing resources. We turned, therefore, with considerable interest to 'Forestry in Norway,' in Mr. John Croumbie Brown's series of forestry publications, in the hope that some light might be thrown upon the extent, actual condition, and producing powers of the great Scandinavian forests. Such information, however, will be sought in vain in the pages of this book. Indeed, there is very little about forests or forestry in it at all. There is, to be sure, a short chapter upon the distribution of trees in Norway, where, among other startling facts, we are told that the ash tree grows within the Arctic circle; another on ship-building and shipping, which, as wood is more or less used in the construction of vessels, has a remote bearing upon forestry; and short chapters upon Transport and Export Timber Trade; and a dozen pages upon Forest Devastation and Remedial Measures, in which we fail to discover anything either very new or very valuable. The remainder of the book is made up of a not very successful compilation upon a great number of subjects, such as "Mountain Plateaux and Mountain Ravines," "Temperature," "Lakes," "Mechanical Action of Glaciers," etc., etc. Careless proof-reading is responsible for such blunders as *Sarix* for *Larix*, *Millaw* for *Willdenow*, *Lank* for *Link*, etc. There may be some reason for writing a book of this sort, but if there is it is not apparent to the uninitiated. It does not increase our knowledge of the forests of one of the most productive forest regions in the world, or add to the reputation of its indefatigable and irrepressible author.

A few years ago Mr. Andrew S. Fuller wrote, and wrote very instructively, about strawberry and other small-fruit culture. Now, as a new venture, he has prepared a treatise upon 'Practical Forestry.' The change is significant, and shows a growing desire on the part of the people of this country to know something about the care and cultivation of trees, and the meaning of forests and forestry. The title of the work in question, however, seems to have been badly selected. It is rather a treatise upon raising and planting trees than a general work upon forestry, which, as we understand that somewhat abused term, relates to everything pertaining to the forest, and not exclusively to tree planting. Certainly, at the present time, any American work upon forestry should treat of the care and perpetuation of our native forests, to which, for a century to come, at least, we must turn, rather than to the forests yet to be planted by the American people, for our principal timber supplies. This branch of forest science, however, Mr. Fuller barely touches upon, and then only in the most general manner, following in this the example of nearly all writers on American forestry, who have generally approached the subject from what may be called the nurseryman's point of view, to whom forestry naturally means raising and planting trees. In regard to these subjects the present book is full and accurate, and arboriculturists will find in its pages much useful knowledge about raising trees from seed, pruning, grafting, and the other operations necessary for the proper training of young trees. Something more than two-thirds of 'Practical Forestry' is devoted to a catalogue of the trees of North America, which seems to have been largely compiled without credit from one of the preliminary publications of the Tenth Census of the United States.

The 'Review of the Forest Administration in British India for the Year 1882-83,' by Doctor Schlich, Inspector-General of the Indian forests, which has just reached us, shows that the work of forestry conservancy in India has made satisfactory progress and yielded fair returns during the year in question. The experiment of protecting these valuable forests from fire and indiscriminate and unchecked cutting is not a very old one, but it has already worked wonders, and now India is beginning to get a financial benefit from her forest policy. We venture to invite the attention of the Secretary of the Interior, whose duty it is to guard the forests upon the public domain of the United States, to the following extract from Doctor Schlich's report:

"On the whole, forest conservancy in India is now fairly secure. This result has not been achieved without difficulties and opposition. In most cases the people had been accustomed to roam at their pleasure over the Government forest estates and to cut where they liked and in the most improvident manner. A considerable reluctance to interfere with that state of affairs existed. But as the real necessities of the case and the interests at stake became more and more manifest to the enlightened rulers of the country, it was recognized that endeavors must be made to prevent a further destruction of the forest property of the state, by regulating the use of the forests without depriving the people of the forest produce required for their domestic arrangements. After a protracted struggle these wise councils have prevailed, and the permanent preservation of a considerable area of forest land has now been placed beyond doubt. Forest conservancy has been recognized as an important part of the general administration of the country, and the labors of those who have struggled for this result have not been in vain."

The forest department of India was first organized upon a scientific basis in 1863; seven years later the net forest revenue was only £52,000. In 1880 this had increased to £215,000, although the effects of a wise policy of forest management were then only beginning to be apparent. In 1883 the forest revenue of India exceeded £300,000. The Indian forest acts originated by Dr. Brandes, the first Inspector-General of Indian forests, divide the forests of India into three classes: "reserved forests," "protected forests," and "private forests." The following description of the system is extracted from an interesting account of Indian forestry, drawn up by Sir George Birdwood to accompany the exhibition of Indian forest produce in the Edinburgh International Forestry Exhibition:

"The reserved forests are under the direct control of the department, and are managed exclusively as a source of immediate and prospective profit, their limits being surveyed and demarcated, nomadic cultivation within them forbidden, destructive undergrowth cut out, the annual hot-weather fires guarded against, and the cutting of timber strictly regulated. The protected forests are subject to less stringent supervision, and the people retain therein, subject to regulation, their hereditary rights of cultivation, pasturage, and wood-cutting, only certain kinds of timber being protected. Private forests are controlled only to such an extent as is necessary to prevent their destruction. Besides there are the state plantations devoted to the cultivation of timber trees. The area of the reserved forests of India is about 46,000 square miles. That of the unreserved forests has not yet been ascertained; while that of the plantations under the Government of India and Madras alone is 41,000 acres. The area of the plantations in Bombay is not known; but it is stated that the great problem of Indian forestry, viz., the rewooding of vast districts, has been grappled with in the western Presidency with great vigor and success, by sowing broadcast the seeds of all sorts of forest trees and shrubs, the result of which action is now beginning to be seen in the appearance everywhere of countless millions of vigorous saplings. Extensive fuel reserves have also been provided, and are strictly preserved in all parts of India, to meet the extension of railway lines throughout the peninsula. Prior to 1848 the revenue from the Indian forests was nominal, and there was no forest conservancy. And this vast and beneficent change, which will gradually also reduce droughts and famines in India to a minimum, has been achieved in a single generation, or in the brief space of thirty-five years."

America, it would seem, after all, has something still to learn from the Old World!

CHARLES GRAUX.—II.

Mélanges Graux. Recueil de Travaux d'Érudition classique dédié à la mémoire de Charles Graux. Paris. 1884.

IT was to be expected that the memory of a scholar whose eminence was so largely connected with palæography as was Graux's, would be honored by contributions to his favorite study It is therefore not surprising to find that many of the articles in the 'Mélanges' bear on new or undescribed MSS. The most important of these is Schöne's "De Isocratis Papyro Massiliensi." The Museum at Borely, a suburb of Marseilles, contains among other treasures brought from Egypt by Dr. Clot Bey eight strips of papyrus, the second and eighth of which contain three columns, the rest two columns each, of a large and generally well-defined Greek writing. The number of lines in each column varies from eighteen to twenty-three, the number of letters in each line is usually from twenty-four to twenty-seven, sometimes as many as twenty-eight or thirty. These fragments belong to the second of the two orations which Isocrates addressed to King Nicocles. Schöne does not venture to define the age of the papyrus; but it must in any case be of far greater antiquity than any

of the ordinary MSS. which do not go back earlier than the tenth century. Though noticed by Egger in 1863, and carefully described in the Acts of the Royal Academy of Sciences of Turin by Lumbroso in 1870, its very existence seems hitherto to have escaped the knowledge of professed palæographers such as Paoli, Wattenbach, Gardthausen, and Birt. The columns (some of them with large lacunæ) contain the first thirty paragraphs of the oration—quite enough to show how materially the Isocratean text, could we reconstitute it throughout by the aid of papyri as old as this, would differ from all known recensions. Photographed facsimiles of two columns present the papyrus visibly to the eye, greatly adding to the value of the description and probably to the cost of the volume also. To the same class of contributions belongs Gardthausen's "Différences Provinciales de la Minuscule Grecque," Maass's "Observationes Palæographicæ," Martin's "Notice sur les manuscrits Grecs de la Bibliothèque Classense à Ravenne," Omont's "Inventaire Sommaire des MSS. Grecs des bibliothèques Mazarine, de l'Arsenal, et Sainte-Geneviève, à Paris"; and the special articles devoted to MSS. of particular authors, Mendelssohn's on the Tours codex of Cicero's Letters, Müller's on the MSS. of Polyænus, Ulysse Robert's on the famous MS. of Prudentius, No. 8084 in the Latin collection of the Paris Library, Ruelle's on the Venice Cod. Marcianus 246, containing Damascius' περὶ τῶν πρώτων ἀρχῶν, Chatelain's on a MS. of Apollinaris Sidonius, Jacob's on the classification of the MSS. of Diodorus Siculus, Schenkl's on the MSS. of Xenophon's 'Hiero.' Each of these contains data of the most valuable kind for the student of the text of these works, though, probably, owing to the brevity required from the contributors, in some cases the reader will be disappointed not to find more. M. Ulysse Robert's careful article, for instance, on the splendid Prudentius at Paris makes one long for a facsimile. Oxford palæographers, doubtless, remembering the Bodleian Prudentius, itself one of the earliest codices in that library, would be glad to compare its writing with the much earlier Paris codex. In passing, it seems worth remarking that a really tempting opportunity exists for a new collation, with facsimiles of both of these two venerable MSS.; few tasks could be more instructive from many points of view.

Among the critical articles may be mentioned Bénoist's, on Guyet's 'Plautus'; Cobet's, on some passages of Herodotus; Dareste's, on 'Pro Flacco,' xxix.-xxxii.; Gertz's 'Emendationes Annæanæ' (corrections of Seneca); Gomperz's 'Une Dizaine de Notes Critiques'; Havet's 'Les Fautes Issues de Corrections dans les Manuscrits de Nonius'; Madvig's emendations of some passages in Athenæus; Schwartz's, on some new *scholia* to Euripides' 'Andromache'; Susemihl's questions on the first book of Aristotle's 'Rhetoric.' Herwerden contributes the lengthiest article in the volume—twenty-five pages of discussion and correction of Euripides. By far the cleverest emendations are those of Gomperz, on pp. 49-53. One of these alone our space allows us to quote. It is in an epigram by Gregory of Nazianzus on the deaths of Epictetus and Anaxarchus, the latter of whom was pounded in a mortar:

Ἔστιν Ἐπικτήτοιο μέγα κλέος ἐν προτέροισιν,
ἔστιν Ἀναξάρχου· ὧν ὁ μὲν ἀγνύμενος
τὸ κλέος οὐκ ἀλέγιζεν, ὁ δ' ὅλμου χεῖρας ἔχοντος
κοπτόμενός γ' ἐβόα πτίσσετε τὸν θύλακον.

Gomperz shows from other passages of Gregory that Epictetus *had his legs broken*, and that in v. 3 we must therefore read τὸ σκέλος, not το κλέος. The interchange of the two ideas, "legs," "glory," is as fantastic as the emendation of Gomperz is simple and convincing.

Passing to the archæological articles, we notice Mommsen's, on a Carthaginian burying-ground, containing a considerable number of inscriptions and names, which show it to have belonged to an imperial *familia*, or establishment of slaves and freedmen belonging to the Emperor. The date is approximately fixed at the end of the first or beginning of the second century. The doubling of letters to express the plural (*Coss.=Consules*), which is generally supposed to have begun in the third century, is now known to have existed in Africa as early as Hadrian; and Mommsen conjectures that it took its rise from the schoolmasters of Africa, and passed thence to Italy. M. Berger's "Ascagne," in which he identifies Ascanius with the African god Sakoun, is very interesting, but too short to be quite as convincing as its author believes. M. Cordier's "De l'Origine des Noms que les Chinois ont donnés à l'Empire Romain" examines the meaning of the Chinese Ta Tsin Kouo and Hai Si Kouo. Ta Tsin is identified with *Tarsus* on grounds which seem somewhat doubtful, against the views of Bretschneider, who believed it to represent *Italy*, and of M. Terrien de la Couperie, who supposes it to represent the Assyrian *Tidan*, or lower coast of Syria. M. Desjardins devotes sixteen pages to the Roman legion and its subordinate officers; M. Duchesne to the divisions of the Roman Empire as stated in ecclesiastical documents of the fourth century. Mr. Robert Mowat, M. Comparetti, M. Pierre Robert, M. Thédenat, deal with inscriptions. Weil examines a critical mark in the MS. of Demosthenes known as S. In the domain of lexicography, M. Beurlier's short notice of *Campidoctores* and *Campiductores*, and Löwe's discussion of certain glosses in the collection known as "abavis," are the most important. Science is represented by Heiberg's bold attempt to restore in Greek the lost original of Archimedes' τῶν ὀχουμένων from the Latin—often highly incorrect—version of Tartalea; and by De Rochas' translation of Athenæus' treatise on siege-engines. Each is illustrated by diagrams, which seem executed very carefully.

On the whole, this large collection of papers in honor of the French savant will be found full of new and original materials on a great variety of topics, literary or philological. Space will not allow us to mention other contributions of equal or greater importance; but the work will stand comparison with the best of those produced in Germany on similar occasions—*e. g.*, with the 'Symbola Bonnensia' in honor of Ritschl (1864-1867), or the large volume recently published in honor of Mommsen, though in neither of these cases is the tribute one of death.

A Record of Ellen Watson. Arranged and Edited by Anna Buckland. London and New York: Macmillan & Co.

Memoir and Correspondence of Eliza P. Gurney. Edited by Richard F. Mott. Philadelphia: J. B. Lippincott & Co.

Harriett Monsell. A Memoir. By the Rev. T. T. Carter, Warden of the House of Mercy, Clewer. E. P. Dutton & Co.

THESE three biographies of women represent three very different positions and opportunities in life. Of Ellen Watson one may think as of a young knight snatched from life while for the first time buckling on his armor. She had scarcely made herself ready for work when consumption seized her, but her short life had been so conscientiously devoted to preparation for duty, that it accomplished more for her sex than many a longer one. Her patient assiduity in study (carried on, it should be carefully noted, amid those home occupations which fall specially to a woman as daughter and sister) opened the way in more than one direction for women to study in college or university. The courage and constancy which seemed so fruitless for herself will not cease to be felt for many a day. Miss Buckland has drawn the slight portrait with affectionate appreciation, and has shown great discrimination in outlining an unusual development of religious experience. "I do not need religion: science thoroughly satisfies me," Ellen Watson wrote in the first eagerness of her researches in the laboratory. But four years after she wrote: "This longing after God is the deepest passion of the soul; it is this which it is the pleasure of God to answer, and with it to include every other blessing." Only a few months later, on the very eve of her sudden death, her last written words were: "For the things we see are earthly, but the things we see not are heavenly." There is not room here to trace the intermediate steps, but those who fear the effect upon women of abstruse studies would find encouragement in a thoughtful review of them.

To this simple and retired life the exalted positions of E. P. Gurney and Harriett Monsell offer the strongest contrast. To both of them were given stations among the great ones of the earth, and by both of them the powers and the opportunities granted were devoted to the noblest philanthropy. They furnish a new illustration of the oneness of all Christian experience in the likeness in faith and purpose of two lives which were so closely identified with two forms of religion so diverse as the Quaker and the most formal type of the English church. Mrs. Gurney's life is told principally in her letters, which can be readily supplemented from the various memoirs of her husband, Joseph John Gurney, and his remarkable group of relatives and friends. As a personal memorial for those who knew and loved her the book seems perfect; but to those who are not familiar with the life and spirit of the Quakers, much of it needs explanation. Judged from this narrative only, to outsiders of even reverent sympathy the visits to Louis Philippe and to Abraham Lincoln must be incomprehensible.

The same kind of comment will be made still more strongly upon the life of Harriet Monsell. She had long been known and widely honored as the first Superior of the community of S. John Baptist at Clewer. No one, however remote from the Anglican Communion, who has marked the rise and progress of philanthropy in our time could have failed to recognize in the great foundations that have one after another grown from that first little House of Mercy at Clewer, one of the strongest proofs of the power of organized work the world has ever seen. Of all this, for almost thirty years, Harriet Monsell was at once the head and the mainspring; but her life, as her friend has chosen to write it, is only another addition to the great body of pietistic literature. The letters, beautiful as they are, can be matched over and over again from the lives of other women. What the world wants to know, and not for curiosity, but for downright need of the help of knowing, is how this devotional, almost mystical piety was made fruitful in such immense work as she undertook and carried through. Mr. Carter's theory is, undoubtedly, that the individual life must be merged in the life of the community, and from that point of view his assertion that the rule and life there should find no place in the book is reasonable. But it is not reasonable to exclude Harriet Monsell's own practical life and work from it, if it is meant to be useful to the world. As it now stands, the book can have but little interest outside of personal friends or of admirers of that form of church work. And again, we admit that Mr. Carter can easily justify himself for leaving out the struggles of the Community: the same

motive prevailed in Sir J. T. Coleridge's Life of Keble. The opposition roused by the formation of the Sisterhood at Clewer was the more strenuous because it was far more in sorrow than in bitterness; but nothing did more to silence it than the wisdom of the Mother Superior—the wisdom which, while straining every nerve to develop the idea of "the Religious life," could still say to another woman, "I am glad that your work is *at home*." As well leave out the battles from the life of a warrior as these struggles from the biography before us.

We would not be understood to disparage the work that has been actually done. Justice, delicacy, and sympathy mark it throughout, and the very deficiencies we have noted are in great part the result of the closeness of the author's relations with the lady herself. He has not written for the outside world. Yet few lives could be so useful as an example, "for it was given to Harriet Monsell to fulfil a cycle of as many phases of experience as can well fall to woman's lot."

The Coöperative Commonwealth: an Exposition of Modern Socialism. By Laurence Gronlund. Boston: Lee & Shepard. 16mo, pp. 278.

Mr. Gronlund puts on his title-page the saying of Montesquieu: "My object is not to make people read, but to make them think." He is an advocate of Socialism of the extreme German type, but, recognizing his audience, he has striven to avoid any extravagance of style. There is no waving of the bloody flag, and he wishes us to think that the sanguine tints are only those of the coming dawn. He tries to be strictly reasonable. His Socialism is quite distinct from Communism or Nihilism. He is constructive as well as destructive. No one outside of a lunatic asylum, he asserts, proposes an equal division of wealth: "The motto of Socialism is, Everybody according to his deeds; that of Communism is, Everybody according to his needs." His aim is to describe the hoped-for change by which each shall get his deserts in such a way as to reconcile us to its advent. He does not agree with Marx that the Socialist should not present detailed plans because they excite controversy, but should content himself with making war against religion and the state. Mr. Gronlund says, in words intended to be those of moderation and common sense: Here, look and see what we are coming to; it is the only thing that will cure our sickness, and it isn't half so bad as it looks. He does, it is true, feel bound to admit, when his logic presses him to it in the end, that the force which is to usher in the coming race and establish the millennium is dynamite, and that, in the revolution which it will cause, church, state government, and family will all be swept away; but it is an unwilling admission, made only after he has explained at length the better régime that is to take the place of these antiquated conveniences.

He sees in history a progress of the lower class from slavery to serfdom and from serfdom to employment for wages, and the next step is to be coöperation. The notion that a man should be compelled by his needs to labor for another has the same oddly exasperating effect upon him that it has upon Mr. George, and he cries out in the same way that it is slavery, though his remedy is more drastic, for the state, he says, is to assume not only the land, but all capital and all business. Just why it will be less slavery or more coöperation than now, when the state shall compel a man to work and pay him in labor tickets, does not appear, but that, no doubt, he considers a minor point. At any rate there is to be no interest, no profit, and no rent, but only wages paid by the state. Each man is to have work supplied him by the state, and with such generous pay that four hours of labor a day will enable him to enjoy all the cakes and ale of life, and even an occasional trip to Europe to tone up his moral system by the sight of her effete institutions. Women are to be divorced whenever they wish it, and, of course, there are to be no lawyers, traders, or middlemen except a few state officials. The farming class, too, will be much diminished, because the state will have to run the farms on the model of the great bonanza farms in the West, with machinery in the place of muscle. Professional men, merchants, and farmers will all have to take their places in the Government mill, their wages being paid in labor tickets on a scale based not on market value, but on the worth of their services, skilled labor being more highly paid only so far as to include recompense for time spent in learning the trade. The only currency is to be these labor tickets—a sort of order redeemable in goods at the Government store. The Government is to be one of trades unions, with no humbug of representation or legislation, the rulers being chosen by the guilds, and all laws enacted directly by the people. We are to have, in short, an immense manufacturing machine without any limit to the gigantic power of its executive, a despotism unchecked even by the press, under which there is no motive to energy or economy, and all independence is gone. And the author tells us that the realization of these projects is very near. Each successive period of hard times is going to bring a riot of increasing danger, until at length the revolution will take place and the new order be established.

Mr. Gronlund's style is vigorous, though not elegant. He makes not a few of the errors natural to such a work, as in his misleading account of the law of married women's property, and his rejection of the law of demand and supply, and his unfounded assumption of the growing sufferings of workmen, for instance. There is little use in commenting upon the somewhat elaborate details of his scheme. The important thing is that his community, with no middle class, and the mechanic class exalted at the expense of every other; with the family tie feeble and the state omnipotent, and without a trace of those religious aspirations which have always been found necessary to hold together communities in which the ordinary bonds were wanting, is an attractive ideal to a growing number of earnest men, who feel the increasing pressure of civilization and the inadequacy of the charity offered to relieve suffering.

Banneker, the Afric-American Astronomer. From the posthumous papers of Martha Ellicott Tyson. Philadelphia: Friends' Book Association. 1884.

Jefferson's 'Notes on Virginia' begot two literary productions which deserve to be bound up with it. One was the letter of Benjamin Banneker, dated "Maryland, Baltimore County, near Ellicott's Lower Mills, August 19, 1791," accompanying a manuscript copy of the writer's first self-calculated almanac. The other was David Walker's 'Appeal,' published in Boston in 1829-30. Both were protests against the depreciatory view of the capacity of the black race expressed in the 'Notes.' Jefferson did not live to read the 'Appeal.' He received and answered courteously Banneker's letter, in which there is no direct allusion to the 'Notes,' and honored himself and his correspondent by sending the almanac to "Monsieur de Condorcet, Secretary of the Academy of Sciences at Paris, and member of the Philanthropic Society." To Banneker's reproach that the author of the Declaration of Independence should be found consenting to the perpetuation of slavery, Washington's Secretary of State opposed professions of a desire for the redemption of the blacks "as fast as the imbecility of their present existence, and other circumstances which cannot be neglected, will admit." This sort of gradualism had no potency in giving effect to the "glittering generality," "All men are created equal"; and we may be sure that the flattery offered to his vanity by Jefferson's disposal of his almanac did not console Banneker—a truly noble-minded man; not himself a slave, though the descendant of slaves—for the failure to make the desired impression on the moral sense of his great countryman. Indeed, he lived to experience in his own person the futility of the anti-slavery sentiment of that time, which neither persuaded the masters to prepare their slaves for freedom, nor kept them from taking away their acquired rights from the free blacks:

"All *free men* stood upon equal footing as voters, in Maryland, during the greater part of Banneker's life. There was a property qualification requisite, which, with age and residence, gave the right of voting until 1802. Then the law was changed, and the elective franchise conferred solely upon white men, twenty-one years old, who should have resided a given time in the place of voting. By this change the venerable astronomer was deprived of the valued privilege of voting during the last four years of his life."

It was Banneker's lot also to assist in laying out the District of Columbia: he had done so before writing to Jefferson. The territory thus set apart for the national Government was not thereby brought under the Declaration of Independence. Nowhere, in fact, did slavery more tenaciously assert its right to exist, or repel the notion that it was a "sectional" institution.

This unpretending memorial was written by the daughter of Banneker's best friend, and gathers together all that is ever likely to be known of the astronomer's pedigree, personal appearance, disposition, and genius—much of it from first-hand sources. Incidentally, it also gives a picture of early life in the settlement where Banneker grew up and won universal esteem.

A Trip to Alaska, etc. By Geo. Wardman. Boston: Lee & Shepard. 1884. Cr. 8vo, pp. iv-237.

Mr. Wardman's little volume is the result of a voyage undertaken by him six years ago in the capacity of correspondent for the Pittsburgh (Pa.) *Dispatch*, and some further experience as assistant-agent of the Treasury, at the Seal Islands. It is neatly bound and printed, but not illustrated or provided with map or index. The author states that he has been led to believe that his observations may be read with interest and profit by those in search of information concerning Alaska. After perusal we regret our inability to confirm this belief. The book has the virtues and failings of ordinary newspaper correspondence. It is lively and full of that exaggeration which writers for the press are often misled into thinking a necessary passport to popularity, and which in familiar matters is harmless because well understood. When information is sought to be conveyed, however, a more serious style and greater care in statements of fact is imperative. The state of things social and political, as described by Mr. Wardman, has largely passed away or changed; and to some extent never existed except for a lively imagination. The rather gloomy forebodings as to the resources of Southeastern Alaska have been happily disproved by the progress of the last six years, and there is little reason to doubt that continued if slow development is in store for the southern part of the Territory.

Proper names are wretchedly misspelled throughout the book, for which the printer is perhaps partly responsible, but such errors as the statement that Cook wintered in Captain's Bay in 1804-5 (p. 83), that snow lies on the Aleutian Islands to the water's edge in midsummer (p. 128), or that statistics of bullion ship-

ments from Alaska have no existence (p. 236), are too grossly careless to be tolerated in anything bound in covers by readers in search of information.

Short History of the Reformation. By John F. Hurst, D.D. Harper & Bros.

THE primers of science so much in vogue nowadays have certain positive advantages, especially in delivering the reader from the enormous mass of unessential detail that cumbers most treatises. In history, too, one cannot help noticing that, when skilfully composed, they recall in a measure the methods of the great writers of antiquity: the moral works of Thucydides and Tacitus were hardly more than on the scale of these modern primers. But it requires great literary skill to compress an extensive subject into these narrow limits—skill which, it must be confessed, is not displayed in Dr. Hurst's 'Short History of the Reformation.' It is not so much in the selection of material—although here we doubt the wisdom of covering so much ground in so small a space as the whole of Europe—or in the treatment of details; but the arrangement is not such as to give the reader a clear consecutive view. For example, the first chapter, "The Heralds of Protestantism," contains good accounts of the Mystics, the French reformers (D'Ailly, Gerson, etc.), but of neither Huss, Erasmus, nor Savonarola. The next chapter, "The Humanism of Italy," mentions Erasmus, but the full account of him is reserved for chap. xii., "The Reformation in the Netherlands," where he is brought in after the account of the revolt of the Netherlands, and is said to belong "in the front rank of reformers"! Neither has chap. iii., "The Reformatory Councils," a word of Huss in the brief paragraph on the Council of *Kostnitz*—a shorter paragraph than is devoted to either Pisa or Basel. On page 108, however, in the chapter on "The Reformation in the Slavic Lands," is an account of Huss, in connection with the Council of *Constance*. The book contains many instances of similar carelessness of expression (for we cannot think them due to ignorance). On page 23 it is said that "at no time have the morals of the Papacy been at a lower ebb" than during the period of its establishment at Avignon. There were worldly Popes during this period, but also saintly ones, and several of respectable character; not one to compare in wickedness with those of the tenth century or the close of the fifteenth.

Democracy in the Old World and the New. By the author of 'The Suez Canal, the Eastern Question, and Abyssinia,' 'Egypt, India, and the Colonies,' etc. London: Kegan Paul, Trench & Co. 1884.

MR. MATTHEW ARNOLD attaches so much importance to style as almost to place it before matter, and certainly in discussing abstract questions it is very essential that the attention should not be diverted from ideas by the obscurity of the language in which they are conveyed. In this respect this book leaves much to be desired. In following its laborious progress, one is reminded of nothing so much as the creaking and groaning of a heavily-loaded wagon over a rough road. When the reader is compelled to read twice nearly every other sentence in order to find out what the words are intended to convey, he is apt to become impatient of the effort of following the train of thought also. It is the greater pity, in this instance, because the ideas are both logical and practical. The main point seems to be, and it has our most hearty concurrence, that democracy is really the greatest safeguard against Socialism. The essence of Socialism is interference by the state with the right of private property, taking from those who have to give to those who have not. Modern political economy has completely demonstrated that the greatest prosperity exists in those countries where private property is most rigidly respected; and conversely, in a democracy where the freest scope is given to individual energy, great prosperity tends to foster the tenacity of private rights. Among the objects of Socialism stated by M. Élie de Beaumont, in 1849, was the abolition of the national debt in France. Yet, in exact contradiction to this, no French statesman to-day dares even to propose reducing the interest, for fear of the wrath of the body of fundholders; and it would be still more dangerous to attempt the second tenet of Socialism, state ownership of land. Such interference with vested right as was involved in the Irish Land Act, and the far greater revolution which is manifestly impending under the aristocratic Government of Great Britain, would be wholly impossible in France. In like manner the writer points out that when the property or privileges of a railroad corporation are threatened in the United States, the cry of Communism or Socialism is at once raised, and found to be a sufficient safeguard. Even more than education, therefore (and as a corollary to it), savings banks, easy land transfer, and every other means of promoting and rewarding thrift, form the strongest of all guarantees for the stability of society.

There is nothing more curious for those whose memories go beyond our civil war than to observe, as they may constantly do, with what a bound that event lifted all American institutions into the region of respectful discussion by Europeans. The present writer indulges an enthusiasm about our Supreme Court which is most gratifying to American pride. But the more precious a possession is, the more jealously the owner is likely to regard the dangers which threaten it. It cannot be denied that the weakening of executive and the preponderance of legislative power is one of the greatest dangers of our political future. But it is less obvious, though no less true, that here also lies the chief peril of our judicial system. Experience as well as theory is rapidly demonstrating that appointment of judges by the executive is the only safe method. In nearly all the States the politicians of the Legislatures have established the disastrous method of election, and while it is to be hoped that this will never be attempted under the general Government, yet an executive completely subservient to the intrigues of a Congressional majority might produce results nearly or quite as bad. Administrative reform, therefore, which is looming up as the basis of a future new party, includes not only its direct and immediate objects, but the inestimable treasure of a pure and independent judiciary, which, as our author well points out, is the strongest bulwark against Socialism and revolution.

The Government of England. By Louise Creighton. [Highways of History.] London: Rivingtons.

IT is not too much to say that for the political student the history of the English Government offers a more valuable field than any other in the world. From the time of the Heptarchy to this hour there has been a regular process of development, such as is nowhere else to be found, and the key to it appears in what Miss Creighton says of William the Norman: "He maintained the local courts of the shire and the hundred while he established a strong central government. The combination of the strongest part of each system produced a new and vigorous growth, from which sprang our existing constitutional machinery." There may have been under despotisms more efficient administration, and in wild and nomad tribes more complete local and individual liberty; but the combination of the two has never been equalled, and constitutes a most precious possession for all mankind. It is no wonder, therefore, that the literature pertaining to it—the flood of histories, commentaries, and analyses—should be greater perhaps than upon any kindred subject, and that no matter how much one may have studied it in detail, a bird's-eye view from a new point is always welcome. The little volume before us, being one of a series, professes to give this as to the strictly political development. Of course, in such small compass only the barest outline can be drawn, and it would not mean much to one who approaches the subject without previous knowledge. But as such a reader is hardly likely to refer to it, one more experienced will find it useful as classifying events, dates, and reigns, and calling his attention to periods as to which he may need further information.

Hints to Our Boys. By Andrew James Symington. Paisley: Alex. Gardner; New York: T. Y. Crowell & Co. 1884.

DR. LYMAN ABBOTT'S praise of this little book, in his preface to the American edition, is discreetly indirect. He says the boys whom it would most profit will not read it, and he recommends their fathers to dole it out to them. And certainly the lad who needs to be told, as to his knife at table, to "always hold it by the handle," cannot be trusted alone with the quotations from poets, statesmen, and moralists which Mr. Symington has here pitched together. Of even a brighter youth we should be tempted to say—considering the formless, illogical, inept construction of the book—that if morally he should gain somewhat by having read it, intellectually he would be worse off than before. As for the fathers, if we may judge by ourselves, the kind of "hints" they are in search of are such as they can place directly in the boy's hands, without any intervention on their part. We give this hint without charge to Mr. Symington, and to all other incompetent writers who may be planning a similar disappointment for parents.

Notes and Essays on Shakespeare. By John W. Hales, M.A., Professor of English Literature in King's College, London. London: George Bell & Sons. 1884.

"'I AM sure, sir,' said a worthy inhabitant [of Stratford-on-Avon], showing us," Mr. Hales says, "something or other supposed to be of Shaksperian interest—'I am sure, sir, we ought to be much obliged to Mr. Shakspere for being born here, for I don't know what we should have done without him.'" It is not only his birthplace that "drives a trade" in Shakspere; many books, many volumes, large and small, have reason to be equally obliged to him. If this volume of reprints from English reviews and journals falls into such a category, it redeems its obligations extremely well by the scholarly carefulness with which it treats its subject, or rather its subjects; for they are as various as Shakspere's genius, though they have not always a very close relation with that genius. The essay on "King Lear" best "sustains" the volume, and may be read with interest; though is there not something a little cold-blooded in teaching us to study "King Lear" as "a strikingly faithful picture of the Celtic race," as a play with "a certain historical and a certain ethnological interest"—which is one of the purposes of the paper? But it must be confessed that any philosophic coldness is balanced by the rhetorical fervidness of Mr. Hales's delineation of the characters of the play. The "Porter in Macbeth" is also a strictly Shak-

sperian study, and is carefully thought out and expressed; but, as with so much of Shakspere literature, it is difficult not to feel that one has read it all before. Of the other three long essays, two of them are somewhat misnamed. "Roundabout Stratford-on-Avon in 1605" should be "Considerations on the Gunpowder Conspiracy"; and "Chaucer and Shakspere" should be "Chaucer and the other Masters of English Literature." The paper "From Stratford to London" is a sufficiently interesting but somewhat guide-book-like account of what Shakspere would see on that journey.

The Notes—chiefly criticisms of Shaksperian labors, not of Shakspere himself—are too minute and technical in character to have any deep interest; but they are of value to the student in providing him with information, and references, and quotations which are of more or less importance according to the point of view from which the reader considers them. The most entertaining, perhaps, is the one in which "the top of question" of *Hamlet* is explained by her neighbor's description of Mrs. Poyser, who, he says, "keeps at the top o' the talk like a fife." Another passage worth quoting, if it were not too much involved in excellent but dry commendations of Schmidt's Lexicon, is on p. 181. It is about the range and changing choice of Shakspere in his vocabulary, the "unceasing movement" of his mind. And while examining how much the prose of other men is the foundation of Shakspere's noblest poetry, Mr. Hales makes a happy application to Shakspere of Dryden's saying about Ben Jonson: "He invades authors like a monarch, and what would be theft in other poets is only victory in him." The last of these papers was written in 1881 (the first in 1877). We shall be glad if Mr. Hales is induced to publish another volume of continued later researches in this field, where no sincere work is worthless.

The Citizen and the Neighbor; or, Men's Rights and Duties as They Live Together in Society. By Charles F. Dole. Boston: Unitarian Sunday-School Society. 1884.

THE purpose of this little manual is to set forth brief and simple statements, under separate headings, of the principal social and political problems involved in our human existence. The profession of the author and the high moral tone of the essays point to its primary adaptation to the use of Sunday-schools, though he aims at a more general influence, and there is certainly no class of young persons for whom his book may not be found both practical and useful. What strikes us most forcibly is the incongruity between the text and the questions which are appended to each division. It is rather startling, after reading the rather elementary propositions of the former, to be confronted with inquiries which have taxed the highest intellects: Does a monarchy ever secure the proper purposes of government as well as a republic? Can you think of any way of levying taxes which would render cheating impossible? Do you think the world is happier for having grown richer? Would there be fewer divorces if the guilty or faulty person could not marry again? Could any harm come to a country from letting as many foreign emigrants come in as might choose to come?

BOOKS OF THE WEEK.

Allen, C. B., and Mary A. The Man Wonderful in the House Beautiful. An Allegory, Teaching the Principles of Physiology and Hygiene. Fowler & Wells Co. $1.50.

PUBLISHERS, N. Y.

Le Français.

REVUE MENSUELLE DE GRAMMAIRE ET DE LITTÉRATURE.

THE FIRST NUMBER OF THE FIFTH YEAR WILL BE READY SEPT. 15.

All communications should be directed to the editor JULES LÉVY, Lock Box 3, Roxbury, Mass.
Specimen copies sent *free* on application until September 15.

WHAT THE NATION SAYS:

"*Le Français*, published monthly at Roxbury, Mass., by M. Jules Lévy, is by all odds the best educational French journal ever attempted in this country. We cannot too strongly recommend it as an adjunct wherever French is taught. Not less than one copy should be taken in every school having classes in the language. *Le Français* will not only assist in mastering idioms and pronunciation, but, thanks to the editor's cultivated sense for selection, in forming the taste of the learner."

CATALOGUE NO. 73 OF CHEAP AND VALUABLE BOOKS, Ancient and Modern, including many *long sets* for Libraries, and many *scarce, curious*, and *out-of-the-way* books, for sale at the reasonable prices affixed. Just published by
DAVID G. FRANCIS,
17 Astor Place and 140 Eighth St., New York.

NOW READY.

Speeches, Arguments, and Miscellaneous Papers

OF

DAVID DUDLEY FIELD.

Edited by A. P. Sprague.

"The selection embraces arguments made in court on great constitutional questions, productions relating to state and international law reform, and addresses and papers on political questions, miscellaneous subjects, etc. It is safe to say that a more valuable presentation of the principles and progress of codification and law reform is nowhere to be found, while the discussion of important topics of general jurisprudence and legal ethics must prove as instructive as interesting to both lay and professional readers."—*N. Y. Herald.*

Two volumes, 8vo, buckram. Price, $6.

D. APPLETON & CO., Publishers,
1, 3, & 5 Bond Street, New York.

27 & 29 W. 23d St.

Headquarters for School and College Text-Books.

From the Home Journal.

The thirty-fourth annual report of this old-established company gives evidence of the sound financial condition and increasing prosperity of this institution. Its income for the year 1883 was $2,080,729; its disbursements, $1,475,178.31—leaving a balance of nearly eleven millions of gross assets. Deducting for claims not yet due, reported claims, unpaid dividends, the reserve on existing policies, etc., there remains a surplus of nearly two and a quarter millions. The increase in its net assets over last year is $250,000.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 25, 1884.

The Week.

THERE is a great deal of talk in the canvass about the example the President of the United States should set to the young men of the country. But how is any one man, President or other, to set an example good enough to neutralize the effect on young men's minds of the display of tergiversation, insincerity, hypocrisy, and self-contradiction which scores of our politicians and editors are now giving to the world? Young men are not babes. They know what is going on, and they know that a man who said in April or June that Blaine was not fit to be President because he was dishonest, and is now publicly maintaining that he *is* fit simply because he has been nominated, is to all intents and purposes an impostor. What, then, is likely to be the effect on the youthful mind of seeing such men respected and listened to? Why do the clergy not take up this great public shame and cry out about it? What offence of any one man can compare as an example to this great conspiracy of many ostensibly good men, to lie, and believe lies, and spread them—to evade, suppress, and distort, and pretend, and make the worse appear the better reason—not in hot blood, not in a passing moment of weakness or of passion, but coldly, deliberately, month after month, on land, on sea, in cars, in steamboats, on the platform, in the newspaper? We would respectfully ask whether they can recall in the history of Christian nations anything quite equal to this as an illustration of the vice of falsehood on a great scale?

Mr. William Walter Phelps is reported by the Paterson *Daily Press* as having discoursed in that town on Thursday evening in the following fashion:

"As for the new batch of 'Mulligan letters,' they showed that Fisher owed Blaine $25,000 which he would not pay him; that Blaine had not 'suppressed' one of the letters, because he never had it, and that Fisher knew Blaine to be an honest man, as was shown in Blaine's letter enclosing the draft of one which he wished Fisher to sign 'because it was strictly true, was honorable to both, and would stop the mouths of slanderers.' The Democrats didn't want the Republicans to read these letters. They wanted them to skip the letters and only read the Democratic editorials upon them."

Oh, Mr. Phelps, Mr. Phelps! this will never do. You are a man of fortune, a college graduate, a man with a character. Everything is in your favor in the matter of truth-telling. You know better. You know that this is not a correct account of the contents of the "new batch." You know that *the facts* of the case show that Blaine knew he was lying, and was proposing to Fisher to lie, when he said that the contents of his draft letter were "strictly true." You know, too, that when you say that "the Democrats did not want the Republicans to read these letters," you are doing what a man of honor ought not to do. You know that your organ never ventured to publish one line of them till Tuesday week, and then published a garbled version, and that the Blaine papers all over the country have followed its example. There are things which ought to be more precious to you than Blaine, or Blaine's election, or even than the whole United States. Do not forget them even in this time of excitement.

We have been watching with much interest to see what course Senators Hoar and Hawley and the other defenders of Mr. Blaine's record would follow in reference to the new batch of Mulligan letters. Both those Senators have made speeches recently, but if they have made any allusion to the new letters it has been suppressed in the reports. Ex-Governor Long has, however, tried his hand at them with this result:

"I admit that it would have been better if these letters had not been written, and I do not think it was in good taste, but I have no doubt about it that Blaine wished to prove the truth. If Mr. Fisher had signed the letter, it would have entirely removed the difficulty."

That is, if Fisher had signed a statement which Blaine's own letters prove to have been a lie, "it would have entirely removed the difficulty." What is the matter with Mr. Long? He has too much intelligence not to see both the weakness and the immorality of that statement. Certainly he has too much intelligence not to know that "bad taste" is an inadequate definition of the offence of a man who uses the Speaker's chair as a basis for stock-jobbing operations. And why does he contradict Blaine himself by regretting the writing of letters that Blaine says are "consistent with the most scrupulous honor and integrity"?

Governor Robinson, of Massachusetts, has contributed the valuable suggestion to the campaign that Mr. Blaine's securing a bank charter for Fisher and Caldwell was the sort of thing which Congressmen are doing all the time, and that it was a perfectly natural and proper thing to do. It is true that Congressmen often go to the Treasury Department on business of this kind at the solicitation of constituents, but it is not true that they habitually keep an eye out, a year ahead of time, to discover when new bank charters or other good things are likely to be forthcoming, in order to get the start of the public in the distribution of plums. All such Congressmen are fit to be classed with Blaine. We are sure that Mr. Robinson has never done anything of the kind; but seeing no wrong in it when done by somebody else is little better than doing it one's self.

Mahone has been officially recognized as the regular Republican leader of Virginia, and henceforth the kickers in the ranks of the party in that State will receive no sympathy from Steve Elkins, or any other Blaine agent. This is consistent and appropriate. There is not in the whole South a man better fitted to represent Blaineism, with all that the term implies, than Mahone. He is, as Mr. William Walter Phelps eloquently says, the "little Napoleon of Readjustment"—which is a Blaineism for successful repudiator; he is one of the ablest machine politicians which any section of the country has ever produced; and he is a most brazen violator of civil-service rules. In addition to this, he has used his chair in the Senate for innumerable "private business transactions," the chief of which has been to cast his vote with the party able to give him the most patronage. He has never been a deadhead in any political enterprise, and we are convinced that he could read all the Mulligan letters and not discover a particle of harm in them.

The organization of a Cleveland and Hendricks club among the members of the Produce and Maritime Exchanges is a significant movement. It is the first outward demonstration of the undoubted drift of business men toward Cleveland. Of the club's officers, the President is a Republican, the Treasurer is a Republican, and there are thirteen Republicans on the Executive Committee. The membership at the start is 433, a large proportion of whom have hitherto voted the Republican ticket. These Pharisees say of their "apostasy":

"The Republican members of this club, while claiming to be Republicans of the Abraham Lincoln school—'with charity for all and malice toward none'—unite with this club, believing that the nomination of James G. Blaine is an eminently unfit one and against the best interest of the country and the American people. And they recommend their fellow-merchants throughout the country to earnestly aid and support the election of Cleveland and Hendricks, whose records for honesty and integrity preëminently fit them for the position of President and Vice-President of the United States."

The expectation is that the club will have 700 members within a few days. They will open a headquarters, distribute documents, and organize similar clubs in the exchanges in other cities. The importance of this movement is emphasized by the fact that its leaders are the men who helped organize the business men's demonstration for Garfield late in the campaign of 1880, after General Hancock's unfortunate utterance on the tariff had shaken the confidence of New York merchants in his knowledge of public questions. It was the support of the merchants which saved Garfield from defeat, and Blaine needs their votes much more than Garfield did.

A very interesting letter upon the situation in Ohio is published in the Boston *Advertiser* from a correspondent at Cleveland. It shows more clearly than we have seen indicated before what an important factor the labor vote is in the problem. The closing of the mines and mills has thrown thousands of men out of employment, and their feeling toward the party in power is consequently not friendly. An iron-worker in Cleveland who heard a Republican campaign orator expatiate upon the benefits of protection turned away, saying: "Aye, me mon, that sounds all so vera well, but me and you voted for Garfield and a high tariff. What has we now? The mills and forges be closing all around, mines be stopping, wages going down, and it looks as if the worst be not here yet." That is the logic which is meeting the Republican stumpers al over the State, and none of them has succeed ed in answering it. Another element of trouble is the wool-growers, who complain that the only reduction of duty made in recent

years was made by a Republican Congress, and they do not see how the suffering which it has caused them can be charged to the Democratic party. It looks as if demagogism on the tariff question had about reached its limit, and if it has, the defeat of the Republicans is not far off.

Mr. Carl Schurz's speech in Cincinnati was advertised in the columns of the *Commercial-Gazette*, of that city, with a quarter of a column of extracts from the editorials of the *Commercial* and the *Gazette* of June, 1876. The extracts from the *Commercial* set forth, among other glaring and admitted truths, that "the Blaine letters prove all that he has been charged with"; also, that "the people of the United States may be somewhat demoralized, but they are not so far gone that it can bé presumed they will elect President a man who has been on the make in the securities of subsidized roads"; also, that "Blaine's stock-jobbing seems to bear the same relation to the open market that policy playing bears to lottery dealing." The *Gazette* gave its encouragement and endorsement to Mr. Schurz by saying that, "with the pending charges against Mr. Blaine, or, in plainer words, with his own letters standing against him, the *Gazette* could not and would not defend him, and our support of him would be about as valuable as would his own support of himself"; and that "No man can successfully stand before the people of this country as the Republican candidate for the Presidency in this year of grace, 1876, covered all over, as Blaine is, with his own letters and other evidence of a speculative connection with almost every subsidy railroad into which Congress breathed the breath of life." The advertisement ended with the cabalistic characters "se 21–2t–op," which we suppose means September 21, two times, oh-pshaw!

President Seelye has written a somewhat obscure article on "Moral Character in Politics" in the *North American Review*. The gist of it is that politicians ought to be good men—that is, that a statesman ought to be willing to "surrender his own advantage to the public good," and ought to be "pure." All this everybody knew before. The question which is perplexing people to-day is, what they are to do if they find that none of the candidates come up to the Seelye standard, and on this he throws but little light. He advises people in that case to cast their votes for a candidate of their own selection, whose character answers their requirements. This would be good enough counsel if the object of voting for a candidate for the Presidency was simply to express the voter's opinion as to the kind of man a President ought to be, and if the object of the counting of the votes was simply to furnish politicians with a great moral lesson. Unfortunately, however, the process of election is the provision of a chief magistrate for a great nation, and it will not wait one hour for the moralists to find a man morally worthy of the place, nor will a bad man, if elected, hesitate for one moment in taking possession of the office, and using it to suit himself, because the moralists think him unworthy. Consequently crying out to people at such a crisis, that they must elect a pure and upright man, when the one thing they can do is to elect the best man attainable, is one of those "counsels of perfection" which it is, perhaps, the duty of moralists to promulgate now and then for general guidance, but which, when offered for use in a particular case, are apt to make the plain people who have to do the work of the world laugh. President Seelye's production of Bismarck as an example of the pious, pure statesman gives, we confess, a touch of burlesque to an otherwise creditable essay.

Mr. Blaine's newspaper supporters continue to disregard his most earnest wishes. Few of them publish all the last Mulligan letters and some of them suppress the whole batch. The *Chronicle-Telegraph*, of Pittsburgh, says it must decline to bore its readers with "waste paper," and that it will not print them because they are "no longer an issue in the campaign." The Albany *Journal*, which has reprinted the whole of them, after waiting three days, considers them a "new bugaboo," and calls Fisher and Mulligan "as precious a pair of sharpers as go unhung." The Providence *Journal* has not printed a line of them, but has printed Mr. Blaine's request that every Republican newspaper in the country help on his vindication by publishing them in full. After three days' reflection the *Journal* broke silence on the subject in an editorial paragraph seven and one-half lines in length, expressing the opinion that the letters "contain little that is new, and that the country has already passed judgment upon the matter so far as it affects Mr. Blaine's reputation for integrity." This is a queer way to treat a "vindication," but it strikes us as much better than the *Tribune's*, which was to suppress seven of the letters and then attempt, by printing in black-faced type the most atrocious falsehood which Blaine ever told, to make its readers accept the same as a proof of his innocence.

It is now more than three months since Blaine was nominated, and more than five months since we began, in these columns, the discussion of his fitness for the Presidency as disclosed in the Mulligan letters. Before his nomination and for three months afterward his chief organ, the *Tribune*, refused to publish any of the Mulligan letters or any of the attempted defences of them, on the ground that they were "exploded slanders," and had no bearing upon the present campaign, which was to be above all things else "aggressive." On Saturday the *Tribune* published for the first time all the Mulligan letters, first and second batches, and accompanied them with some editorial comments which are in no sense a defence, but merely a justification on the ground that the transactions between Blaine and Fisher were "simply a series of private business transactions with which the public has no concern." The correspondence fills six columns of the *Tribune* and numbers in all thirty-seven documents. Their forced publication now, in the heat of the campaign, shows that they are, as we predicted they would be, the real issue of the canvass, and the platform upon which Mr. Blaine must be elected or defeated. We trust that every Republican voter will read them carefully, and decide for himself if he thinks they reveal simply "a series of private business transactions," and if he is prepared to have the White House made the headquarters for more private business of the same kind by electing Blaine President. What is asked of the American people now is a vindication of public morality of the kind which these letters reveal. They are the standard of the Blaine party and would be the standard of a Blaine administration.

As we have said elsewhere, we regard the widest dissemination of these letters as of the greatest importance. The *Tribune's* publication in its daily edition will be of incalculable value, and in its weekly edition would be, of even greater for the readers of the *Weekly Tribune*, who are far from the cities, and who have few opportunities to see any other paper, have as yet been permitted to see none of these letters. The unaccountable withholding of documents which are now declared to be not only innocent, but really creditable, will have the natural tendency to stimulate curiosity to read them, and we are confident that great good will be the result. We are only sorry that the *Tribune* has not accompanied the letters with the text of Mr. Blaine's speech in Congress, defending his course in the Little Rock transaction, made before the letters were produced. Still, if the *Tribune's* readers will compare Blaine's and Fisher's letters with the statement which Blaine tried in vain to get Fisher to sign, they will find much food for reflection.

Keifer is travelling across New York State giving opinions of Cleveland which are the most severe of any uttered recently save those of Dorsey and the Rev. E. D. Winslow, formerly of Boston, but now of Buenos Ayres. Keifer says: "Cleveland is a very unfortunate candidate for his party. There is absolutely nothing of general or national character to be said for him, and he does not have the merit of being unknown. He has no hold on the working classes, who constitute a large factor in the campaign." As for Blaine, Keifer thinks that the charges which have been brought against him "have had no unfavorable influence whatever—they are not believed by any considerable number of people, and are regarded as a poor and feeble attempt to offset the admitted scandals against Cleveland." Keifer does not seem to have been asked his opinion of the Independents, but we have no doubt that it is a very low one.

Keely has stopped work temporarily on the "motor," and begun experiments with a gun. There was an exhibition of the gun at Sandy Hook on Saturday, and it is the unanimous testimony of those present that it actually went off. As none of the visitors, after a long and close study of Keely's inventions, believed beforehand that it would do this, the experiment was naturally looked upon as a great success. Keely says that the "force" in the gun was "etheric vapor," but ordinary scientific people say it was nothing more nor less than compressed air, and that the experiment has merely given fresh evidence that Keely is a fraud. We do not accept this harsh view. Saturday's demonstration has so encouraged the stockholders in the motor that they will pour in fresh subscriptions, and Keely is going

to set to work immediately to build two engines, one of 250 horse-power and one of 500 horse-power, which will be run by "etheric vapor," and within a few weeks the final grand demonstration will come, when all scoffers will be put to shame and a new motive power will be given to the world. Keely says his great trouble has been to "bridle the force," but that he has got it under control at last.

The Egyptian complication has passed into a fresh stage, and a somewhat serious one, by the high-handed repudiation of the liquidation law by the orders of Lord Northbrook and Sir Evelyn Baring, the British Commissioners. Under this law certain branches of the revenue were set apart for the redemption of bonds which are largely held in France, and the interest on which has for some time been seriously threatened, owing to the heavy deficit in the Egyptian income. At the late Conference all proposals for a reduction of it as a relief to the Egyptian taxpayer were rejected by the French representative. The British have taken the bull by the horns, and ordered the pledged receipts to be turned into the Egyptian Treasury for the general expenses of the Government. The indignation this is causing in France may be imagined, and it comes on top of a great deal of Anglophobia which the press has lately been stimulating, and of which a new paper in Paris has actually been started as the organ.

The news that Gordon has relieved himself by defeating the Mahdi's forces, makes the situation in Egypt more sensational than ever, and heightens the romance of Gordon's career. In the meantime, however, Wolseley's preparations for the ascent of the river continue, and are the subject of sharp debate in England. He proposes to take the bulk of the army up the stream in long rowboats carrying twenty men with stores put away in flat cases on the bottom, fitted with awnings, and only drawing fifteen inches of water. They are to be hauled or poled over the cataracts, or, if possible, towed by steamers, one or two stern-wheelers having been sent out from England for that purpose. The opinion of the older explorers, like Sir Samuel Baker, is generally against the scheme, on the ground that the Nile will be too low for it; but they were all or nearly all previously committed to another route—generally the Suakim-Berber route. The advantage which all concede to the Wolseley plan is that it supplies what is the great desideratum of all military operations in Upper Egypt, and that is, water for man and beast. It is the want of this, and this only, and not the climate, which makes marches across the desert for large bodies of men impossible. By sticking to the river, even if progress be slow, this is done away with. But the probabilities are now that Gordon will meet the expedition half way down, drums beating and colors flying, unless, indeed, he sticks to his original plan of staying in Khartum to set up another government such as he approves of.

Even before the news of Gordon's success the reports from the interior showed that the Mahdi's influence was declining. Doubtful tribes were abandoning him, and those which had remained faithful to the Egyptian Government were becoming more pronounced in their fidelity, largely under the influence of Major Kitchener, an officer of whom doubtless more will be heard hereafter. He has, during the last year, led an extraordinary life, travelling about the desert with a small escort from tribe to tribe, encouraging the wavering, denouncing the hostile, and collecting and forwarding to Cairo the mysterious oral rumors which, in the East, often fill the bazaars with news far in advance of either telegraph or mail, and all the while he has been in daily danger of being murdered or left to perish in the sand. The truth is, that a Mussulman prophet who relies on the sword must succeed quickly if he is to succeed at all, even when he has more civilized material in his following than the Mahdi has. The tribes are, doubtless, getting tired of watching and waiting around Khartum and Suakim for victory which never comes, losing men occasionally, and always standing on the defensive. It is noticeable that Baker Pasha, for whose restoration to the British army a petition with an immense list of signatures was lately presented, and who had managed to secure the deep sympathy of the best drawing-rooms in London, has been left out of the arrangements for the Wolseley expedition. It was confidently expected that he would be employed, but this has been forbidden, probably by the Queen, on the "holier-than-thou" principle. Besides his unfortunate antecedents, he has not been a success in his Eastern warring. His friends say he did wonders both in Turkey and in the Sudan, but somehow the enemy always got the better of him, and there is for a soldier little use in deserving success, if he does not get it.

There is a curious dispute going on in Ireland between the Government and the Corporation of Limerick. During the disturbed period the city was "proclaimed" under the Coercion Act, and additional policemen sent to it, and their cost charged to the borough, and the Common Council was directed to levy a tax to pay it. This the Councilmen refused to do, and have set at defiance a mandamus to compel them, announcing their readiness to go to jail, if they cannot resign, sooner than comply. The Government have reduced the levy but will not forego it altogether. If it is enforced, of course the sole result of any importance—for the sum to be collected is very small—will be the conversion of the Councilmen into popular heroes and martyrs, and the aggravation and renewal of the now declining popular discontent. It is this hardness and want of tact, and unreadiness to be conciliatory at the proper moment, to which fully one-half of the English failures in the Government of Ireland have been due. The effect of saying to the Limerick Corporation that, the troubles being now over, bygones should be bygones, and, as the city was poor, the rate would not be levied, would probably be very happy, and would be a kind of appeal to which Irishmen are very ready to respond. But it goes hard with even the best Englishmen when in power—and Earl Spencer is one of the best—to do this sort of thing.

The Irish Nationalists are making a good deal of uproar over the assertions of Casey, one of the informers, on whose evidence partly the Joyces were executed for the horrible Maamtrasna murders, in which a whole family except one boy nine years old were massacred. Casey's story is that he was induced to swear as he did by Bolton, the Crown Solicitor, whose unsavory character has lately been exposed in a libel suit; that the Joyces were not guilty; that the witnesses who swore they followed the murderers in the moonlight swore falsely; and that the real perpetrators of the crime are still at large, and so on. Enough interest in his story has been excited to get some of the Catholic clergy, and notably the Archbishop of Tuam, to urge the Lord-Lieutenant to make an investigation, but he declines to do so, and we think justifiably. There was not one of the murder trials of that period in which the evidence was so clear. But the Irish Nationalists are once more going to put themselves in the wrong before the civilized world by making Casey's story the basis of a furious agitation and denunciation of Earl Spencer. Their eagerness for an inquiry would make some impression on mankind if it had ever been shown in the work of detecting the real murderers during the troubles of 1882-83. But, as everybody remembers, every conceivable obstacle to the detection of the murderers was offered by the Nationalists at that period, and everything said and done that could be said and done to throw discredit on all attempts to bring them to justice. In fact, to read the Nationalist press, one would conclude either that no murders at all had been committed or that they had been committed by the police.

The question of the justifiability of cannibalism as a measure of self-preservation will shortly be tried in the English courts. A man named Dudley undertook to take a yacht out to Australia, but she foundered at sea, and he and his crew of two men and a boy took to the boats. They were four days without food, and Dudley then killed the boy, and they all lived on him till they were picked up. Dudley is now to be tried for murder. The case is peculiar because when shipwrecked men begin to think of cannibalism as a means of safety, they usually draw lots, which makes the person killed a consenting party, so to speak, to the arrangement under which he is killed. In this case the boy was not consulted or forewarned till the knife was at his throat. The ethical question, too, is now raised, we believe for the first time, whether shipwrecked people are not bound to die sooner than kill any one else; but we doubt if a jury will have much difficulty in adhering to the old doctrine, that the minority may properly be sacrificed to the majority, or, in other words, that any two men are justified in saving their own lives, in a lawful enterprise, at the cost of the life of a third. In this case, the three survivors were undoubtedly saved by the boy's death, which will tell in the Captain's favor. Anyhow, no fear of future temporal punishment is likely to prevent such occurrences. A man who loves life will always take his chance of the gallows by consuming a friend if death by starvation be imminent. Besides all this, there is the physiological question whether a person who has passed several days without food is in possession of a responsible judgment.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 17, to TUESDAY, September 23, 1884, inclusive.]

DOMESTIC.

THE Naval Court of Inquiry appointed to investigate the circumstances of the collision between the *Tallapoosa* and the Baltimore schooner, finds that the *Tallapoosa* did all in her power to avoid the collision, and that the blame for the collision rests with the schooner. The Navy Department approves the finding of the court.

Colonel Dudley, Commissioner of Pensions, has resigned to engage in banking with A. E. Bateman. It is their intention to have offices in New York and Washington, Colonel Dudley taking charge of the latter. The resignation will take effect on November 10.

J. B. Butler, Appointment Clerk of the Treasury Department under Secretary Folger, announced himself on Friday for Cleveland, and said that he hoped all of Mr. Folger's friends would support the Democratic candidate.

The Mahone Committee in Virginia has received a letter from the Republican National Committee, in which the latter recognizes the Mahone State Committee of Virginia, appointed by the Convention of April 23, 1884, as the regular organization of the Republican party in that State, communicating and coöperating only with it.

Mr. James G. Blaine recently wrote a letter to William Walter Phelps, which was published on Saturday, and which explained that he was secretly married on June 30, 1850, at Georgetown, Ky., "in the presence of chosen and trusted friends," by what he knew was in his native State of Pennsylvania a perfectly legal form of marriage. In the following winter he discovered that the laws of Kentucky made a license certified by the clerk of the county court "an indispensable requisite of a legal marriage." He adds: "After much deliberation, and with an anxious desire to guard in the most effectual manner against any possible embarrassment resulting from our position—for which I alone was responsible—we decided that the simplest and at the same time the surest way was to repair to Pennsylvania and have another marriage service performed. This was done in the presence of witnesses, in the city of Pittsburgh, in the month of March, 1851, but was not otherwise made public, for obvious reasons. It was solemnized only to secure an indisputable validity, the first marriage being by my wife and myself always held sacred. My eldest child, a son, was born in his grandmother's house on the 18th day of June, 1851, in the city of Augusta, Me., and died in her arms three years later." Mr. Blaine has answered the interrogatories, filed in the Indianapolis libel suit, in accordance with the above letter.

Mr. Mu'ligan positively reasserted on Wednesday that a copy of the letter from Warren Fisher, jr., to Blaine, bearing date of October 24, 1871, *was* in the package which Blaine took from Mulligan at the Riggs House. Whether or not Mr. Blaine purposely suppressed it or simply misplaced it, Mulligan did not know, and had no explanation to offer. The original letter, of course, Mr. Blaine had, and the letter printed in the lot of September 15 was from the letter-press copy, as are all the letters from Mr. Fisher to Mr. Blaine.

James G. Blaine attended the Worcester (Mass.) Agricultural Fair on Thursday. He arrived in New York on Thursday night, and was received by various political organizations. On Monday night he went to Philadelphia and stopped at several New Jersey towns on the way.

The Republicans of the First Assembly District of Oswego County on Friday nominated Henry C. How for Assembly. D. C. Littlejohn was a candidate for the nomination, but the district was carried overwhelmingly against him. Littlejohn made a speech in the Convention, claiming credit for defeating the Adirondack Park Bill.

W. D. Kelley has been renominated for Congress in the Fourth Pennsylvania District. This is the thirteenth time he has been a candidate for that office.

Ex-Gov. Thomas A. Hendricks was in a train which was wrecked near Farmer's City, Ill., on Wednesday, but escaped with slight bruises. Twenty-five persons were injured.

A large mass-meeting was held in the Academy of Music on Thursday evening, under the auspices of the "Irish-American Anti-Cleveland Union." M. D. Gallagher presided. Alexander Sullivan, of Chicago, who resigned the Presidency of the Irish National League to take the stump for Mr. Blaine, was the principal speaker. He repeated the familiar charges that Cleveland is an enemy of the workingman, "a free-trader," etc.

The New Jersey Independent Republican Executive Committee have opened headquarters in Jersey City, from which documents will be forwarded to those in sympathy with the movement. An address to the voters of the State will soon be issued.

Mr. Carl Schurz spoke in Cleveland on Thursday night, in the Armory, to a great crowd, which received him with enthusiasm. The President of the evening was C. B. Lockwood, for many years a sterling Republican, and the lifelong friend of General Garfield. Upon the stage, as Vice-Presidents of the meeting, sat a number of prominent Germans who never before denied their allegiance to the Republican party. In speaking of the second series of Mulligan letters, Mr. Schurz said, referring to Mr. Blaine's letter to Mr. Fisher enclosing the draft of a letter which the latter was asked to sign, exculpating Blaine: "What a spectacle! The nominee of a great party for the highest position in the land asking a railroad speculator to give him a certificate of good character; asking a man to sign a letter which he who wrote it knew to be utterly false in the main point."

Carl Schurz spoke in German to a large audience in Cincinnati on Monday evening. To a reporter who questioned him about the story that he is paid for his speeches, he said that it was not true, and that he even pays his own travelling expenses.

The Greenback-Labor party of Colorado has nominated John E. Washburn for Governor.

President Seelye, of Amherst College, has not declined the Massachusetts Prohibition nomination for Governor.

There was a large attendance at the opening session of the sixteenth annual reunion of the Army of the Cumberland in Rochester on Wednesday. Generals Sheridan, Logan, Kilgour, Horace Porter, and many other distinguished men were present. General Sheridan made a short speech in reply to an address of welcome by Mayor Parsons. In the evening an oration on Gen. George H. Thomas was delivered by Maj. William H. Lambert, of Philadelphia. The reunion was brought to a close on Thursday evening. The next meeting will be held at Grand Rapids, Mich., on September 19, 1885.

Between 2 and 3 o'clock on Friday afternoon an earthquake shock was felt in many parts of Ohio, West Virginia, Indiana, and Michigan. No damage to property is reported from any quarter. In Michigan the shock was felt at Ann Arbor, Schoolcraft, Adrian, Grand Rapids, Hillsdale, Hudson, Jackson, Lansing, Marshall, and other points. Three shocks were felt at Angola, Ind., at 2:53 P.M., and between 2:15 and 2:25 P.M. shocks were felt at Auburn, Aurora, Elkhart, Fort Wayne, Ligonier, Marion, Michigan City, Muncie, Madison, Indianapolis, Danville, Anderson, Wabash, and other points in Indiana. In Ohio the shocks were felt at Cleveland, Delphos, Mansfield, Newark, Norwalk, Tiffin, Zanesville, Mount Vernon, Columbus, and Coshocton. In Wheeling, W. Va., a severe shock was felt about 2:52 o'clock. The shock in the suburbs of Cincinnati was severe. Panics were narrowly averted in several schools. The shock was felt at London, Ont., about 3:25 o'clock.

Dr. Wolf, of Zurich, discovered on September 6 a bright new comet. It was carefully observed at Harvard Observatory on Sunday night. The observation shows that the comet is circular, two minutes in diameter, and well defined, with a nucleus of the ninth magnitude. Its position is as follows: Sept. 21, 14 hours 36 minutes 30 seconds, Greenwich time; right ascension, 21 hours 15 minutes 53.11 seconds; declination, 21° 52′ 41.7″.

President Adams's statement to the Union Pacific Directors at Boston, on Monday, declares that for the year ending July 1, 1884, this company had a surplus income, applicable to dividends, equalling 5.22 per cent. upon the company's capital stock. It amounts to $3,179,704.

The Cambria Iron Company at Johnstown, Pa., employing 5,000 men, has ordered a general reduction of wages from 10 to 20 per cent. on October 1, owing to competition and decline of prices. In order to equalize matters they will make a reduction of 10 per cent. in coal and the rent of dwellings owned by the company.

The infamous Mollie Maguire Society has been extensively revived among the miners of Pennsylvania. Mine bosses and railroad operators have been threatened, and a number of Hungarians have been assassinated, and the Society is suspected of instigating the crimes.

The firm of Rindskopf Brothers & Company, of this city, clothiers, made an assignment on Friday; liabilities about $800,000, with assets nearly equal.

Cleveland, O., was visited with another serious lumber fire on Sunday morning. It began in Munroe Brothers' yard, and a second fire soon broke out in Brown, Strong & Co.'s yard, two blocks away. Twenty acres were burned over. The fire was evidently incendiary and a man has been arrested on suspicion. The loss is estimated at several hundred thousand dollars.

Capt. Albert De Groot, thirty years ago the most popular North River steamboat commander, died in Richfield Springs on Wednesday. When a boy he obtained employment on one of Commodore Vanderbilt's boats. He became master of the *Sandusky*, the *Osceola*, the *Niagara*, and the *Reindeer*. Captain De Groot put up the statue of Franklin in Printing House Square in this city, and presented it to the press of the city. He was about seventy years old.

"Jerry" McAuley, a reformed convict and noted missionary of this city, died on Thursday at the age of forty-five. On January 10, 1882, the Cremorne Mission for rescuing fallen men and women, which had been fitted up at a cost of $9,000, was opened under his management. It has been very successful.

Seabury Brewster, an old dry-goods merchant of this city and millionaire, died on Saturday.

Edwin C. Larned, a prominent anti-slavery man and well-known lawyer in Chicago, died on Thursday at the age of sixty-four.

Francis B. Hayes died in Lexington, Mass., on Saturday, at the age of sixty-five. He was prominently connected with railroad interests, and was a liberal giver to public and private charities. An ex-member of both branches of the State Legislature, he was only a short time ago nominated by the Republicans of the Fifth Massachusetts District for Congress.

Harry Clay, a grandson of Henry Clay, and a well-known lawyer and politician of Louisville, Ky., was shot and fatally wounded on Sunday by Andrew Wepler, a Councilman of that city. The fight was the result of a dispute about loaning money. Both men were armed, and both took position to fire. Wepler shot first. Clay died on Monday.

FOREIGN.

The Khedive, Nubar Pasha, the Egyptian Prime Minister, and Sir Evelyn Baring, the British representative in Egypt, received on Wednesday an identical cipher despatch from General Gordon. The despatch left Khartum August 26, and reads as follows: "I am awaiting the British forces in order to evacuate the Egyptian garrisons. Send me Zebehr. Pay him a yearly salary of £8,000. I shall surrender the Sudan to the Sultan directly 20,000 Turkish troops arrive. If the rebels kill Egyptians, you are answerable for the bloodshed. I require £300,000 to pay my soldiers, my daily expenses being £1,500. Within a few days I shall take Berber, where I have sent Colonel Stewart, Colonel Power, and the French Consul with troops and Bashi-Bazouks, who, after staying a fortnight, will burn the town and return to Khartum. Colonel Stewart will then go to the Equator via Dongola to bring the garrisons thence. I disbelieve the report that the Mahdi is coming. I hope the Sudanese will kill him. If the Turkish troops arrive they should come by Dongola and Kassala. You should give them £300,000."

Rumors were current in Cairo on Friday that Colonel Stewart had captured and burned Berber, but this was denied.

Two more telegrams were received from General Gordon on Friday. He complained of the slowness of the authorities in sending the relief expedition, and stated that the number of the rebels besetting Khartum was increasing.

Sir Evelyn Baring, the English representative in Egypt, telegraphed on Saturday from Cairo that the Mudir of Dongola had received advices from several sources to the effect that General Gordon had gained two great victories, and that the siege of Khartum was raised on August 30, four days after General Gordon's last message.

Fuller accounts of General Gordon's victories state that on July 24 his troops slaughtered the rebel army which had been sent against them from Kordofan. Another battle was fought on August 30, which resulted in raising the siege of Khartum.

Two fresh messages were received from General Gordon, at Cairo, on Monday. He insists on Turkish occupation of the Sudan.

A change took place in General Wolseley's plans on Monday. He telegraphed to the British War Office to stop forwarding troops to Egypt for the present. It is believed that the expedition for the relief of Khartum will be reduced to a flying column, owing to the favorable news from Gordon.

Two thousand sets of harness for camels have been ordered at Cairo in order to utilize those animals in hauling the boats of General Wolseley's expedition.

General Wolseley will start up the Nile on September 27 without awaiting further arrivals of troops. A merchant from El Obeid reports that the Mahdi has twenty Krupp cannon, and that 10,000 of his 25,000 followers are armed with Remington rifles.

In accordance with the decision of the Conference in Cairo on September 15, regarding Egyptian finances, in which Lord Northbrook, Sir Evelyn Baring, Nubar Pasha, and others took part, the Egyptian Ministry of Finance has given orders that the revenues which had been assigned to the Caisse de la Dette Publique, for the redemption of the unified debt by purchase in the open market, should be temporarily paid into the Egyptian Treasury. The purpose of this action is to enable the Treasury to pay the current expenses of the Government and the tribute to Turkey. Such payment is now impossible, owing to the heavy deficit. The members of the Caisse protest against this action of the Finance Ministry.

The action of Lord Northbrook in Egypt in suspending the law of liquidation has raised a storm of protests in Paris and Vienna.

It was reported that the Powers had protested against the suspension of the Egyptian Sinking Fund, but the fact is that France only has protested.

Two hundred French troops landed on Wednesday at the Kinpai Pass, on the Min River below Foo-Choo, and attacked the Chinese. The latter were defeated.

The Paris *Télégraphe* announced on Friday that Prime Minister Ferry, in behalf of the French Government, was willing to forego pressing the indemnity claims upon China, provided the latter Government would cede to France for ninety-nine years the port of Kelung, the present treaty port of the island of Formosa.

An immense meeting was held at Shanghai on Wednesday which passed resolutions that "this meeting of all nationalities at Shanghai makes urgent appeal to the British, German, and American Governments, which represent a preponderant interest, begging them to call upon the treaty Powers collectively to render their good offices to France and China, with the view of bringing about such settlement of the quarrel as will satisfy the honor of both countries."

A despatch from Shanghai on Monday reported a new complication in the Franco-Chinese difficuty. The blocking of the bar at the mouth of the Woosung River has been ordered by the Chinese authorities, although a passage for the ships of neutrals is to be left. This action is due to Chinese disbelief in the promises of the French. A veritable panic prevails in Shanghai, and merchants of the neutral Powers have asked the naval commanders of these Powers to take some action. The British Consul has advised the Chinese authorities to obtain skilled foreign assistance and keep traffic open. The Russian Consuls have been ordered to protect French interests wherever French Consuls leave.

A portion of the Paris press are making violent attacks upon the American press for their comments on the bombardment of Foo-Choo.

The agitation in regard to the new Education Bill in Belgium, which the King has already signed, still continues. On Wednesday the Mayors of Brussels, Ghent, Liége, Mons, Arlon, and Antwerp were granted an audience by the King. The Mayor of Brussels, acting as spokesman for all, uttered a strong protest against the bill. The deputation for which he spoke, he said, represented 820 communes, with a population of 2,800,000. The King, in reply, said that he had also received numerous petitions in favor of the bill. It was his duty to comply with the national will, which was expressed by the majority in Parliament. He served Belgium—not one political party, but both—and, with Belgium, the noble cause of liberty, to which he was deeply and steadfastly devoted. Political mobs thronged the streets of Brussels on Wednesday night and had to be dispersed by the police.

The meeting of the three Emperors at Skierniewice, Poland, came to an end on Wednesday. Their parting was very affectionate. The *Journal de St.-Pétersbourg*, which speaks with some authority, says that the recent meeting of the three Emperors secures a lasting peace to Europe. The principles of unity, conciliation, and appeasement will now replace all isolated action and remove all uncertainty as to the morrow's events, thus exercising a favorable influence upon the political and social world. The whole German and Russian press consider the meeting as one that will result in the security of peace to Europe.

A German Imperial decree has been issued appointing October 28 as the day for the election of members of the Reichstag.

Twenty-one persons have been arrested in Vienna charged with complicity in Bachmann's Anarchist schemes. Gunpowder and dynamite stores at Wiener-Neustadt and Neunkirchen were entered on Monday night and the contents stolen. A mine was exploded under a steeple at Neustadt.

The cholera epidemic in Naples continued to abate on Wednesday. Among the victims on that day was a son of King Kalakaua of the Sandwich Islands. The poet Cavalotti arrived at Naples on Wednesday with four squadrons of men from Milan and Tuscany—mostly Garibaldini—to assist in caring for the sick. Cavalotti himself is at the Maddalena Hospital, where he is putting forth every effort in aid of the sufferers.

There were 251 fresh cases and 152 deaths from cholera at Naples on Tuesday.

Father Curci has written a letter expressing his submission to the Vatican, and condemning all passages in his three latest works which can be construed as inveighing against the faith, morals, or rights of the Church. He further expresses the hope that he may be restored to the Pope's favor.

Henry M. Stanley lectured on the Congo country in London on Thursday. "Portuguese civilization," he said, "is like a withered tree, bearing no fruit; commerce could not be extended into a new-born region, like the Congo Basin, unless it were relieved of all fear of that dread Portuguese tariff. Portugal does not understand the art of colonizing." Mr. Stanley described the rise and progress of the African Association. Its constitution, he stated, was being prepared by eminent men, and when completed would be published as the "Constitution of the Free States of Congo," the name or title which will replace that of the African Association.

The National League meeting at Castlewellan, County Down, Ireland, on Sunday, was quiet and orderly, a circumstance which is explained by the fact that the road was lined for a mile with British troops. The speakers were William O'Brien, M.P., and Michael Davitt. Mr. Davitt treated his auditors to a surprise. He declared that he was second in command of a political army which was invading the province of Ulster with a fixed purpose, and with a confident expectation of victory. The Nationalists had now one great and absorbing desire as far as the North of Ireland was concerned, and that was for political unity between the Orangemen and Catholics. Mr. Davitt begged his hearers to lay aside their religious differences of opinion for the sake of the patriotic duty which is incumbent on Orangemen and Catholics alike. "Let religion give way for once to patriotism," he said, "and then only shall we get home rule for Ireland." Two inferences are drawn in London from this episode. The first is that Messrs. Davitt and Parnell have settled their differences, and that the former is once more the trusted lieutenant and mouthpiece of his chief. The second conclusion is that the Parnellites have determined upon a new line of tactics in seeking a coalition with the Orangemen, in order, by their aid, to defeat the Conservatives at the next general election.

The Duke of Cambridge, Commander-in-Chief of the British Army, will pay a visit to Ireland about October 1.

The British gunboat *Wasp* was wrecked on the northwest coast of Ireland on Tuesday. Fifty-two of the persons on board, including all the officers, were drowned. Only six were saved.

It is announced in Paris that England will join the International Commission on the Metrical System of Weights and Measures, with a view to securing the adoption of Greenwich as the prime meridian at the coming International Meridian Congress at Washington.

A Spanish sergeant and seven privates on the northeastern frontier deserted from their post on Tuesday, and, taking the treasure chest of their regiment with them, crossed into France, shouting, "Vive Zorilla!" They were placed under arrest and deprived of their arms.

THE TEMPERANCE CAUSE.

THE founder of the temperance movement in England, Mr. Joseph Livesey, died a few weeks ago at the ripe age of ninety-one, after a life devoted from first to last to philanthropy in the largest and best sense of the word. He was, however, in point of time, much behind the advocates of temperance in this country, who first began to show themselves in New England in the last quarter of the last century, and have ever since played a part for which the history of the reform in England offers no parallel. But it is to be observed that few if any of the early temperance men here preached total abstinence. What they denounced was the consumption of distilled spirits. Toward the product of the brewery and the cider and wine press they were long very tolerant. It is only within our own time that every species of intoxicating drink has come under the ban, and that the great discussion which is now carried on with more or less fervor in every civilized country over the effects of alcohol on the human frame, has begun to be heard. The beer and wine drinkers are no longer secure from attack. They are now pursued by the Prohibitionist with as much vigor as the whiskey and wine drinkers of sixty years ago were pursued by the advocates of simple temperance or morning abstinence.

This year we are undoubtedly witnessing a more advanced stage of the war against "the liquor traffic" than ever before. The Prohibitionists have secured the embodiment of their theory into the Constitution of the State of Maine after a prolonged experience of the working of a simple prohibitory law. They are not very far from a similar triumph in Iowa and Kansas, and in Ohio they are exerting a powerful influence on the politics of the State. The ticket which they have put in the national field this year, too, is treated with an amount of respect never before accorded to it, and really promises in some States to affect seriously the fortunes of the candidates of the two great parties. In a large number of the States, too, the anti-liquor sentiment grows stronger and stronger, and the disposition to resort to coercive measures against the drinker more decided. In several of the Southern States, in which partiality for whiskey has perhaps been stronger than in any other part of the world, localities are permitted to exercise their option in the matter of permitting any drinking at all within their limits.

The disposition to legislate against liquor on the part of communities is, after all, however, not so important as the readiness on the part of individuals to stop drinking, and about this the information we possess is very imperfect. There has been in England, as far as can be ascertained from the revenue returns, a considerable falling off in the consumption of spirits, but the sale of beer appears to be as great as ever, and that of wine greater. In this country the consumption of both beer and spirits increases, and, what is perhaps of more importance just now than any other fact, there does not appear to be any fixed and certain connection between prohibition and consumption. In other words, as far as can be ascertained, drinking does not by any means cease in States in which it is unlawful. In fact, in Maine it appears to have been very great in spite of the law, although, doubtless, anti-liquor legislation must always restrict drinking to some extent and make it more or less disreputable.

It is still harder to decide how the discussion stands on the question of the effects of alcoholic drinks on health. It never raged so fiercely as it does at this moment, and the doctors never took so prominent a part in it. A general agreement has undoubtedly been reached that the consumption of alcoholic drinks to excess is injurious, and that it is always uncertain whether a man who uses them at all will not end by using them in excess. But what is excess is still an unsettled question. The testimony of individuals on this point is still infinite in its variety, and so is the testimony of doctors. Nor is there as yet anything like a general agreement, even among scientific men, as to what the precise effects of alcohol on the human frame are. The one thing about alcohol which seems to be settled is, that it is the most potent, direct cause, in our time, among northern nations at least, of poverty, crime, and disease. The moral question which this fact at once starts—whether people who can drink in moderation are bound to give up drinking for the sake of those who cannot drink in moderation, or, in other words, how far each man is bound to regulate his own life, in things indifferent, for the sake of setting an example to others—is one of the questions, unfortunately, on which it is not possible to throw much light by experiment. Nobody can tell what the direct effects of his example are in matters which are not wrong in themselves, or only wrong in their possible consequences, even on his own children. No man can make sure that by excluding wine from his table he will save his sons from becoming drunkards, or even convince them that they cannot drink with safety. Most of the drinking in America is done in bars, in which nobody can set a good example at all, and very little of it in places in which total abstainers can exhibit their abstinence. But it may be asserted as absolutely certain that, throughout the civilized world, doubts as to the value of alcoholic drinks grow stronger, and so do the disposition to put legislative restrictions on their use, and the social disrepute attending their use, except with one's meals, as an aid to digestion. By the end of the century we shall probably witness a very decided change in the opinion of the civilized world on the whole matter. On the European continent, where until very recently the temperance agitation was all but incomprehensible, the growing use of ardent spirits in place of beer and light wines has made a strong impression on statesmen and philanthropists. In both France and Switzerland the reports on this subject are alarming, and indicate the need of very decided restraints of some kind—if on no other ground, out of regard for the public health.

THE USEFULNESS OF THE REPUBLICAN MISTAKE.

ONE good result of the Blaine candidacy, however it may end—and to our minds it can end in only one way—will be vastly greater caution in making nominations. It is quite safe to say that no convention will do again, in our time, what the Republican Convention did in nominating a candidate with serious and widely accepted charges affecting his personal integrity hanging over him. It will not greatly matter whether these charges are true or false. Hereafter it will be recognized that the mere fact that large numbers of people believe a man to be personally dishonest, is a disqualification for the Presidency; that, in other words, a wronged man or a man with a grievance is nearly as unsuited to be the candidate of a great party as a man who has confessed his faults and says he is sorry for them. Everybody, we are sure, now sees, and none more clearly than Mr. Blaine's friends, that a Presidential canvass is not the place for the discussion of a man's private affairs, and for what has been ridiculously enough called "an inspection of his private character"; that if his character be really defective, it cannot be properly patched up or whitewashed between June and November.

Moreover, the nomination once made there is no getting rid of it. The talk in which some of our Independent friends are indulging, touching Blaine's withdrawal, is simply preposterous. He cannot withdraw, and the Republicans cannot let him. He must run and must brazen it out. Even if his tough moral fibre were to give way, and he were to desire to seek rest and peace in disgraced obscurity, his supporters could not let him. Any such step on his part would make certain that defeat of the party which is now only probable. The prize contended for at the Presidential election is so valuable, and the amount of money and expectations invested in the candidate so large, that the nomination, particularly that of the party in power, has a momentum which nothing can arrest or even slacken. Therefore there cannot be a change of candidates during the campaign. There never has been such a change, and there probably never will be, unless caused by death. The possibility of it diminishes every day with the growth of the country, the growth of electioneering expenses, and the difficulty of getting at the exact drift of public opinion.

As a general rule, conventions are saved from the mistakes which the Chicago Convention made in Blaine's case, by the fact that men whose names are presented for nomination are invariably of mature years, and well known in their own State, if not in the national arena. If there are any ugly facts in a man's career, they are pretty sure to have leaked out before the period at which he begins to be talked of for the Presidency. There is a sifting process, too, of more or less severity performed by previous elections to local offices, or long service in Congress. But it is to be observed that since the war, for reasons which we need not reiterate now, service in Congress has ceased to be the guarantee it once was. The period of inflated money and large expenditures, and prodigious grants and concessions of "the potentiality of growing rich" in the shape of bank charters and land grants, tempted a good many able but weak and impecunious men into transactions which would not bear the light, or which were capable of very damaging constructions. The result has been that two Republican Presidential candidates have now been attacked on the score of official integrity. The charge against President Garfield was very flimsy indeed compared to that against Blaine, but there was no denying that he had placed him-

self in an awkward position, and one capable, in view of all that was then going on at Washington, of an injurious interpretation, which proved very troublesome in the canvass, and diverted a good deal of public attention from matters far more important. In Blaine's case, however, there was ample warning; the charges made against him were old, the evidence was the best possible, and its force had been acknowledged, when first produced, by nearly all the leading Republican journals. His nomination, therefore, may be said to have been almost without excuse, and can only be accounted for by ascribing it to the steady decline in the party of the standard of official probity.

But the mistake, we feel sure, will not be committed again. The men who made it are not "conscience voters," or theorists, or anything of that kind. They seek offices, and salaries, and contracts, and opportunities, and other substantial goods of this life; and that any device does not succeed is all the reason they need for abandoning it. Consequently, if the public indicates unmistakably this time that it will not have for President of the United States a doubtful character, or a cruelly slandered man, or a man who needs "honorable construction" or the testimony of "those who have known him longest that he is honest as the sun," no such man will be nominated by either party for many a day to come.

THE BEST WORK OF THE CANVASS.

We think it is no exaggeration to say that the great question of the day for those who believe that the election of Blaine would be a national misfortune and disgrace, is how to bring the Mulligan letters under the eyes of the voters. We believe that wherever they are seen and read they play havoc with his prospects. But it will not do for those who are charged with the conduct of Cleveland's canvass to flatter themselves that the work of spreading them can safely be left to the newspapers. In the cities the newspapers may perhaps prove a sufficient reliance, but in the country, it must not be forgotten, it is the custom of each voter to read his party paper and no other. Nothing but great conscientiousness or extraordinary professional zeal on the part of editors can prevent this being turned to account for party purposes. If all editors had a stronger sense of the duty of giving their readers the news faithfully, and had more professional pride in the contents of their papers, it would make no difference whether voters in a Presidential canvass read one paper or half-a-dozen. But as we all know, in exciting campaigns the ideal journalists are apt to vanish from the scene, and party newspapers are apt to be made up with the view of getting votes for their candidate by hook or by crook. The subscriber is in their eyes no longer a fellow-citizen to be enlightened, but a voter to be "stuffed" with anything that seems likely to keep him straight on election day.

There has never been a Presidential election before when the man of one paper was so grossly imposed on as he is by the Republican press in the present canvass. There has never been a canvass in which it was so important to keep him from seeing one particular thing as it is to the Republicans in the present one to keep him from seeing the Mulligan letters. His fidelity or his thrift in reading only one journal has been practised on in the most extraordinary way. In spite of the very important part the letters are playing in the canvass, the larger part of the Republican newspapers have not printed the first batch at all since Blaine was nominated, and most of them have suppressed or garbled grossly the second batch. There has been no more shame or scruple about it than about deceiving the enemy about a ford or a road in time of war. There is still a very large body of Republican voters at the North who have never seen these letters at all, or who have not seen enough of them to form an adequate judgment of their real tenor and bearing. These people ought to be sought out in every practicable way during the few weeks that now remain. They cannot be reached through the newspapers. They might be and ought to be reached through the mails and, if necessary, by house-to-house distribution. Young men who have horses cannot do better work to-day than acting as colporteurs in the country districts. An enormous amount of good may be done in this way before the election. If we may judge from our own observation, few intelligent and patriotic Americans who have read the letters and Blaine's statements about them in Congress, and are not themselves in office or candidates for office, will vote for Blaine. We have never happened to come across an avowed supporter of Blaine who had read them carefully and completely. If any one will give himself the trouble to try the experiment, in any State of the North to-day, with voters of average honesty and intelligence, we venture to predict that he will find that in nine cases out of ten a man who says he is going to vote for Blaine has never seen the Mulligan letters, or read Blaine's speech in Congress on his railroad transactions, or Mulligan's evidence before the Congressional Committee. In nine cases out of ten, too, he will discover that a supporter of Blaine fancies that a Democratic committee investigated Blaine in 1876, and made a report which acquitted him of all wrong-doing. He will find, further, that as a general rule Blaine men are unwilling to talk about the letters, and do not desire to have them brought to their notice, and if urged to read them will plead urgent business, so as to break up the conversation and be able to hurry away.

It does not do to be importunate or obtrusive in such cases. Men will not be teased into an examination which is likely to end in destroying cherished predilections, or make them uneasy in the region of the conscience. The better way is when a Blaine voter openly avows ignorance of the Mulligan correspondence, to have it ready in some convenient shape to slip into his hand or pocket. He may not read it then and there, or promise to read it at all, but there is always a strong probability that he will read it when he gets home, or reaches some secluded place and has a little leisure. When he does read it the effect in a vast majority of cases will be decisive. If it were not so, if the great majority of the American people, with full knowledge of Blaine's dealings when Speaker of the House with Fisher, Caldwell, and Tom Scott, saw nothing wrong in them, and were not shocked by his mendacity thereanent, it would show that the experiment of free government on this continent was in great danger of ignominous failure.

All this makes the work of Blaine's opponents in the canvass extremely simple. Ordinarily the Presidential question covers a great deal of ground, and a discussion of half-a-dozen weighty topics is necessary to damage a candidate. In the present instance the work can be done by a simple statement of the facts of one business transaction made almost exclusively in the candidate's own words. In other words, the Mulligan letters are a genuine specific. The symptoms which call for their administration are so plain that anybody can recognize them. They ought to be circulated by the million.

THE WHEAT CRISIS.

The price of wheat has become the most searching question of the day in Europe and America. More anxious thought is centred upon it than upon Mr. Blaine's chances for the Presidency, or upon Mr. Gladstone's reform bill, or upon the hostilities in China, or upon the meeting of the three Emperors. In Minnesota and Wisconsin, farmers are said to be in a state of great bitterness on account of the low price, and are borrowing money to pay for indispensable articles rather than sell at the prevailing market rates. In England, where the farmers are compelled to pay rents in cash, a sort of panic has set in. The price has fallen to 35s. 1d. per quarter, a quotation for which, the *Economist* says, a parallel cannot be found during the present century. The farmers are actually "threatening," says *Bradstreet's* correspondent, to feed their wheat for stock fattening rather than sell at present prices, and some interesting estimates are given of the relative values of corn and oil cake as compared with wheat for this purpose. A ton of wheat is worth only 12s. more than a ton of Indian corn, and only 13s. 4d. more than a ton of oil cake. The fattening properties of wheat are believed to be much greater than the differences represented in the prices respectively. Curiously enough, there is a legal obstacle to this method of getting rid of one's wheat in England. Under the Agricultural Holdings Act, "tenants are entitled to compensation for purchased feeding stuffs only, and if a farmer feeds his white wheat crop on the land he will not be entitled to a penny of compensation if he quits. Therefore, if farmers decide to feed wheat they will have to go through the farce of selling to each other, and then each will have a claim to compensation for the use of purchased feeding-stuff." It is agreed upon all hands that the present price of wheat does not cover the cost of production in England if the farmer is to pay his rents. Eventually the total loss will fall upon the landlords, whose incomes have been already curtailed to such a degree that land-owning has ceased, to a large extent, to be a mark of social distinction. This fact is emphasized by a recent writer in the *Economist* as one of the reasons why agricultural land in England has become unsalable at any price which

its owners think it fairly worth. Obviously, land is worth what it will yield in money and no more. It will not yield social distinction a moment longer than it yields cash profits.

The trouble on the Continent is nearly as great as it is in England. It has led to a demand in France for protective duties against American grain, and these will undoubtedly be granted by the Government, because they believe in protection and because they want more revenue. If they could squeeze even a small sum out of the consumers in this way it would help them to tide over the financial crisis which recent expenditures in Tunis, Madacascar, Tonquin, and China have brought about. In Austria and Hungary the opening of the International Corn Market was marked by an almost total absence of foreign buyers, and the feeling which it left upon producers and dealers was that of extreme depression. It would seem as though India had been ruled out of European markets altogether by the drop in prices, for the *Economist* of September 6 says that present prices barely cover the cost of carriage from the central provinces to England and leave nothing to the grower. If this is true, it is a fact of very great importance to us. We can still send wheat to the United Kingdom. If India cannot, the fact proves we still have a superiority, though not the superiority which we have heretofore enjoyed.

There are reasons, however, for believing that wheat has "touched bottom," and that the extremely low price of 74⅞ cents per bushel, which was quoted in Chicago on Saturday week, will not be seen again. The recovery from that minimum figure was rapid, although the advance was not great. Later advices from the wheat-growing districts of the Northwest show that there has been injury in some places by rust, and that the early estimates of the yield were too great. The best reason for thinking that the bottom has been reached is that the cost of production will not tolerate a lower price. Cost of production does not necessarily enter into the market price of the present crop, because the cost has already been incurred. But it exercises a potent influence in the way of holding back the crop, and it will enter into all plans for the succeeding year. Less wheat will be grown in this country and abroad. More ground will be given up to pasturage and to food for cattle, sheep, and swine. It is a remarkable fact that with all the decline in prices of cereals and of manufactured goods, of coal and of iron, that has taken place within three years, the prices of meat products have not fallen off, but on the contrary have advanced. The decline of general prices, exclusive of meats, since January, 1881, is estimated by *Bradstreet's* at 31 per cent. The prices of fresh meats have advanced in the same period fully 10 per cent. These facts point the way to a change in the methods of using land and to an equalization of farm products, which may be looked forward to with absolute certainty in the near future.

The American wheat grower has now reached the protectionist paradise which such philosophers as Henry C. Carey, William D. Kelley, William Walter Phelps, and James G. Blaine have so long pictured to his imagination. He has got a "home market," the very best and largest which manufacturing possibilities can give him. No more cotton mills, no more rolling mills, no more iron furnaces can find room here for many years to come. Half-time or dead silence is the condition of a large part of this "home market." The bucolic mind does not work rapidly, but the fact will surely make its way into the chimney corners of the rural districts that the very acme and summit of agricultural prosperity which a home market built up by protective duties can produce, has been reached, and that there is nothing more to be gained by travelling that road.

RAILROADS AND LAND GRANTS.

When the Northern Pacific Railroad was projected in the year 1864, there was a wide contrariety of views respecting the feasibility of the undertaking. It seemed so vast, so hyperborean, so thankless from every point of view, that the great majority of those who gave it any thought whatever, believed that no person then living, unless possibly very young children, would ever see it completed. The land grant attached to it was very large, but lands unoccupied had never built a railroad, and the only example of the building of a road by means of a land grant through a partly settled country (the Illinois Central) had resulted in the early bankruptcy of the undertaking. Illinois had been a State of the Union forty years before the grant of lands was made, and was just entering upon the period of rapid growth and abounding prosperity which has since astonished the world. Nevertheless, the building of the Illinois Central Railroad, regarded as a money-making venture, was in advance of the times—not very far in advance, but sufficiently so to ruin most of the original projectors. At the time when the Northern Pacific was brought before the public the Illinois Central was not yet out of difficulties.

The belief that the Northern Pacific was a chimerical undertaking, and that the construction of the road would be relegated to a very distant period—land grant or no land grant—was therefore commonly entertained, and was fully justified by all the facts upon which an intelligent opinion could be founded. That the common opinion was the correct one has been proved by the misfortunes which have successively overtaken the enterprise. That the property is now in a fair way to realize the expectations founded upon it is a matter for congratulation to all concerned, but we cannot overlook the fact that it was, in its original inception, a most deceptive and fantastical undertaking, made so by the very magnitude of the land grant bestowed upon it. We cannot overlook the fact that the forty millions of preferred stock now selling at about fifty cents on the dollar represent cash paid in some twelve years ago, the interest upon which has quite eaten up the principal. The delusive nature of the land grant is shown in the fact that, out of the 46,700,000 acres bestowed upon the company, only 5,118,000 have been sold since the grant was made. We say delusive, because it was this which induced people to put their money into the enterprise so long before any return could be got out of it. The lands are still there, and they will eventually be sold and the proceeds will be realized. The course of events which followed the building of the Illinois Central has followed here, and there is every reason to suppose that the future fortunes of the Northern Pacific will be upon the same lines. Indeed, there are many reasons for believing that the latter will surpass the former in point of prosperity, to those who can afford to wait. It appears from a statement recently made by ex-President Villard that the cost of the road exceeded the engineering estimates made in the year 1880 by 90 per cent., and that a part of this excess of cost was due to extreme haste in construction, rendered necessary in order to save from forfeiture the very land grant upon which the whole enterprise hinged. Looking at all the mishaps and miscalculations which the company has encountered, the financial exhibit now made ought to be considered most encouraging. The surplus from the first year's operations is not large, but it is a surplus, where a deficit might not unreasonably have been looked for.

We are not likely to have any more land grants or land-grant railroads. It is to be hoped in the interest of the investing public that we shall not. Nearly all of these grants have led to speedy insolvency. There have been exceptions, but they are such as prove the rule that a land grant commonly tempts individuals to put their money where they cannot recover it in time to save themselves from ruin. The slow process of settlement and cultivation is lost sight of in the dazzling prospect of an imperial domain. The greater the grant, the more dazzling the illusion and the more bitter the disappointment. Whether the country is really benefited by a speedy settlement stimulated by land grants to railroads, as opposed to a slower and more natural development, is an undecided question, but undoubtedly the men who put their money into the Northern Pacific twelve or more years ago, would vote with entire unanimity in favor of the latter policy.

THE ART OF FICTION.

Mr. Henry James, in an article bearing the above title in *Longman's Magazine* for September, and Gustave Flaubert and George Sand, in their recently published correspondence, have respectively given vigorous expression to their artistic faith. It is not often that an artist is able and willing to discourse on the principles of art, and the comparison of the opinions with regard to their own art of three such writers is peculiarly valuable. We propose to point out briefly the similarities and dissimilarities of their standpoints. The effect of a careful examination of them is surely, in Mr. James's own words, to make our interest in the novel "a serious, active, inquiring interest."

They all recognize the essential truth that a novel must be interesting. "The only obligation," Mr. James says, "to which in advance we may hold a novel without incurring the accusation of being arbitrary is, that it be interesting." If the novel has not this and that, says George Sand, "its essential quality, interest, is lacking." But they part company as to *whom* it shall interest. Flaubert avowed that he wrote for only ten or twelve persons. George Sand maintained strenuously that all the world was the audience to which a writer should address himself. Mr. James does not commit himself further than by saying that the English novel of the present day

"strikes me as addressed in a large degree to 'young people,' and that this in itself constitutes a presumption that it will be rather shy." The foundation of George Sand's conviction that there should be no fastidiousness in the selection of their readers was her ardent belief that the writer ought to have a moral intention and influence. "We should write," she says, "for all those who can profit by what is worth reading. And we should go straight to the highest morality we have in ourselves, and make no mystery of the moral and profitable meaning of our work." This brings us into the full flurry of the skirmish. Friendly lances are breaking in every direction, and clouds of arrows flying here and there, and sometimes following each other in quick succession into the very bull's-eye of the target. Mr. James is careful to notify the reader of his essay that his reflections on the "conscious moral purpose" of the novel have no pretensions to be exhaustive. And it is equally evident that those of Mme. Sand and Gustave Flaubert were not intended to be so. But we may gather much from each, and infer more.

"The essence of moral energy," Mr. James declares, "is to survey the whole field." "To see *far* and *clearly*," says George Sand, "is the whole aim of life"—and consequently we may add, of "the art that," as Mr. James says, "is most closely related to life." "I have always striven to see the soul of things," is Flaubert's declaration. And, therefore, he saw many things with extraordinary clearness; but he did not "survey the whole field," and hence came that lack of "a distinct and extensive view of life" with which Mme. Sand was always tenderly reproaching him; a reproach which he himself candidly acknowledged to be more than just, but about which at the same time he felt himself to be equally guiltless and hopeless. "How can it be otherwise?" he asks.

Perhaps in consequence of this lack of "a distinct view of life," Flaubert had an extreme dislike of the intrusion of personal teaching into literature:

"I experience an invincible repugnance to putting on paper anything of my heart. I feel even that a novelist *has not the right to express his opinion* about anything. . . . He may communicate it, but I do not like to have him utter it. (This belongs to my poetic vein.) . . . I believe that great art is scientific and impersonal. The author must by a mental effort transport himself into his personages, and not draw them to himself. This at least is the method—which amounts to saying, Try to have much talent, and even genius, if you can."

George Sand, on the contrary, was persuaded not only that it is impossible a writer can have "a philosophy" in his soul without its coming to the surface, but that it is his duty to let it appear. Again Flaubert writes:

"If the reader does not find in a book the morality which should be in it, either the reader is a fool or the book is *false* from the point of view of accuracy. . . . In my ideal of art, I think one should never show anything of himself, and that the artist should no more appear in his work than God does in nature. The man is nothing, the work everything! This discipline, which may proceed from a false point of view, is not easy to observe; and for me, at least, it is a sort of permanent sacrifice which I make to good taste. It would be very agreeable to me to say what I think, and to unburden the sieur Gustave Flaubert by phrases; but what is the importance of the said sieur? . . . The first comer is more interesting than I, because he is more *general*, and consequently more typical."

George Sand answers him:

"What an odd mania! What a false rule of 'good taste'! Our work is worth nothing but what we are worth ourselves. Who proposes putting yourself personally before the public? . . . But to withdraw your soul from what you do—whence comes this unsound idea? To hide one's own opinion of the personages one puts on the scene, to leave the reader consequently uncertain of the opinion he should have of them, is to desire not to be understood, and thereupon the reader leaves you. . . . What the reader wishes, above all things, is to enter into our thought, and it is that which you haughtily refuse him. . . . You say it should be so [that in a given case it is well the reader should be in doubt whether the writer were immoral, sceptical, indifferent, or broken-hearted], and that M. Flaubert would be wanting in good taste if he exhibited his thought and the object of his literary enterprise. It is false—in the highest degree false. From the moment M. Flaubert writes well and seriously, the reader becomes attached to his personality, and desires to be lost or saved with him."

What has Mr. James to say on this point? It seems to us that he utters the complete truth in saying: "A novel is in its broadest definition a personal impression of life; that, to begin with, constitutes its value, which is greater or less according to the intensity of the impression." Flaubert was right in dwelling on "the *intensity* of the impression"; George Sand was right in insisting that it must be "a *personal* impression." It is the gold and silver shield.

But besides being personal and intense, what else must be the character of the impression? Mr. James thinks "a work of art should be as little concerned to supply . . . *an objective tone* as if it were a work of mechanics." Perhaps this is true, though it is a little imperfect in expression. Flaubert says:

"I limit myself to exposing things as they appear to me, to expressing what seems to me true. So much the worse for the consequences: rich people or poor, conquerors or conquered, I have no concern with that. I wish to have neither love nor hate, nor pity nor anger. . . . Is it not time to bring justice into art? The impartiality of representation would attain then the majesty of law and the precision of science! . . . I think as you do, that art is not merely criticism and satire; consequently I have never intentionally tried to do either the one or the other. I have always endeavored to go to the heart of things and to dwell in the largest generalities, and I have expressly turned aside from the accidental and the dramatic. No monsters and no heroes."

George Sand answers:

"This intention of painting things as they are, the adventures of life as they present themselves to sight, is not, to my mind, well thought out. Paint as realist or as poet inanimate things—that may be as you please; but when one approaches the movements of the human heart it is another thing. . . . I think art, this special art of narrative, is worth nothing save through the opposition of characters; but in their struggle I wish to see good triumph. Let facts crush the righteous man—I consent to that; but let him not be either soiled or degraded. . . . You are 'renourishing' yourself, you say, with Shakspere, and, indeed, it is a good thing to do! He it is who puts men in conflict with facts; observe that by them, either for good or ill, the fact is always conquered. They crush it or they are crushed with it. . . . Man is neither good nor bad, he is good and bad. But he is something else—that vague thing [*la nuance*] which is for me the aim of art: being good and bad he has an inward force which leads him to be very bad and a little good, or very good and a little bad."

She comes back to Flaubert here: "No monsters and no heroes."

So much with regard to the matter, the *fond*, of this art; how about the experience which is to accumulate the material? Our French friends have little to say about that, but what Mr. James says is so admirable that nothing more need be asked for:

"Experience . . . is the very atmosphere of the mind, and when the mind is imaginative—much more when it happens to be that of a man of genius—it takes to itself the faintest hints of life, it converts the very pulses of the air into revelations. . . . The power to guess the unseen from the seen, to trace the implication of things, to judge the whole piece by the pattern, the condition of feeling life, in general, so completely that you are well on your way to knowing any particular corner of it—this cluster of gifts may almost be said to constitute experience."

Let us now consider the questions of form, of manner. "The form, it seems to me," Mr. James says, speaking as a reader, not as a writer, "is to be appreciated after the fact; then the author's choice has been made, his standard has been indicated; then we can follow lines and directions and compare tones. Then, in a word, we can enjoy one of the most charming of pleasures—we can estimate quality, we can apply the test of execution. The execution belongs to the author alone; it is what is most personal to him, and we measure him by that." And then he adds, shifting suddenly, apparently unconsciously, to the standpoint of the author, "His manner is his secret, not necessarily a deliberate one. He cannot disclose it, as a general thing, if he would: he would be at a loss to teach it to others." George Sand, writing to Flaubert, says:

"It seems to me your school ["But I trample down my nature with the strength of my endeavor to have no 'school,'" Flaubert ejaculates in answering her], it seems to me your school is not enough concerned about the heart of things [*le fond*], and stops too much at the surface. Through seeking form these writers hold too cheap the matter; they address themselves to literary people. . . . You prefer a well-turned phrase to anything metaphysical. I, too, like to see condensed into a few words the contents of volumes, but these volumes must have been thoroughly understood (whether one accepts or rejects them) to find the sublime condensation which is literary art in its highest expression. . . . Nourish yourself with the ideas and feelings amassed in your head and heart; the words, the phrases—the *form* you think so highly of will come of itself. You consider it an end, it is only an effect. Successful expressions spring only from emotion, and emotion springs only from conviction."

George Sand did not exaggerate Flaubert's regard for form, but it rested on deeper ideals than she gave him credit for. He says of himself:

"Neither of them [Daudet and Zola] is concerned *before all things* with what to me is the object of art—beauty. I remember having had a beating at my heart, having felt a violent pleasure, in contemplating a wall of the Acropolis—a perfectly bare wall. . . . Well, I ask myself if a book, independently of what it says, cannot produce the same effect. In the precision of the combinations, the rareness of the materials, the polish of the surface, the harmony of the whole, is there not an intrinsic virtue, a kind of divine force—something eternal, like a principle? (I speak as a Platonist.) Why, too, is there a necessary connection between the right word and the musical word? Why, if one condenses the thought too much, does it always become verse? Does the law of numbers, then, govern feelings and images? and is what appears to be the outside really and truly the interior? If I continued long in this direction I should go completely astray; for on another side art ought to be genial [*bonhomme*], or rather art is just what one can make it. . . . I regard as very secondary technical detail, local coloring, all the exact and historic side of things. I seek above all things *beauty*. . . . I think that the rounding of the phrase is nothing, but that *to write well* is everything, because 'to write well is at one and the same time to feel well, to think well, and to say well.' The last term depends, then, on the two others, because one must feel strongly in order to think, and think in order to express. . . . So I try to think well *in order* to write well; but, I confess, writing well is my object."

In conclusion, the last word shall be Mr. James's: "The deepest quality of a work of art will always be the quality of the mind of the producer. In proportion as that mind is rich and noble will the novel, the picture, the statue partake of the substance of beauty and truth. To be constituted of such elements is, to my vision, to have purpose enough."

A PROPHET AMONG THE PAINTERS.—II.

London, September 8, 1884.

In a lecture delivered at Oxford, William Morris has offered a new theory of the relations between art and the state. Ruskin laid down, in his political economy of art, a definite obligation

of Government to support art. Morris, being a Socialist, frankly abandons all forms of modern government to the dogs, and aims at the reconstruction of society on a basis which shall include art in its purposes. It is the modern "commercialism" and greed of gain, according to him, which stifles the love of art in the prosperous, and starves it out of the workman; and he has no hope of art until the education of the workman and the motive of the art grow out of the regenerated social life. Art as it now exists in England is only a pale reflex of mediæval art, which began among the workmen and decorators. "Those only among our painters do work worth considering whose minds have managed to leap back across the intervening years, across the waste of commercialism into the Middle Ages," he said in his Academy notes; but he added, after commendation of those who have revived art in its mediæval form—*i. e.*, pure art, for art's sake—

"Now, I ask again, with all solemnity and pain enough, is it possible that a living school of art can be founded on these fragments of retrospective art, nursed by the brains of one or two strangely-imaginative men? I can only answer the question one way myself—it is impossible. The art of modern Europe, whose roots lie in the remotest part, undiscoverable by any research, is doomed and is passing away. That is a serious—nay, an awful—thought; nor do I wonder that all artists, even the most thoughtful, refuse to face the fact. . . . In what way the new art will come, who can say for certain? It seems to me that the ideas of the older art still linger too much in the midst of cultivated men to allow any germination of the new amongst them. I believe, as I have done for long, that the new art will come to birth amidst the handicrafts; that the longings of simple people will take up the chain where it fell from the hands of the craft-guilds of the fifteenth century, and that the academical art which was developed from that misreading of history which we call the Renaissance will prove a barren stem. However that may be, I know surely that the new society which we hope and work for will develop a new art, fit for the life that will be lived under it, and furthered, in a way we slaves of competition cannot conceive of, by that new life of the commonwealth."

And in the Oxford lecture on "Art and Plutocracy," he lays down his broad definition, or rather description, of art as follows:

"And first I must ask you to extend the word art beyond those matters which are consciously works of art, to take in not only painting and sculpture and architecture, but the shapes and colors of all household goods, nay, even the arrangement of the fields for tillage and pasture, the management of towns and of our highways of all kinds; in a word, to extend it to the aspect of all the externals of our life. For I must ask you to believe that every one of the things that go to make up the surroundings among which we live must be either beautiful or ugly, either elevating or degrading to us, either a torment and burden to the maker of it to make, or a pleasure and solace to him. . . . And yet, I say, how have we of these latter days treated the beauty of the earth or that which we call art? Perhaps I had best begin by stating what will scarcely be new to you, that art must be broadly divided into two kinds, of which we may call the first Intellectual and the second Decorative Art, using the words as mere forms of convenience. The first kind addresses itself wholly to our mental needs; the things made by it serve no other purpose but to feed the mind, and, as far as material needs go, might be done without altogether. The second, though so much of it as is art does also appeal to the mind, is always but a part of things which are intended primarily for service of the body. I must further say that there have been nations and periods which lacked the purely Intellectual Art, but positively none which lacked the Decorative (or at least some pretence of it); and furthermore, that in all times, when the arts were in a healthy condition, there was an intimate connection between the two kinds of art, a connection so close that in the times when art flourished most, the higher and lower kinds were divided by no hard and fast lines. The highest intellectual art was meant to please the eye, as the phrase goes, as well as to excite the emotions and train the intellect. It appealed to all men and to all the faculties of a man. On the other hand, the humblest of the ornamental art shared in the meaning and emotion of the intellectual; one melted into the other by scarcely perceptible gradations; in short, the best artist was a workman still, the humblest workman was an artist."

To this unquestionable portrait of any one of the great periods of art, whose exactness is testified to by any fragment of artist life in the records of those periods which we possess, Mr. Morris appends the following sketch of the artist of to-day:

"That is not the case now, nor has been for two or three centuries in civilized countries. Intellectual art is separated from decorative by the sharpest lines of demarcation, not only as to the kind of work produced under those names, but even in the social position of the producers; those who follow the intellectual arts being all professional men or gentlemen by virtue of their calling, while those who follow the decorative are workmen earning weekly wages; non-gentlemen, in short."

He divides again those who follow the intellectual arts into two classes—a small one of men of genius, noteworthy in any epoch, and a large one of amateurs with varying and varied gifts. The former he regards as spoiled by the system which insists on individualism and forbids coöperation. The old schools were built on the accumulated traditions "which men find themselves partakers in without effort on their part," while now they have "to learn everything from the beginning, each man for himself." And what is worse for the existence of any school of art, "apart from the artists themselves and a few persons who would be artists but for want of opportunity and insufficient gifts of hand and eye, there is in the public of to-day no real knowledge of art and little love of it. Nothing, save at the best certain vague prepossessions, which are but the phantom of that tradition which once bound artist and public together."

The cause of the degradation of art being the competitive system, Morris would see its revival in the coöperative activity of workmen and the formation of what may be designated as industrial art schools. For "as long as competition in the production and exchange of the means of life goes on, the degradation of the arts will go on, and if that system is to last forever, then art is doomed and will surely die; that is to say, civilization will die." The pleasure of the artist in art seems to Morris to be three-fold—"variety, hope of creation, and the self-respect which comes of a sense of usefulness, to which must be added that mysterious bodily pleasure which goes with the deft exercise of the bodily powers. . . . Now this compound pleasure in handiwork I claim as the birthright of all workmen," and, unless they possess it, they are but machines.

To summarize Mr. Morris's hopes and belief, it is to the development of art through the decorative branch, and the artistic education of the workman as distinguished from the amateur, who now monopolizes the title of "artist," and to the natural and progressive evolution of a new art with new traditions and new hold on the sympathies and the imagination of the modern man—the entire development being dependent on the quickening influence of a Socialistic organization of labor—that he looks for the future of art, and not in any more successful return to the lost traditions of Greece or Italy. In what respect this art shall differ from the old, he makes no attempt to designate; but, holding out the cross of Socialism, and believing in the power of organized, happy, and intelligent labor, he says to the art workman, *In hoc signo vinces;* and this reform shall begin with our gardens and reach to our highest intellectual aspirations. The development of industrialism from the ancient crafts has gradually brought about the creation of a great class of workmen who work without pleasure in their work—*wage workers*, nothing more—and "has by its very oppression and compulsion of the monotony of life driven them into feeling the solidarity of their interests, and the antagonism of those interests to those of the capitalist class; they are all through civilization feeling the necessity of rising as a class." They have begun to look to *association* as their remedy as against the system of *competition* organized by the capitalist; and so "in them the hope has arisen, if nowhere else, of finally making an end of this class degradation. It is in the belief that this hope is spreading to the middle classes that I stand before you now, pleading for its acceptation by you, in the certainty that by its fulfilment alone lies the other hope for the new birth of art and the attainment by the middle classes of true refinement, the lack of which at present is so grievously betokened by the sordidness and baseness of all the external surroundings of our lives, even of those of us who are rich."

The enemies of the new religion of art are competition, money greed, and machine labor as opposed to intelligent, artistic hand labor; but, above and around all, the determination of society to get ahead, regardless of any general good, and what Morris calls the "Devil take the hindmost" doctrine. Machine labor is the "Devil" of his combination; and, looking at the whole question from his point of view, it is clear that he must oppose its extension as the worst of evils. For it is as an artist that Morris is drawn into the controversy; it is the utter want of vitality in modern art which has first aroused him to the want of artistic quality in modern workmanship. As an artist, which he is in all his nature, he regards art as the beneficial outcome of the Socialistic reform which he preaches; and this is unquestionably true, that to get good decorative art into our common and daily lives to such an extent that our surroundings shall be beautiful and life more truly happy on account of art, can be only through work which shall embody the thoughts, the sense of the beautiful, and the ideal of the workman. What is the permissible field of machine labor in the system of Mr. Morris does not appear, and I need not discuss the question on its merits.

It may be of interest by and by to look into the practical results of his doctrine, and see how far he and his cobelievers have affected the condition of the workman and the quality of work here in England. Movement there certainly is, in response to Morris's appeal: "Remember, we have but one weapon against that terrible organization of selfishness which we attack, and that weapon is Union. Yes, and it should be obvious union, which we can be conscious of as we mix with others who are hostile or indifferent to the cause; organized brotherhood is that which must break the spell of anarchical Plutocracy."

MR. GLADSTONE'S TACTICS.

LONDON, September 5.

PEOPLE were getting wearied of the demonstrations and counter-demonstrations against and for the House of Lords, and so much more weary of the speeches delivered, that the newspapers even at this dead season had begun to report them very curtly, when Mr. Gladstone's appearance on the stage produced such a silence and thrill as honors the entrance of the prima donna at the opera. There was an idea that he would "give a lead" to the party by indicating more clearly than he had yet done what ought to be said about the House of Lords generally; that he might indicate the course the Ministry would take in the event of the Lords again refusing to entertain the Franchise Bill; that he would stimulate his party by a general defence of his policy and an arraignment of the Opposition tactics.

Apart from these expectations, a peculiar interest attached to the occasion from the idea that it might be his last great appearance in the character of a member before his constituents. He is now seventy-five; he has several times intimated a wish not to sit in another Parliament, and should he dispose of the whole question of Parliamentary reform in this Parliament, he would probably bid a final adieu to politics. Opponents as well as friends watched his progress to Scotland with interest, for they trusted to point with damaging effect to the contrast between the apologies which he would be forced to make to his electors now for the shortcomings of his ministry, and the programme which he had sketched in 1879 and 1880, when denouncing to those same electors the crimes of Lord Beaconsfield's Government, then still in power.

Most of these expectations have been falsified. He has not said much in the way of defending his policy of the last four years, and has spoken with no air of contrition or even of apology. He has not set himself to fan the flame of agitation, but rather to moderate it. He has revealed no secrets, thrown out no new views as to Second Chambers and the way to improve them. But he has again given, in delivering three speeches to enormous audiences, two of them nearly two hours long each, extraordinary evidence of his undiminished physical and intellectual force, as well as of the quality of his voice, not less clear and sonorous now than fifty years ago; and he has shown that delicate tactical judgment in knowing what to avoid as well as what to say which so rarely fails him at a grave crisis. Others of our statesmen, Peel, for instance, or Lord Melbourne, have possessed it in equal or higher measure. But they were persons of a far less ardent and excitable temperament. What is peculiar to Mr. Gladstone is the combination of an impetuosity which often betrays him into imprudences, with a self-control and sagacity which at other times enable him to steer with the utmost wariness through a labyrinth of rocks and shoals. He is like a famous guide whom travellers in the Alps twenty years ago well remember, whose eagerness and self-confidence induced him to lead his party into many a dangerous place, but who never failed to extricate them by a caution, skill, and ingenuity which those whom his heedlessness had just alarmed were not prepared to expect. It seems as if the sense of danger, or at least the presence of a crisis, were needed to develop these qualities in Mr. Gladstone. His mistakes have seldom been faults of judgment; they have lain in words spoken at moments of unadvisement, when nothing had warned him to call the powers of his judgment into play.

The present contest with the House of Lords is a crisis needing all his strategy. It is not merely that he has to overcome their resistance, for that in a country so far advanced toward democracy as England is a certain result in the long run. He has to do this without, if possible, resorting to a dissolution of Parliament. He has to do it without alienating the Liberal Peers who have supported him in the Upper House and are jealous of its privileges. He has to do it without, if possible, shaking the Upper Chamber itself, and so bringing on changes in the Constitution. Why, it may be asked, this last condition? Why should he not abolish or reform the House of Peers? The great bulk of his party would follow him. The one thing that has disappointed them in these last three speeches is the deference he shows to the Lords, his apparent acquiescence even in the anomaly of an hereditary chamber. Some of the Radicals accuse him of being overawed by rank, or of being after all a Conservative at heart.

Those who know him best know how absurd such charges are. So far from valuing rank, especially the mushroom nobility of England, he is too proud a man to consent to become himself a Peer. His Conservatism is nothing more than that hesitation which any man with a long experience of politics and a strong sense of official responsibility must needs feel, when he is asked to pull down something which he does not see how to replace, though he feels that it needs to be replaced. At his age he could not expect to live to complete such a task as the turning the House of Lords into a proper Senate like those of France or America, and what he cannot complete he is justified in refusing to begin. The policy toward the Lords developed in these Midlothian speeches has been that indicated by him from the first. It is plain that neither the provocations of the Tories, whose bitterness it has not assuaged, nor the enthusiasm to be expected from the Radicals, should he move faster in their direction, will tempt him from it. It is simply this—to make it easy for the Lords to yield, to build a golden bridge for their retreat, to open for them every door of compromise, always provided that the essential point is secured of getting them to pass the Franchise Bill in such time as that the next general election can take place under its provisions. "One thing at a time," he seems to say. "It is not necessary to threaten the Lords, because they may repent and pass the bill. It is not desirable, because you distract them and the country from the true issue, and because you give to a moderate and safe proposal the air of forming part of a revolutionary programme. We, therefore, we, the responsible Government, do not agitate against the Lords: we confine ourselves to urging upon them their own true interests." This course has the merit of conciliating not only the Lords but that large section of moderate opinion which, without approving the present action of the Lords, is unprepared for their abolition. It leaves the Government free to take a more aggressive attitude if the House of Lords does again reject the bill, putting them in the position of soldiers who have reserved their fire. At the same time it really gains all the advantages of the popular agitation, for, of course, the Government cannot check that agitation, and the longer it lasts the more clearly must the Peers see the danger they are running—running not at the instance of the Government, but in spite of it, for it still stands trying to befriend them; is still calling off its dogs, and offering them another chance of repairing their mistake.

This redefining of the pacific attitude of the Government is the principal feature of the Midlothian speeches. But an inference of no small importance may be gathered from the warmth with which Mr. Gladstone denounced the claim of the House of Lords to insist on a dissolution of Parliament. His language seemed to come from one who had determined not to dissolve even if the Lords reject the bill again, but rather to pass it a third time in the session of 1885 and throw on them the responsibility of a third rejection. In that event, the present Parliament might last till 1886, for it will not legally expire till April, 1887. Its duration, however, depends on many other contingencies. There may be a compromise with the House of Lords: some of Mr. Gladstone's language seemed calculated to invite negotiations. Or there may be events in Egypt which will either compel a dissolution, if disastrous for the Ministry, or make the Opposition cease to desire it, if they redound to the Ministry's credit.

His latest moves in the Egyptian game are another evidence of the Prime Minister's adroit tactics. For the last two years he has appeared to be sinking deeper and deeper into the mire by following an indecisive policy. But whenever the results were beginning to threaten his Parliamentary position he has escaped by some unexpected expedient, and either obtained the needed majority in the House of Commons or avoided the necessity for a debate and a division. When it was clear that some new departure must be made in Egypt, and some avowal of policy announced to Parliament, the Conference was summoned and the preliminary agreement with France concluded. A debate on that agreement was demanded by the Opposition, a day for it had been fixed by the Government, when, at the last moment, the House of Commons, at the instance of Mr. Goschen, refused to allow a discussion which seemed likely to be injurious to national interests. The Conference went on sitting till near the end of the Parliamentary session—so near the end that a debate would have been lifeless and inconclusive. The demand for a declaration by the Ministry of their policy during the recess was averted by sending out Lord Northbrook to examine the conditions of the Egyptian problem, and report to the Cabinet on his return, while popular uneasiness regarding General Gordon has been appeased by the expedition to direct which General Wolseley has just been despatched in Lord Northbrook's company. The preliminary agreement with France has, of course, fallen to the ground, because it was conditional on the success of the Conference. Thus the general upshot is, that the Government have retained to the end of a session during which they have been plied with unceasing interpellations, perfect exemption from any kind of pledge either to Parliament or to any foreign Power. Every effort has been made to tie their hands, to run them into a corner. But their hands are free, and just when they seemed on the point of being flattened against the wall, they glided lightly aside, and now stand facing their adversaries in the open. If they had displayed half the skill in keeping away from Egypt, or even in giving no pledges when they went there, that they have shown in avoiding committals or avowals during the last eighteen months, enviable indeed would be their position now. They have now a respite till November, by which time Parliament will have met, Lord Northbrook will probably have returned, and the question whether Khartum can be reached and Gordon rescued by the Nile route have drawn near to its decision. Y.

Correspondence.

THE POLITICAL SITUATION IN OHIO.

To the Editor of The Nation:

Sir: The outline of the political situation in Ohio as given by an editorial in No. 1002 of the *Nation* was substantially correct. The State is claimed for the Republicans, mainly, it would seem, on the ground that it has always gone Republican in Presidential years. But the situation this year is peculiar. The liquor question, on which the German element went over to the Democrats last year, is not yet definitively settled, and personal conversation with prominent Germans, formerly Republicans, convinces me that they will not return to the fold in great numbers this year, in spite of strenuous efforts to reclaim them.

In this district the Republicans have nominated for Congress Jacob Romeis, the present Mayor of Toledo. Being a born German, and having had former Greenback affiliations, he was chosen over the heads of several confessedly abler men in the hope that he would unite the floating vote, which in this district is peculiarly large. He is perhaps as strong a candidate as the Republicans could have nominated, and he will be aided by the fact that there is a strong opposition among many prominent Democrats to Frank Hurd, the Democratic nominee, based partly on objections to his well-known free-trade views, but more largely, I suspect, on more per-

sonal grounds. There is, however, no reason to suppose that the large Democratic majority in the district can be overcome.

For several reasons I am inclined to think that the Prohibition vote in the State will be unusually large this year. The enormous vote cast in favor of the Prohibition amendment to the Constitution last year indicates a growing conviction of the importance of temperance as a political question. Then, too, the absence of any distinctive issue between the two great parties, on any question of principle, and a very prevalent indifference as to which succeeds, will induce many to emphasize their prohibition sentiments by casting their votes for St. John. Besides, the Prohibition ranks will be swelled by accessions from Independent Republicans who have been switched off by the Cleveland scandal.

As the *Nation* says, the anti-Blaine Republican vote is difficult to estimate, being mostly a silent one. The fact is, the campaign against the Independents has been marked by such an extraordinary amount of ridicule and abuse that most men hesitate to expose themselves to it, by publishing their views. But I think their vote will be a large one, nevertheless. The very vehemence of the attacks made upon them is in a certain sense a measure of their strength; it is an indication of the fear with which they are regarded by the party managers. But ridicule will not change the votes of men who have been waiting all summer for those who would "with reasons answer" them, and have heard nothing but the tiresome repetition, "Sure, he is an honorable man." There is beginning to be a touch of Marc Antony's irony about this last.

The prevailing opinion seems to be that if Thurman, who is deservedly popular, had been nominated, he would certainly have carried the State. As it is, Ohio may be fairly classed as doubtful. ALEXANDER L. SMITH.

TOLEDO, O., September 13.

MAGNETIC MENDACITY.

TO THE EDITOR OF THE NATION:

SIR: Enclosed I send a clipping from an editorial column of the *Evening Wisconsin*, a Republican newspaper published in Milwaukee. If the statement is true that Mulligan is "a *convicted* and *confessed* perjurer and thief," it seems quite important that the public should know it. The editors of the *Wisconsin* have been called upon to furnish the evidence on which they make charges so serious, but, with a strange disregard of their party interests, they have failed to respond, or in any way to notice the request. Perhaps you can help them out, and thus aid in the cause of "truth."

The pity of it is, that so many who have the right to use "voting papers" have no other means of learning the truth than their party newspapers. First, these papers make their readers believe that all the charges against Blaine rest on the testimony of Mulligan, and then the Plumed Knight is left unscathed when they show that no one can believe the witness.

The effrontery and audacity in lying now shown by so many of the Republican papers and orators can be fairly claimed, I think, as proof of the vaunted "magnetism" of Mr. Blaine.

I trust the *Nation*, in the spirit of its wonted fairness, will not deny to the plumed chieftain this quality of inspiration. The mendacity and unexampled moral recklessness of his campaign ought, it should seem, to fully satisfy Mr. Blaine, if not even the devil himself. H.

MONROE, WIS., September 16, 1884.

A NEWSPAPER WITHOUT NEWS.

TO THE EDITOR OF THE NATION:

SIR: In your issue of this week (No. 1002), you formulate a complaint which I, in common with hundreds of others, have to make against the (weekly) *Tribune*. The publishers of that journal promised us that in consideration of one dollar per annum their paper would give us reading matter of ten-fold more interest than any other "document," and that every copy, of sixteen pages, should be "full of news, *facts*, arguments, and entertaining miscellany." Considering the price of the paper, I can't complain that the miscellany is not as entertaining as I had reason to expect. The "arguments" suggest the great want of "news and facts" which its readers so much need.

In order to supply the *Tribune* omissions I am compelled to obtain the news and facts in other journals of the day at my own expense. The *Tribune* has not only not kept its contract with me, as to its obligation to furnish the news and facts, but has deprived me of the benefit of its "arguments" upon all the news and facts so much needed, since I am (or ought to be) distressed over the alternative of helping defeat a corruptionist, or to continue "steady work" to our "wage-working population," and secure "home markets for their crops" to our farmers. Until the *Tribune* became so earnest about the "paramount issue," I felt no alarm on that account, and was greatly agitated over the arraignment of our brilliant candidate because I saw the necessity of an answer and explanation. I am waiting with impatience to see what sort of an answer and explanation can be had for "one dollar per annum." RUSTICUS EXPECTAT.

MISSOURI, September 13.

CHEAP FREE-TRADE LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: Where can I procure some of the cheap and pernicious free-trade literature published by the emissaries of the Cobden Club with the British gold so liberally poured into this country? Being desirous of obtaining a little information in regard to free trade, I entered a book store with intent to purchase. Judge of my surprise at finding the cheapest pamphlet on the subject retailing for forty cents. This book, printed on paper that would not cost over ten cents per pound, probably could be published at $80 per thousand, possibly even less. Can it be that the *Tribune* is mistaken in its assertions, and that all this literature is published by avaricious men solely to make money by the operation?—Very respectfully, L.

WASHINGTON, September 17, 1884.

A FABLE.

TO THE EDITOR OF THE NATION:

SIR: Can you tell me whether the following fable is from Æsop? I do not find it in my edition. I translate, no doubt a little crudely, from an old Latin copy which has strayed into my hands. The text presents two or three difficult and obscure expressions, due, I suspect, to some corruption.

THE WOLF WHO WOULD BE SHEPHERD.

As Death was approaching the Shepherd of a fine Flock, several of the Sheep put their heads together and named for the succession a Wolf, who had long sought the position as an extremely eligible one. His distinguished appearance and ready tongue, his gentle manners, and a certain magnetic quality he possessed (*nescio quis basilisci oculus*), had gained him an important influence over these members of the Flock. "This is our Protector," they said, "who will vindicate our rights against the encroachments of other Flocks, and will give our Flock an altogether commanding position."

But it must be confessed that a number of the Sheep, with a ridiculous idea of their own importance, and imagining themselves far wiser and better than the others, objected to this choice. "We never had a Wolf for a shepherd," they said. "We shrink from his caresses. We do not believe he would protect us from insult. Indeed, we hear sad stories about his doings even before he had laid his plans to get into this position (*antequam hanc sedem ambiisset*)."

"You are very foolish!" retorted the wolf-party. "A mere handful like you, and pretending to be better than other Sheep! Your leaders! what is every one of them but a h—ll of a book-worm (*helluo librorum*)! We understand the secret malice of your opposition, and that you are really in league with a rival Flock, and will get your pay in golden-rod (*auro insulari?*) [the text here seems very corrupt, and I scarcely venture to offer any emendation] and other choice fodder. But be decent and hear the Wolf for himself."

Then the Wolf, who chanced to be conveniently near, bowed politely, and took up modestly the question of the weather: "'Tis a beautiful day! Were ever lovelier skies than these?" said he. "And these rich pasture-fields! could Sheep ever ask for better? But do you realize, sweet friends of the opposition, that you owe them almost wholly to the wisdom and devotion of your companions you are now opposing? What you need is a Protector, who will care for the weak and delicate Sheep, and nurse with tenderness the Lambs—dear pets (*deliciolæ*)! I believe in protection, thoroughly, with all that it implies. Then—though I refer reluctantly to my own merits—I have always been in favor of Reform; and now, if possible, am still more so. No pettiest office in the Flock but should be filled on grounds of strictest merit. And then your graver interests, and the questions of policy and administration. You will need a new wall to your fold, I think, and better drinking facilities. For the former I know where there are some little rocks (*saxula nonnulla*) and I am acquainted also with an excellent system of pipes, some very serviceable channels (*canales utiles*); and I should not be an idle spectator (*caput mortuum?*) [the text is again uncertain]. I should endeavor——"

"But you don't answer the charges brought against you!" interrupted, at length, the captious, self-rightous faction in opposition.

"Bah! bah!" bleated the majority. "Will you never discuss large questions of policy? You are always foisting upon us the ridiculous issue of personal character!"

This Fable teaches that Sheep should not be too particular (*scrupulosiores*) in scrutinizing the character of their Shepherds. H. D. C.

DUBLIN, N. H., September 20, 1884.

THE MEANING OF "A. B."

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of last week you referred to President Porter's remarks in the Princeton *Review* on the offence of giving an "A. B." to a man with a slight knowledge of Greek. These remarks occur, as you say, "in the course of his argument"; but I suggest that it would be more fair to say that, quite out of the course of his "argument," the learned President indulged in a sort of parenthetical arraignment of Harvard for her "offence against the common faith and common understanding which exist among educated men."

As an argument favoring the study of Greek, these remarks were, of course, irrelevant. As charging an offence, what do they amount to? I submit that this "common understanding among educated men" in regard to the meaning of an "A. B." is altogether mythical. We hear that a man is an A. B.; we ask at once: "What college?" In printed lists of college graduates the custom is almost universal to name the college

after the degree. And where this is not done, surely only among uneducated men is there any common faith that the letters mean the same in each instance. A hopeless variety of college standards has left us no common faith and common understanding to be offended. If those letters long ago refused to tell us how much and how well a man studied, what matters it that now they will tell us a trifle less of what he studied?

The quality and quantity of his labors mainly determine his mental training, the all-important fact which those letters have not revealed to us. Does it not seem trivial that on the occasion of an additional doubt thrown over the direction of those labors, which mainly determines the less important question of what knowledge he has acquired, the Yale President has been moved to utter this charge?—Yours truly,

R. W. G. Welling.

New York, September 22, 1884.

Notes.

White, Stokes & Allen will add the following books to their list during the present season: 'Artistic Tableaux,' with picturesque diagrams and descriptions of costumes; 'Fifty Soups,' by Thos. J. Murrey; 'The Good Things of *Life*,' selections from our amusing contemporary; 'Guide and Select Directory to New York City'; 'An Outline History of Sculpture for Young People and Students,' by Clara Erskine Clement; 'Some Modern Etchings,' specially made for this occasion; 'Songs of Bird Life,' translated from the German by Josephine Pollard, with Giacomelli's designs; 'Wheel Songs,' for the bicycler, not for the mechanic, by S. Conant Foster; 'America Illustrated,' by J. David Williams; and a new edition of Heine's 'Book of Songs,' in Sir Theodore Martin and Edgar A. Bowring's translations.

G. P. Putnam's Sons will publish at once a new and cheaper edition, planned for a wide popular sale, of the 'Memoir of the Princess Alice of England and Hesse.' The same firm announce also 'The Works of Alexander Hamilton,' including his contributions to the *Federalist*, edited, with introduction and notes, by Henry Cabot Lodge, in seven octavo volumes, the edition being limited to 500 copies; and Scott's edition of 'The Complete Works of Dryden,' revised and corrected by George Saintsbury.

Roberts Brothers, Boston, announce: 'Our Great Benefactors: Short Biographies of the Men and Women most Eminent in Literature, Science, Philanthropy, Art, etc.,' edited by Samuel Adams Drake, with nearly 100 portraits; 'Paris: Historical, Social, and Artistic,' by Philip Gilbert Hamerton, profusely illustrated with woodcut engravings and twelve full-page etchings; 'The Countess of Albany,' by Vernon Lee, 'Harriet Martineau,' by Mrs. Fenwick Miller, and 'Mary Wollstonecraft,' by Elizabeth Robins Pennell, in the "Famous Women Series"; 'The New Book of Kings,' an attack on monarchy, by J. Morrison Davidson (of the Middle Temple); 'The Loving Ballad of Lord Bateman,' illustrated by George Cruikshank; 'Atheism in Philosophy, and other Essays,' by the Rev. Frederic H. Hedge, D. D.; and 'The Making of a Man,' by the late Rev. Wm. M. Baker, author of 'His Majesty, Myself,' being a sequel to that book.

D. Lothrop & Co., Boston, have in press 'Money in Politics,' by J. K. Upton, late Assistant Secretary of the United States Treasury.

T. Y. Crowell & Co. have issued in a comely volume with broad margins, and some special illustrations on wood that do not help much, the poems of George Eliot, complete—her own favorite monument, doubtless, rather than her complete prose. The typography is clear and tasteful.

The 'Descriptive Atlas of the United States,' just published by Ivison, Blakeman & Co., is well calculated to meet a general want. It will serve either as a text-book—both primary and higher grade—or as a family book of reference. It has maps of the whole continent of North America, and two sets for the United States—by sections and individually. Condensed information concerning the geography, government, natural resources, manufactures, or other industries of the several States is given in the accompanying letter-press. Here we miss careful editing, for the same divisions are not preserved in all the chapters, and the typography is not uniform for such as are common. Under New Jersey, and generally, the counties are enumerated—certainly a great convenience in a work of this kind—but not under Oregon, Kansas, Nevada, etc. Again, the population of the counties is only exceptionally given, as under Connecticut, and that of cities and towns is stated or not, without any fixed principle. The utility of the maps would have been much enhanced by indexes. The engravings, on which expense has not been spared, are to our taste too picturesque and too fantastic in their grouping, following a bad example of our illustrated magazines. On the whole, however, the merits of this work outweigh its defects, which even vitiate the copyright entry of the map of standard time.

We recommend to those who think the abandonment of Greek would give time for getting the same discipline from living tongues, Mr. Arthur Gosset's 'Manual of French Prosody' (London: Geo. Bell & Sons). The inability even of cultivated men to read French poetry properly is notorious; few teachers, as Mr. Gosset says, can perform or explain the scansion; and "if Greek were taught in the same way as French, would not the newspapers give us the same jokes about *Œdipus Coloneus* that they now lavish on *Horace* or *Athalie*? And yet," he continues, "a knowledge of the rules of French Prosody, sufficient for the appreciation of the latter, can be acquired in a tenth of the time necessary to assure ourselves that we can have no approximate idea of how Sophocles would have pronounced the former." Mr. Gosset writes with great clearness, and any student of French can find profit in his agreeable little treatise.

Seyppel's second Egyptian mummery, 'Er, Sie, Es,' has been brought out in an English edition, 'He, She, It,' with the substitution of Gladstone for Bismarck (J. W. Bouton). The English text is poorly done at best, and becomes miserably flat at the end; but the comical designs and the generally rubbishy look of the volume are preserved, and can still be enjoyed as fooling not yet stale, though it can hardly be made perennial.

M. Yves Guyot has written and Dr. E. B. Truman has translated what they call "A Study in Social Physiology": 'Prostitution under the Regulation System' (J. W. Bouton). It is a very Gallic and hysterical assault upon the contagious-diseases acts of England, and the analogous laws of France. The author's animus appears to be not moral but legal indignation. He is filled with wrath over intrusion upon the liberty of the subject, and as he had himself fallen into the hands of the French police, he speaks with the fervor kindled by persecution, just or unjust. Although a member of the Municipal Council of Paris, authority and its agents are very distasteful to him, and he looks upon his compatriots as "descendants of the theologians of the Middle Ages, and heirs of the nation of fools, so completely elaborated by our old university; with our minds full of the formulas of our lawyers and the dogmas of our priests." His English colleagues, actuated by purely moral sentiments, by this time probably do not relish the coalition. He asserts "there are very few lawful marriages into which the question of gain does not enter," and he is evidently disposed to place all alliances on much the same legal footing. The book strikes us as a study of social psychology quite as much as of physiology, and as a curious but not particularly inviting or valuable contribution to social science. We think the author is right in maintaining that general hospitals should receive all classes of disease, the proper sanitary precautions being observed.

The current issues of *L'Art*, Nos. 485, 486 (J. W. Bouton), complete the illustrated article on Charles Le Brun, and discourse of the Holbeins in the Munich Gallery (of one of which, a portrait, it gives a fine etching by Bocourt), and the landscape painters in the same collection. Much the greatest interest attaches to certain plates, from woodcuts by Christopher Jegher, of Antwerp, after paintings by Rubens. Jegher, like Rubens himself, was often employed by the great publishing house of Plantin-Moretus at Antwerp. The vigor of these large engravings is very remarkable. They might at first blush pass for copper-engraving, and one, "The Repose in Egypt," has all the appearance of work on metal. In the "Silenus Drunk," however, the "white line" is unmistakable.

Morand & Co. send us their photogravure after a miniature of Washington made by James Sharpless in the year 1795. The photographic copy was an enlargement, and presumably there has been some retouching; though in the miniature itself also the marks of age may have been smoothed over. In other respects, the portrait is the familiar one, but with a distinction of its own, and it deserves a place in any collection. The accompanying chart (which is included in the price of the engraving) undertakes to show the Washington pedigree, and to make our national hero the descendant of Kings of England, Scotland, and France. The publishers ought to know that this is all rubbish, and that the connection with the English line has never been satisfactorily established, whatever may be the probabilities in the case.

In the August-September *Art Union* the editor warns artists against what he considers the "true inwardness" of the prize-fund scheme which we lately noticed. He declares it to be simply an assault on the National Academy, from which it seeks to draw away the best pictures by the hope of a dazzling award.

It was a very natural and proper idea to cull from Whittier's poetry the Scriptural allusions and to place them beside the original words of the Bible. This has been done, and well done, by Gertrude W. Cartland, in 'Text and Verse for Every Day in the Year' (Houghton, Mifflin & Co.). Sometimes the parallelism is almost literal, sometimes rather remote, but the task has not presented such difficulties as might have been imagined. The little volume is calculated to give strength and comfort to a wide circle and to increase the poet's admirers.

William R. Jenkins, 850 Sixth Avenue, has added to his 'Théâtre Contemporain' Ohnet's play, "Le Maître de Forges." Belot's "Le Testament de César Girodot" will follow next in this series, and About's "Le Roi des Montagnes" in the "Romans Choisis" of the same publisher.

Mélusine for September 5 has some capital African tortoise tales. Is it on the Amazon or in Uncle Remus's realm that one finds, as here, the tortoise caught by the foot, and getting off by pretending that his enemy has seized a root by mistake?

A minute account, by Alfred Emerson, of Kiesintky's article on the Athena Parthenos of the Ermitage in the *Mittheilungen* of the German Archæological Institute at Athens is given in No. 18 of the *American Journal of Philology*. Our

readers have already had this article called to their attention with less particularity. Two medallions of beaten gold containing the head of Athena, with attributes neglected in the rude statuette discovered four years ago near the Varvakeion, serve both to check and to confirm the latter.

The first article in the *Antiquary* for August is the third of the series upon the House of Lords —"Its Place of Meeting," by Henry B. Wheatley. This gives occasion for some discussion of the interesting, but probably unsolvable question, as to the relation of the Lords and Commons in the early Parliaments, whether they sat in the same chamber, and at what time the present division into two houses was made. The paper is mainly occupied with a description of local details, illustrated by a plan. The next paper is a very interesting one, upon "The Lady Anne Clifford, Countess Dorset, Pembroke, and Montgomery," by W. Brailsford. This lady is the author of the famous letter to Sir Joseph Williamson, Secretary of State, in reply to his request for her influence in the election of a member for Appleby: "I have been bullied by a usurper, I have been neglected by a Court, but I will not be dictated to by a subject. Your man shan't stand." She being an ardent adherent of the King in the Civil War, while her husband, the Earl of Pembroke, was a leading Parliamentarian, there was little harmony between them. They seldom lived together, and he appears even to have kept her in confinement. A second paper, upon "Legends of Mecklenburgh," by Jessie Young, contains many entertaining and instructive traditions. We will also mention Mr. Round's second paper upon the Tower Guards, Mr. Walford's article upon Greenwich Fair, and Mr. Bent's upon London in 1669.

The shortcomings of most of our town histories are suggestively pointed out by Robert Luce in the *Granite Monthly* for September-October. The writer is led to discuss them, with illustrative examples, from his knowledge of the excellence of the census monographs, now in press, on "The Social Statistics of Cities." These will make two large volumes, and have been compiled under the direction of Colonel Waring. Mr. Cable's historical sketch of New Orleans is the most significant as a piece of literary work; but "nearly every community in the land containing more than ten thousand inhabitants has a more or less full account."

To those newspaper readers to whom, after all the talk on France, China, and Tonquin, an historical sketch of the last-named country, especially in its relations to the Celestial Empire, with remarks on the Black Flags and prognostications as to the probable results of the impending contest, may still be acceptable, we can recommend the following little book: 'Tungking,' by William Mesny, Major-General in the Imperial Chinese Army (London, 1884). The author has had some special sources of information, owing to his connections in the Chinese service, and his historical account is readable, in spite of its often bristling with barbarous names in a most unpardonable manner—as when he tells us that the country was successively known "by the various names of Lo-yüeh-ti, Nan-chiao, Lu-liang, Chiao-chou, Wu-p'ing-chün, Chiu-chün, Sung-p'ing-chün," etc., etc. The descriptive part is very fragmentary and defective. The author betrays a strong anti-French bias, and he makes no secret of his object, to impress upon his English readers that Anam "has been for more than thirty centuries and still is" the vassal of China; that France has "ruthlessly and without legitimate excuse" endeavored to seize Tonquin; that the Black Flags are recognized Chinese and Anamese troops, "and not rebels"; that the Anamese hate the French "with a bitter, unquenchable hatred"; that "France has already met no mean foe," and that a reverse of the French "will be the death-blow to their dream of a colonial empire in the East."

After the appearance of so many recent writings, lexicographical, grammatical, or philologico-comparative, on the pre-Semitic idiom of ancient Babylonia, variously designated by Assyriologists as the Accadian, Sumerian, or Sumero-Accadian language, it is almost surprising to find that the controversy raised some ten years ago by M. Joseph Halévy concerning the very existence of such an idiom is not yet ended. That French scholar, in a series of articles published in the *Journal Asiatique*, endeavored to prove that what were considered in the cuneiform inscriptions columns of non-Semitic words, in juxtaposition with the Semitic Assyrio-Babylonian vocables, were in reality but columns of signs in a special artificial style of writing, used by Semites. This heterodox archæological view he subsequently defended in various publications, against the refutations of Oppert, Schrader, Lenormant, and Sayce, but without success. In 1882, however, another French Orientalist, M. Stanislas Guyard, came forth on the same side of the controversy in the *Revue de l'Histoire des Religions*, and Halévy reiterated his opinions in his 'Mélanges de critique et d'histoire relatifs aux peuples sémitiques,' published in 1883. Against both Professor Schrader has again taken up the defence of Accadianism, with his wonted display of learning and laboriousness, in two lectures delivered before the Prussian Academy of Sciences, and published by the Academy under the title 'Zur Frage nach dem Ursprung der altbabylonischen Cultur' (Berlin, 1884).

An interesting work illustrating the history of the French in Northern New York in early colonial times has lately been published at Paris. The title is 'Journal d'une Expédition contre les Iroquois en 1687, par le Chevalier de Baugy.' The writer was aide-de-camp to the Marquis de Denonville. Hitherto for the history of this campaign we have had Denonville's official report, which is contained in O'Callaghan's 'Documentary History of New York,' vol. i., and, with notes by O. H. Marshall, in the New York Historical Society's Collections, 2d series, vol. ii.; an account, apparently by a participator, given in the Abbé Belmont's 'Histoire du Canada'; and Indian reports, printed in vol. ix. of the 'Documents relating to the Colonial History of New York.' The notorious Baron La Hontan also gives an account in his memoirs.

—From English sources we derive the following literary intelligence: The first number of the *International Magazine*, an addition to the ever-growing list, will be issued to-day in London by David Bogue. The contents will comprise "contemporary biography, records of travel, enterprises at home and abroad," and some general literature. Mr. Robert Louis Stevenson finished the novel he was engaged on when he was attacked by his long and serious illness. It is named 'Prince Otto,' and is described as a fantastic and humoristic study of modern manners. It will be published immediately in London by Longmans. Mr. Hamerton's new work on 'Landscape,' on which he has been closely occupied for some time, will consist of a series of chapters or essays on landscape in nature, literature, and art. The sea is, of course, included under the term landscape. It will contain forty illustrations on copper, half of them being etchings or engravings. Among the original etchings will be the "Port of Blanzy," by Mr. Hamerton himself; "Le Bas-Meudon," and "Nogent-sur-Marne," by M. Lalanne; "Lobster Fishers," by Colin Hunter; and "Stag and Tree," by Heywood Hardy. In addition to these there will be an etching of Turner's "Totnes," specially executed for this work by Brunet-Debaines, and one of Landseer's "Eagle's Nest," by C. O. Murray. The edition will consist of 1,250 ordinary copies and 500 copies on large paper. Mrs. K. F. Kroeker, the daughter of the German poet Freiligrath, has translated Brentano's fairy tales, which are so popular with German children, and they will be published shortly in London by T. Fisher Unwin, with twenty-two illustrations by Mr. F. C. Gould, who is known as the illustrator of the holiday numbers of *Truth*. Mr. Joseph Thomson's narrative of his recent travels and explorations in the region between Zanzibar and the Victoria Nyanza is about to be published by Sampson Low & Co. M. Gustave Masson has written a little work on Richelieu, by the light of the most recent research, which will be published by the Society for Promoting Christian Knowledge. A new annotated edition of Walton's 'Complete Angler' is in preparation by several members of the Gresham and the Piscatorial Angling Societies and the editors of the London *Angler's Journal*. Hurst & Blackett have in the press a new work in two volumes by Mr. Fitzgerald Molloy, entitled 'The Life and Adventures of Peg Woffington, with Pictures of the Period in which She Lived.' Arrangements are being made for the issue of an American edition of the *Illustrated London News* on the same day as its publication in England. The Oxford University Press have in preparation an annual of a rather new and remarkable kind, for the use of worshippers in the Established Church. It is an 'Annual Sunday Service Book of the Church of England,' in which "the morning and evening services will be given without omission or alteration of any kind, in the precise order in which they are used in our churches Sunday by Sunday throughout the year; so that they can henceforward be readily and intelligently followed even by persons wholly unaccustomed to them." It is significant, too, that at the same time a clergyman of the Established Church writes to a leading London paper, under the title "Common Sense in the Church Services," proposing that the bridegroom should be required to say simply, while affixing the emblem of union upon the finger of the bride, "With this ring I thee wed, in the name of the Father, and of the Son, and of the Holy Ghost." And he also asserts that "the coarse and indelicate opening exhortation to the office for the solemnization of matrimony is a source of pain and grief to thousands."

—The *Atlantic* for October is distinguished by a narrative of the unfortunate expedition against Crown Point, in which Dr. Parkman describes the gathering of the raw levies at Albany and their march through the colonial wilderness, and, with his characteristic pictorial touch, brings out the figures of the leaders, their principles and spirit. With particular felicity, he tells over the story of "the Bloody Morning Scout" and the battle it began, in which the farmer recruits in homespun, matched with the white-uniformed French regulars, fought, as the French commander said, "in the morning like good boys, about noon like men, and in the afternoon like devils." This sketch is one of the most engaging of the author's scenes, if one may so designate the purple patches of his histories. The fact that Leigh Hunt would have been one hundred years old had he lived until October 19, is the occasion of the study given under the title of "An English Literary Cousin"; and this recognition of him, in an age of centenaries, is made to come from our country because Hawthorne claimed him as an American gone astray at his birth. The article offers nothing new in fact or comment, but is merely an "occasional" piece; yet

it is not without its interest, and, whatever one may think of such a pleasantly-chirping poet as Hunt, none will grudge a few words of kindly and, rightly enough, uncritical remembrance to the friend of Shelley and the victim of Dickens. Of more entertaining quality is the letter that George Houghton has found in the Lord Dorchester Papers, which describes that incipient Cæsar, Washington, at the Princeton Commencement in 1783, listening, as the British emissary thought, with clouded face and downcast look, while the young collegian "extolled the virtues of the man who could stab even his father when attempting the liberties of his country." An article on the condition of Southern collegiate and academic education is the statistical paper of the number, and will prove valuable reading to educators, since reliable information from that quarter is difficult to obtain. The author points out the fact that a large number of inferior colleges destroys academies and confuses the minds of the youth as to the relative value of their education, and he especially laments the preponderating influence of the University of Virginia on the organization of the schools of the South, since he believes that a definite and required curriculum, with the slightest election, is the one necessary for the social condition of that section. Some movements contrary to this, he indicates, are already at work, and he cites Vanderbilt University, Tenn.; Central College, Mo.; Wofford College, S. C.; and Emory and Henry College, Va., as returning to a more fixed course of study. This is a sign of the great difference that still exists between the Northern and the Southern civilization so far as it is embodied in, or reflected by, institutions.

—The educational question is also taken up in *Lippincott's* in a very clear and directly illustrative paper on "A School without Text-books"—the school in question being that established at Zurich forty-eight years ago by a nephew of Froebel. The system is well enough known—the instruction given orally and by the aid of objects is the chief feature—and its capacity is being tested now in this country. The plea is made that the strain on a twelve-year-old child's faculties is diminished by a part of it being thrown on the attention of the senses instead of exclusively on the mind, and by the greater interest and pleasure felt by the student under *viva-voce* methods. There are, however, two sides to this question, and were there any sign that this prolongation of the Kindergarten period into youth were to be favored among us, a disquisition might be necessary. The practical instincts are, no doubt, highly developed, the knowledge of the specific facts is more tenaciously held, and so on; but the neglect of the slowly-formed powers of abstraction and imagination (among the latest of human acquisitions) is a very marked characteristic of the system. In these powers is the future of the child's faculty for originality and reflection and his appreciation of poetry and philosophy. Some of us might prefer Ruskin's ideal school—of a schoolmistress telling fairy tales to the group of children, and rigidly excluding from her discourse everything that was true. On a lower level of objection, many parents must hesitate to give full scope to the vagaries of an individual teacher, and be glad of the limitations of a text-book as a restraint upon him; and, again, the use of books, to which the mind becomes accustomed very slowly, and the habit of looking to them as something fixed and authoritative, cannot be unquestioningly delayed to so late a period. In fact, this system is essentially a substitution of the teacher for the parent to such an extent as to require genius on the part of the former and implicit trust on that of the latter; and were these conditions obtained, the rightness of the method is still to be determined. We note, in this same number, the conclusion of Coleman's "Reminiscences of Reade," and a denial of the statement made in London that Reade, in his alleged conversion by a non-conformist minister, was conscience-stricken on account of his connection with the stage—a denial which Mr. Coleman follows up by a fling at the detractor, Mr. Graham, who, it seems, "did not disdain to receive the 'wages of sin' in the shape of a substantial legacy" earned by the representation of the plays in "that 'pit of abomination,' a play-house."

—*Harper's* opens with an interesting account of Hans Christian Andersen's home in Copenhagen and Odense, by Mr. Horace E. Scudder, admirably illustrated, and written in that author's well-known amiable vein. Its picturesqueness is very noticeable, and many of the incidents of the walking-tour in the neighborhood are told almost with the charm of naïveté. The early history of King's College, as Columbia was originally named, though deficient in color and in anecdote, will restore to passing memory some of the better known scenes and figures of old New York life, before commerce left the Knickerbockers so far behind in their comfortable somnolency; but, for an antiquarian sketch, it is extraordinarily ill-furnished. The statistical article of this magazine is an exhaustive one on municipal indebtedness, bristling with figures to show our extravagance past, present, and to come, and with comparisons of many odious kinds to awake the business sense of the city communities to their danger. It is an oft-told story, and is here presented with force and clearness; but figures have so little influence on legislators, and the public mind has become so accustomed to contemplate nine or ten in a row, that even the author cannot expect to secure attention to the subject. A statistical alarmist is, in a democratic society, an extraordinarily ineffective person. The finest literary article in *Harper's* is a reminiscence, in excellent taste, of a visit with Darwin. This is accompanied by a masterly engraving from a photograph of the great naturalist, taken in the year following the publication of the 'Origin of Species,' and showing him in his prime and without a beard. The short stories, as is too frequently the case with this magazine, are adapted to the lowest respectable popular appreciation.

—Why is it that an *édition de luxe* published for a little group of Southern gentlemen is more impressive than many columns of statistics of the progress of popular education in that section? Without answering our own inquiry, we call attention to the sumptuous quarto volume that constitutes number one of the Filson Club Publications. The Filson Club was organized on May 15 at Louisville, Ky., by ten associates, of whom the Secretary, Mr. Thomas Speed, bears perhaps the most widely-known family name. Their object was and is to collect and preserve what pertains to the history of Kentucky, and they limit their membership to "persons known to take an interest in historic studies, and to be capable of so arranging and presenting the information they may obtain as to be useful to others." And who is their patron saint? A Northerner, a Pennsylvanian schoolmaster and civil engineer, who wrote the first history and made the first authentic map of Kentucky, laid out the city of Cincinnati and invented a fantastic but euphonious name for it, which was rejected, and surveyed a road from Lexington to the mouth of the Licking, which became ultimately the line of the Cincinnati Southern Railway. More than this, Filson's history first made the world acquainted with the adventures of Daniel Boone; so that on all sides his title to remembrance seems peculiarly strong. His history was at once (1785) translated into French and published at Paris, in 1793 was reprinted at London as part of another work, and is about to be reproduced once more by Robert Clarke & Co., the publishers of the Club. Filson was certainly not a great or impressive personage, but he was a sort of adventurer extremely useful for the time and the scene of his activity, and not without aspirations for the spread of enlightenment in a philanthropic spirit. All that can be now learned of him was related to the Club by its President, Mr. Reuben T. Durrett, in the paper now published as above under the title of 'The Life and Writings of John Filson.' His map, which had become a subject of debate as non-existent, is given in facsimile, as is also a page of his handsome handwriting and a miniature of his unhandsome, not to say doleful, countenance. The brochure is rightly printed in Cincinnati (by Robert Clarke & Co.), since Filson was one of the three original proprietors of the site of that city. We regard this movement with great interest, as of good omen for Kentucky and for the South, to which it sets a worthy example.

—Mr. H. C. Sorby read a paper before the Society of Arts conference on water supply lately which might have been entitled "The Rehabilitation of Animalcules." People who have been frightened by the sight of the marine monsters which the microscope reveals in a drop of water, will be glad to learn that they are not enemies but friends of man; that they are scavengers, devouring dead animal matter and positively thriving upon human excrement. And as is usual in the processes of nature, this purifying provision is elastic, the number of scavengers adapting itself much better than if under the orders of a Board of Health to the amount of garbage to be removed—the more sewage the faster do they multiply; when the demand for mouths diminishes, the number of eaters at once falls off. The possible increase of the laborers in this health department is enormous, a single female cyclops being capable of producing in one season five thousand millions of young. But curiously there is a point where nature fails: water may be so saturated with decaying animal matter as to overtax the powers of entomostraca and to drive them away, so that the purification ceases for a time. Thus two points are explained which sometimes puzzle the ordinary man: first, why this constant influx of filth does not end by making all rivers and the ocean itself utterly vile; and, second, how it sometimes happens that a river that is usually unobjectionable becomes suddenly offensive. There is some difference, it appears, between the different groups of entomostraca in this respect: an increase of sewage will lead to a rapid diminution of some and a corresponding increase of others. There are beings of refined taste, evidently, even among animalcules.

—Another paper read at the Congress was of great interest—Mr. G. P. Bevan's on "The Thames and the Public Health." He denounced the present treatment of the river roundly, both in regard to the water supply above London and the sewage disposition below. To furnish London with water the Thames Companies abstract two-thirds of the daily flow, and leave a large part of the river bed dry in the warm season. To relieve London of its filth, the river from Henley to Gravesend is made a mere sewer; for the point of discharge is so far from the mouth of the river that a very large portion of the sewage does not get out into the sea at all, but travels with the tide up and down the river, which every one knows looks like a thick broth and kills the unfortunate people who are thrown into it by steamboat accidents. Mr. Bevan proposes that the sewage should all be carried across the Essex marshes to Foulness Island, a little to the north of Shoeburyness, and there cast into the German Ocean, or, better still, be converted into a valua-

ble manure, or spread over large farms, as is to be done by the city of Paris at Gennevilliers. Space is plenty in that region, and a brisk manufacturing business of a not very savory kind could be carried on there without offending the neighbors. At any rate, the Thames would be relieved and London preserved from discomfort now and a possible pestilence in the future. Not all Mr. Solly's entomostraca can fully deal with the exuviæ of that rapidly growing city. One hundred and sixty-four million gallons are discharged daily now. In twenty years it will be two hundred millions. The river will perhaps have reached that point at which nature refuses to purify it.

—M. Anatole Leroy-Beaulieu, the French publicist and economist, has repeatedly been introduced to our readers, in notices of his 'L'Empire des Tsars et les Russes,' as the keenest and most brilliant foreign expounder of contemporary Russian affairs. To that grand publication, the third volume of which is shortly to appear, his latest production, 'Un Homme d'État Russe . . .' (Paris, 1884), forms a very pleasant, though comparatively somewhat light, companion book. It is in some respects less, and in others more, than a biography of its hero, Nicholas Alexeyevitch Milyutin, on whose inedited correspondence, surrendered to the author by friendly hands, it is founded; and it is therefore characterized in its sub-title as a 'Study of Russia and Poland during the Reign of Alexander II. (1855-1872).' The private life of Milyutin is completely left out, and the sketch of his career as a statesman and a reformer is made to embrace so much of the doings and thinking of his two inseparable friends and co-workers, George Samarin and Prince Vladimir Tcherkasski, that it becomes the history of a triumvirate; for such a political combination, through the submission of the Czar to its lead, the three friends really formed during the emancipation period of the late Imperial reign. There was much that distinguished the three from each other, in their origin, mental endowments, habits of life, and external position; but their political creed and passion bound them as firmly together as Robespierre, Saint-Just, and Couthon ever were united in life or death.

—The winter season is just beginning at the Paris theatres, and correspondents are giving lists of new plays announced for production. There will be, however, comparatively few novelties this year, several of the theatres simply continuing the successes with which they left off. With regard to authors' profits from the long runs which pieces have nowadays, some startling figures are given. Dumas fils is said to have taken 220,000 francs in six years at the Français alone. Meilhac received nearly 50,000 francs in a single month, when four of his pieces were running at the same time. Marais recently claimed $1,600 a month in a dispute with the director of the Porte St.-Martin Theatre, and Lasalle pockets $2,700 for a month from the opera. Goethe's "Egmont," by Salveyre, is the principal novelty promised at the opera, where also a new ballet founded on the fable of the "Deux Pigeons" is to be produced. The Théâtre-Italien, with Adelina Patti for prima donna, announces "Aben-Hamat," by Dubois; "Le Chevalier Jean," by Joncières; "Richard III.," by Salveyre; and "Benvenuto Cellini," by Diaz. The Folies Dramatiques will open with "Rip Rip," by Planquette, which has already proved a success in London under the title of "Rip van Winkle." This will be followed by a new comic opera, called "Les Trois Petits Mousquetaires" (founded on Dumas's novel), by Ferrier and Prevel, the music by Varney. Madame Judic is coming to America, so the Variétés will be without its chief attraction, and its only novelty, therefore, will be a new vaudeville by Gondinet and Blum, called "Mademoiselle Gavroche." The authors and composers of opéra bouffe have been very industrious. At the Bouffes Parisiennes two new works are announced, "Le Diable au Corps," by Blum and Toché, music by Marenco, and "Le Chevalier Mignon," by Clairville, music by Wentzel. Both Marenco and Wentzel are as yet unknown to fame. The Nouveautés offers very strong attractions in the shape of an opéra comique in three acts, called "La Nuit au Soufflets," by D'Ennery and Ferrier, music by Hervé, and "La Vie Mondaine," a four-act operette by Najac and Ferrier, music by Lecocq.

—The Français will open with a three-act comedy by Raymond Deslandes, called "Antoinette Rigaud," and later in the season will produce another one-act piece in verse, by Théodore de Banville (the author of the very successful "Gringoire"), called "La Femme de Socrate," in which Coquelin will play the philosopher. "L'Héritière," a one-act piece by Morand, in which Coquelin and Mlle. Reichemberg will take the two parts, is also announced at this theatre. At the Odéon, "Le Mari," a comedy, by Nus and Arnould, will be the first novelty, to be followed by "La Maison des deux Barbeaux," the first dramatic work of André Theuriet. A four-act comedy by Jannet, called "Les Imbéciles," and a drama of the Bourse, by Louis Davyl, entitled "Isaac 1er," are also on the programme. The Vaudeville opens with a new three-act comedy, by Moreau, entitled "Un Divorcé," the first dramatic result of the new divorce law. Then in succession will come "L'Amour," a play in four acts, by D'Ennery and Davyl; "L'Américaine," a play in four acts, by Jules Claretie; "La Doctoresse," a comedy in three acts, by Ferrier and Boccage; and "La Revanche d'Ève," a comedy in three acts, by Madame Barrière. If ever the "Maître de Forges" comes to an end at the Gymnase, a comedy will be produced by Meilhac and Gille, entitled "La Ronde du Commissaire," and also two adaptations of novels, Claretie's "Prince Zilah," and Mario Uchard's "Mademoiselle Blaisot," of each of which 50,000 copies have already been sold. At the Palais Royal an important piece in four acts, also by Meilhac and Gille, is promised in the course of the season, and two other novelties called "Cupidon" and "Tout Feu, Tout Flamme." The Ambigu announces an English drama called "Bob," and the Porte St.-Martin will probably bring out the historic tragedy of "Théodora," which Victorien Sardou is writing for Sarah Bernhardt. Among rumors, we may mention Victor Hugo's drama of "Cromwell," and another venturesome attempt to present "Lohengrin" to a French audience, more risky than ever since the successes of the French fleet in the East. The rebuilt and redecorated Ambigu, we may also note, is the first French theatre to be lighted by electricity. Altogether, therefore, in spite of the statement freely made that the coming season will be a comparatively barren one, there will hardly be any lack of new pieces to engage the attention of play-goers and critics, although it is true that most of the novelties are light and not very important productions, and that only one of the great French playwrights—Sardou—will be represented by a new work. On the other hand, however, the adapters of opéra bouffe will find plenty of fresh material provided for them.

MARGARET FULLER.

Margaret Fuller Ossoli. By Thomas Wentworth Higginson. [American Men of Letters.] Second Edition. Boston: Houghton, Mifflin & Co. 1884.

Memoirs of Margaret Fuller Ossoli. By R. W. Emerson, W. H. Channing, and J. F. Clarke. 2 volumes in one. Boston: Roberts Brothers. 1884.

It is impossible to read either of the two works whose titles are given above without feeling that at the present day we lack, with regard to any Transcendentalist biography, one qualification supposed to be essential to a just appreciation of all literary memoirs—that of sympathy. The public is not, to be sure, in the frame of mind which led the Knickerbocker writers of the last generation to dub the writers for the *Dial* "zanies"; it is in a mood rather ready to appreciate. It would like to believe if possible that the Transcendentalists were the fathers and mothers of American thought and letters; to discover the true secret of their influence and fame; to learn what it was that made them so hated and so loved, so revered and so ridiculed. For this task, in respect to the great female Transcendentalist, Mr. Higginson is better qualified in almost every particular than his predecessors, the joint authors of the original biography. Cradled in the Transcendental traditions of New England, he has lived to emancipate himself from them, and to be able to look upon them with a critical, though never coldly critical, eye. It will not surprise the reader to find that he does not at all sympathize with the only critic of the New England renaissance with whom we should think of comparing him, Mr. James. Mr. James's term "parochial," applied to Thoreau, greatly, and not unnaturally, irritates Mr. Higginson, who revolts against the implied prediction that the verdict of the future on the Transcendental movement is to be that it was a petty local affair—much as the worldlings of the time insisted that it was. Parochial! cries Mr. Higginson in disgust. As well call Kant a parochial philosopher, or Goethe a parochial poet, because they lived in places which, compared with our modern capitals, were of the village type. If we apply such a term to Thoreau, what shall we say about Emerson, about Parker, about Margaret Fuller? Are we not drawing dangerously near the line which divides the sublime from the ridiculous when we admit to ourselves that such epithets, applied by an American critic to an American seer, are permissible? The point is one upon which we are far from wishing to enter, and we merely refer to it as indicating the generous warmth of feeling with which Mr. Higginson has engaged in his task—his very difficult task—of making a Transcendental biography interesting. He has a spark of the afflatus himself. He is not a Transcendentalist, because there are none now; but we feel in reading his volume that under better conditions he might have been one, and that he feels in his heart that Transcendentalism was a loftier and nobler thing than criticism of it can ever be.

We have ventured once or twice to suggest the idea in these columns that the movement in which Margaret Fuller played such a conspicuous part cannot be understood at all except as a distinctly New England outbreak. It could have been set on foot nowhere except in New England, and nowhere except in New England could any intellectual movement have taken on its peculiar hues and shades. It was an attempt to furnish a substitute for a time-worn theological philosophy of life by people who really had no substitute ready. It was a revolt against a narrow theology in the interest of a philosophy which—except so far as it consisted in the doctrine that every one must think for himself—did not exist. The *Dial*, as Mr. Higginson himself points out, was not written by people who thought alike: it was written by people who thought differently, and because they thought differently. The account given of the origin and management of this odd magazine by Margaret Fuller's latest

biographer is full of interest; and it is by no means a bad indication of what the enterprise was, that at the outset the solemn Alcott should have somewhat bitterly complained of Miss Fuller's editorship as of a too worldly-minded cast. The theological, or rather anti-theological, genesis of the *Dial*—*i. e.*, of Transcendentalism—is a fact which, in estimating its character, cannot be made too prominent. Who does the reader suppose were the bright young Bohemians, the New England *libres penseurs*, who assisted at its birth? They were four young Unitarian clergymen—Dr. Emerson, Dr. Hedge, Dr. Ripley, and Dr. Putnam—who, meeting at the bicentennial celebration of that headquarters of orthodox religion, Harvard College, "got into some conversation about the narrow tendencies of thought in the churches." It was, then, four embattled clergymen who, afterward enlisting with them such congenial spirits as O. A. Brownson, Theodore Parker, C. A. Bartol, some unnamed "divinity students," and Margaret Fuller and Elizabeth P. Peabody, fired the shot heard round the world, but heard outside of New England rather with curiosity than with the feeling that it was the crack of doom to the established order of thought. Carlyle heard it at Ecclefechan, and laughed at it; for, being a seer himself, he was perfectly able to see the comicality of a number of his inferiors setting up as seers. Elsewhere it attracted at the time little or no attention, and even in New England Hawthorne and Lowell had the hardihood to make more or less fun of it, while in godless New York the *littérateurs* who were attempting to found a school of their own, and who would have been sadly embarrassed by a "potato gospel" or by the "sisterhood of Reforms," laughed all the louder at the noise because they felt that they had in their own keeping the real germs of a new American literature.

If we imagine a community hide-bound in theological thought for two centuries, cut off from communication with the rest of the world by the distance from Europe, by the absorption of its inhabitants in a hard and material life, and bound by forms, ceremonies, and prejudices to a degree not to be found anywhere now, we can see perhaps why it was that the first effort at independent thought in New England was so queer, and had so little relation to thought anywhere else. The mould of thought among all thinking men was theological, or at best metaphysical. In order to be less theological there was nothing for it but to be more metaphysical. That the Transcendentalists did an important piece of work in knocking off the theological shackles from New England, is not to be disputed, and could any assistant have been found better adapted to help on such a work than a clever woman, inspired by all the loftier thoughts of the time and by the companionship and friendship and emulation of the chief men? Margaret Fuller would undoubtedly have made her mark anywhere, but nowhere else could she have been the friend of Emerson; nowhere else could she have edited the *Dial*. She, too, thought for herself. Brilliant in conversation, acute in analysis of character, and gifted with a genuinely feminine appreciation of masculine thought, she was eminently fitted to heighten the generous aspirations, and we must say also to increase the confusion, which marked the Transcendental movement. Mr. Higginson makes her character attractive; he does not make her intellectual rank so clear. Shall we compare her with George Sand, with Mme. Roland, with George Eliot, with Mme. de Staël, or with Sappho? It was difficult to know how to do so, because, while we know exactly what all these ladies in their various spheres of activity accomplished, it is hard to explain exactly what Margaret Fuller did. What has she left behind her? We are unable to agree with Mr. Higginson in his estimate of her literary gifts. She has left no substantial literary performance which is to be compared with the work of the great literary women. As a talker she had evidently great powers; but here again it must be admitted that Miss Fuller's conversations were not in the taste or adapted to the comprehension of the present day. One of Mr. Emerson's contributions to the 'Memoirs' gives a better idea, perhaps, of the conversations than Mr. Higginson's chapter on the same subject does. On one occasion, March 22, 1841, the question of the day was, "What is life?"

"Margaret did not believe we had, any of us, a distinct idea of life. A. S. thought so great a question ought to be given for a written definition. 'No,' said Margaret, 'that is of no use. When we go away to think of anything we never do think. We all talk of life. We all have some thought now. Let us tell it. C., what is life?' C. replied: 'It is to laugh, or cry, according to our organization.' 'Good,' said Margaret, 'but not grave enough. Come, what is life? I know what I think. I want you to find out what you think.' Miss P. replied: 'Life is division from one's principle of life in order to a conscious reorganization. We are cut up by time and circumstance, in order to feel our reproduction of the eternal law.' Mrs. E.: 'We live by the will of God, and the object of life is to submit,' and went on into Calvinism. . . . Margaret was then pressed to say what she considered life to be. Her answer was so full, clear, and concise, at once, that it cannot but be marred by being drawn through the scattering medium of my memory. But here are some fragments of her satisfying statement. She began with God, as Spirit, Life, so full as to create and love eternally, yet capable of pause. Love and creativeness are dynamic forces, out of which we, individually, as creatures, go forth bearing his image, that is, having within our being the same dynamic forces, by which we also add constantly to the total sum of existence," etc., etc.

The next day, says Mr. Emerson, whom we cannot help suspecting of a slightly humorous appreciation of Miss Fuller, some of those who were present "begged Margaret to repeat the statement concerning life with which she closed the last conversation. Margaret said she had forgotten every word she said. She must have been inspired by a good genius to have so satisfied everybody—but the good genius had left her. She would try, however, to say what she thought, and trusted it would resemble what she had said already. She then went into the matter, and, true enough, she did not use a single word she used before."

The literary impression that we get of Margaret Fuller from Mr. Higginson's biography is very like the impression that we get of most of the other Transcendentalists—of people just freed from an outworn creed, and thinking for themselves without any method except such as they had actually inherited from the very system they had given up. What did they do for American literature? Emerson is the only writer of importance whom the school, if it can be called a school, produced, and Emerson's literary standing cannot yet be pronounced settled. But between the main current of American literature, even in New England, and Transcendentalism little or no connection can be traced. We owe to it neither Lowell, nor Hawthorne, nor Holmes, nor Whittier—to mention no others—and it made on contemporary European thought and letters a very slight impression. As time goes on, we fancy the part the Transcendentalists played in the development of America will seem rather more than less strange and incomprehensible. They were protagonists in the fight against materialism and convention. They threw open the windows and doors of the tightly-closed New England domain to the air and sunshine which they perceived outside and longed for. Suddenly endowed with intellectual freedom and seeking expression for it, they revelled in the new and incomprehensible. We cannot spare the word: *pace* Mr. Higginson, Margaret Fuller loved the unintelligible, and when he defends her by saying, "She may be confused, rambling, sometimes high-flown, but she offers no paradoxes so startling as some of Emerson's and is incomparably smoother and clearer than Alcott," the line of defence seems rather dangerous.

In only one point do we find Mr. Higginson's very interesting account misleading: in indirectly conveying the idea that Margaret Fuller played an important part—that the Transcendentalists played an important part—in the development of modern literature. Do not we really always think of them as standing quite by themselves, in literature as in philosophy?

AN ADVENTUROUS CAREER.

Storms and Sunshine of a Soldier's Life. 2 vols. Edinburgh: David Douglas. 1884.

UNDER this not very happy title we have presented for our perusal the life of a distinguished officer of the old East India Company's service, Lieutenant-General Colin Mackenzie. The name is a strange one to American readers, but the career depicted in these volumes was so fraught with peril and adventure, and was passed, in great part, amid such strange scenes and wild countries, that the biography is full of interest, although composed and put together with culpable haste and carelessness. General Mackenzie entered the service of the East India Company so far back as 1825, when the British possessions in India had not acquired their present magnitude, and the administration was conducted on much simpler and ruder methods than now. The Punjab was then an independent country, under the rule of the Maharaja Runjeet Sing. Oudh was still governed by a Nawab; and a quarter of a century had still to pass before Lord Dalhousie entered upon that policy of annexing the petty native states which in the course of a very few years aroused the wrath and consternation that found expression in the great insurrection known as the Indian Mutiny. But then, as now, the minds of Anglo-Indian officials were greatly troubled by the advance of Russia in Central Asia. She had then only begun that forward movement which has now aligned the frontier of her Asiatic possessions with that of Afghanistan. The Central Asian Khanates—Khiva, Bokhara, Khokand, and the rest—were unsubdued, but Russophobia then, as now, ruled in the counsels of the Indian Government to the absolute exclusion of reason and common sense. In 1838, this panic terror of Russia brought about the first English invasion of Afghanistan—assuredly the maddest project that was ever undertaken by responsible statesmen.

Afghanistan was at that time ruled by Dost Mohammed Khan, a chief of remarkable capacity both as a soldier and administrator; a man, moreover, as alarmed as the English themselves at the approach of Russia, and most solicitous to become the friend and ally of the British Government at Calcutta. Instead, however, of responding in the spirit of his advances, nothing could content Lord Palmerston in London and Lord Auckland in Calcutta but to drive the Dost from his throne and his dominions, and set up in his place a certain Shah Soojah, whose incapacity and misgovernment had been the occasion of his expulsion from Afghanistan a few years previously. This ex-king had no party in his own country, and could, therefore, be restored only by the intervention of British force, which force, before it could reach the frontier of Afghanistan, had to march either through the territory of the independent Ameers of Sind, or through that of the Punjab Maharaja. Consequently, as soon as it penetrated within Afghanistan it left its base

of supply at the mercy of an Indian prince. The main incidents of what followed are well known. The British troops, bringing their puppet king with them, had no difficulty in getting to Kabul, but, having got there, they could not come away. The puppet king was destitute of authority, and the troops were surrounded upon all sides by a fanatical and turbulent population. Incapacity and irresolution on the part of the English leaders aggravated all the difficulties of the situation, until at length the desperate resolution was formed to abandon the puppet king to his fate, and try to force a way back to India. The season was the depth of winter ; the line of march lay through steep and narrow passes where a few resolute men would suffice to stop the progress of an army ; and the desperate attempt failed disastrously—utterly. The entire English force, together with all their camp followers—to the number of 14,000 men—was, with the exception of a few captives, annihilated in the Khoord Kabul pass. In all these events Captain (as he then was) Colin Mackenzie played a prominent and distinguished part. It constitutes the most important episode in his long career as a soldier, and a brief account of his doings will serve to show how much of wild and stirring incident there is to be found in these volumes.

It was on the 2d of November, 1841, that the storm long gathering round the English army of occupation at Kabul actually burst. The city mob forced their way into the house of Sir Alexander Burnes, and murdered him, his brother, and Captain Broadfoot, of the Engineers. Captain Mackenzie was at this time in command of a small post known as "the Fort of Nishan Khan." The garrison consisted of twenty sepoys of the Company's army under a native non-commissioned officer, and ninety-five Afghan Yezailchis under the command of a native officer, also an Afghan, named Hasan Khan. There were also, in the fort and the gardens round it, a number of women, children, and camp followers, and a huge quantity of baggage as well as commissariat stores. The armed population of the city, now rendered doubly furious by their first taste of blood, poured down in great masses to attack the fort. Mackenzie was compelled to sacrifice the baggage and commissariat stores, which were scattered about in the gardens outside the fort ; but he felt confident of being able to hold the fort until a force was sent to his relief from the British military cantonments situated at some distance beyond the city. The thing about which he felt doubtful was the temper of Hasan Khan and his Afghan Yezailchis. If they preferred siding with their countrymen to remaining "true to their salt," all was lost. But Mackenzie was one of those men whose personality would seem to have possessed a magical power over the minds of Orientals. Tall, handsome, a bold rider, yet courteous and gentle in all his relations with men, he was known among the Afghans by the title of "The King of the Franks." Hasan Khan and his soldiers yielded, like the rest of their countrymen, to the charm of his manner and his presence. Long afterwards, he said to Hasan Khan, "What made you come and fight for me when I was a stranger to you?" "You came out and called on us to come," was Hasan Khan's reply.

So much has been written about Afghan falseness and perfidy, that it will not be amiss to turn aside for a moment from the defence of the Fort of Nishan Khan, to trace the fortunes of Hasan Khan. He and his Yezailchis stood by the English to the end. During the long defence of the military cantonments, they fought in every sally, and were in the thick of every engagement. They accompanied the retreat through the Khoord Kabul Pass. They fought until, of the defenders of the Fort of Nishan Khan, there remained only Hasan Khan and some half dozen followers. Then, seeing that all was over, Hasan Khan obtained permission from one of the few surviving English officers to leave the relics of the retreating army, in order to provide for the safety of his own family. For many months Colin Mackenzie lost all intelligence of him, and feared to inquire lest he should hear that he had been killed. The relieving army under General Pollock had marched through the Khyber to Kabul ; the captives had been released, and the English on their way back to India had encamped at Gundamuk. Writes Colin Mackenzie :

"On arriving at Gundamuk, as I dismounted, I saw a wretched, half-naked man standing by my tent-door. His bare feet were cut and bruised by sharp stones, his beard matted, and his eyes hollow and sunk. This was all that remained of the most splendid specimen of Eastern chivalry I have ever known. He waited to see if I should recognize him, and then rushed into my arms, fell on my neck, kissed me, and burst into tears. My joy may be imagined. I led him into the tent, procured him refreshment, clothes, and a pipe, and then heard from him a detailed account of all his adventures and miseries, which he frequently interrupted to bless God for the miracle of my preservation, for at one time he had also given me up for lost."

Hasan Khan accompanied Mackenzie back to India, when a pension was settled upon him by Lord Hardinge. When the Sikh war broke out, he again took the field and earned from Lord Gough—that fiery old Irish soldier—the commendation that he was the bravest man he had ever seen. In 1857, he, together with other Afghan exiles, was dwelling at Loodianah, and, on the breaking out of the insurrection, preserved the lives of the missionaries and others by giving them an asylum in his house. When the mutineers attacked the place, he placed his services at the disposal of the Magistrate, George Ricketts, fighting, this time, as an artilleryman, the Magistrate subsequently declaring him to be the "stanchest friend" he ever had. There is an abundance of similar splendid material to be found in the Indian dominions of the English Queen ; and it may be asserted as a fact to which there will be very few exceptions, that a native whose mental endowments raise him above his fellows is, by natural inclination, the loyalest supporter of British rule. Unhappily, however, for the stability of the Empire, the English have not had the sagacity or the generosity to afford a career to these men. Beyond the pension granted by Lord Hardinge, Hasan Khan received no reward for nor recognition of his services. The Russian Government, wiser in its generation, would have given such a splendid soldier the command of a regiment, and lavished titles and decorations upon him.

For two days Mackenzie held the fort against the Afghans. He waited, hour after hour, for a force to be sent from cantonments to relieve him, but there all was consternation and disorder. The generals, dismayed at the position they were in, could decide upon nothing ; and after forty-eight hours of incessant fighting or watching, Mackenzie resolved to abandon the fort, and cut his way to the cantonments. In the darkness of the night, and with a train of camp-followers to look after, he got separated from his faithful Yezailchis :

"Riding on alone along a narrow lane, to try and pick out the road, I found myself suddenly surrounded by a party of Afghans whom at first I took to be my own Yezailchis, and spoke to them as such. They quickly undeceived me, however, by crying out, 'Here is an European,' and attacking me with swords and knives. Spurring my horse violently, I wheeled round, cutting from right to left. My blows . . . parried the greater part of theirs, and I was lucky enough to cut off the hand of my most outrageous assailant. My sword went clear through the man's arm, but, just after, I received such a tremendous blow on the back of the head that, although the sabre turned in my enemy's hand, it knocked me almost off my horse. The idea passed through my mind—'Well, this is the end of my career, and a miserable end it is, in a night skirmish with Afghans.' . . . I became insensible, hanging on the saddle by only one foot, but I did not let go the bridle. How I was rescued from that fearful peril I know not, but the next thing I remember is finding myself upright in the saddle in advance of the enemy, the whole picket firing after me. I passed unhurt through two volleys of musketry. The picket pursued, but I soon distanced them, crossing several fields at speed, and gaining a road which I perceived led round the western end of the Shah's garden. Proceeding cautiously along, I found to my horror my path again blocked up by a dense body of Afghans. Retreat was impossible, so, putting my trust in God, I charged into the midst of them, hoping that the weight of my horse would clear the way for me, and reserving my sword-cut for the last struggle. It was well that I did so, for by the time I had knocked over a heap of fellows—for they tumbled over one another—I found that they were my own Yezailchis. If you ever experienced sudden relief from a hideous nightmare, you may imagine my feelings for the moment."

Six weeks later, Colin Mackenzie formed one of the party which accompanied Sir W. Macnaghten to the interview with Akbar Khan, the son of the Dost, when Akbar caused the English envoy to be murdered. Mackenzie owed his escape upon this occasion to the gallantry and fidelity of an Afghan friend. It was after this murder that the fatal resolution was adopted by the English commanders to evacuate their cantonments, and attempt to return to India. Colin Mackenzie escaped the horrors of this retreat by the accident of his captivity. He was afterwards employed by Akbar Khan to act as the bearer of terms from him to General Pollock for the surrender of the English captives in Afghanistan, and his adventures on his perilous journey from Akbar Khan's place of residence to the headquarters of the British general at Jelalabad, as told by himself, are a most interesting story. Akbar Khan's terms were rejected by the English general, but Colin Mackenzie won the hearty admiration of the Afghans by returning forthwith to captivity instead of consulting his own safety by remaining with the English army.

The extracts we have given will convey some, though by no means an adequate, notion of the wild and varied incidents related in these volumes. Especially striking is the narrative of the naval operations for the extermination of the Malay pirates, and the description of the district of Peshawur under the rule of General Avitabile, an European adventurer in the service of the Maharaja Runjeet Sing. In general, books which record the achievements of Anglo-Indian officials tell us nothing about the people among whom they lived, but this biography is an exception to the rule. We know of no book in which the Afghans are brought more vividly before us.

Memoir of Abbott Lawrence. By Hamilton Andrews Hill. 2d ed. Boston: Little, Brown & Co. 1884.

It was proper that this should not remain a privately-printed memoir. Abbott Lawrence's name is permanently associated with the industrial development of the country, with the progress of the higher education, and with the peculiarly American annals of public spirit and princely liberality. He was as useful as anybody in arranging the Ashburton treaty. He came very near being nominated Vice-President of the United States instead of Fillmore, and it must be esteemed the greatest good fortune of his life that he escaped being called upon to sign the Fugitive Slave Bill. He was elected to Congress in 1834, and had the distinction of being the first political candidate ever catechised as to his views on slavery. This, by the way, his biographer has entirely overlooked, though the Boston fire which

destroyed so many materials for the present work left untouched the record of Mr. Lawrence's cautious and somewhat haughty reply to the inquiry if he would vote for the abolition of slavery in the District of Columbia. He was reëlected in 1838, and again catechised, and evidently had not made much progress in anti-slavery sentiment in the interval, though opposed to the annexation of Texas. He had the independence to break with Webster in 1842, preferring that Clay should be the party standard-bearer in 1844. The author of the 7th of March speech had his revenge by depriving Mr. Lawrence of the Vice-Presidency in 1848. The latter concluded his public service as Minister to the Court of St. James, where the first important matter requiring his attention was the neutrality of the Isthmus Canal.

While the political interest of this memoir is considerable, its economic value may be thought greater. Mr. Lawrence began his business career as an importer, and his conversion to protectionism coincided with his becoming a manufacturer. He tells of his having resisted the forcing of "the American system" upon New England by the tariffs of 1824 and 1828, and of his idle fears of the injury that would ensue to navigation. He thought it a consequence of protection that, "so far from our foreign commerce being diminished, it was increased," while our domestic tonnage and commerce were very soon more than quadrupled. He also flattered himself that, as a legislator, he had always unselfishly kept in view "those principles which would carry home to the Many the greatest amount of prosperity and happiness, believing that the Few will always take care of themselves." He did not apply these principles too closely when discussing with William C. Rives the causes of Virginia's falling-behind in the race for material prosperity. He even pointed out how what he euphemistically termed the "labor of that character which depends principally on physical strength"—*i. e.*, slave labor—might be employed in the coarser manufactures. It was not the slaves whom he had in mind when, in the same letter, he said, "We should strive to elevate the laboring and less-favored classes"; and again, that by the introduction of "a regular system of the division of labor"—white intelligent and black unintelligent—"a desire for knowledge will be created: more education, more intellectual cultivation will be desired by those engaged in the mechanical departments." Had he so intended or been understood, the Hon. Mr. Rives would have committed the letter to the flames with a pair of tongs as an "incendiary" document, and the editor of the Richmond *Whig* would have closed his columns to the correspondence, with some appropriate remarks on firebrands in the mails from a sister State. The "humble classes" whom William S. Archer, of Virginia, hoped to win "to habits of regular and systematic industry from lethargy, loafing, and dissoluteness," were equally not the slaves. Senator Archer was pressing Mr. Lawrence to accept an invitation to come to that State and take the lead in developing its water power. Mr. Hill's reflections on what might have happened to the friendly relations between North and South—they "might never have been broken"—if Mr. Lawrence had consented, betray the same want of humor that Mr. Lawrence's diagnosis of the Southern malady did.

It was a necessary consequence of "the American system" that moneyed men should more and more be thought of, and should put themselves forward, as candidates for Congress. Our dismal experience of the Crédit Mobilier would alone suffice to make unpopular now the dictum of Webster in 1850, here reported: "Boston should send commercial men to Congress; they are infinitely more useful than lawyers." On the other hand, there is an echo of the present time in this extract concerning Mr. Polk, before the election in 1844: "He has told us," says Mr. Lawrence to the Whigs of Essex County, the then citadel of protection, "that he is in favor of a horizontal tariff of 20 per cent., the effect of which would be (if adopted), in opening our markets to all the world, to place our free and independent laborers on an equality with the pauper laborers of Europe." Here Mr. Lawrence was hardly faithful to his idea of international commerce. In 1846, in his third letter to Mr. Rives, Mr. Lawrence was explaining how far protection had done its work in establishing American manufactures against the world. He concluded that "we have now certainly nothing to fear in the manufacture of yarns as high as No. 14—so far we can go on without protection."

Mr. Hill gives a curious account of a German attempt to make a "Poor Richard" of Abbott Lawrence in 1856, by publishing a pretended document bequeathed him as his sole capital by a rich uncle, and consisting of maxims such as "Never love to spend," "Never run in debt," "Persevere," and the like. "From a laborer and farmer in Virginia," ran this romance, "he became a wealthy manufacturer, an owner of plantations and railroads, of mines and of gold diggings. . . . And he would undoubtedly have become President of the United States if he had not beforehand declined the honor. He died . . . a man of ten millions of dollars, which, like his uncle, he bequeathed to charitable institutions." On the side of charity this transatlantic reputation was, if excessive, not undeserved. Mr. Lawrence, among numberless other benefactions, during his lifetime and by legacy, gave $50,000 for the erection of model lodging-houses for the poor of Boston, his will directing "that of the net annual income, after all charges for expenses, repairs, etc., had been met, one-half should be distributed to organized public charities, not to individuals, and that the other half should be reserved by the trustees for the increase of the system of buildings." The property is now worth three times the original bequest, and has produced some $20,000 for the charities indicated. We could wish Mr. Hill had explained why the Lawrence Scientific School at Harvard has not proved an equally successful foundation. It is somewhat singular, too, that no mention is made in this volume of the city of Lawrence, Kansas.

McDowell and Tyler in the Campaign of Bull Run. 1861. By James B. Fry, Brevet-Major-General, U. S. A. D. Van Nostrand. 1884.

A FEW years before his death the late Gen Daniel Tyler, who commanded the 1st Division of McDowell's army, wrote a memoir of the battle of Bull Run. It was written entirely from memory, and the author expressed his purpose, before completing it, to examine the official reports of the battle, converse with its survivors, and correct any mistakes he might have made in his narrative. This, however, he failed to do, and after his death the uncorrected memoir was incorporated in a memorial volume published by his friends. This volume was noticed in a communication to the *Evening Post*, and pronounced fresh proof that the history of the war cannot be written until the death of the principal actors in it makes their diaries and private papers accessible. General Fry was the Adjutant-General of McDowell's army, and the little pamphlet whose title we give above is an answer to Tyler's memoir. He does not write from memory, although he was more fully cognizant of the facts than Tyler, but from the official records of the Rebellion, published by the War Department, and his quotations are largely from Tyler's own reports made at the time of the battle.

Tyler's first charge is that the Bull Run campaign "was gotten up by General McDowell and his friends, and was intended to make him the hero of a short war," and that all the accounts of it "were either written or inspired by General McDowell and his friends, intending to shield his military reputation from the condemnation it so richly deserves." This statement, while showing Tyler's animus, is so absurdly foolish that it was unnecessary for General Fry to make so elaborate an answer to it. Tyler then goes on to make more specific charges—that the first misfortune was in halting too early on the march to Centreville; that the battle of Bull Run was lost because of the delay of three days after the affair at Blackburn's Ford; that Tyler surprised Beauregard in that affair, and could have whipped him before sundown had not McDowell recalled him; that the army was supplied with seven days' rations when it began the march, and hence had no need to stop for supplies; and that during the three days' delay no movements were made to ascertain the force and position of the enemy. Each and every one of these statements and several others of less consequence are shown by the records to be directly at variance with the truth. The halt on the march to Centreville was made at Tyler's own instance, who stated that his troops were tired. Tyler had, moreover, failed to execute his orders on that day, and by leisurely following the enemy's rear instead of intercepting it as instructed, had himself produced the first misfortune of the campaign. There were not three days between the affair at Blackburn's Ford and the battle of Bull Run; the former action took place on the evening of the 18th of July (although Tyler persistently speaks of it as happening on the 17th), and the battle on the 21st. The two intervening days were fully occupied in reconnoitring the fords on Bull Run, and in distributing supplies; for the army did not march with seven days' but with only three days' rations, and these had been exhausted. Tyler did not surprise Beauregard, and had no idea at the time that he could "whip him before sundown" or after; he was not recalled by McDowell, but withdrew his troops on his own authority, because they were defeated by a large force of the enemy, and he so reported and testified at the time. On the day of the battle he was ordered to move at an early hour, and subsequently to press the attack at the stone bridge. He did neither, and except in Sherman's brigade, which fought under McDowell's own orders, his division sustained only an insignificant loss and was hardly engaged at all, although it was in the advance and should have sustained the greater part of the action.

That Tyler, in the face of this record, should attempt to write a memoir condemning his commanding officer, and telling what he would have accomplished if he had not been restrained, only shows, as General Fry says, "in what dense ignorance of the campaign Tyler lived and died." It shows, also, that the history of the war is not to be written from diaries and personal recollections made long after the event, but from the official reports and other records made at the time. Tyler must have completely forgotten his own reports and sworn testimony of 1861, or he would not in 1881 have made statements which could at once be refuted by documentary proof. He had a grievance against McDowell, because the latter commented at the time upon his slowness on the morning of the battle. But even with men who have no grievances the memory of events of twenty years past is often strangely at fault, as the following incident will show: In a conversation not long since between several survivors of the war, one of them, an officer of great distinction and unquestioned veracity, related the anxiety with which he watched from

the ramparts of Fortress Monroe the varying phases of the combat between the *Monitor* and the *Merrimac*. Another officer also remembered the same feelings, and quoted the conversation held by him at the time. Yet, on examining the records, it was found that on the day of that battle, March 9, 1862, both these officers were present for duty with their commands in McClellan's army in front of Centreville! Though they were both stationed at Fortress Monroe for long periods afterward, and doubtless often stood on the parapets surveying the roads where the battle was fought and thinking of the momentous consequences that depended on it, yet they did not arrive at the fort until eight days after the battle was over! If officers of the highest character, having no personal interest to warp their memory, can be so strangely at fault in their recollections of an important event, how easy is it for one who fancies injustice has been done him to conjure up in twenty years the strangest fancies in his mind, and write them out as his contribution to history. Of such fancies, at issue with facts, is Tyler's memoir composed; and it and all other memoirs like it must be read with the official records at hand, to make sure that we are reading history and not fiction.

Concord in the Colonial Period: 1635-1689. By Charles H. Walcott. Boston: Estes & Lauriat. 1884.

LONG before the tale of New England town histories is complete, Mr. Walcott begins the revision of one published fifty years ago. His excuse for going over ground already covered by Shattuck in his 'History of Concord' is, that the antiquarian labors of the last half-century have made accessible much that had formerly to be painfully deciphered in the original manuscript, not to mention new sources of information discovered in the meantime. Accordingly, "in the modern spirit of historical inquiry," he traces the evolution of the town from its planting down to the overthrow of the Andros Government. He does this in a way to inspire the utmost confidence in his fairness and accuracy; and, in spite of frequent documentary citations, his work possesses a good deal of readability. Mr. Walcott finds a strong Kentish infusion in the early settlers, and thinks "it is by no accident that the people of Middlesex County have been equally quick to rise in defence of their rights and to put down the oppressor; for the people of Middlesex derive their origin, in great part, from the freest and most independent of English counties. The patriots of Concord Bridge, Lexington, and Bunker Hill found their prototypes at Hastings and Swanscombe" (p. 48). The same theory should also explain the earlier rebellious and independent disposition of the men of Concord, when, "in 1689, on the Nineteenth of April, an oft-recurring date in American history," they "despatched their military company to Boston, under the command of Lieutenant John Heald, to assist in the revolt" against Andros. A month later, too, on May 20, in town meeting, they voted that if the government chosen under the charter of 1686 could not be reinstated, "our desires is that a councell of war may be chosen & settled by our representitives when met together att boston wth the rest of the representitives of the country"—"the only formal declaration sent to the seat of government, of readiness to go to war in defence of popular rights." Concord was noticeably prompt in forming a military company, and since 1636, the year following its settlement, it has never been without one.

In establishing public instruction the town was backward. In the spring of 1665 it was complained of for "not having a lattin Schoole Mr," and it does not appear to be quite certain that a grammar school existed before 1680. "Of the first planters, nearly all the men, and some of the women, could write, but their sons and grandsons not infrequently signed by making a mark; and during the first three generations it was an unusual accomplishment for a woman to be able to write her name." Still, the Rev. Peter Bulkeley, the founder, "had a very considerable library for those times, a portion of which he bequeathed to Harvard College." From the instructions received by the selectmen in the year 1672, it appears that the nucleus already existed of a town library. It was enjoined upon those officers "that ceare be taken of the bookes of marters [Fox's Book of Martyrs] & other bookes, that belong to the Towne, that they may be kept from abeuce[ive] vesage, & not to be lent to a person more then one month at one time." In that same year a further subscription was made by the town in aid of Harvard College, additional to its five-pound contribution from 1653 to 1660; and individual bequests "for the furtherance of Learning" in local channels began in 1687.

When the minister and the schoolmaster did not enter upon the scene simultaneously, the former seemed always the necessary man. It was so in Concord, where they even began with two ministers, whose maintenance soon proved "too heavy a burden for them," to quote Winthrop's words in 1642. The usual controversy between pastor and parish arose with which we are familiar in Puritan annals, and which so often gives a sordid tinge to these. Mr. Walcott's remarks on this head are but just to a generation apparently chargeable with meanness:

"In 1635, the proportion of the number of clergymen in Massachusetts to the entire population was greater than in any other age or country of which we have any knowledge. They were, almost without exception, men of high character, education, and talents; but the difficulty lay in the fact that they were non-producers in a community where the paramount and ever pressing question was, how to produce the necessaries of life in sufficient quantity to supply the daily wants of the family. No one would willingly detract from the high consideration due them as ministers to the better instincts and aspirations of their people. State in the strongest terms the value of their presence and influence among the colonists—the problem was still to be solved. The wolf at the door was first to be met, and other considerations were, not unnaturally, forced to yield their claims for a time. . . . Of the earliest graduates of Harvard College, a very large proportion qualified themselves to become ministers; but it is amusing to find that, for lack of employment on this side of the water, some went to England to seek their fortune" (p. 37).

The Indians seem to have been treated by the Concord folk with exceptional humanity, which was not without its reward, as not more than one man is known to have been killed in the limits of the town. The Brookfield massacre, however, in King Philip's war, was too near not to inspire distrust and dread of every Indian, even "Christian or 'Praying' Indians." Hence when some of these, from Nashoba, were ordered by the colonial authorities to Concord in November, 1675, "Mr. John Hoar was the only man in town who was willing to take charge of the miserable remnant." He also happened to be the least popular man, on account of his independent carriage and conversation. He generously provided for his wards in his own buildings, and began a workshop and refuge for them near his own dwelling; and when, in consequence of further massacres, public sentiment called for their removal, he resisted it, with bolts and protests, refused to recognize the authority of the captain who came (quite irregularly) with troops to carry the Indians away, and compelled him to force the door.

There would be much else to glean from this volume if space permitted. We conclude with noticing that under the colonial régime delegates to the annual Courts of Election were not required to be inhabitants of the town which deputed them; and that when this was changed in 1693 the Concord representative voted nay.

Words; Their Use and Abuse. By William Mathews, LL.D. Chicago: S. C. Griggs & Co. Second Edition. 1884.

THE maker of this thick volume (we can hardly call him the author, since it is a kind of scrap-book) disarms criticism by saying, in his preface, that "the work is designed for popular reading, rather than for scholars." He has, he confesses, "picked up his materials freely from all the sources within his reach." And this he has done quite successfully, gathering in a little something of entertainment or instruction from almost every well-known writer on the subject of words. It would have been better, on some accounts, to insert the quotation-marks. A general disclaimer in the preface is hardly enough, since few people of the sort he addresses ever read prefaces. For example, one picks up the book in a railroad car and reads (pp. 369, 370):

"Language is not only 'fossil poetry,' but it is also fossil philosophy, fossil ethics, and fossil history. . . . Examine it closely, and it will be found to rest upon some palpable or subtle analogy of things material and spiritual, showing that, however trite the image now, the man who first coined the word was a poet."

Some time afterward he reads in Trench's 'Study of Words' (Introductory Lecture):

"Language may be, and indeed is, this 'fossil poetry'; but it may be affirmed of it with exactly the same truth that it is fossil ethics or fossil history. Examine it, and it will be found to rest on some deep analogy of things material and things spiritual. . . . The image may have grown trite and ordinary now, . . . yet not the less he who first discerned the relation, and devised the new word, . . . was in his degree a poet."

The danger is that the reader will remember to have seen this before somewhere, and will mentally accuse Archbishop Trench of having been an unscrupulous professional book-manufacturer, which he certainly was not. Sometimes, in cases where the quotation-marks have not been forgotten, this writer's quotations are not made so carefully as the above. For instance, in Emerson's famous epigram, that "the Frenchman invented the ruffle and the Englishman added a shirt," he substitutes "dickey" for "ruffle," which is really wrong.

The original part of the work (if we can be certain which that is: the maker naïvely tells us in his preface that he cannot) is not often so fatuous as the following:

"Another remarkable fact is, that the vocal organs are so constructed as to be exactly adapted to the properties of the atmosphere which conveys their sounds, while at the same time the organs of hearing are fitted to receive with pleasure the sounds conveyed. Who can estimate the misery that man would experience were his sense of hearing so acute that the faintest whisper would give him pain, loud talking or laughter stun him, and a peal of thunder strike him deaf or dead?"

We have not space for any of the more eloquent passages, but one metaphor we must quote, simply for its value as an example for text-books of rhetoric. Speaking of Shakspere's use of Latin words, he says:

"In his loftiest flights it is on the broad pinions of the Roman eagle that he soars, and we shall find, if we regard him closely, that every feather is plucked from its wing."

The volume contains much that is interesting, and is well adapted to being picked up at odd minutes by those who have few other books. We doubt if any one ever reads through a book that is so little consecutive. It belongs to that class of works which people think will be admirable for somebody else to read—the unfortunate "young," for the most part—and so buy them to give away

If, in the process of being scrapped up from all sorts of sources, the volume contains some pretty wild "science," it is no worse than "popular science" in general. And it matters very little to the audience addressed whether or no *gibberish* comes from *giber;* and *petit* from *petitus;* and *right* from *rectus;* and *prance* from *proud* and *dance;* or whether the Anglo-Saxon was chiefly a language of monosyllables. The main point for them is to follow the exhortations not to say "*lay* for *lie*," and never to say "*setting-room*." Only the best sentiments are encouraged throughout the work, and the many humorous anecdotes, if sometimes very familiar, are chosen with good taste.

Reminiscences of Newport. By George Champlin Mason. Illustrated. Newport: C. E. Hammett, jr. 1884. 4to, pp. 407.

In this handsome volume are brought together the entertaining papers contributed during several years by the author to the Providence *Journal* and the *Evening Post*, under the signatures of "Aquidneck" and "Champlin" respectively. It is characteristic of Newport that its attractiveness as a summer resort was one of its early features. When Berkeley (not "Bishop" then, nor until long after his return to Ireland) landed in 1729, he was welcomed by the Redwoods from Antigua, the De Courcys from Ireland, the Grants, and Edward Scott (the uncle of Sir Walter), from Scotland, the Bretts from Germany, and others who, like himself, were temporary residents, attracted by the climate and the beauty of the place. Both before and after the Revolution, Newport was the favorite summer resort of Southerners, and the journey by water from Charleston was pleasanter and more easy than the long land-route in those primitive days. The French officers who were quartered in Newport during the Revolution never failed to send their friends thither on their frequent visits to the New World, and thus Newport kept up a close intimacy with the Old. The Friends who found a welcome in Newport, brought not only wealth and business, but much cultivation and refinement, and "Quaker Point" is still occupied by the descendants of the old Philadelphia Friends, whose intermarriages with those of Newport and New Bedford supplied new ties to the old faith. The Early Theatre, Old Dances, Old Time Frolics, Old Signs, Old Invitations, Old Miniatures, Old China, are some of the special topics on which Mr. Mason dwells with the affection and the intimate knowledge of a local antiquarian, and indeed these are subjects much better worth studying than many of those generally selected as illustrations of local history. Even the names of the old dances are suggestive, as "A Successful Campaign," "Lady Hancock," "Stony Point"; and Mr. Mason has unearthed descriptions of the way they were danced, figures—decorations, and music—showing that dancing, like dressing, in those good old days, was a much more complicated and elaborate business than now.

The story of the Fellowship Club, founded by captains sailing out of Newport, in 1752, has a characteristic incident in the description of the dinner given in 1769 by the members of the Club who were not utterly ruined by the losses that followed the Stamp Act, to those of their number who were in the "King's Bench Prison" as debtors, when of course high honor was paid to the leaders of the Opposition in Parliament, the recognized friends of America—Chatham, Camden, Conway, Barré, Burke—and to the representative of independence, General Paoli. The Club still exists in the "Marine Society" of our day, but it limits its usefulness to keeping its members out of prison by aid from the income of its modest endowment. As early as 1761, the theatre became an established institution in Newport, and to this day it flourishes as if in evidence of the liberal spirit which has always marked the local authorities and society. Even now, among the best of the amateur players at the Casino, there are found local actors with good old Newport names, and while Newport has supplied some well-known professional performers to the stage, it has also furnished a home and a hearty welcome to many of its leaders—Charlotte Cushman, Edwin Booth, Jefferson, and Warren, to mention no others. The New York Mercantile Library now owns a curious collection of more than five hundred plays, once part of a Newport 'Hammond's Circulating Library.'

Mr. Mason has unearthed a bill for instruction at a dame's school in the early part of the century:

For one quarter's schooling.....$1 50.
For fuel extra..... 25.

He remarks the copperplate hand of it, and one can but be struck with the beautiful writing of some old invitations of the same period, reproduced here, mostly from the papers of Christopher Gant Champlin, to whom they were sent when he was sitting in Congress in Philadelphia. Mr. Mason tells characteristic anecdotes of some of the famous men who have visited or resided in Newport—Talleyrand, Kosciusko, Steuben, La Fayette; and indeed his roll is so large that it is to be regretted that he has not supplied an index of names for easy reference to the text. The volume closes with a reprint of an article by Mr. George C. Mason, jr., an architect by profession, originally printed in the *Magazine of American History*, on the Old Stone Mill, in which the theory that it is a relic of the Northmen is pretty thoroughly exploded. On technical and historical grounds it seems undeniable that the mill dates from the last quarter of the seventeenth century, and was designed and built by Governor Benedict Arnold. Without further enumeration of its contents, we recommend this book both for passing amusement and as a permanent possession.

Man, Woman, and Child. By M. J. Savage. Boston: Geo. H. Ellis.

In so far as it was the aim of the sermons which make up this book to lay before a congregation the arguments of the most competent authorities upon the general subject of the development of the individual through the progress of society (by society meaning organized human life), they were admirably done. The origins of law, the primitive ideas of marriage, the growth of individual responsibility, are all matters upon which a minister may well instruct his congregation, adding to his instruction that force of personal conviction which is the mainspring of his power. The ideal that is presented throughout is pure and lofty, and no thoughtful listener could have failed to see that in these theories and arguments lies the best hope of the race. It is with regret, therefore, that we find what may be called the practical application of the book so inadequate. That which will be most talked about, that which will in actual fact be most likely to be applied to daily life, is the least thoughtful, the least logical of the whole. The two chapters on "Woman's Sphere" and "Careers for Our Daughters," if not the *raison d'être* of the book, make its culminating point. Nowhere in public speech or print are judgment and caution so imperatively needed as in these matters, most of all from the ministers, who are, for the great majority of women, the only educated men with whom they come into personal contact. That is not a too careful man who can say in his pulpit, "I think that if I were in Russia I should be a Nihilist"; and when Mr. Savage talks about the wrongs and needs of women, he forgets the thoughtful reasoning of his earlier chapters, and permits himself to fall into catch-phrases and sophistry which cannot possibly help any one. He uses very justly the oft-repeated tale of the hardships endured by sewing-women as an argument for industrial schools, but the insuperable difficulty about wages is found in the fact that if one woman will not finish shirts at seven cents a dozen, there are seven others waiting behind her who will. The long line that steadily, however slowly, presses on from every country village toward the great cities, is an element in the problem with which Mr. Savage makes no reckoning. His strictures upon the views of society as to women who work are at least ten years out of date.

In many other points more study of the case and far more care in expression were indispensable to make the execution of the book equal to what was, we are glad to say, evidently the design of the writer. We are speaking of no light matter. Human progress is always costly, and if women are to be brought up to even rank with men it can only be done by paying in person. For that very reason it behooves every one who has the opportunity to speak, or upon whom rests the duty of it, not to make the sacrifice of life or of happiness heavier than it must be, and therefore to choose only words that can be helpful—that will not waken the restlessness, the discontent which lead through vain hopes to disappointment and bitterness.

Number One, and How to Take Care of Him. By Joseph J. Pope. Funk and Wagnalls. 1884. Pp. 160.

There is something very paradoxical in the persistent anti-selfishness, so to say, of the human race in regard to matters of hygiene. Everybody knows how completely his personal happiness and comfort and his capacity for work are dependent on the physical well-being of his body; but all those simple rules of conduct which alone can bring about this result are constantly neglected as trifles hardly worthy of notice by the vast majority of mankind. They eat too much or too fast, drink too much ice water and other injurious liquids, poison their lungs with the air of ill-ventilated rooms, clothe themselves in apparel of uncomfortable pattern and hurtful material, etc. As long as this state of affairs continues, all kinds of books on the subject of hygiene should perhaps be welcomed, even if they are as gossipy and whimsical as the present little work by a retired staff-surgeon. The book contains a considerable number of funny stories and many curious facts, and can therefore be read not only with profit but with interest by such as would be repelled by a more sober and scientific treatment of the subject. Mr. Pope's conclusions and teachings are generally on the right side, and his advice is not neutralized by any extreme views. In regard to alcohol, *e. g.*, while convinced that total abstinence is the best thing, and that children should never taste it, he concedes that there may be no harm in the daily consumption of a pint of claret or three pints of beer. The chapter on "Fashion and Figure" might be profitably read in all our female seminaries.

BOOKS OF THE WEEK.

Hatfield, J. T. Elements of Sanskrit Grammar. Evanston, Ill.: George W. Muir.
House on the Marsh. A Romance. D. Appleton & Co. 25 cents.
Huntington, F. What Fide Remembers. Thomas Y. Crowell. $1.25.

THE BOOK FOR PRACTICAL PEOPLE.

THE MEISTERSCHAFT SYSTEM

By Dr. RICHARD S. ROSENTHAL.

A wonderfully simple and practical method, enabling any one to learn, with scarcely any effort, to speak fluently and correctly

SPANISH, FRENCH, AND GERMAN.

Pupils learn to speak from the very first lesson in long and connected sentences. Exact pronunciation given. All exercises corrected and all difficulties explained free of charge. Ten weeks' study sufficient for entire mastery of every-day and business conversations.

From the *Nation*, New York: "This is, without doubt, the best system yet devised for learning to speak a foreign language in a short time."

Send $5.00 for books in each language, with privilege of answers to all questions and correction of exercises. Sample copies, Part I, 25 cents each language.

ESTES & LAURIAT, 299–305 Washington St., Boston, Mass.

NOTE.—Dr. Rosenthal will hold classes during the winter at 45 West 31st St., New York.

The Nation.

NEW YORK, THURSDAY, OCTOBER 2, 1884.

The Week.

THE Commissioner of Pensions has resigned his office, after stipulating that his resignation shall not take effect till November 10, and has gone to Ohio to take the stump for Blaine. In this way he will draw his salary from the Government for nearly two months, at the rate of $5,000 a year, while he will be rendering no service in return, and while the office will have to be conducted without a head. It would be difficult to conceive of a more flagrant violation of the spirit and letter of the civil-service rules than this is. Instead of accepting his resignation with fulsome words of praise, and with no objection to its preposterous date of taking effect, Secretary Teller ought either to have insisted that the Commissioner should remain at his post till November 10, or have informed him that his resignation would take effect immediately. If, as his superior officer, Secretary Teller had not the courage to do this, the President ought to direct him to do it now. That Mr. Dudley should see no harm or disgrace in this sharp trick to draw a Government salary while doing partisan political work, is not surprising. Political pressure put him into the office, and he looks upon all office as primarily a reward for political service. His appointment in 1881 was one of the most inexcusable acts of President Garfield's short administration, and one which did much to shake the confidence of the friends of civil-service reform in the sincerity of the new President's devotion to its principles.

When Garfield came into office, Mr. Bentley was Commissioner of Pensions. He had administered the office in a time of great perplexity with remarkable energy and efficiency, and with unimpeached integrity. The passage of the Arrears of Pensions Act had added enormously to the labor of the bureau, and had at the same time, by holding out larger prizes, greatly stimulated the greed of those who live by cheating the Government on the one hand, and the pensioners on the other. Mr. Bentley not only brought the service of the bureau up to the advanced point necessary to meet this emergency, but he stood like a rock between the thieves and their intended victims. His vigilance and fearlessness won him a most enviable reputation as a public officer. But his place was wanted for Colonel Dudley, who had been of great service in the Indiana campaign. The President held out for a few weeks, but finally succumbed, and about the middle of June, 1881, he requested Mr. Bentley's resignation. What the mysterious "pressure" behind Garfield was it is not difficult to conjecture. Mr. Kirkwood, who was then Secretary of the Interior, announced at the time that he was averse to the change. General opinion settled upon Mr. Blaine as the man who persuaded the President to violate his own pledges and those of his party in this case as well as in that of the Collectorship of New York. This opinion is strengthened by Mr. Dudley's conduct now.

The following, which purports to be a true copy of Senator Edmunds's letter "to one of the members of the Wisconsin State Administration," is going the rounds of the Blaine newspapers. It appeared first as a special despatch to the Chicago *Tribune*, dated Madison, Wis., September 23:

"BURLINGTON, Vt., September 18.
"DEAR SIR: I have yours of the 15th. I am sure that I never wrote or said that the gentleman you refer to 'acts as the attorney of Jay Gould,' for I am not conscious of having thought so. As I have publicly stated, I expect to vote the Republican ticket. Yours truly,
"GEORGE F. EDMUNDS."

We make bold to say that this is not a true copy of Senator Edmunds's letter; that it is to all intents and purposes a forgery. We therefore call for the publication of the letter as it was written—the whole of it.

Mr. Blaine, in his tour "swinging around the circle," seems to be rather scant of material for speeches. But at an agricultural fair on Thursday he ventured the statement that "there is no year in the history of the United States in which, through all its borders, the agriculturist has rejoiced as he does this year." This is an apparent fulfilment of Dorsey's prediction in 1880, that if the Republican ticket were elected great business prosperity would be secured. Mr. Blaine thinks it has come—in agriculture at all events. What are the facts? The facts are that there never was a year when the agriculturist was so profoundly and bitterly disappointed as now, and this for the reason that although he has good crops he can scarcely get back the cost of production, and in many places cannot get even that. Who is to be blamed for this condition of things may be matter for dispute, but the fact is undeniable. Mr. Blaine's asseveration that the farmers are in a rejoicing mood will fall upon their ears as an untimely sarcasm.

In a glowing account of Mr. Blaine's visit to Syracuse, published in the *Standard* of that place, which is zealously supporting Blaine, we find these sentences: "Leaning on the arm of ex-Mayor J. J. Belden, he (Blaine) gazed in mute amazement at the outward tokens of regard which made the progress of the train through Washington Street like an excursion into the realm of the fays. 'This is magnificent,' he remarked to Mr. Belden. 'You live in a fine city, a fine city.'" And again: "The train was in control of John W. Vrooman, Secretary of the State Committee. Among the other passengers was ex-Mayor J. J. Belden, of Syracuse." Mr. Belden has in fact become a prominent leader of the Blaine travelling show, and the astonishment which his presence in that capacity excited at Albany, where he is so well known, was but natural. Lest the public may have forgotten the points in his history, we will recall them. There is a great deal about Mr. Belden in the files of the *Tribune* for 1875 and 1876. From that unimpeachable source we learn that the Syracuse branch of the Canal Ring was sued by Governor Tilden, in behalf of the people, for the recovery of $417,000, wrongfully obtained by the members of that ring from the State by means of fraudulent canal contracts. The Syracuse members of the ring were held in bail for $200,000 each. Of Mr. Belden's proud position in the ring, we have this fine picture in the *Tribune* of April 10, 1875:

"(*From a staff correspondent of the Tribune.*)

"SYRACUSE, April 9, 1875.—The chief, the brains of the Syracuse Ring is James J. Belden, whose fortune, largely derived from canal contracts, is said to mount up to more than two millions. He is a man of ability, and though none of the Canal Ring have more than a common-school culture, he is a gentleman of refined bearing. But canal contracts make strange partners, and this patron of churches and sponsor of charitable societies is the partner of an uncouth man who can neither read nor write. Mr. Belden has been prominent in good works. He has given liberally to churches, and his example has been followed in this by one or two other members of the ring. He has thrown all his influence on the side of temperance. One can imagine how strange it sounded to hear a church announcement of an exhibition of the 'Belden Cold Water Temple,' tread closely upon the heels of the minister's denunciation of canal rings and thefts by contract."

Republican advices from Ohio are to the effect that the Democratic managers are flooding the State with money, and are determined to buy it up at any price; nevertheless, the Republican managers are confident of carrying it, when the election is held, a week from next Tuesday, by a handsome majority. Senator Sherman is said to feel assured of a victory, and so is the Chairman of the Republican State Committee. Democratic advices are to the effect that the Republicans are spending money like water, with the intention of buying a majority if it cost a half-million dollars; nevertheless, the Democratic managers are sanguine of victory, and Chairman Barnum thinks they will have 10,000 majority in October. These conflicting accounts are sufficient evidence that the election is what Steve Elkins calls "largely a question of finance." There can be no doubt that the natural tendency is toward a Democratic victory, for while Ohio has been invariably Republican in every Presidential contest for thirty years, there has been during the past three or four years a steady and rapid growth in the size of the Democratic vote, owing mainly to the agitation of the temperance question. It rose from 288,000 in 1881 to 316,000 in 1882. In 1883 it advanced to nearly 360,000, making an increase of 72,000 in two years. Garfield's total vote in November, 1880, was 375,000, and Hancock's 340,000. The total Democratic vote for Governor Hoadly last year was an increase of 20,000 on Hancock's vote, while the Republican vote for Foraker, 347,000, was a decrease of 28,000 from Garfield's vote. These figures show pretty conclusively that if the voters of the State were left to follow their natural bent next month they would elect the Democratic candidates by an increased plurality over the 12,000 which Governor Hoadly received. But they have not been left to this course. While they are nominally to vote for minor State officers, they are besought to vote indirectly for Blaine or Cleveland, and their State is deluged with money for the purpose of securing the

"moral effect" of a victory for one or the other of those candidates. The effect upon the political morals of the State is about as bad as can be, and ought to convince the people of Ohio of the imperative necessity of changing their election day from October to November.

The personal assaults of the Cincinnati *Commercial-Gazette* on Mr. Carl Schurz surpass in point of brazenness anything in recent campaign literature, except possibly Mr. Blaine's statement that his letters to Fisher are "entirely consistent with the most scrupulous integrity and honor." Both the *Commercial* and the *Gazette* were filled with the same charges against Mr. Blaine in 1876 that Mr. Schurz is now examining in public debate. Those papers are now edited by the same men who edited them then, and their opinions of Mr. Blaine's railroad transactions have not changed one iota, whatever they may say in their consolidated newspaper, or whatever they may think of the general virtues of the Republican party. Because Mr. Schurz says now what they said then, and what they think still, he is subjected to a daily stream of abuse which serves better than anything else to show that the work which Mr. Schurz is doing in Ohio is having a terrible effect upon the Blaine vote in that State.

Every lover and admirer of the venerable Dr. Woolsey, of Yale College, now eighty-three years old and retired from work and affairs, will deplore and reprobate the use which the Republican managers are making of his name as well as of that of another eminent and aged man, Dr. Hopkins. They have got Dr. Woolsey to serve as one of the State Electors, pledged to vote for the elevation of their disreputable candidate to the Presidency of the United States, counting doubtless on his years and infirmities to prevent his making any thorough examination of Mr. Blaine's disgraceful record. Not content with this, they have invaded his well-won repose to extract a written opinion from him of Blaine's qualifications, in which he confesses that all he knows of Blaine's defence he got from Mr. George F. Hoar's letter, which the *Tribune* was afraid to print, and which most of Mr. Hoar's friends were ashamed to read, and from a pamphlet by——Mr. George Bliss; and that he confides in Blaine on account of "the confidence entertained in him," among others, by "Hawley and Edmunds of the Senate." Nothing more discreditable than the publication of this letter has occurred in the canvass.

We regret to observe that the *Tribune* has found itself unable to print the Mulligan letters in its weekly edition. It has done the next best thing to it, however, by informing its weekly readers that all the letters appear in its daily and semi-weekly editions of September 20 and 23, and offering to send copies free of cost to those of their weekly subscribers who ask for them. Its excuse for not publishing them in the *Weekly Tribune* is that they would take up too much space, but the question arises, How could a "complete vindication" of Mr. Blaine take too much space anywhere? The letters could have been printed upon a neat four-page supplement, which would have been convenient for Blaine voters to slip into their pockets and read at odd moments of leisure, or pull out in the heat of debate with irritating dudes and Pharisees. There is great demand for such a supplement in the West, for, as far as our observation goes, few or none of the Blaine organs there have published the Mulligan letters in accordance with Mr. Blaine's personal request. If the *Tribune* does not feel like going to the expense of a supplement, we have no doubt it could contract cheaply with the Harpers for a few hundred thousand copies of the supplement which they issued with their *Weekly* of last week. That is an exceedingly interesting document, is of about the size to fold neatly into the *Weekly Tribune*, and thus disseminated would accomplish a vast amount of good.

It may assist some people to appreciate the value of Mr. Blaine's asseveration that he "never had any transactions of any kind with Thomas A. Scott concerning bonds of the Little Rock and Fort Smith Road, or the bonds of any other railroad, or any business in any way connected with railroads, directly or indirectly, immediately or remotely," to quote the testimony of the Hon. James F. Wilson, United States Senator from Iowa and a friend of Mr. Blaine, as given on two separate examinations before the investigating committee in 1876. Mr. Wilson was then a Government Director of the Union Pacific Railroad:

From Page 39 of Testimony.

"Mr. Blaine said to me that he could not imagine how he could be connected in any way with the negotiation of these bonds, unless the impression had grown out of the fact of a negotiation in connection with the construction of that [Little Rock] road, which had no relation to these bonds, but which did relate to the affairs of that company after it got into difficulty between the company and other parties. I do not remember the names of others except Colonel Scott. *Colonel Scott was mentioned as one of the parties connected with that negotiation*, but that relates, as I understand, to a different subject entirely."

From Page 58 of Testimony.

"I asked him (Blaine) whether he had any theory on which to explain the connection of his name with those bonds. He said that he had not, and that he certainly never had been interested in them, nor had anything to do with them. He said that the only thing he could fix in his mind out of which such a rumor could have originated, was the fact that during the pendency of certain negotiations between parties interested in the construction of the Little Rock and Fort Smith Railroad and others (whom, as I stated in my examination the other day, I afterward understood to be the parties interested in the Southern Improvement Company, *Mr. Scott being one of them*), he had been requested to speak to those parties in aid of the negotiation that was pending, *and that he had done so.*"

Tammany's purpose in nominating a "straight" ticket is plain enough. It is in accordance with John Kelly's regular policy of asking for everything in order to get the most possible in the final division. That he wishes to run his ticket against the combined County Democracy and Irving Hall organizations, we do not believe. The Blaine Republicans are more anxious for him to do that than he is. Two opposing Democratic tickets and a separate Republican ticket would furnish a fine opportunity for a "deal," by which a few thousand Tammany votes could be sold to Blaine in return for as many Machine Republican votes for the Tammany ticket. This would be a needed help to Blaine, but it would not enable Tammany to elect its candidates. What Kelly wants first of all is success in the city contest. He does not care a rap for the success of Cleveland, but he does not carry his dislike of him so far as to be willing to defeat himself rather than have Cleveland elected. His movements are contemplated with great satisfaction by the Blaine supporters of all kinds, and the *Sun's* delight finds expression in a really enthusiastic approval of his ticket.

The anti-Blaine demonstrations among the Republicans of Rhode Island are very significant. In Newport the Independent Club have so large a following that they took part in a Cleveland parade on Tuesday evening. We believe that this was the first display of the kind made in the city for many years, if not the very first in the history of the city, because there has never before been sufficient opposition to the Republican Presidential candidates to make a respectable demonstration. There are Independents enough now to make more than this, and they are even more impressive in quality than in quantity. They represent the most eminent and influential families in the city. Many of them are men of large means, and are universally known as earnest, thinking men of the true Republican type. The same things can be truly said of an Independent club which was formed on Monday in Providence, with a membership of 175 at the start. They adopted a constitution, pledging themselves to "oppose by all laudable methods the election of James G. Blaine to the Presidency of the United States," andalso a long address.

The appointment of General Gresham as Secretary of the Treasury, in place of Judge Folger, deceased, will be recognized everywhere as a fitting and appropriate disposition of that important office. President Arthur has neither used the Department as a makeweight in the political campaign, nor as a stepping-stone for his own political future. General Gresham has the full confidence of the country, earned by an industrious andun sullied career in military, civil, and judicial life. No appointment could have been freer from objection, and hardly any could have been made giving better promise of usefulness to the public service.

Judge Van Vorst's decision in the Loubat case, that Mr. Loubat was properly tried and legally expelled by the Union Club, will be a relief to all, not only persons to whom clubs are of any value for social purposes, but to all friends of common sense. A man asserting his right at law to stay in the society of gentlemen who dislike or despise him, is surely one of the most ludicrous spectacles which the moving panorama of modern society presents. Of course, everybody should be protected against suffering in mind, body, or estate from a charge false in fact, but in this case there was no dispute about the nature of Mr. Loubat's offence. What he was trying to show was, that it had not been inquired into with proper technical regularity, although he did not pretend that a different result would have been reached by any inquiry. His object was doubtless to escape the disgrace of formal ex-

pulsion. If the courts had reinstated him he would perhaps have tried to pop in a resignation between the judgment and the next action of the Club.

The announcement is made on good authority that the price of steel rails has been advanced to $29 per ton, the former rate having been $27 50, and that a further advance to $35 is contemplated. Simultaneously with this comes a telegram from Williamsport, Pa., saying that wages in iron and steel works are to be reduced 10 to 20 per cent., and that notices of the reduction have already been given by the Cambria Iron and Steel Company of Johnstown, the Lackawanna Iron and Steel Company of Scranton, and the Pottstown Iron and Steel Company, and a number of smaller concerns in Susquehanna, Lehigh, Allegheny, Schuylkill, Lebanon, Lackawanna, and Wyoming. A strike is said to be impending in Bethlehem, Scranton, Allentown, and Johnstown. The companies are no longer willing to furnish rails at or below cost. The workingmen, on the other hand, cannot see why wages should be reduced on an advancing market for rails. Meanwhile, the blessings of a high tariff constitute the principal theme of the Blaine orators in their appeal to the operatives.

Bradstreet's record of business failures for three quarters of the present year (the last week of September estimated) foots up 8,290, against 7,358 in the corresponding period of last year. For the full year the estimate is 11,500 against 10,191 last year. Bank failures (national, State, savings, and private) for nine months, have been 117 against 28 the previous year. Fourteen of the 117 were national-bank failures. Of the whole number of bank failures 16 were due to fraud or embezzlement, 22 to speculation, and the remainder to "bad management." The record merely shows what has been apparent all along, that business has been more depressed this year than last year, or any year since 1879.

The development of the Russian petroleum wells at Baku is watched with deep interest by the trade in this country. A very thorough examination of its prospects and promises was made at the beginning of the present year by *Bradstreet's*, the purport of which was that American petroleum was in no immediate danger of being supplanted in European markets by the Russian product. This conclusion is supported by a recent report of Consul-General Perry to the British Board of Trade. The difficulty at Baku is not any lack of petroleum, for the district is capable of supplying 1,600,000 tons per annum; but everything else required for a large traffic is completely wanting, and most of all common sense. There are no pipe lines, no oil cars, no banking facilities, no wharves, and no conceptions of method in business. There is a complete monopoly of the carrying trade on the Black Sea. The Russian officials are bent upon keeping back the crude oil in order to promote the refining business at home, and are even advocating an export duty for that purpose. The rate of discount on good drafts is 20 per cent. per annum. This combination of adverse influences has ruined several companies. The shares of oil companies have depreciated to about 20 per cent. of what they cost to the original investors. The trade is at present paralyzed, and the probability is that it will remain so for a long time, the movement of official life and of every other kind of life in Russia being exasperatingly slow. Nevertheless the petroleum of Baku will keep, and eventually the prospect of gain will overcome even Russian stolidity and bureaucracy.

British trade returns for August show, for the first time this year, a perceptible shrinkage. The falling off in imports exceeds 18 per cent. in value and probably 10 per cent. in quantity as compared with last year. In iron ore the decline is as much as 40 per cent., in wool 43 per cent., and in jute 61 per cent. It is explained, however, that the imports of these articles were exceptionally large in August, 1883. In exports the falling off is slight, being only 7 per cent. in values, which may mean not more than 3 or 4 per cent. in quantity. The exports of linen, woollen, and worsted fabrics show an increase of 25, 18, and 20 per cent. respectively, while those of iron and steel decreased 25 per cent.

There has been a somewhat amusing correspondence between Sir William Harcourt and Nobel's Explosive Company, of London, which manufactures most of the English dynamite. He proposed that they should have their fifty depots guarded well every night. They answered that this would cost them $125,000 a year, and make competition with foreign dynamite impossible, and suggested that as all the dynamite used in the late outrages was American or German, he should clap an import duty on that as the true remedy. We suppose this was seriously meant, but it has the air of a joke, as of course foreign dynamite intended for outrages does not pass the Custom-house, and therefore would never pay duty. The correspondence illustrates forcibly the difficulty there is in contending with this form of crime, even where the police is as good and the power of the Government as great as they are in England. It would seem to be the duty of the Government, however, to guard dynamite factories at night, or else assume control of the business as a State monopoly. Why not prohibit its manufacture altogether, as the growth of tobacco is prohibited, and rely on foreign supplies?

Mr. Gladstone's reception in Midlothian, and on the way thither, so far from showing any diminution of his popularity, seems to have surpassed even that of 1880 in the fervor of its welcome. He addressed enormous meetings, speaking with all his old vigor, and, it may be added, with all his old candor, or, as some would say, rashness. It was of course about the controversy with the Peers over the Franchise Bill that he was listened to with most attention, and on this he was distinctly cautious and conservative. He evidently sought to soothe rather than inflame popular hostility to the House of Lords, while not concealing in the least the possibility that continued obstinacy on the part of the Peers might put that House in peril. The agitation in the provinces, set on foot by the Radicals, has shown two things clearly; one is that the hostility to the House of Lords is very strong among the masses—so strong that it would need but little fanning of the flame to create an overwhelming demand for its abolition or fundamental alteration. On the other hand, it has also shown that there is no popular dislike of the Peers as rich men with titles, and that the opinion of those who think that, were the House of Lords abolished, the Lords would be favorite candidates for the House of Commons, even in popular constituencies, is well founded. The Liberals are satisfied that the appeal to the country has been fairly taken and the decision given against the Peers, and it has, we believe, been now determined that the claim of the Peers that they may insist on a dissolution of the House of Commons before passing the Franchise Bill, will be firmly resisted, and if pressed will lead to a direct attack on the House of Lords itself, either by resolution or by an address to the Crown.

The Belgian crisis grows more and more grave, and we are apparently now threatened with a fight in the streets of Brussels. The controversy has taken the shape, which such controversies are so apt to take, of town against country. That is, the priests, who have demanded the present Educational Bill, have their strength in the country, while the Liberals are strongest in the towns, and particularly in Brussels. This used to be the condition of things in France as regards religious questions, but within the present generation the peasantry seem to have gone over to the anti-clericals. How it happens that Catholicism has maintained its hold so well in the country districts of Belgium, in spite of French influence, is probably to be explained by difference of language. French is the language of the Belgian cities, but the peasantry speak Flemish and Low Dutch only, and are therefore not easily reached by the sceptical literature of the day, and in fact have never been a very political body. Their country has been for ages the "cockpit of Europe," and has been fought over by a dozen modern armies, without attaching them to any cause, nationality, or dynasty in particular. They have consequently never acquired the habit of troubling themselves much about politics; but as the human imagination will have something to stir it, they have made religion take its place. The hold of the Catholic Church on the Irish, which is also so strong, is due to causes very similar.

The identical note presented to Nubar Pasha by Germany, Austria, France, and Russia, protesting against the action of the Egyptian Government in suspending the law of liquidation, is another very important incident in the Egyptian trouble, particularly as it winds up with a threat in case the Egyptians continue to act under British guidance. It is the more extraordinary because it is a new thing in international relations to treat the claims of foreign creditors as good ground of menace directed against the Government which fails to meet them. This is true, whether Egypt is to be held responsible for her own acts or not. It will be interesting to see how the matter will be received in England, which just now appears to be in foreign politics in a position of great isolation.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 24, to TUESDAY, September 30, 1884, inclusive.]

DOMESTIC.

LATE last Wednesday night the President appointed Postmaster-General Gresham to be Secretary of the Treasury. It is thought that he was only appointed temporarily, because of the declination of a person or persons to whom the office had been offered, and that he will soon resign to accept a United States Judgeship. Under the law First Assistant Postmaster-General Hatton became Acting Postmaster-General for ten days.

A call has been issued for the redemption of $10,000,000 bonds of the 3 per cent. loan of 1882; the principal and accrued interest will be paid at the Treasury on November 1, and interest will cease on that day.

Mr. Cleveland is to visit Buffalo this week, but he has expressed a wish that no "demonstration" be made in his honor.

Mr. Blaine began his political tour to Ohio and other States from this city last Wednesday morning. Crowds turned out to meet him at many places in this State and he spoke a few words to them, but said nothing on political subjects.

One of the largest political gatherings ever seen in the West was the Democratic demonstration at Columbus, O., last Thursday. It is estimated that from 75,000 to 100,000 persons participated.

Among the latest bolting Republicans announced are William Young, of Milwaukee, Wis., probably the largest grain commission merchant in the West, and Judge C. M. Butt, of Vernon County, Wis., who was the Republican candidate for Congress two years ago in the Seventh District, and served as State Senator in 1869–70.

One of the oldest Republican papers in Connecticut, the Litchfield *Enquirer*, finds that the last batch of Mulligan letters convict Blaine of falsehood.

Butler's Massachusetts Convention has nominated M. J. McCafferty for Governor and John F. Marsh for Lieutenant-Governor. A very large number of Massachusetts Republicans will vote for him.

Ex-Governor St. John, the Prohibition Presidential candidate, believes that he will receive 1,000,000 votes in all.

The Illinois Methodist Conference has adopted a resolution that that body will give its support to St. John in the coming Presidential election.

Tammany Hall, in convention on Monday, put an entire city ticket into the field, without any regard to the other local Democratic organizations. Its candidate for Mayor is Alderman H. J. Grant.

Referring to the frantic attempts of Blaine's friends to induce Mrs. Lot M. Morrill to retract what she has said about the Republican candidate, the Augusta (Me.) *New Age* says: "She has told the truth, but not the whole truth, or half of it, as her persecutors in this city well know. They know that Mrs. Morrill has in her control certain letters of Mr. Blaine, written to her husband, which, if given to the public, would fully vindicate her every statement. These letters in question Mrs. Morrill regards as sacred, and she does not propose giving them to the public unless compelled so to do in self-defence, to vindicate her course, and to relieve herself and family from Blaine's satellites."

A few days ago the anti-Blaine Republicans of Concord, Mass., challenged the Blaine men, through the Republican Town Committee, to a public discussion of the personal honesty of Mr. Blaine. The Committee decline the discussion, saying: "The question which you propose to discuss was, in our judgment, thoroughly and completely discussed and settled before the nomination of the Republican candidate for the Presidency, and is not an issue in this political campaign. Concurring in the judgment which the great mass of the Republican party of the United States have passed upon the personal character of Mr. Blaine, we have no disposition to assist in forming or gathering an audience to listen to a rehash of confuted slander."

The Young Republican Club of Brooklyn held an excited meeting last week. The Blaine men were in the ascendant, and passed resolutions declaring for the Republican Presidential candidates. The President of the Club has resigned and many of the Executive and Advisory Committees will follow his example. One of the members says: "I do not think Blaine's friends can gain much comfort from the result of this meeting, for it shows that 500 out of 2,500 Republicans oppose his nomination, and if he loses in like proportion throughout the State he cannot be elected by Republican votes."

The Democratic members of the House Committee that investigated the Star-route proceedings have made a report. They find that the whole amount out of which the Government was defrauded in the Star-route mail service during the Hayes administration will exceed $4,000,000. They say that the testimony is so conflicting as to lead to the belief that wilful perjury was practised by some of the witnesses, and in conclusion find that, "while the evidence against Star-route contractors and public officials was strong and conclusive as to their guilt, and that the Government was defrauded of large sums of money, and that large sums were also expended to secure indictments and convictions, yet no person was convicted or punished, and no civil suits have as yet been instituted to recover the vast sums illegally and fraudulently obtained from the public treasury."

The equalized values of this State for taxable purposes show the following footings: Total assessed, $3,014,591,372; equalized value of real estate, $2,669,173,011. The total value of New York city is fixed at $1,390,596,803.

A general report on the potato crop shows that the yield will be only two-thirds that of 1883, and that the rot is very prevalent. Higher prices are expected.

The Southern cotton-manufacturing interest remains in an unsatisfactory condition, and the managers will meet soon to consider the situation.

At an adjourned session of the general managers of all the Western and Southwestern railroads held in Chicago last week, the initial proposition to form four pools on Colorado and Utah business, taking the Missouri River as the dividing line, making two pools east and two west of that river, was unanimously agreed upon. The action of the conference provides that rates shall be maintained until October 6, when, if the agreement is signed by the Presidents of the roads, the pools will enter into effect and remain in force until the close of the present year. The new combination is already looked upon as a fixed fact.

Three Pullman cars and a private car left the track near Pickering Station, Ont., last Wednesday night, owing to a broken frog, and went over an embankment twenty-five feet high. Two of the cars took fire, and the passengers had to be taken out through a hole in the roof. Notwithstanding the serious nature of the accident, no one was fatally injured.

Two thousand six hundred and ten feet of the long bridge across Lake Pontchartrain, La., were burned on Thursday night. It is said the cost of rebuilding will be $75,000.

The Rockingham House at Portsmouth, N. H., one of the finest hotels in New England, was burned on Saturday. The loss is estimated at from $90,000 to $140,000.

Cleveland, O., is alarmed by a succession of fires, doubtless of incendiary origin. The insurance companies are cancelling a great many of their policies there.

A very daring attempt at bank robbery has been frustrated at Las Vegas, N. M. The cashier became convinced that robbers were tunnelling from an adjoining building to the vault, and guards were immediately placed in and around the building. A Mexican who volunteered to go down to the cellar and make an investigation had taken but a few steps when he saw some one coming. He fired, and the man fell dead. The dead robber has been recognized as one of the masons who built the vault. The other robbers escaped. The tunnel was sixty feet long.

Over the cornice of the façade of the Eden Musée, in West Twenty-third Street, this city, are four stone urns, which are capped with stone pinnacles weighing some 300 pounds each. Last Wednesday afternoon the wind caused one of the flags on the building to flap vigorously. It caught on one of the pinnacles and toppled it over toward the street, striking a man so squarely on the top of the head that he fell dead.

General Alfred M. Scales, the Democratic candidate for Governor of North Carolina, who was badly hurt a short time ago by being thrown over a precipice in the western part of the State, is still unable to meet his appointments, and his friends fear that he was more seriously hurt than was at first supposed.

Isaac Newton, the Chief Engineer of the Department of Public Works in this city, killed himself by cutting his throat with a razor last Thursday. Ill health and business cares had impaired his reason.

Commodore T. Scott Fillebrown, the Commandant at the Brooklyn Navy-yard, died suddenly at his residence at the yard last Saturday morning of heart disease. He was sixty years of age.

Mr. John W. Garrett, President of the Baltimore and Ohio Railroad Company, died at Deer Park, Md., last Friday morning. The death of his wife, as the result of an accident, last year, affected him greatly, and he had for some time been in a decline.

John Lord Taylor, D. D., one of the most eminent Congregational ministers in this country, and who was connected for nearly thirty years with Andover Theological Seminary, in the capacity of Trustee, Treasurer, and Professor of Theology and Homiletics, died last week, aged seventy-four years.

Francis E. Kernochan, President of the Belair Manufacturing Company at Pittsfield, Mass., and a wealthy and prominent citizen, believing that burglars were about the premises early last Friday morning, took a revolver and started for the lower part of the house. On his way he stumbled, his revolver was discharged, and he received a wound from which he died in a few hours. He was a member of the Yale class of 1861.

The lifeless body of Mr. Gillie Leigh, a member of the British Parliament who visited this country for pleasure, has been found at the base of a precipitous cliff in the Big Horn Mountains. He left camp for a stroll, and was not heard of afterward till an eight days' search revealed his dead body.

FOREIGN.

The principal event of the week in regard to Egyptian affairs has been the presentation to Nubar Pasha, the Egyptian Prime Minister, of an identical note by the diplomatic representatives of Germany, Austria, France, and Russia, making a formal protest against the action of the Egyptian Government in diverting the revenues set apart for the sinking fund to the general Egyptian treasury. The Italian representative made a milder remonstrance. It is expected that the Egyptian Government will simply make a formal acknowledgment of the receipt of the protest. A Vienna despatch to

the London *Times* asserts that the Cabinet of Great Britain has informed the Powers that, in its opinion, the suspension of the sinking fund by the Egyptian Government is justifiable in the present condition of its finances. French newspapers represent that Bismarck is leading the movement against the English policy in Egypt, and the French Ministerial papers express satisfaction with an agreement between France and Germany relative to Egyptian affairs. It is positively stated in Berlin that the great Powers are discussing the question of a renewal of the London Conference, in order to settle the Egyptian financial question.

The *Caisse de la dette Publique*, of Cairo, will commence an action against the Minister of Finance, before the International Tribune, to compel the refunding of the sums of money which have already been paid since the suspension of the sinking fund, and will also demand that an injunction shall be issued against any future payments to the Minister of Finance.

It is understood that General Wolseley has positive orders from the War Office for General Gordon, directing him to hasten the evacuation of Khartum. A letter from the London *Times's* correspondent at Khartum dated July 30 gives a detailed account of the situation up to that time. He says: "The town has been closely besieged for five months and will be able to hold out only two months longer. Rations are being issued to the poor." "Since the siege began, our loss has been under 700. Arab bullets are flying on all sides, some of them falling on the palace. Food is tremendously dear. Since my recent despatch all hope of Government relief is gone, and we only depend on the steamers. It is impossible for us to cut our way through the rebels, burdened as we are with numbers of women and children." "July 29.—Mehemet Ali's action yesterday was very successful. Five armored steamers, after clearing thirteen forts, found at Gareff two strong forts. The vessels engaged the forts for eight hours under a terrific fire. The cannon in the forts were finally disabled, and the rebels driven out. Our loss was only three killed and thirteen wounded. General Gordon will soon send two steamers toward Sennaar to try to recapture a steamer taken from Saleh Bey. General Gordon is well."

The Suez Canal Company has decreed a reduction in the tariff of fifty centimes, to go into effect January 1.

At an important meeting of the French Cabinet last Saturday it was resolved to summon the Chambers to meet on October 14. The Government has resolved to retrench its expenditures during the year 1885. The estimates will be cut down to the extent of 50,000,000 francs.

The news of the week in regard to the Franco-Chinese question is made up largely of "reports." It is said that the Empress of China has decided to conclude peace with France, and the Shanghai correspondent of the London *Times* has reported that the Franco-Russian alliance means the disintegration of China and its partition between those two countries; France taking the three southern provinces and Russia having China as a recruiting ground for her armies—the two countries being connected by railways. The latter story is denied from St. Petersburg. Private advices received in London from Pekin say that China has been improving the inaction of Admiral Courbet and General Brière Delisle by strengthening all the points along the coast and southern frontier which are menaced by the French. Admiral Peyron, French Minister of Marine, has refused the request of both General Brière Delisle in Tonquin and Admiral Courbet to recommence warlike operations, with a view to hastening the crisis. General Brière Delisle is sanguine of success even without reinforcements.

The Governor-General of Min Che, comprising the provinces of Tse-Kiang and Fuh-Kien, has been dismissed from office and degraded in rank, but the Governor and the General of Fuh-Kien, in which Foo-Choo is situated, have both been retained. The excuses which the latter gave for the success of the French in their district were satisfactory. Li Hung Chang, the famous viceroy of Chi-Li, and leader of the peace party in China, whose power and influence had been greatly curtailed by the Government, has been reinstated in all the offices he formerly held.

The French have stopped and searched two English trading steamers in the Formosa Channel, and this may cause some trouble.

China has paid £11,400 indemnity for the losses suffered by German residents at Canton by reason of the outbreak of the natives in 1883.

At a meeting of Liberals held in Brussels last Sunday to arrange a platform to oppose the Education Law, speeches were made appealing for support at the communal elections. A Liberal demonstration was subsequently held on the Bourse in honor of the Burgomaster, to whom a bust and a scarf of honor were presented in recognition of his services in the educational cause. M. Marchi, Director of the *National Journal*, who has recently been strongly supporting the Republican cause, has been expelled from the country.

A placard, signed "The Committee of the Liberal Association," has been posted in all parts of Brussels, which declares that, inasmuch as the new Education Bill has been officially promulgated as the law of the land, it ought to be respected and obeyed by all. Liberals, by so acting, will prove to the Catholics that they will not imitate the factious opposition displayed by the Romanists toward the Education Bill of 1879. The placard continues: "We repudiate all community with those who profit by the ferment of popular feeling to attack the bases of our national institutions with the cry 'Vive la République.' We indignantly repel the calumnious assertions of the Catholic press, which professes to hold the Liberal party responsible for those acts."

The *Times's* correspondent telegraphs that up to midnight of last Thursday the total number of deaths in Europe from cholera since the outbreak in Toulon was 14,132. Of these Italy had 7,974, France 5,798, and Spain 360. The epidemic is abating in Italy.

A riot has occurred between German colonists and Russian peasants at Rovno, in the Government of Saratoff, Russia. Ten of the rioters were killed and thirty wounded.

The gathering of groups of students in the streets of Kieff, Russia, has been forbidden because of recent disorders which were suppressed by the military. During these disturbances a number of persons were wounded, and 340 of the participants were arrested.

Sir William Vernon-Harcourt, British Secretary of State for the Home Department, has written a letter urging upon Nobel's Explosive Company, of London, the necessity of having their fifty dynamite depots strictly guarded nightly. The Nobels reply that to comply with the request would involve an expense of $125,000, and render their competition with American and German dynamite manufacturers impossible. They say that foreign dynamite has been used in nearly all the recent outrages that have been perpetrated in England, and suggest that the Government levy a duty upon foreign-made dynamite.

An attempt was made last Sunday to blow up the Council House at Salisbury, Eng. A number of windows were smashed by the explosion, but otherwise no damage was done.

Lord Salisbury has written an exhaustive article in the *National Review*, in which he undertakes to prove that the Conservatives in reality desire the franchise to be coupled with redistribution. This, he says, will give the Conservatives more seats than they now hold.

According to London *Truth*, the British Cabinet have resolved to create fresh Peers if a small majority of the House of Lords rejects the Franchise Bill a second time. "If, however, the bill is rejected by a large majority, Parliament," says *Truth*, "will be asked to express its views regarding the future constitutional position of the House of Lords, either by a resolution or by an address to the Crown. If a dissolution of Parliament is brought about this autumn the country will be consulted—not regarding the Commons, but regarding the Lords."

Mr. Gladstone's attention being called to the statements of an anonymous pamphlet which accuse him of supporting the Roman Catholic Church, he pronounces them grossly untrue, and demands the name of the author.

George Swan Nottage, Esq., Alderman for Cordwainers Ward, was elected Lord Mayor of London on Monday.

The British steamer *Coventry*, from Liverpool, September 22, for Charleston, has put into Greenock after meeting with a curious accident. When 400 miles off Tory Island her spare propeller broke adrift between decks and smashed iron plates, frames of the hull and beams. The propeller fell into the lower hold and burst through the shaft tunnel. The vessel nearly foundered. She had much difficulty in reaching the Clyde, having met with heavy gales.

The Boers have invaded Stellaland in violation of the guarantees entered into with England. Enthusiastic meetings have been held at Cape Town, Grahamstown, and other places, at which the high-handed proceedings of the Boers were denounced. The London *Times* says that England, while chary in entering upon fresh complications, cannot allow the Boers to extort concession after concession, heap insult upon insult, and treat convention after convention as only to be made in order to be broken.

The Copyright Congress at Berne has resolved that authors belonging to the Union shall enjoy equal rights with the natives of all the contracting countries, subject to the laws of the country where the work originated, or, in the case of unpublished manuscript, to the laws of the author's country. These rules are to apply to authors publishing their works in a country belonging to the Union of which they are not natives. Authors are to enjoy ten years' exclusive right to a translation in all countries belonging to the Union. The publication of extracts or entire pieces of scientific works or works of instruction will be permitted, provided the author's name is given. The musical works to be protected include arrangements or compositions based on themes from original works. A permanent international protection bureau has been established.

A meeting of the Salvation Army at Nyon, Switzerland, was attacked last Friday by a rabble who broke in the windows of the building in which the Army was assembled and destroyed the furniture.

A Madrid despatch says that the Spanish and American Governments are not, as has been alleged, negotiating for the establishment of a treaty of commerce between Spain itself and the United States.

Herr von Schloezer, the Prussian Minister to the Vatican, has presented to Cardinal Jacobini, Papal Secretary of State, a note indicating the basis on which Prussia is prepared to resume negotiations with the Vatican.

A complete separation of Government and the Church in Chili seems probable.

Quiet has followed the defeat of General Caceres in Peru, and the outlook in that country is peaceful.

Henry Irving, Ellen Terry, and the entire London Lyceum Company, numbering over sixty persons, arrived at Quebec last Sunday.

"THE CONSCIENCE VOTE."

It is no secret that a very large number of Republican voters are sufficiently dissatisfied with the candidates of both the great parties to be unwilling to vote for either, and are looking about for some mode of taking part in the Presidential election which will save them from all moral responsibility, however slight, for the election of either. One mode of doing this has been recommended by such authorities as President Seelye, of Amherst, in the *North American Review*, and the Rev. Dr. Woolsey Bacon, of Philadelphia, viz.: the making by each group of malcontents of a ticket of their own. In fact, it would seem as if it was not necessary that a number of persons should unite in making a ticket. There appears to be no good reason why each man should not have his own ticket, because, under this plan, it is not necessary that the nominees should accept the nomination. Dr. Bacon says it is "a foolish notion that it is necessary to ask a man's permission before you nominate him and vote for him." Dr. Bacon's ticket would be Alfred H. Terry, of Minnesota, for President, and Julius H. Seelye, of Massachusetts, for Vice-President. It is needless to say that he would not have the smallest hope of electing them, or of accomplishing anything by voting for them, beyond taking a nominal part in the election without seeming to approve of candidates selected by the two great parties. It is to be observed, however, that his vote would not be exactly what used to be called "a conscience vote." The conscience vote was a vote cast for candidates whom nobody expected to elect, but who did represent a political policy or a set of political ideas which their supporters expected some day or other to see triumph in legislation, and whose candidacy was therefore to be in some sense the foundation of a new party. The Republican party was, as a matter of fact, founded in this way.

The other mode of avoiding responsibility for the election of either Blaine or Cleveland, and the one which probably finds favor with most malcontents, is total abstention. Those who choose it stay at home on election day, in order when all is over, and a man of whom they utterly disapproved has been placed in the Presidency, to be able to say to their own consciences that they have had neither lot nor part in bringing about a result which they deplore. This year the number of those who resort to this expedient will undoubtedly be very large.

We think, however, it is not very difficult to show that both these plans are based on the assumption that the conscience, like a heathen idol, may be kept in the dark as to the remoter consequences of men's acts; though in politics the remoter consequences are the important ones, and it is above all things around them that the reflection of a conscientious man must play. The conduct of the Prohibitionist in casting a vote for St. John is perfectly practical and rational, because he believes that by incessant trials of strength at the ballot-box he will some day convert the Prohibitionist minority into a majority, and put it in possession of the Government. But those who either cast a hopeless vote or abstain from voting at this election, do so for the simple purpose of procuring a certain amount of self-satisfaction after the election is over. Not only, however, have they no right to the luxury they seek, but they cannot escape the responsibility they try to avoid. As a matter of fact, a man who has a vote cannot, in any country governed by party, avoid all share in the result of any election except by pairing. If he stays at home, he adds one vote to the party to which he does not belong. If he votes for a fancy ticket, it is, of course, the same thing as staying at home. The dissatisfied Republican who cannot vote for either Cleveland or Blaine, virtually gives a vote to somebody by refraining. And so does the dissatisfied Republican who votes for General Terry or President Seelye. There is no way under heaven of arranging it so that no party shall profit by his absence. It may be that the effect of his abstention will be so small as not to be noticeable. But the effect of his vote on the large constituencies of these days, when he does vote, is so small as not to be noticeable. When a man casts his vote with the majority for the President of his choice its effect is, in the State of New York, for instance, only an almost infinitesimal part of the whole power exerted—or, in other words, not worth talking about to his fellow-men, but yet not too small for his conscience to weigh and record.

Moreover, there is no sounder rule of political ethics than the rule which forbids us to do what all may not do, or refrain from doing what all may not refrain from doing. If all good men abstained from voting because neither candidate came up to their expectations, the country would soon be given over without restraint to the rule of the wicked, and yet every good man has just as much right to gratify his fastidiousness in this respect as Dr. Bacon or President Seelye. The notion that an active, positive, practical share in the rough and often very repulsive work of providing the nation with the best servants within reach, may be shirked by people who do not like it, and the shirking covered up by playing a little game in a corner with doll candidates, is surely a strange delusion for professed moralists to entertain.

A large part of the abstention and of the voting for sham candidates is due to forgetfulness that the election of a President is a piece of practical business of the highest importance, asit is the provision of a chief magistrate for the nation. It was not the intention of the Constitution that he should be a model for youth, or a moral teacher, or anything of that sort, but a man competent to discharge certain well-defined functions. It is the duty of the voters to put as good a man as they can get in this place as in all others—a perfect man, if possible; but government has to go on whether perfect men can be got for the offices or not. Bad men are often put into all the offices, from the Presidency down, for precisely the same reason that bad men are admitted to the United States, viz.: that it cannot be helped. This country ought to be populated, if possible, entirely by the good and pure; but it is not possible, and we consequently have to take the population as we find it, and make the best of it, as indeed of the whole human race. There never has been a man absolutely unexceptionable on moral or other grounds in the Presidential chair; there probably never will be. In choosing a President, as in choosing everything else in this world, we have to take, not what we should like, but the best we can get. In other words, the qualifications of Presidents have to be matters of degree. We have invariably in every election to choose between two men of different degrees both of badness and goodness. When there comes an election like the present one, in which the candidates are both considered by some people unusually bad, it is very unfortunate, but such cases are common in human affairs. The Government cannot be suspended until the right man turns up. Nor can the immense organizations known as the Ins and the Outs be improved and enlightened, or made to do better, in a day. We have to wait and labor, and in the meantime use for the necessary work of the world such instruments as inevitable circumstances have put into our hands. It is not open to any man to go aside, and sulk and say that he will have no hand in choosing the governor under whom he is to live for four years, who is to command the armies and execute the laws of the country, and to be paid out of its taxes, and represent it in its relation with the outer world. He cannot avoid helping to choose him. There is no corner of the country into which political duty does not follow a voter. There is no desert for political anchorites.

THE LANDREAU CLAIM.

We have received many communications asking us to explain the Landreau claim, which is frequently referred to by Mr. Blaine's assailants as a piece of dangerous diplomacy. The Landreau claim was an old claim against the Peruvian Government held by one Landreau, a Frenchman by birth, whose American citizenship was at least doubtful. It was an old claim which Landreau had been for years trying to get the United States Government to back up. A resolution was once passed by the House of Representatives recommending the claim to the attention of the President, but it was thrown out by the Senate. Secretary Fish, when in office, went so far as to permit our Minister to Peru to urge "unofficially" a "speedy investigation" of it. Mr. Evarts also made some sort of report on it. But this was all the United States ever did about it. It was a claim of enormous amount to guano and nitrate deposits and other good things, and in every way most attractive, but there did not seem to be anything in it, and it was in a fair way, like the Little Rock and Fort Smith Railroad Bill, "to sleep the sleep of death," when Mr. Blaine came into office and had his attention drawn to it.

He at once took it up with great vigor, and made it the basis of interference in the Chili-Peru quarrel then raging of a most curious kind. General Hurlbut, whom he had sent to Peru as American Minister, at first laid it down as law that Chili had no right to take territory as an indemnity from Peru in case cash was not forthcoming. Mr. Blaine overruled this view, in one of the queerest diplomatic correspondences on record, but he had previ

ously, in instructions to General Kilpatrick, taken the ground that the question whether money or land should be taken by a conqueror should be settled by an arbitrator. A little later he threw Hurlbut overboard and sent Mr. Trescot out as a special agent to Peru to get Chili to take money, and laid it down as a rule of international law, that "between independent nations hostilities do not, from the mere existence of war, confer the right of conquest until the failure to furnish the indemnity and guarantee which can be rightly demanded." We need hardly say that this rubbish—for rubbish it is, being all but incomprehensible—originated in Mr. Blaine's brain. Nothing of the kind can be found in any text-book or in the history of any war. The right of conquest exists in virtue of the fact of conquest, and the conqueror takes his indemnity in any form he pleases. Of course Chili paid no attention to these absurd utterances.

He had before this, when Peru was completely overthrown and at the conqueror's mercy, disregarded Mr. Christiancy's report that Calderon, whom the Peruvians, after their regular government had disappeared, had set up as a sort of provisional or makeshift governor, was entirely without power, or, in other words, was not a *de facto* Government at all, and directed him to recognize him as the Government of Peru. The Chilians, who had not approved of or accepted this government, thereupon arrested Calderon, as they had a perfect right to do, and placed him in confinement. Mr. Blaine then proceeded to complete the farce by treating the arrest as an offence to the United States Government, which called for an "explanation," and he intimated that the explanation "would not be satisfactory unless accompanied by the restoration or recognition of the Calderon Government." In other words, he brought us within a hair's breadth of a war with Chili, which, of course, could not accede to such a preposterous demand, any more than the United States could afford to put up with a contemptuous rejection of it. We were delivered from this embarrassing position by Mr. Frelinghuysen's accession to the State Department. He communicated with the Chilian Minister in Washington, and ended the ridiculous affair in a few words.

Now, what has all this to do with the Landreau claim? Simply this, that these strange interferences in the quarrel, and the strange demands and queer concoctions of international law, were accompanied all along by warnings that no treaty of peace must be concluded which did not provide for an investigation before some Peruvian tribunal, or recognition by the Chilians, of the Landreau claim—a claim of obscure origin and doubtful validity, held by a person whose American citizenship was not clear, and which our Government had already refused to treat as worthy of its official support, the amount of which was enormous, and which, if a good claim, would of course continue to be as good against any Power which took possession of Peru as against Peru herself.

That Mr. Blaine had a personal interest in the claim there is no proof; but the extraordinary amount of interest he showed in it, the extraordinary means to which he resorted, and the extraordinary risks which he ran in order to save or support it, naturally excited the curiosity of all and the suspicions of a great many. The suspicions naturally rested on the revelation made by the first batch of Mulligan letters of the extent to which his mind was occupied, while in Congress, by a desire to get an interest in "the bedrock" of speculative schemes, and of his readiness to use both his official and personal interest to advance them. They have been, of course, deepened by the last batch of Mulligan letters. But what the Chilian correspondence impresses on people is not so much his corruption as his unsafeness as a foreign minister. Whether his motives in pushing the Landreau claim were pure or not, can make little difference to the business men of the country, who saw themselves brought to the edge of war with a Power possessing a powerful ironclad navy, on the childish pretext that it was bound to treat as *de facto* government, on soil occupied by its own armies, any gentleman whom the United States Secretary of State chose to designate as such, although the nominee had so little power that he was taken to jail by one policeman. In fact, no one can read the South American diplomatic correspondence of 1881 without feeling that the presence of such a person as Mr. Blaine at the head of the Government, even if he were as honest as Mr. William Walter Phelps says he is, would be a standing menace to trade and finance.

CLEVELAND'S INDEPENDENCE.

We have more than once commented on what may be called the personal dishonesty and self-debasement which distinguish the present canvass from all others that have preceded it. There has happily been hitherto no such spectacle in American politics as a large body of leading editors and politicians, of good character and standing, trying to persuade people to admire and elevate to the Presidency a man whom, two months previously, they had been denouncing as a sort of national disgrace. Never before, for instance, has a politician of the standing of Mr. Warren, the editor of the Buffalo *Commercial*, and the Chairman of the Republican State Committee, been known to be advocating in July the election of a candidate of whom he was compelled to say in May:

> "Edmunds only added force to the fact that if Blaine manages by hook or crook (he cannot get it in any other way) to get the Chicago nomination, his party will be put upon the defensive with a candidate of whose record they are ashamed, whose future makes the business men afraid of him, who would be consistently opposed by every truly independent newspaper in the country, and whose election, should that be brought about by some mysterious agency, would be regarded as the triumph of demagogism."

This is happily a new thing. The Presidential canvass has been marked, ever since the foundation of the Government, by much bitterness and even ferocity, by much party unscrupulousness and servility, by much readiness to stifle honest convictions and profess opinions not honestly held on great public questions; but never before has a large body of party leaders come forward unblushingly to contradict themselves within six weeks about a candidate's personal character, and make open acknowledgment that if telling the truth about him at one time they were at another telling falsehoods.

The defences of Blaine by this class are only one degree worse than their attacks on Cleveland. The same thorough-paced falsity marks them both. Of this their attacks on him for vetoing the Five-Cent-Fare Bill are an excellent example. There have been few things in his official career which have better illustrated the strength and independence of his character than this. The bill offered an excellent chance to a demagogue to curry favor with the ignorant vote of this city, at very small expense. There was some doubt about its constitutionality—a fair chance that the railroad company would have successfully resisted it in the courts, and that, therefore, his approval would have done the company no real damage. His approval, too, would have enabled him to pose as the friend of the workingman and the enemy of corporations, like the two charlatans who are now his competitors. He vetoed the bill, however, as a duty he owed to public faith, and thus has enabled conscienceless enemies like the Chicago *Tribune* to accuse him, with enough air of plausibility to impose on the ignorant, of being the friend of corporations.

The truth is, however, that it is the very quality that Governor Cleveland displayed in this matter which is giving the support of nearly all the great corporations and the great railroad operators to Blaine. Almost without exception they are giving Blaine their open or secret assistance, and the reason is obvious. The last thing the great corporations and great railroad men desire to see is men of unbending and puritanical temper about public rights in high places, such as the Presidency and Governorships. They live, and, we grant, not always unjustifiably, in a state of antagonism to the public. They are constantly in need of such favors as a lax administration of the law, or a straining of the law for their benefit. It is of the last importance to them, therefore, that high officials should either be in sympathy with them, through business interests and associations, or should be men of such easy temper and blunt sense of public duty, as to make it certain that when a corporation gets into collision with the State in any way, he will facilitate and not hinder its getting the better of the State. A better specimen of the latter kind of official could probably not be found in the United States than Blaine. He would be Gould's, or Field's, or Cameron's ideal President, and the natural consequence is that all the railroad magnates are supporting him with both voice and purse.

Cleveland, on the other hand, has given such plain proof that he is above all things a lawyer of the stern, unbending, trustee type, who will not be easily persuaded into taking "a practical business view" of things, that it is most natural that corporations should dislike and distrust him, and that this dislike and distrust should be intensified by the very act which has most exposed him to the denunciations of demagogues.

THE APPROACHING GERMAN ELECTIONS.

THE party movements in Germany, preparatory to the general elections to the Reichstag which are to be held in the latter part of October, are full of interest. The relations of some of the political parties to each other and to the Government have undergone modifications; new combinations are to be formed, and changes of programme have become necessary. The mainspring of the whole commotion, as usual, is Prince Bismarck. He has become tired of bargaining for the support of his pet measures with the Ultramontanes or Centre party, and is now trying to form a new governmental majority through an alliance of the Conservative fractions (German Conservatives, Free Conservatives, Christian Socialists) with the National Liberals. The latter, since the secession from their ranks in 1880 of the more liberal wing, led by the late Dr. Lasker, have completely ceased to be an opposition party, and have recently undergone a sort of revival under the auspices of such former leaders as Bennigsen and Miquel. Bismarck, whose main parliamentary staff they formed in the earlier period of the *Culturkampf*, and who dropped them when they began to evince more independence than he could brook, is now again ready to lean upon their support, in addition to the more facile adherence of the Conservatives, upon which he can count at all times. The Ultramontanes, but recently allies—though intractable and exacting—are again becoming the Chancellor's most decided opponents. The other great opposition body is that of the new German-Liberal (Deutsch-Freisinnige) party, which lately arose out of a fusion of the Lasker Secessionists, under the lead of Rickert, Bamberger, and Gneist, with the Progressists, whose foremost spokesmen are Professor Virchow, Hänel, and Richter. Further to the left are the small fractions of the Democrats (People's party) and Socialists, while the Poles, Alsace-Lorrainers, and other particularists steadily vote with the Ultramontanes.

Bismarck will come before the new Reichstag with fresh prestige. Never since the creation of the new German Empire and the conquest of peace has his lead as Foreign Minister been so uncontestably and brilliantly successful as now. He has drawn two-thirds of Europe into a coalition of which Germany and Austria—an humbled enemy, turned into a stanch friend—form the nucleus, and of which he is himself the arbiter. He returns from a three Emperors' conference, held under his oracular guidance, which promises to Europe a new era of peace and stability. He has proved to France that her expectation of an alliance with Russia against Germany was a chimera, and has lulled her into security concerning her expansion in the East, which makes her forget her lowered position on the European continent. He has planted the German flag on African shores, and intoxicated the German nation with expectations of colonial glory in rivalry with England. His advice is followed in Constantinople, and his word may to-morrow be decisive in Cairo, against Great Britain, and in Peking against France. And all these advantages have been secured without sacrificing a single "Pomeranian landwehrman" in a decade. The internal advance, too, of the Empire has been uninterrupted. The work of unification goes on slowly but steadily. The stringent anti-Socialist law has worked well; the struggle with the Ultramontanes has been reduced—by concessions, it is true—to a contention without convulsions; the State-Socialistic innovations instituted by the Chancellor have exercised a rather pacifying influence upon the laboring classes; his agrarian protection schemes have not proved a failure. It is hardly necessary to add that the army, the navy, and the whole machinery of the Empire are in a most efficient condition.

Yet, in spite of all these favorable conditions, it is not likely that the elections will give Bismarck a working majority, for the simple reason that his schemes and demands are alarming to the bulk of the middle classes. He wants to go still further in the socialistic direction by enlarging his scheme of state insurance for workingmen against old age, sickness, and accidents; he wants to increase the import duties on foreign agricultural products and the tax on working capital, and to multiply the state monopolies. He seeks, moreover, a renewal of the anti-Socialist law, and a vote of the army grants for seven years more, after the expiration of the seven years' vote of 1880. He will get the Conservative and National-Liberal support for most of these things with more or less readiness, but their combined forces in the last Reichstag only numbered 125, of whom less than fifty were National Liberals. The latter may possibly secure some new seats, but the Conservatives have no such prospect, and, to make a majority, need to muster, with their allies, 199. The general tendency of German opinion is now somewhat conservative, so that there is a possibility that the German Liberals may lose a few seats. They numbered 100 in the last Reichstag. The Centre Party, including its Catholic auxiliaries, the Poles and Alsace-Lorrainers, are probably the steadiest element in the Parliament, numbering about 140. The Ultramontanes, led by Windthorst, make no secret of their intention to fight the National Liberals, their old enemies, everywhere. Bismarck can doubtless have their support, but he must pay for it.

By their ability and readiness to vote, as circumstances permit and the exigencies of the struggle for Catholic interests demand, with the liberal and radical opposition against the proposals of the Government, or with the Conservatives for them—if new concessions can be obtained—the Ultramontanes will most probably again be masters of the Parliamentary situation, and they will surely make the best of it. And thus Bismarck will again have to bargain for votes with the representatives of the Curia, though, perhaps, with a greater show of strength and determination to carry his points, if his adherents achieve considerable gains in the elections. The chasm between him and the German Liberals can be bridged over only by the surrender of the most vital principles of government, which neither side is in the least inclined to make; and the strong position occupied between them by the Ultramontane party, with its special non-German interests, affiliations, and methods, will continue to render a real parliamentary government by majority in Germany impossible. The fight is and must be in the main, as our Berlin correspondent points out on another page, a triangular one between Conservatives and Moderates of all shades, advanced Liberals, and Catholics. Only by his surpassing prestige and tactical abilities is Prince Bismarck enabled to govern as he does without a surrender and without a *coup d'état*.

THE ENGLISH NAVY SCARE.

THE alarm in England over the condition of the navy, which seems to be genuine and to rest on some well-established comparisons with that of foreign Powers, and particularly that of France and Italy, will probably bring about a more thoughtful consideration of the English colonial policy than it has received within the present century. As a matter of fact, what is called the imperial policy of extensive colonial dependencies and possessions has grown up under the undisputed naval supremacy with which Great Britain came out of the great wars of the French Empire. After Trafalgar there was literally no navy left in Europe but her own, and, owing to the impoverishment of the Continental nations, this state of things continued till about 1843, when the French, under Louis Philippe, began to have a respectable sea force, and the British public was startled by a pamphlet of the Prince de Joinville maintaining that rivalry with England on the ocean was again possible for her old enemy.

But between 1843 and 1870 France was the only Power which in the smallest degree threatened English superiority. There was no Italy and there was no Germany, and for naval purposes there were no Austria and Russia. The resources of both these empires were strained to the uttermost in maintaining great land armies, and their maritime population was small, and not very hardy or enterprising. Since 1870 there has been a great change. Germany and Italy have both come into existence as great States, and France has continued with renewed vigor the naval progress which was initiated under the Empire. Moreover, Italy, which, even thirty years ago, nobody thought of as a naval Power, has become a very formidable one, having the most powerful ironclads afloat, and having a large body of excellent sailors to draw on for crews.

The result is that the old rule of English naval policy, which, during the first half of the century, was very easily followed, that the English fleet must be more than a match for the combined fleets of any other two Powers, is now not easily followed by any means; and if what very good authorities are saying be true, it is at this moment actually suspended. That is, even if it be true that the English ships now afloat could overpower the combined navies of any other two or three Powers, the fact that they have to be dispersed all over the world for the protection of distant dependencies and the greatest commerce the world has ever seen, makes the English fighting force in European waters alarmingly small. Whether, therefore, the conditions of the British Empire can continue what they are without a fresh trial of naval strength, is a question which is apparently beginning to occupy the English public

very seriously. It is now eighty years since England measured her prowess at sea with any European Power of the first order. Since then the conditions of naval warfare have wholly changed. Seamanship, in the narrower sense of the term—that is, the skill and audacity in contending with winds and waves, which have been so marked a characteristic of men of the English race for three centuries, and which English institutions have fostered—no longer plays the part it did in the efficiency of fleets. The *morale* of the men and officers has, in fact, lost much of its value, and the machinery has largely taken its place. The ship with the best engines, and best machinery for moving guns and turrets, will now, other things being equal, win the fight, and in the construction of these things England enjoys no great superiority, if any. In fact, in the old days of wooden sailing vessels the French ships were the best models and best sailers, and nowadays nobody can say with confidence that the mechanical outfit of French and Italian and German men-of-war is one whit worse than that of English men-of-war.

Of course it may turn out, when another great sea fight takes place, that English nerve and pluck have all their old place in naval warfare, and if it should, it would give England another half century of undisputed supremacy at sea. The one important naval action with ironclads which has taken place in European waters, that of Lissa, between the Italians and Austrians, was won by Austrian skill in manœuvring, and there is no reason to suppose that British commanders have heads less cool and hearts less bold than in Nelson's day, or that they will ram any less effectively than they used to cannonade. But, even since Lissa, the deadly torpedo has appeared on the scene, and made enormous strides, and apparently promises to make a steam launch with two men in it a shape of dread to the greatest ironclad afloat; so that of all the uncertain problems in international politics to-day, there is probably none more uncertain than the value of fleets and the relative maritime strength of the great Powers. A serious shock to confidence in England's ability to take care of her foreign stations, and to protect her amazing commerce against swift cruisers, would probably be the most momentous political event in the old world since Waterloo.

ENGLAND, FRANCE, AND GERMANY.

LONDON, September 20.

THE most considerable change which has ever passed in the European relations of England is that which this generation has seen—her renunciation of the old idea of playing a part in Continental wars and alliances. Palmerston was the last Prime Minister of the old school; yet even before his death the idea had established itself that Britain was rather an Indian and colonial than a Continental Power, with nothing to gain and much to lose in the play of European politics. The new view is partly due to the growth of a more pacific spirit, and the aversion of a democracy for secret diplomacy; partly, also, to the vast increase of the armies of the great European states, with which it is obviously impossible for a small army like ours to contend. Two points, however, remain on the European main land in which British interests are still deemed to be involved, and which are, so to speak, cords attaching us to the tangled web of Continental politics.

One is Belgium, important on account of the position of Antwerp, a strong naval fortress which lies opposite the mouth of the Thames, and would, in the hands of a strong Power, be a menace to it. Having, in the old days when we always took a hand in the game, been parties to the establishment of the Belgian kingdom, and feeling also this concern about Antwerp, we concluded a new treaty, guaranteeing Belgium in 1870, when her independence seemed threatened by the war between Germany and France, the latter of whom had been shown to have entertained designs of annexation. The other point is at the extreme opposite end of Europe—viz., Constantinople, and the neighboring shores of the Bosphorus and Hellespont. Here, however, England's interest is not personal, as in the case of Belgium, but is held to be a part of that general interest which she has in the Eastern Mediterranean because that sea forms part of the short route to India. Doubtful as it may well be deemed whether it can make any difference to India or ourselves who holds the Bosphorus, a large section of English opinion would have supported Lord Beaconsfield in 1878, had he carried out his threat of declaring war against Russia for the sake of saving from her grasp the ancient capital of the Eastern Empire; nor is it certain that even now any English Ministry would be permitted to stand by and see this famous sea highway closed or pass under the control of any great Power.

One may say, therefore, that, except as regards Belgium, English foreign policy is now purely Indian and colonial. But that means a good deal, for India is taken to include the route to India, and therefore to compel us to watch over Asia Minor, Persia, the Levant, and Egypt, while our colonial interests may involve contact and contest with any or all of the naval and colonizing Powers—France, Holland, Portugal, Italy, Germany, possibly even Spain. Our withdrawal, therefore, from the territorial or dynastic complications of the Continent has by no means freed us from the necessity of constant and serious diplomatic dealings with the great Powers. Their friendship is still important to us, their hostility still unpleasant, and so far from getting more and more away from them, as Mr. Gladstone has doubtless always wished to do, the last two years have involved us more closely with them, for we have occupied Egypt, a country almost covered, so to speak, with treaties, giving to seven or eight of the European Powers rights which we cannot brush away.

These facts may serve to explain to American readers why it is that England, after all the professions of non-intervention repeated for the last thirty years, has now to watch Continental politics so closely. Our newspapers are almost as full of them as in the days of Castlereagh or Canning. Few people understand what it all means, but it is felt, not without discomfort, to mean something. It is like a growling storm, heard from along the horizon, while the foreground is bathed in sunshine.

The chief diplomatic sensation of the last few weeks has been the attack made by several of the leading German newspapers on England and English policy. Everybody knew that there was little liking for this country among the Germans, but this journalistic outburst was so sudden as to be startling, and is generally deemed to have been, if not prompted, at least tacitly encouraged, by Bismarck himself, whose attitude during the recent London Conference on the affairs of Egypt had been decidedly cold. Whether the dictator of the Continent is really angry with us, or is only pretending for some occult purpose to be so; whether he is seeking to fan into a flame the embers of wrath between France and ourselves, and thinks to encourage France by showing her that we have no friends on the Continent—these are questions it is hardly worth while to discuss. But there is something significant in this apparent alienation of England from the two strongest of her neighbors, with neither of whom, for many years past, has she had any serious ground of quarrel. Moreover, there are some signs of the development in England of two adverse currents of opinion, the one urging the conciliation of France, the other the defiance of France and cultivation of a German alliance.

France, it must be confessed, is not an agreeable neighbor. English Liberals used to set down all her old misdeeds—the tricks she played us in the Crimean War, the tricks she tried to play upon Italy, the expedition to Mexico, the wanton folly of the quarrel with Prussia in 1870—to Louis Napoleon and the knot of unprincipled men who surrounded him. The Republic, they thought, will turn over a new leaf—will respect honor and good faith, will love peace, will be animated by those philanthropic sentiments toward the uncivilized races which we in England have at last begun to cherish. And of course one free people will love another free people. However, as time went on, it appeared that the Republic was, in foreign and colonial affairs, not so very different from the Empire. The snake had only changed its skin. Unable to make trouble in Europe, France determined to restore her self-esteem by extending her boundaries in other parts of the world. On what seem slender pretexts, she practically annexed Tunis. She picked a quarrel with the Hovas in Madagascar, and in prosecuting it ill treated English missionaries and showed little respect to the English flag. She was a disagreeable bed-fellow in Egypt while the Dual Control lasted, and has intrigued right and left against England both then and since. She has alarmed the Australian colonies by the plan of flooding her penal settlements in the Western Pacific with large consignments of convicts, many of whom, it is feared, will be sure to escape to Australia. Last of all, she has turned her war with Tonquin into a war with China, which is sure to affect British and American commerce, even if it does not endanger the lives of all Europeans in that country. I do not say that this is a perfectly fair account of the recent behavior of the French, but it is the sort of account which the English public has received, and which puts it into a decidedly bad humor. No one wishes for an open quarrel, still less for war — the interests uniting the countries are too numerous and too close for that to be contemplated. But one sees the sentiment growing that there is little use in trying to be civil to France about Egypt or anything else, for she will only mistake civility for cowardice; while the often repeated warning that the French fleet is now nearly as strong as ours is received with so much uneasiness that it would not be surprising if the Government were soon to be pressed to increase largely the number and strength of our vessels.

How far the French people are irritated against England, I will not undertake to say; but their newspapers certainly strive to make them so, and seem, by the way they persist, to be succeeding. Nothing is more difficult than to estimate the influence exercised by newspapers in any country other than one's own, or to appraise the value of the report that such and such a journal is under the control of some financial ring, which works it for the purposes of stock-jobbing. In France, even more, perhaps, than in England, a great deal of newspaper writing is mere writing, which, though read with approval and sympathy, has little effect on action. That there is a serious wish in France to quarrel with England cannot

be imagined. French sentiment is at present averse to all big wars, because they mean big expenditures; and to quarrel with England on some trumpery colonial pretext, while Germany, Italy, and even Spain, are all unfriendly, would be too absurd. Nevertheless, there is on both sides a lack of cordiality, a disposition to expect intrigues and affronts, which may easily have important consequences. Cases arise, especially in connection with Turkish and Egyptian affairs, in which the joint action of the great Powers has been held to afford the best prospect of benefiting the populations of those countries and preventing war. Such joint action becomes less likely the more mutually distrustful the Powers become.

As for Germany, the dislike is all on one side. Our people have no particular aversion to the Germans, no fear of them, certainly no jealousy of them in oceanic or colonial matters. We have never thought of Germany as a rival to England on the seas, nor as having interests anywhere opposed to our own. The average English traveller doesn't find the average German congenial, and Bismarck inspires repulsion as well as admiration, owing, I think, neither to his high-handed treatment of the Parliament nor to his protective policy, but to the impression of unscrupulous boldness which his play, exquisitely skilful as it was, in the Schleswig-Holstein question made in 1864-5-6. Mr. Gladstone is supposed to be anti-Prussian in his sympathies—one hardly knows why, unless because Prussia has been so vigorously anti-ecclesiastical; but in this respect he doesn't quite represent the nation, which was, on the whole, pleased to see the establishment of German unity, and respects the qualities of solid greatness which the Germans have shown. English political party has now little to do with our foreign sympathies. The Tories were formerly pro-Austrian; if anything they are now (or at least some of their prints are) pro-Prussian, for no better reason than that it is convenient to blame the Ministry for subservience to France. The Liberals, however, are not pro-French. Neither Mr. Gladstone's supposed leanings that way, nor the fact that France is a Republic, has affected their mood, which is one of a desire to have as little as possible to do with any Continental Power. We have so little consciousness of hostility to Germany that the tirade of the German newspapers astonishes and amuses more than it provokes us. The idea that the delay of our colonial and foreign officers in answering the German Government as to whether we claimed some wretched spot on the coast of Africa should indicate jealousy of Germany, or anything but official procrastination, is too childish to be even refuted. The desire for a *rapprochement* with Germany, to which I have already referred, is due not to fear of her, but to the feeling that as she practically controls Austria and largely influences Russia, her support of any line of action we might wish to adopt in Egypt or Turkey would be decisive. This it doubtless would, but a price might have to be paid, and what would that price be?

The present irritation—quarrel we cannot call it, for there is nothing to quarrel about—is another instance of the tremendous power for mischief which the press exercises in international questions. Half-a-dozen editors can, apparently, do now in Europe what half-a-dozen mistresses, and father confessors, and court favorites used to do two centuries ago in setting nations by the ears. Fortunately, blows are not so likely to follow; but the mere embitterment of feeling and disturbance to commerce caused are grave evils. Yet every country seems to assume that the journals of another speak that other's sentiments, though at home we smile when a French or German newspaper cites the *Times* or *Standard* as the exponent of our ideas or intentions. Y.

GERMAN ELECTORAL ISSUES.

BERLIN, September 15.

THE next elections to the Reichstag will be held towards the latter part of October. In Bavaria and in some smaller States the order for making up and exposing the lists has already been given, but in Prussia the Government holds back, and does not even publish its programme nor intimate its intentions. The reason of this policy is manifest. At the last election in 1881 a new assortment of duties and taxes was laid before the people, the tobacco monopoly was vehemently exacted, and the patrimony of the disinherited classes was loudly called for. But instead of gaining a victory by making these demands, Bismarck suffered a heavy defeat, for people had ample time to think over all these economical and socialistic patent medicines which they were expected to vote for, and made up their mind to defeat a policy pregnant with the worst consequences. At present just the opposite course is resorted to. By keeping quiet, Prince Bismarck expects to hold his political opponents in check. Since the beginning of this month, however, the political campaign has commenced in earnest. In all parts of the country meetings are held, papers spread, and incriminations or recriminations made. Although we have not yet reached that political ripeness, or rather putrification, which, as far as the candidates for the Presidency are concerned, now manifests itself in your country, I am sorry to say that we are making rapid progress in that direction. Here the first reproach which is made against a political opponent is treachery towards the country, or at least hostility to the Empire. A National Liberal calls a real Liberal a traitor, a Protestant Conservative nicknames the Roman Catholic an enemy of the fatherland, and Bismarck's organs revile those who do not agree with him, and just now especially those who differ from him in colonization matters, as traitors to the Empire. Like master, like man; but, worse still, letters are forged and published, passages are quoted at random from a literary man's former pamphlets, in order to prove him an agent or agitator for a foreign Government. And at the head of the small fry stand court preachers and Government officers who long for promotion. Anti-Semitism is played out, and people laugh at the bait; neither does Manchesterdom draw any more, for bread has not become cheaper by the victories of the protectionists, and the economic prospect grows more gloomy every day. Thus stronger expedients are resorted to in order to make the people swallow what its so-called "only friends" have prepared for them.

In spite of the silence of the Government in regard to its policy, however, it is not difficult to find out what it is driving at. First, it wants still to increase the duty on rye, hitherto half a mark per hundredweight. This duty is now to be enlarged four-fold, viz., to two marks, which will enhance the price about 30 per cent. of the present value. Our agrarians demand it as their share in the bargain which they made with the ironmongers five years ago. The latter, of course, will be the next to apply for more protection. According to the newly instituted statistical inquiries, not quite 10 per cent. of the farming interest is benefited by such a fearful increase, and it is the small farmer, as well as the workingman and the poorer class in general, who will have to suffer for the benefit of our landed aristocracy. Formerly the official organs tried to prove that the foreign producer or manufacturer paid the duties laid by our Government; now they are eager to instil the notion that, however high the taxes and duties laid on rye and wheat may be, the price of bread is independent of such a policy, and that it is only the baker who loses what the small minority of our agrarians gain. To refute this nonsense the Liberal papers have compared the prices of rye, wheat, and flour for the last five years. Although any man who can read is now able to draw his conclusions from these sober facts, the Conservatives do not give up the fight, but pretend that wholesale prices are quite indifferent to the retail trade, and that the retailer profits exclusively by the difference. From this point of view it would of course be of no consequence whether the duty on rye and wheat were increased or not, as the consumer is in no danger from the higher duties. If, however, the four-fold duty of two marks on rye should be carried, the following greatest six real-estate owners in Prussia would gain in proportion to the present duty of half a mark—

	Marks.
1. Duke of Arenberg on 55 square miles (1 German square mile=22 English square miles)...	1,611,060
2. Prince of Thurn and Taxis on 55 square miles.....	1,611,060
3. Duke of Brunswick on 50 square miles.....	1,466,460
4. Prince of Fuerstenberg on 50 square miles..	1,466,460
5. Duke of Talleyrand on 31 square miles.....	908,052
6. Prince of Salm-Salm on 28 square miles.....	820,179
Making in all.....	7,883,271
As, besides, our agrarians demand the abolition of the taxes on manors and baronial estates (Ritterguter), the above named gentlemen would gain in proportion.....	1,970,817
Total.....	9,854,088

or more than $2,500,000 a year, which of course would be borne by the consumers and taxpayers.

The next bill the Government will submit to the Reichstag is the abolition of all private insurance business and its transfer to the State. The proceedings of the last session of the Reichstag in relation to the accident insurance companies proved that the Opposition were helpless against the united action of the Conservatives and Ultramontanes. Next time a greater practical and more valuable advantage will be derived by and for State Socialism. If, consequently, that majority be not broken by the next elections, the people will not only have to pay a four-fold duty on rye, but also to accept a measure of such enormous bearing upon its self-government, its financial interests, and its economical independence. If fire and marine insurance companies be run by the Government, the latter will not stop at swallowing any other lucrative private business. In the background lurks still more mischief. A majority submitting to Bismarck's dictates will provoke the reintroduction of his old favorite schemes, which were even rejected by the last Reichstag, as, the tobacco monopoly, the "surtaxe d'entrepôt," the doing away with the secret voting of universal suffrage, the biennial instead of annual adoption of the budget, and other popular rights.

What, then, will be the result of the elections? I really cannot say. It is the more difficult to foretell as the party formerly most potent, the National Liberals, has undergone an essential change.

This is not the first time, although as a party it is only seventeen years old. During the conflict of Bismarck with the Prussian Second Chamber they belonged to the Party of Progress, but after the victory over Austria they separated from the main body of the Liberals, and assisted the Chancellor in his new policy for the reconstruction of Germany. From 1867 to 1878 they had their best time, for in coöperating with the Government they introduced liberal laws into the statute-book and promoted a series of reforms which answered the wishes of the people and placed the North German Confederation on a permanent and solid basis. Bismarck, who likewise fought the "Junker" and bureaucratic rule, was then an ardent free-trader, and developed the old Stein-Hardenberg era, assisted by Minister Delbrück, who put the Chancellor's economic ideas into shape. As the National Liberals then numbered about 120 to 150 mem-

bers, they held the balance of power, and although not forming a majority, they were the most influential party. These relations, satisfactory to the Chancellor as well as to the commonwealth, lasted till about 1878, when Bismarck went over to the protectionists. Only a part of his former supporters followed him ; the more independent stood aside, and in his home policy even became his opponents. In 1880 they seceded from the main stock, and were, therefore, called Secessionists. These were about fifty in number, while the National Liberals remained about forty strong. With the exception of two able men, Herr von Bennigsen and Miquel, the talent, the parliamentary experience, and the independent character were on the side of the Secessionists, who last spring united with their old friends, the Party of Progress, which stood nearest to them in its political views and aims. In this way a strong Liberal party of just 100 members was formed, whose influence was immediately felt in the Reichstag.

Nothing, however, was done on their part to break off their former friendly relations with the National Liberals. But these gentlemen considered the independent movement of their former friends as an attack on their position, and ordered an advance along the whole line, not against their mutual opponents, the Conservatives and Ultramontanes, as would have befitted their former policy, but against the united German Liberals. In order to leave no doubt of their intent, they nominated candidates against the Liberals in almost all election districts, and, without asking for a consideration, placed themselves unconditionally at the disposal of Prince Bismarck. This is just the ideal which the Chancellor wishes to realize. If possible, he wants to have two majorities—the Conservatives and Ultramontanes on one side, and the Conservatives and National Liberals on the other—which he can play off at pleasure against the Liberals or against each other. For this reason the National Liberals are soft-soaped, and their organs boast that Bismarck is desirous of being on intimate terms with them, that he will honor their services, and that the subordinate questions of home policy are of no account when the greatness and welfare of the Empire are at stake. The Southern Germans are in this respect more eager than the Northern, and their leaders have entered on the campaign by declaring their willingness to vote for the fourfold duty on rye and for the passage of the so-called social-reform measures of the Government. In short, they out-Bismarck Bismarck, and are his most abject followers. Their name is but a reminiscence, and a mere cover for all those who under a Liberal flag sail with Conservative wind. The Centre now fears that its former bitter enemies may obtain the ascendency, and will rob it of its commanding position. Until now, the Catholic leaders have treated as a power with Bismarck, but if the National Liberals should, as they expect, conquer about thirty seats and form an alliance with the Conservatives (which under the present circumstances they cannot avoid), then the Centre will have to relax a litle and accept conditions from Bismarck. The Ultramontanes therefore pass the word to defeat the new left wing of the Conservatives, *i. e.*, the National Liberals, while on the other hand they cannot help coöperating with the old Conservatives. Hence it will not be sufficient for the Liberals to maintain their ground; they must gain at least as many seats as the National Liberals will lose, to form also a party of respectable numbers, if they expect to prevent the Chancellor from carrying out his most obnoxious plan. In my opinion, whether they conquer or lose a few seats, the result will not differ much from the present situation.

The Chancellor, who will thus have his hands free, is very clever in raising side-issues and in masking his real object. Thus at present he acts the colonial policy before the curtain—a play just now very popular, because the people do not understand anything of its bearing, its temptations and dangers. The colonial craze rages like an epidemic all over the country. It is the German edition of the French chauvinism; it cannot be refuted by reasoning, but must be crushed by bitter experience. Closely connected with it is the question of subsidizing mail steamers to countries with which as yet we have little or no commerce. Although Bismarck is very cautious, and promises his assistance only to such private settlements in Africa as are unjustly attacked by other Powers, his followers again and again assail those as traitors who do not believe in colonization schemes on a wider scale, and who warn against squandering our national resources in countries and for objects which jeopard the solid development of our strength. † † †

MONTALEMBERT AND CORNUDET.

PARIS, September 14.

A FEW years ago were published the 'Letters of Montalembert to a College Friend'—letters written between 1827 and 1830, when Montalembert was between seventeen and twenty years old, full of religious ardor and enthusiasm, of fire and of talent. When Montalembert took his seat in the House of Peers (he was one of the last hereditary peers), he astonished the House by his maiden speech. He professed an ardent Catholicism, and a new sort of liberalism which reconciled faith with liberty. The 'Letters' were in this same spirit. The friend to whom they were written was M. Cornudet, who remained to the last united to Montalembert by his religious principles, though their two paths soon became very different in politics and in social life. The reputation of Montalembert soon became universal; the reputation of M. Léon Cornudet is very limited. Young men are very prompt to make alliances ; the friendship of Montalembert and of Cornudet began when they were both full of hope and of illusions. On the 10th of December, 1827, Montalembert writes the treaty of alliance :

"God has given us great benefits : he has made us live in a free country ; he has enabled us to profit by the light of our century ; he has sanctified our life by religion ; he has embellished it with friendship. Our gratitude will never equal his goodness. Religion, liberty, such are the eternal foundations of virtue. To serve God, to be free, these are our duties. We will employ in their fulfilment all the resources, all the means which Providence may place in our hands. We will love God with all our hearts, and others as ourselves. In an age when the sublime truths of Christianity are disregarded, we will sacrifice all our inclinations, we will conquer all opposition, so as to remain faithful to them; we will exactly observe the divine laws, and we will never be led by respect to men into guilty weaknesses. We will try to put in practice universal charity, and the unfortunate will always be the objects of our care and our compassion. Sincerely convinced, we will banish from our minds the doubts which may be conceived by a weak and vain reason. Liberty will be our only passion ; we will never cease to work in order to establish and consolidate it in our country. No sacrifice will cost us too much whenever it becomes necessary to defend it. For the sake of liberty, we will triumph over all the obstacles which might arise from our family relations or our personal interest. We will give ourselves with ardor to all the studies which will enlighten us and make us more fit to serve it; and if liberty must have martyrs, to die for it will be our recompense. By living for our country, we shall also live for God; and whoever has lived for God and country can die without pain."

Such was the programme which Montalembert made for himself and his friend, for this declaration is a complete programme. He adds : "It seems that Providence has brought our hearts together in the midst of an irreligious and immoral youth, in order to double the force which she has given to each of us, and help us to do more good. Blessed by religion and born of the remarkable conformity of our sentiments, our friendship will last as long as our religion and our patriotism—in other words, will end only with our lives."

To understand well the state of mind of these two young men, it must be added that after this declaration, made by Montalembert and fully accepted by Léon Cornudet, they both received the communion together. We must remember, too, that liberalism was, in the years which preceded the revolution of 1828, generally associated with anti-clericalism, with free thought, with a sort of Voltairianism and of scepticism. The opposition against Charles X. was based chiefly on the confusion which was made in the mind and councils of the King between the interests of the Church and the interests of the throne. The formula of the time was "Le trône et l'autel." The new men who were entering the political world were singing the songs of Béranger and receiving the lessons of the *Globe* and of the *National;* they applauded all the attacks made against the priests, the Jesuits, the congregations. If ever there was an infidel generation, it was the generation which triumphed in 1830. The Romantic school was, to be sure, slightly tainted with Catholic ideas, but it looked only on the artistic side of religion. It liked old cathedrals; it cared but little for the doctrines which were preached in them. The true religion of the Romantics was "art for art's sake." It affected to have no morality, no social aim. How was it that, in the midst of such a society, when religion was almost as much despised by those who pretended to make of it a mere "instrumentum regni" as by those who were working against the Bourbons—how could a few young men, completely unknown, separate themselves from all the leaders of opinion, and agree on this new programme, the living alliance of Catholicism and of liberty ? These men were Montalembert, Cornudet, Lamennais, Lacordaire, Dupanloup; they became the founders of a school which has received the name of Liberal Catholicism.

The son of Léon Cornudet has just republished the letters of Montalembert of this early period, adding to them the answers of his father to his eloquent friend. We see in the new volume how they exchanged their thoughts, their preoccupations. At an age when most young men are thinking only of pleasure, they talk together of Cicero's treatise 'De Amicitia,' of the "Don Carlos" of Schiller, of the 'Cinq Mars' of Vigny, who was then beginning to be famous. Montalembert, who knew English as well as French (in fact,he kept a slight English accent all his lifetime), revealed and explained to his friend the beauties of Byron, of Cowper, of Thomas Moore. He translated for him the speeches of Grattan.

"I can conceive," he says, "of Mr. Pitt or Mr. Fox leaving the House of Commons,after having crushed their adversaries by the most sublime eloquence, and enjoying the pleasures of a jovial dinner. I can conceive of Mr. Grattan, after fifty years of glory, amusing himself in playing at hide-and-seek with young girls. But when you are a mere mortal, obscure and unknown, when you are lost in the crowd of the men of fashion who think themselves obliged to go to three or four parties every night, and be crushed while saying that they are amused, I see neither honor nor pleasure in such a life: I only see in it a loss of time and a mortal tedium."

Montalembert wished to be famous. He could not bear obscurity, his love of glory was intense. Speaking of William Pitt, he says: "When, in the presence of the two Chambers and of all that was illustrious in England, his remains were taken to the vault where lay his father, the immortal Chatham,the King-of-arms could well say, 'Non sibi sed patriæ vixit.' . . . Why should

not our contemporaries some day inscribe this on our tomb?" He scolds Cornudet for his want of ambition, and reproaches him with thinking as a "future notary." Cornudet was less ardent than his friend, and more reserved, but his preoccupations were not in the least material; he enjoyed literature very keenly. When the poems of André Chénier were published in 1829 by Latouche, he writes to Montalembert:

"Do you know the verses of André Chénier, who died so young on the scaffold during the Revolution—so young, so full of life, such a poet! I do not know a destiny which I could envy more. André Chénier was not twenty-five years old when he died; none of his illusions had yet disappeared; he had not yet felt his heart grow cold, and he died for a great cause. I imagine that his last day must have been very fine, and that his last reflections, his last thoughts, must have been very happy. They say, indeed, that he walked cheerfully to the scaffold. André had, like his brother, given his vows and his first writings to the cause of the Revolution; but, like all the honest men of his time, he did not wish to follow it in its rapid march, and before the death of Louis XVI. he had declared against it. His Ode to Charlotte Corday, his dithyrambs, protested against the tyranny of the executioner with an energy worthy of the ancients. No, I cannot imagine anything more complete or finer than the fate of André Chénier. To have felt all the pleasures of life, friendship, love, to have felt them as a poet, to have written admirable verses, and to die at twenty-five, leaving a name to posterity, a spotless name, a glorious name; to die so young for the cause of liberty; to die in full possession of all the energy of the soul; to die protesting against the oppressors of your country—I cannot conceive of anything finer or more worthy of envy."

There is more pathos than humor in the letters of Cornudet. Both correspondents were somewhat enthusiastic. Still, Cornudet has occasionally a touch of irony. Victor Cousin was the chief of the philosophical school of 1830, a school which went under the name of eclecticism, as it pretended to gather the truth, as the bees gather honey, from all systems. Cousin was very handsome and very eloquent, but his philosophy is hardly worth the name, and it has not survived him. Cornudet gave an account to Montalembert of the lectures of the young professor of philosophy: "Cousin spoke yesterday of the Constitution, he spoke to-day of the King; he was decorated this morning."

The problem of the conciliation of Catholicism with liberty was always before the two correspondents. After 1830 Cornudet says that Paul Louis Courier was right when he wrote: "The cart rolls on the plain—nothing will stop it any more." The cause of liberty had triumphed, but Cornudet did not like the tone, the spirit of the Liberals. As for Montalembert, who was an aristocrat although a Liberal, he expressed his fears of His Majesty the Number and His Divinity Money. He hoped that Belgium, Piedmont, and Spain, which were preparing their revolution after the revolution of France, would not "derive from it as a necessary consequence the atheism of the law and of the state and the democratic levelling."

"If this spirit triumphs," he says to Cornudet, "I am for ever its ardent and implacable enemy. . . . It will cost me much to be left behind among the reactionaries, as I have always loved progress and light; it will cost me much to renounce all these fine theories of the perfectibility of the human race which are so seductive; but conscience and reason oblige me to do so. No, the liberty of which we dreamt, you and I, in the fervor of our young souls, was not this liberty, which is a formless mixture of journalism and of industrialism; it had not for its principle to condemn the past and to ignore another life; it was a creation, at once historical, poetical, and religious; it was proud and holy; it bound man to everything that was pure and elevated; it spoke to the most noble and intimate part of his nature, not only to his mouth and to his purse."

These early utterances of Montalembert and of his friend will be found interesting to all those who have watched in France the double development of the school of the Liberal Catholics and of the Ultramontane school of the *Univers*. Even now the battle is raging; and M. de Falloux, who is the last champion of the Liberal Catholics since the death of Bishop Dupanloup, made only a few weeks ago an eloquent protest against the school of the Ultramontane *Univers*. This protest was made in the *Correspondant* on the occasion of the review which the *Univers* had made of the 'Life of Bishop Dupanloup,' by the Abbé Lagrange.

Correspondence.

BLAINE AND GARFIELD.

To the Editor of The Nation:

Sir: Mr. Blaine poses before the country as the confidential friend of Garfield, and holds up his appointment to Garfield's Cabinet as a certificate of character. But his relations with Garfield by no means justify the inference which he tries to have the people of this country draw from them. General Garfield was a politician as well as Blaine, and politics "make strange bed-fellows." What General Garfield thought of Blaine in private or when unreservedly talking with intimate friends—when unbosoming himself, so to speak—was not altogether what his public acts would signify. After the close of the session of the Forty-second Congress, which was made memorable by the investigation of the Crédit Mobilier, General Garfield told one of his associates in that Congress that he had no doubt that Mr. Blaine instigated that investigation for the purpose of killing off prominent Republicans, in order to make his own way clearer to the attainment of the position for which he is now a candidate, and which was then the object of his ambition.

The circumstances fully accord with General Garfield's suspicion. During the campaign of 1872, charges were made that Congress had been corrupted by the Crédit Mobilier, and Mr. Blaine's name had been mentioned among those to whom the stock of this company had been issued. Mr. Blaine felt sure that these charges could not be substantiated against himself, and therefore, when Congress assembled, he took the floor and read an extract from an obscure newspaper charging him with bribery, and demanded an investigation. In his dramatic style, he said that members of Congress should be not simply pure, but, like Cæsar's wife, above suspicion. Mr. Randall, and Mr. Eldridge, and other prominent Democrats deprecated an investigation, saying that Mr. Blaine's constituents had evidently discredited the charge, and that an examination of the subject by a committee of Congress would serve no good purpose. But Mr. Blaine insisted, as a matter of right belonging to him, not as Speaker but as a member of the House, that an investigation should be made, and added to the theatrical display by saying that he would like to have the Committee consist entirely of Democrats. If it was his purpose, as General Garfield suspected, to involve prominent Republicans in disgrace, he took the right course to accomplish it, and he was partly successful.

Mr. Blaine's treatment of Roscoe Conkling, after he became the dominating spirit in Garfield's Cabinet, bears on its face evidence of a similar selfish purpose. President Garfield personally liked Mr. Conkling, and had no reason in the world for quarrelling with him, much less for humiliating him and breaking him down; and no one believes that of his own accord he would have pursued Conkling as he did. It was the selfish and designing influence of James G. Blaine which caused the rupture between Garfield and Conkling, which was the occasion, certainly, of Garfield's death. The same purpose was displayed in the opposition which Blaine encouraged against the election of Judge Folger for Governor of New York two years ago, directed in this instance against President Arthur.

Mr. Blaine has magnetism, but it is the personal force of an abundantly vital nature, that hesitates at nothing which will contribute to his own personal advancement. It is the magnetism of a skilfully disguised selfishness, the carefully cultivated art of a demagogue. General Garfield understood Blaine, and he thought it better to cultivate Blaine's friendship, selfish and perfidious as he knew it naturally was and was liable to prove in his own case, rather than to provoke his hostility. This was the opinion which General Garfield entertained of Blaine when thinking of him apart from his actual or possible connection with his own personal and political fortunes. L. L.

September 19, 1884.

A PRESIDENT "ON THE MAKE."

To the Editor of The Nation:

Sir: In the event of the election of Mr. Blaine to the Presidency, would he not interpret it as an approval, or at least a condonation, by the American people of his peculiar views regarding the duties and morality of a public officer?

That being so, would it not be the duty of the press and of the people, throughout his administration, to scrutinize closely every veto, appointment, recommendation, and other public act of his to see if he was not "making himself useful," "laying an anchor to windward," or in some other way administering public trusts to the advantage of private interests?

Would not such a state of things be very anomalous, and something altogether unknown in all our previous Presidencies, from Washington to Arthur? X. X.

Baltimore, Md., September 24.

THE POLITICAL DUTY OF CLERGYMEN.

To the Editor of The Nation:

Sir: In your issue of September 25 you ask why it is that clergymen do not come forward and express themselves openly on this grave question of public morality now occupying all minds. The query is pertinent: they, of all men, should lead in the revolt against corruption in high places. In these days I think of my father, a clergyman, who, during our war and in the anti-slavery days before it, believed it not only his duty but his privilege to take his stand openly and boldly for truth and right, and lend his aid to them with voice and pen. He was a Republican then—he would be an anti-Blaine man now. If he were alive in his old vigor to-day, he would not be of those who keep silence! If the world goes wrong because people are too timid or too lazy to hinder, whose fault is it? And what excuse have public teachers and preachers for neglecting their responsibilities?

A Clergyman's Daughter.

Connecticut, September 26.

WOMEN IN THE CANVASS.

To the Editor of The Nation:

Sir: I am sure that I express the feeling of many other women besides myself when I say that to me the present political situation is one of the deepest interest. However unacquainted with the details of political affairs in general, it is perfectly easy for any one to comprehend the importance of the present issue as one of plain morality and practical good government. It is distressing to note the demoralizing influence of "party" politics in blinding the eyes and warping

the judgments of really honest and worthy men, who would themselves scorn to be guilty of such things as are charged against the Republican candidate—who would regard the mere accusation as an intolerable insult. That these men should show themselves insensible and indifferent in the matter proves how low we are fallen. But though anxious, I yet hope. I must believe that the intelligence and moral sense of the people at large will be found equal to the demand made upon them. It is possible this country that we love is destined to pass through a period of degradation and misery before the day of better things sets in —it is possible, but I cannot think it probable.

Cannot women, in whom the moral sense is supposed to be strongest, and who are free from the entanglements of party, do something toward influencing in the right direction the men with whom they are in contact, opening the eyes of the would-be blind to this clearest of issues? If they are without the means of acting in a direct way for the support of the right, have they not enough enthusiasm for it to try to aid it in such ways as they can?

AN INDEPENDENT REPUBLICAN WOMAN.

COMPARATIVE VALUE OF THE VIRTUES.

TO THE EDITOR OF THE NATION:

SIR: In a book published some years ago in New York, called 'Sidney Smith's Wit and Wisdom,' there occurs the following passage, page 299. Besides being a wise and a witty man and a famous preacher, Sidney Smith was also a writer on moral philosophy:

"You spend a great deal of ink about the character of the present Prime Minister. Grant you all that you write; I say, I fear he will ruin Ireland, and pursue a line of policy destructive to the true interest of his country: and then you tell me he is faithful to Mrs. Perceval and kind to the Master Percevals! What are, undoubtedly, the first qualifications to be looked to in a time of the most serious public danger? Somehow or another (if public and private virtue must always be incompatible), I should prefer that he destroyed the domestic happiness of Wood or Cockell, owed for the veal of the preceding year, whipped his boys, and saved his country."

H.

LAWRENCE, KAN., September 23.

[In the same sense is the following passage from Lord Mahon's 'History of England,' which another correspondent brings to our notice:

"In the whole range of our history I know not where to find a more upright and unsullied public character than that of Somers. He had contracted nothing of the baseness and venality of his age. He had touched pitch and was not defiled. He had all the knowledge, but none of the pedantry, of his profession. He loved the law of England—not, as too many seem to love it, merely for the sake of the dross that defiles it, but as the armory from which, when threatened either by democracy or by despotism, we may draw our readiest weapons, and which may prevent recourse to any other. As no man was ever more deserving of the veneration of posterity, so no one was ever more beloved in private life. Perhaps the only blemish in his private life was an excessive passion for women."

Add to the foregoing this extract from George Eliot, in her 'Impressions of Theophrastus Such':

"Until we have altered our dictionaries, and have found some other word than *morality* to stand in popular use for the duties of man to man, let us refuse to accept as moral the contractor who enriches himself by using large machinery to make pasteboard soles pass as leather for the feet of unhappy conscripts fighting at miserable odds against invaders; let us rather call him a miscreant, though he were the tenderest, most faithful of husbands, and contend that his own experience of home happiness makes his reckless infliction of suffering on others all the more atrocious. *Let us refuse to accept as moral any political leader who should allow his conduct in relation to great issues to be determined by egoistic passion, and boldly say that he would be less immoral, even though he were as lax in his personal habits as Sir Robert Walpole, if at the same time his sense of the public welfare were supreme in his mind; quelling all pettier impulses beneath a magnanimous impartiality.* And though we were to find among that class of journalists who live by recklessly reporting injurious rumors, insinuating the blackest motives in opponents, descanting at large, and with an air of infallibility, on dreams which they both find and interpret, and stimulating bad feeling between nations by abusive writing which is as empty of real conviction as the rage of a pantomime king, and would be ludicrous if its effects did not make it appear diabolical—though we were to find among these a man who was benignancy itself in his own circle, a healer of private differences, a soother in private calamities, let us pronounce him, nevertheless, flagrantly immoral, a root of hideous cancer in the commonwealth, turning the channels of instruction into feeders of social and political disease."—ED. NATION.]

EVOLUTION IN THE CHURCH.

TO THE EDITOR OF THE NATION:

SIR: Your issue No. 999 contains a note on the controversy now in progress in the Southern Presbyterian Church concerning Doctor Woodrow's views on evolution. The religious press has been engaged for some time in an active discussion on the subject; but the action of the Board of Directors of Columbia Seminary, taken last week, is now at hand, and is the first official utterance from which the position of the Church may be learned.

The chair of "Natural Science in connection with Revealed Religion" was established in 1859 at Columbia Seminary. It was the first of its kind. The only example of a similar department was the chair of Natural Science in the New College of the Free Church at Edinburgh, the design of which, however, was to teach natural theology. Since then Princeton Seminary has established a chair, which Doctor Patton occupies, embracing science and philosophy generally in their relations to religion, and, at Glasgow, Professor Drummond holds a corresponding position in a theological seminary of one branch of the Presbyterian Church.

In 1860 Doctor Woodrow was elected the first occupant of the new chair. His task is not to teach science or theology, or to attempt the tracing of harmonies between these. Harmony he cannot expect to find where the subject-matter is so wide apart. He contents himself with showing that between the received results in these departments of truth there is no conflict, and hence no ground for apprehension.

The present controversy sprang up upon the publication in the *Southern Presbyterian Review* of an address on evolution delivered by Doctor Woodrow before the Alumni Association of Columbia Seminary, and published at the request of that body and of the Board of Directors. In this address he states his belief in "the divine inspiration of every word of the Bible, and in the consequent absolute truth, the absolute inerrancy, of every expression which it contains, from beginning to end." His belief also in the distinctive doctrines of the Presbyterian Church—the federal headship of Adam, the imputation of Adam's guilt to his posterity, etc.—emerge distinctly in the progress of the controversy. He maintains his belief in the confessional theology and its perfect consistency with his scientific views. Whatever the outcome of the controversy, it cannot be inferred that the "new" or "progressive" theology, so far as it diverges from the Westminster standards, has made any headway in the "ultra-orthodox" Presbyterian Church of the South.

On evolution Doctor Woodrow carefully defines his views. He is not a follower of Darwin or Haeckel or Spencer. Evolution to him is not a substitute for God, but rather His plan of creation; it gives no account of origins or of forces, but is the mode of divine operation in the cosmos; it is for the most part continuous, but creative energy is exerted at the appearance of matter, of organic life, of spiritual life; it is in itself neither Christian nor anti-Christian, and should not be confounded with the religious beliefs of those who have held it.

The point of discussion is, however, not evolution in general. For life below Man this is conceded generally, and one newspaper pronounces it "harmless." The controversy begins when the doctrine is applied to Man. Doctor Woodrow holds that man's body was probably in the line of development of the animal world. The soul of man he believes was immediately created, and Eve was immediately formed from the rib of Adam; of these Scripture leaves no room for doubt. But of the mode of creation of Adam's body, whether immediately from inorganic dust or mediately through organic forms, the Scripture is not decisive. Either view, therefore, is consistent with a firm belief in the authority of God's Word, and that view is to be taken which is best sustained by extra-Scriptural evidence. The question is thus deprived of theological significance, and the Church relieved of the necessity for an *ex-cathedra* deliverance upon it. It belongs solely to science, whose methods must determine it.

This is the point at issue. Obviously it is a question of exegesis only: for if anti-Scriptural, Doctor Woodrow will be the first to abandon these views; if merely extra-Scriptural, the Church has no more interest in this than in the other open questions of science. Exegesis, therefore, is the proper resort for the solution of the question. Yet, curiously enough, most of the critics cannot see this, nor will they be thus restrained. Some make merry and "laugh heartily"; others call names, such as "fantastic," "preposterous"; others denounce as subversive of confessional theology; others attempt the scientific question, and quote from Virchow, Gray, and Dana. Only a few discuss the real question, and these generally assume the received interpretation of Gen. i-iii as correct.

On the other hand, Doctor Woodrow states that he does not look for concurrence in his scientific views, for the evidence on which these rest can be appreciated only by a specialist. He contends that they are Scripturally tenable, and beyond this the Church is not required to go. This is the position of the Board and of the supporters of Doctor Woodrow as a body. It should be added that a large and influential party in the Church earnestly oppose even the toleration of such views in the Church, and that four of the six papers send forth their solid and leaded columns against Doctor Woodrow.

It is, however, not to these but to the Board of Directors that Doctor Woodrow is responsible. This body passed last week four resolutions, a small minority opposing, the first of which tenders thanks to Doctor Woodrow for the ability and faithfulness with which he complied with their request, and the fourth records the Board's sense of the wisdom of establishing the chair. The second and third are as follows:

"2. That in the judgment of this Board the relations subsisting between the teachings of Scripture and the teachings of natural science are plainly, correctly, and satisfactorily set forth in said address.

"3. That the Board is not prepared to concur in the view expressed by Doctor Woodrow as to the probable method of the creation of Adam's body; yet in the judgment of the Board there is nothing in the doctrine of evolution, as defined and limited by him, which appears inconsistent with perfect soundness in the faith."

Here the matter stands. Doctor Woodrow's chair will not be abolished, nor will he be deposed therefrom. The only resort of his critics now is the General Assembly, to which the Board makes annual report, but which has no immediate control of the Seminary. That the question will rest here is perhaps too much to hope; the turn it will take I cannot predict.

It is an interesting fact that the number of students at Columbia is relatively large, and that some are in attendance who are attracted there by Doctor Woodrow's teachings in particular.

I am, sir, yours respectfully,

W. S. P. Bryan.

Huttonsville, W. Va., September 24, 1884.

STEAMSHIP CUISINE.

To the Editor of The Nation:

Sir: The letter upon "Steamship Cuisine" in your issue of the 4th has interested us. Our experience of eight voyages on four different lines has left impressions only too truly represented by your correspondent, and inclines us to think his suggestion of the restaurant plan a good one. We also have observed that there has been no proportion, unless it were an inverse one, between the cost of the passage and the character of the cooking. Last summer we left New York when its markets were crammed with delicious peaches at reasonable prices. Judge of our dismay when, at the very first dessert, the *pièce de résistance* consisted of small, green, and blighted specimens, well meriting the Englishman's curt reply, "And we should too," to the American's boast, "Why, we give *our* peaches to the hogs!" This voyage, on a line commanding the highest rates, was our worst experience as to the cuisine, although we never suffered less from sea-sickness.

Why are essentials, such as bread and coffee, always so poor? This summer I staid at a very modest "Temperance Hotel," awaiting two friends from the United States. The delight with which they sat down to a tea, the chief items of which were cold roast-duck, home-made bread, and raspberries and cream, would have been a lesson to any steamship chef, if only the comfort of his involuntary guests were of moment to him. That it was simple board and lodging which gave such pleasure is patent by my bill, which came to 11s. 3d. for two nights and a day.

Quality of food rather than great variety, well instead of grandly cooked; fresh-smelling bed linen; ignorance, nasal at any rate, of the location of the pantry; air below as pure as the air above—these, surely, are no unreasonable demands on the part of the passengers. Will not some of the great lines find it "pay" to provide them? J. E. C.

York, England, September 17, 1884.

MR. GREG ON THE FRENCH COINAGE.

To the Editor of The Nation:

Sir: Your criticism upon the "decision," "smartness," and "mechanical antithesis" of Mr. Greg might have reached a more radical fault if the sentence which you quote in regard to the French coinage is a specimen of his accuracy. It was on the 18th of May, 1804, that, in pursuance of a popular vote, Napoleon assumed the imperial title. It was not until some months later that the Republic was formally superseded by the Empire. One will therefore not infrequently find in circulation a coin bearing what Mr. Greg deems the contradictory legends: "République Française" and "Napoléon Empereur." But not one such can be found without the dates of 1804 or 1805. T. B.

Rochester, September 23, 1884.

Notes.

Mr. Rider announces, in his last *Book Notes*, the sale to the Providence Public Library of the late Mr. C. Fiske Harris's "collection of books, pamphlets, and other material relating to slaves, slavery throughout the world, and to our late Rebellion." It contains more than 7,000 distinct titles, and is rich in European works on the above topics. The unrivalled collection of American poetry purchased from Mr. Harris by the late Senator Anthony will pass by bequest to the library of Brown University. It is noteworthy that the fund for the purchase of the Rebellion collection was originally raised to supply reading matter for a soldiers' hospital, which was abandoned so soon that the money could not be expended. Its present application must meet with universal approval. We hope an index of the slavery portion can be undertaken ere long, perhaps in connection with Cornell, the Boston Athenæum and Public Library, and the libraries of Howard University and of Oberlin—probably the five chief depositories of that branch of literature.

Cassell & Co. will publish a new and enlarged edition of Sir James Caird's 'India, the Land and the People;' and 'The Electrician's Pocket-Book,' by Gordon Wigan.

'The Mentor,' a handbook of good manners, by Alfred Ayres, and 'A Narragansett Christmas,' by Edward Everett Hale, are in the press of Funk & Wagnalls.

Mr. Froude has finished his 'Life of Carlyle,' and is stated to be now engaged—apparently reserving his most difficult task for the last—upon a preface to the third volume, in which he will attempt to explain and vindicate his conduct as literary executor to Mr. Carlyle.

A new volume of songs by Mr. Swinburne will shortly be published by Chatto & Windus, under the title 'A Midsummer Holiday.'

The centenary of Doctor Johnson's death will occur on December 13 of the present year. No celebration, however, has yet been determined upon at Lichfield, although it seems hardly likely that nothing will be done to honor the memory of the great lexicographer. The only memorial of which we have heard is a little volume by Doctor Macaulay, the editor of the *Leisure Hour*, called 'Doctor Johnson: His Life, Works, and Table-Talk,' and to be published by T. Fisher Unwin in his centenary series.

The Christian names of the late Mr. MacGahan seem to be imperfectly known to many of his biographers. The *Tribune* of this city spoke of him as "John A."; the London *Daily News*, which certainly ought to know, as it was in the service of that paper that he reached the high-water mark of his reputation, calls him "James A."; and another English newspaper states authoritatively that his name was nothing less than "Januarius Aloysius." His tombstone should settle the question.

In type, paper, and binding, little fault can be found with the "Haworth Edition" of 'Jane Eyre,' published in a limited edition by Robert M. Lindsay, Philadelphia. The work makes two volumes, large octavo; the print is beautifully clear and even, and the subjects selected for illustration are, besides the author's portrait, the principal places of interest described in the story or associated with the life of the author. In this last respect the publisher has shown excellent taste. Artistically, the etchings for the title-pages are real embellishments. The portrait (after Richmond) cannot be called so; and of the six other etchings, only one or two are praiseworthy performances with the needle. Mr. Stephen Parrish's Lowood is distinctly the best of these. The one jarring note in this general harmony of good intentions and material execution is the series of initial letters for the various chapters. They are beneath notice as design, and have the cheap appearance of most "process" copying of pen-and-ink work. Either woodcuts or etchings were called for here.

Mrs. Craik's 'Poems' have been brought out by Thomas Y. Crowell & Co. in a volume with gilt edges and red-line borders to the pages, but with rather indifferent presswork.

A thoroughly pretty volume is the first of the *English Illustrated Magazine* (Macmillan). Its illustrations have a noticeably decorative quality, and can be judged by a severe standard, being well chosen as well as generally well executed. The letter-press is from the pen of Austin Dobson, Grant Allen, A. Lang, Professor Huxley, J. H. Shorthouse, Hugh Conway, H. Sutherland Edwards, Swinburne, Henry James, Mrs. Craik, Miss Yonge, Archibald Geikie, William Black, and by lesser lights in the world of letters and of science.

Dr. Harrison Allen has reprinted from the Transactions of the College of Physicians of Philadelphia an essay on a 'New Method of Recording the Motions of the Soft Palate' (P. Blakiston, Son & Co.). His apparatus, the palatemyograph, is ingenious and practicable, and his observations are interesting, especially to physiologists and physicians, in tracing variations of the palatal motions in health and disease. The apparatus, as hinted at, may become available for the comparative study of language, for the instruction of the deaf, and for the formation of a scientific shorthand.

Dr. J. M. Carnochan has reprinted (through J. H. Vail & Co.) a paper upon 'Cerebral Localization in Relation to Insanity,' read before the Medico-Legal Society in May last. The doctrine not only that the brain is the organ of the mind, but that special mental functions are carried on through special parts of the brain substance, is advocated and is supported by three cases of his own and one quoted, where the autopsy confirmed the diagnosis made in life as to the exact locality of the cerebral disturbance. The essay is beautifully printed, except that in the first twenty pages the running review of mental philosophy is marred by various typographical errors in names and dates.

In the preface to the tenth volume of Mr. Gardiner's revised edition of his History, the author expresses his gratification at being now free "to take up the interrupted thread" of the history of the Civil War, in which he had gone as far as the preparations for the siege of Reading in April, 1643. Historical students, however much they have been benefited by this revision, will certainly rejoice at the prospect of new volumes from his pen. The present one contains six chapters, being the equivalent of four chapters of the earlier edition; it contains, also, the instructive Parliamentary Map of England given in the earlier edition. More than one hundred and fifty pages are occupied by an index to the whole work—an index which is a real guide to the contents of the book, and in making which Mr. Gardiner refused all assistance. "No one but the author of a book," he says, "can hope to achieve in this department even the negative success of not exasperating those who wish to study his work seriously." The preface contains a very suggestive discussion of the relation of the historian to the statesman, and the aid which he can give in the solution of current problems. This aid is, he thinks, mainly indirect, in arousing "a statesmanlike temper in the happily increasing mass of educated persons without whose support the statesman is powerless"; directly, he can hardly do more than assist in the understanding of existing facts by showing their causes, or "by clearing away false analogies supposed to

be found in the past." The volume ends with the setting up of the King's standard at Nottingham, August 22, 1642.

In these days of plagiarisms unveiled and famous works of literature traced to their original sources, there is a certain pleasure in learning that Reuchlin's "Henno" is certainly not an imitation of "Maître Pathelin," as M. Parmentier has shown in the *Bulletin Mensuel* of the Faculté des Lettres de Poitiers. It differs, he avers, in the conception of the subject, the composition, and the dialogue.

"European Interests in Asia" and "Pierce's Administration" are the topics of *Monthly Reference Lists* for September (New York: 31 Park Row).

Librarydom is spreading northward. A public library has been founded at Toronto, with a good endowment. A movement for one has been begun at Montreal, under the leadership of an active man, and with the endorsement of the leading literary and scientific names. Indeed, the promoters have secured letters from persons in the United States who were likely from their connection with libraries or from their fame (as Oliver Wendell Holmes and Lieutenant Greely) to influence the public, and have covered the whole side of a newspaper with them. Halifax has gone further than either of these cities. It has published its catalogue, presumably compiled by its librarian, Mr. J. Reed Welch. As the preface explains that *A* before a shelf mark adds 10,000 to that number, and we find the mark *A*8662, and the method of marking is evidently the primitive one of calling the first book received 1, the second 2, and so on, it follows that the collection is already approaching 20,000—a very good beginning. They fill a catalogue of 429 pages of a simple but serviceable kind, in which entries are made of authors and also under leading words of the title. This also somewhat primitive method is accompanied by the exasperating overabundance of initial capitals which is usual in English booksellers' and library catalogues.

The question of copyright deposit is again exciting attention in France. M. Raunié proposes that both the printer and the publisher shall deposit separately two copies apiece, the publisher's two copies to go to be the spoil of the Bibliothèque Nationale and some other public library, the two copies of the printer to go to provincial libraries, to their great gain, especially in building up collections of local history.

About the middle of the last century the Count Gianmaria Mazzuchelli projected a great biographical work upon the writers of Italy. His plan was to give a series of biographical treatises on the principal authors. To this end he published separately several biographies, which were finally embodied in six folio volumes, covering, however, only the letters A, B. He died in 1765, leaving a large number of manuscripts for the continuation of the work. They have until lately remained untouched in the Alexandrian and Vatican Libraries. In 1867 Enrico Narducci, the Librarian of the Alexandrian Library, published a list of the manuscripts in the Vatican in connection with some notes on Mazzuchelli. Since then he has brought out some additional matter from the manuscripts in the Alexandrian Library, and the whole is now published under the title 'Giunte all' opera *Gli Scrittori d' Italia* del Conte G. Mazzuchelli.'

Probably the most gigantic biographical compilation ever undertaken by a single author is Dr. Constant von Wurzbach's 'Biographisches Lexikon des Kaiserthums Oesterreich.' Of this the fiftieth volume has just appeared (Vienna, 1884), bringing the work down to the first part of the letter W, and embracing, as usual, more or less famous representatives of all the nationalities and spheres of activity of the motley Austro-Hungarian monarchy. A few more volumes will complete the Lexicon, and the marvellously active compiler, who began its publication in 1855, and has thus issued yearly, on an average, nearly two volumes, of generally more than 300 8vo pages each—compiling, writing, and revising them himself—seems to have every chance of finishing his monumental work before reaching the age of three-score and ten, having been born in April, 1818. He is a native of Carniola, and owes his equestrian rank, with the title of Edler von Tannenberg, to his services in the Austrian army, Ministry of the Interior, and Ministry of State, and to his merits as a writer in prose and verse. Many of his poems, epic and lyrical, appeared under the *nom de guerre* of W. Constant. He retired from the state service with a pension in 1874, taking up his abode in the little Bavarian town of Berchtesgaden.

'Louis XIV. et Strasbourg: Essai sur la Politique de la France en Alsace,' is the title of a volume of 800 pages by M. A. Legrelle, recently published, and intended to prove that the occupation of that Rhenish city in 1681 by the "grand monarque," though executed by a kind of stealthy *coup de main*, was far from being a deed of unjustifiable violence and foul treachery, such as German historians, before and after the reconquest of 1870, have always represented it to have been. The work presents the French view of the matter with a much greater display of documentary evidence, drawn in great part from hitherto inedited French archives, than of Gallic passion and partiality, and even German criticism broadly acknowledges its merits as a scholarly historical production. M. Legrelle, however, not only exculpates the action of Louis XIV. from the charge of unscrupulous meanness, but endeavors to show it to have been the assertion of legitimate international claims by a "grand acte de vigueur." Of the correctness of this opinion the author will find it hard to convince the Germans, who even in 1870, as Ranke then told M. Thiers, still believed themselves to be justly fighting against—Louis XIV.

—The University of Michigan is to be congratulated on the prospect of coming into possession of the important gallery of paintings, marbles, and bronzes collected by the late Henry C. Lewis, of Coldwater, in that State. This destination of the gallery is in accordance with the provisions of Mr. Lewis's will made public within the past week. An inspection of the Catalogue shows that the collection consists of 723 articles, of which 18 are marbles, 47 bronzes, 97 portraits, 135 copies of celebrated pictures, and 436 original paintings by modern artists. The copies were made, for the most part, by Malini, Galli, Gavini, Manzuoli, and Metzger. Of much greater interest are the historical portraits, nearly all of which are of persons who have been prominent in American political affairs. Among the modern artists represented by important works in the collection are Gérôme, Schreyer, Bouguereau, Van Marcke, Verboeckhoven, Coomans, De Haas, Constant, and Richter. There are very few paintings by English artists and not many by Americans. For nearly twenty years, Mr. Lewis was an enthusiastic collector, and during the latter portion of his life particularly he seems to have bought with good judgment and discrimination. The pictures by Bouguereau, Schreyer, Van Marcke, Constant, and Verboeckhoven are among the most notable works of these artists.

—The October *Century* opens with an *avant-courrier* of its series of battle-articles, in the shape of a sketch of the general minor aspects of the war throughout its whole field, under the title "Lights and Shadows of Army Life." It is a paper of anecdote, for the most part, and gives fresh illustration of the truism that no *mot* is original. The Confederate officer, for example, who at Malvern Hill called out to his wavering command, "Come on! do you want to live forever?" repeated the oath and the word of the great Frederick, as we have come to name him, at Kunersdorf: "Wollt ihr ewig leben?" Mr. Eugene V. Smalley's paper, "The Cœur d'Alène Stampede," is also a lure for the next year's subscription, being the first of the promised group descriptive of the Northwest, and an admirable narrative besides, though it exhibits the discomfort better than the picturesqueness of that unclaimed wilderness. It gives one a feeling of escape when he gets out of it, and makes him appreciate the mingled awe of nature and rudeness of life in these mountains rather than their charm. Probably no part of our country is less known to the people than this quarter, where discoveries of whole tracts of beauty and fertility are still made. Mr. Eggleston's antiquarian papers on colonial life are as uneven in their interest as they are irregular in their appearance. In the present instalment, on the tenure of land, inheritance, and the trade in white bondmen and slaves, there is a lack of freshness quite unavoidable; but the illustrations of colonial houses and interiors are of great interest, though nothing is said about them in the text. A valuable volume might be made, especially if illustrated, on our colonial architecture and its sources. In the way of literature, which in all the magazines is a steadily-decreasing element save in the one field of fiction, Mr. Brander Matthews has an elaborate critique on Austin Dobson, which tells us too little about Dobson and too much about what its author knows of the contemporary French influence in England. And perhaps, after all, Mr. Dobson is an honest English poet, whose grace is as English as his thought, and whose charm fails only when (as it must be confessed he does) he takes the French stutter.

—Some interesting statistics of the comparative circulation of French and English newspapers have just been published. *Lloyd's Weekly News*, a popular and ultra-radical London journal, heads the list with 612,902 copies. Then comes the *Petit Journal*, with 600,000. *Reynolds' Weekly News*, similar to Lloyd's, issues 350,000, and the *Weekly Despatch*, an excellent London workingman's paper of very advanced views, formerly owned and edited by the late Ashton Dilke, 220,000. Of the great London dailies first comes the *Daily Telegraph*, with 250,000 copies, then the *Standard*, with 242,000, the *Daily News*, with 160,000, the *Daily Chronicle*, with 120,000, and lastly the *Times*, with 100,000, which is rather over than under the mark, its circulation having fallen off very much under the competition of its cheaper rivals. It has of course the advantage of selling for three pence against their penny, but a reduction in price has been hinted at more than once. The Parisian dailies, with the exception of the *Petit Journal*, begin where the London ones leave off, the Radical *Lanterne* and the *Soleil*, the organ of the Orleanist Princes, leading with 100,000 each. The *Temps*, the most influential and most read of large French papers, circulates only 35,000 copies; and the *Journal des Débats*, the official organ of the Left Centre, 12,000, and the *République Française*, the official organ of the Ferry Cabinet, only 8,000, although the *Petite République Française*, its cheaper evening edition, reaches 50,000. Rochefort's paper, *L'Intransigeant*, has a circulation of 25,000, and the same number is attributed to the ultra-socialistic *Bataille*. The violent Communistic organ, *Cri du Peuple*, sells 20,000 copies, and the new American poly-political venture, *Le Matin* (in which a Bonapartist, a Republican, and a Radical write the leaders on different days), is described as having an increasing circulation of

20,000. Among English provincial papers, the Birmingham *Post*, Leeds *Mercury*, Manchester *Examiner*, Newcastle *Chronicle*, Liverpool *Post*, Glasgow *Herald*, and *Scotsman*, the great Liberal organs in the provinces, stand at about the same figure, from 50,000 to 60,000. The other papers of largest circulation in England are devoted respectively to sensational crime, short sensational stories, and "sport," viz., the *Police News*, 300,000, the *Family Herald*, 200,000, and the *Referee*, 120,000. *Punch* has a smaller circulation than would be supposed from its omnipresence in England, only 25,000.

—Within the last century the rate of suicide in England seems to have quintupled, with an increasing number of juvenile cases (under sixteen); and no fewer than 43,346 patients have been added, in a period of twenty years, to the number of registered lunatics. These facts are mentioned in an interesting report by Dr. Crighton-Browne on over-pressure in elementary schools, containing the results of investigations made in fourteen London schools since February. The evils complained of are that children are often detained beyond school hours; that they have too much work to do at home, especially before an impending examination; and that no allowance is made for differences in mental endowments and health. In some cases as many as 50 per cent. of the children are kept after hours in order to be brought up to the examination level; and as for home work, it "is bad in the case of young children, and even where that work is moderate in amount, it is often sufficient to stir up and irritate an exhausted and feeble brain, and so to interfere with sleep." The doctor thinks backward children can be divided into three sets, the dull, the starved, and the delicate. In one school containing 448 boys, 9 only were to be withheld from examination, whereas the doctor easily pointed out 35 in regard to whom the teacher readily agreed that were it not for fear of the inspectors they would be classed as quite unfit for hard mental labor; and in a girls' school there were 46 such cases among 341 pupils. A medical report is recommended as of use in such cases, and better still a log-book containing a register of the height, weight, head and chest girth of the children.

"No one can walk through a few schools in different districts of London, and with different rates of payment, without being impressed by the wide interval in health and development that separates children in the best from those in the worst. The latter are puny, dwarfish, pale, and feeble, when compared with the former; and to judge a teacher who is laboring among them by the same standard that is applied to another whose lot is cast among larger-limbed and larger-headed children, with richer blood and more constitutional vigor, is to do him a manifest injustice, and incite to over-pressure."

—Starvation is pronounced a larger question even than dulness. Bread and weak tea form the only nourishment of many of these children, and one boy was found studying geography who had had no breakfast, and whose dinner consisted of two rotten oranges. Others neglect their breakfast in their eagerness to get to school in time to secure the red mark. Some of the results of these evils are very striking. "It is now certain that more than one-third of the children attending elementary schools in London suffer from habitual headache. I have examined 6,580 children in elementary schools in London on the subject of headaches, and have found that 3,034 or 46.1 per cent. profess to suffer from them habitually. Great pains were taken to secure accurate returns." In one school containing 381 boys, 129 were sleep-talkers and 28 sleep-walkers, this being a school in which home lessons were insisted upon. In a school of 432 girls there were 17 somnambulists, and in another of 382 there were 20. Tabulated statistics show, furthermore, that 53.4 per cent. of the boys and 55 per cent. of the girls suffer from neuralgia and toothache; and short-sightedness increases so rapidly that it threatens to become a national infirmity, as in Germany. A remarkable contrast to this state of affairs is offered in the schools of Scotland. "Only 23 children (9 boys and 14 girls) out of 335 complained of headaches, which gives a percentage of 6.5 against 46.1 for London. One child, a nervous girl, out of the 335, complained of sleeplessness, and there was just one instance of short-sightedness, while not a somnambulist was to be found; the reason being that "they are well fed on porridge and milk as the staple articles of diet, with broth, potatoes, butter, tea, and occasionally a bit of meat or bacon. They are warmly clad, and wear stout clogs in winter and go barefooted in summer. They are much in the open and uncontaminated air."

—The *Revue Politique et Littéraire* of September 6 has a characteristic bit of French criticism on American literature in a notice of M. Émile Blémont's translation of Poe's "Poetic Principle," which is to be prefixed to that gentleman's forthcoming version of Poe's poems, and was recently printed in *Le Monde Poétique*. The critic, who first notes prominently Poe's opinion that a poem must be brief in order to deserve the name, puts this down as purely American, and ascribes it to our national restlessness, economy of time, and greed of money, in making which we use all our hours except a very few in the evening, when the shops are shut up. Poe thought the "Iliad," the "Æneid," and "Paradise Lost" not poems, properly speaking, because they could not be read at an hour's sitting. Taking the opinion of Poe for that of Wall Street, our critic says: "It is useless to object that these poems have been popular for many centuries. 'That may be,' is the reply; 'with us and henceforth they won't be.' In other words: 'There was time then to attend to strong emotions; but now time fails. *Hip! hip!* we must go fast; we want only *les grands rapides*, even in literature.' *Et voilà*," adds the critic, "steam has killed the epic!" "*Bien américain, n'est-ce pas?*" is his smiling sneer; and "French of the French" is the only answer to make. Who that knows our poetry does not know that Coleridge, far from the banks of the Susquehanna that he only dreamed of visiting, enunciated this critical dictum as to the necessary brevity of pure poetry, and that Poe "conveyed" it from him more than fifty years ago, before all criticism of America became an echo of the steam-whistle? *Bien américain*, and behold, it came out of the heart of that most contemplative region of our literature, the Lake Country! The Frenchman goes on, in his harmless prattle: "If there is a country where the cult of utility flourishes, it is the New World. At Boston, where Edgar Poe was born, more than elsewhere, utilitarianism is made manifest in the theory, generally admitted and proclaimed, that a poem, whatever its kind, ought first of all to have a moral." This belief in the Boston of the Transcendentalists as a still living fact convinces us that we have a past after all; but how is it that the French critic could, in his first column, dwell so realistically on the speed of our progress, and in his second assume that fifty years of Boston were of no more consequence than the Tennysonian cycle of Cathay? That he derives his impression of the present state of letters and criticism in America from Poe's long-since antiquated remarks on the subject is, however, only a striking instance of the density of the ignorance regarding foreigners which, although somewhat rifted by the war with Germany, still envelops most educated Frenchmen.

—M. Ulbach, continuing his letters from Lisbon, praises the marvellous monastery of Belem, where no arch, no pillar, no frieze resembles any other arch, pillar, or frieze. It is now an orphanage, and M. Ulbach is surprised that twelve or fifteen hundred boys play in these Moorish cloisters without defacing any of the carvings or writing their names upon the walls. Not so would the *gamins* of Paris treat the most beautiful building of France, if given them for a residence. Not so, M. Ulbach remembers, did he respect the walls of Parisian churches when he was at the name-carving age. Such boys will make good citizens, and M. Ulbach is never weary of giving instances of the mild character and good deportment of the Lisbonese. They do not even applaud in the theatres till the King has given the signal—a privilege of royalty which at once becomes a duty, and must in the end be a burden, like the hand-shaking of an American President. At Belem are the relics of Camoens. They are said by some sceptics to be the remains of another man, a Lisbon shoemaker; but what matter? Were there not three well-authenticated corpses of St. Denis? and did not the royal abbey possess two of them, for the greater security? This multiplication of a saint or other famous man, after death, may be taken as one of the signs of greatness. Not far from Belem another sort of relics is preserved, better authenticated—the royal coaches from the earliest times. It is a custom in Europe; there is a similar collection at Madrid, at Versailles, at Windsor, if we recollect aright. Crown jewels and crown vehicles have an equal honor. In Lisbon they are a testimony to the national mildness; no revolutions have disturbed them in the least, nor have either the revolutions or the more dangerous progress of the age changed the national fashion of love-making. The lover still takes his station under his mistress's balcony; still urges his suit, or pours forth nothings, with upturned face; the parents discreetly turn a deaf ear; the neighbors perhaps listen a little, as they can easily do; then, when the lady at last consents, the lover knocks at the door, and the negotiation with the parents, which precedes in France, follows, as it does in England and Germany.

—In the *Deutsche Rundschau* for September will be found an article by Julian Schmidt on Auerbach (apropos of the recent publication of the latter's letters), which seems to us as good as anything we have ever read from the pen of the distinguished critic. If Schmidt has neither grace nor wit, he has great insight, and he wields the heavy and awkward tongue in which he is obliged to write with honesty and force, while he is not deterred from speaking his mind by the *convenances*, political and other, which forced Sainte-Beuve to be so circumspect in the choice of subjects, or to walk so gingerly over ground which was in the least hazardous. Both Auerbach, says Schmidt, and his contemporary Gutzkow, were pupils or descendants, as the French say, of Richter, "who was not a great poet, though a significant literary phenomenon, . . . but whom no one reads now, because the world he represents has already become so unfamiliar to us that we do not find it worth while to struggle with the difficulties of his unkempt style." Truly, a fearless, not to say iconoclastic opinion to utter respecting one of the traditional giants of literary history. In his lifetime, Auerbach was not pleased by the alleged resemblance to Jean Paul, and protests against it in his letters; but Schmidt maintains that his early judgment was sound. Auerbach had two "manners," that of the village stories and 'Waldfried,' and that of 'Auf der Höhe' and the 'Landhaus am Rhein'; and it is refreshing to find a German saying of the latter that their world, with its absurd sentimentality, its operatic duchesses and milkmaids, and its unhealthy, dream-world morality, is as un-

real, as fantastic, as untrue to the life of any beings who breathe fresh air as anything in 'Hesperus' or 'Titan': indeed, adds Schmidt, they are less so, because in Richter's time people who lived this sort of nightmare existence really existed, and were not altogether an anachronism. Save under exceptional circumstances, of course, a foreigner's opinion of the accuracy with which a novelist describes the social conditions of his country has no value; but no American, we think, could read the works of Auerbach we have named without feeling instinctively their unreality. But, so far as we know, Mr. Schmidt is the first German to say this; nor did he express this view (out of regard, doubtless, to the reticence which he says is due the living) until Auerbach's sensitive ear was beyond the reach of his criticism. For to say that the latter resembled Richter, and to point out *how* he was like him, are very different things. But if all this is true of Auerbach, is it not equally so of his contemporary Gustav Freitag? The latter's world, in his much praised and widely read 'Verlorene Handscrift,' is substantially the same as Auerbach's, and its morality is fully as maudlin. But Freitag is living, and, for his other works, deservedly honored.

—We fancy Auerbach's tales will be read for their poetic beauty and intrinsic, if idealized, truth, long after his artificial novels are forgotten; but his letters have little interest except for those who had relations with the writer or his friends. Auerbach was excessively sympathetic, and, it was said, correspondingly vain. But, as in the case of Andersen, it was perfectly innocent vanity, and, as Mr. Schmidt thinks, his literary success was largely due to it, though it involved much personal suffering.

"Vanity is not a common failing with Germans: we both observe it and despise it. But in truth it would be for our advantage if we were less unlike the French in this respect, for we should then take more pains to make ourselves agreeable. Vanity is social: the want of self-confidence implied in it, and the effort to please, prevent offensive reserve. And with an author vanity is very natural."

It was not because Auerbach was more vain than his neighbors, but simply because he lacked their self-command, or natural reserve, that he made himself ridiculous. His vanity, so to say, was corporative as well as individual, and his last years were greatly embittered by the temporary ostracism of his race, which was doubly hard for him to bear, first because he was a Jew himself, and still more because he was a patriotic German, and believed, as well, in Humanity. Faith in Justice, remarks Schmidt, is a better support in adversity.

—The *Jahresbericht über die Erscheinungen auf dem Gebiete der germanischen Philologie* has just completed its fifth year (1883). It is issued by the Society for Teutonic Philology in Berlin, and contains a complete bibliography of works in all departments of Teutonic philology, distributed into sections, embracing lexicography, grammar, dialectology, the history of literature and of culture, antiquities, mythology, pedagogy, and works and essays relating to each one of the Teutonic languages in their early and middle periods. A characteristic feature of this bibliographical work is that, in addition to the mere title, usually a brief summary of the nature of the work is given, with references to reviews of it, and sometimes a short statement of the opinions of the reviewer. It will thus be seen that it is something more than a well-classified list of books, as it gives the reader some information about the books and essays noted, and it will be found very helpful to all students of Teutonic philology. The department of English is treated by Dr. John Koch, known to the literary world as a Chaucer scholar, and in the present volume embraces 321 titles out of a total of 1,826, covering all branches of English philology and literature, such as history and antiquities, records, lexicography, phraseology, etymology, dialects, history of the language and of the literature, grammar, pronunciation, metre, chrestomathies, and special works and essays on works belonging to the Old and Middle English periods. Other Teutonic languages are treated with singular fulness, and even mediæval Latin is included. The pedagogical section is divided into a German and an English subdivision, the latter of which is also edited by Doctor Koch, and well serves to show the extent to which English has found its way into German schools. No less than five school histories of English literature are enumerated, a silent testimony to the influence which English literature is exerting upon German children. The work deserves a wide circulation among scholars.

—The story of a Jew doomed by Christ, for an insult offered him before the crucifixion, to live till the day of judgment, is first told by the St. Albans chronicler, Roger of Wendower, under the year 1228. He obtained it from an archbishop of "Great Armenia," who in that year visited England, and had himself, before his departure from his country, dined and talked with the undying Jew. That unfortunate man, who called himself Cartaphilus, was, however, not a world-wanderer. The first real Wandering Jew was Ahasuerus, who appeared in Hamburg in 1542 or 1547, and had long conversations with Doctor Paulus von Eizen, subsequently Bishop of Schleswig. This prelate, so it is stated, communicated all the particulars to the author of a relation or letter on the subject, which appeared in "Leyden bey Christoff Creutzer," in 1602. This pamphlet is dated June 9, 1564, but contains a mention of the appearance of the Wandering Jew in 1599, and another similar anachronism. Besides the Leyden edition, which may thus have been a reprint with additions, there are at least five early editions marked "Bautzen bey Wolfgang Schuchnach," and many others. The relation is in some reprints attributed to Chrysostomus Dudulæus Westphalus. All these names connected with the publication are considered spurious. But the story of Ahasuerus, as told in the narrative of 1564, has become, through numerous reproductions, the traditional basis of the many poetical productions of later times whose theme is the sad fate of the undying wanderer. One of the best critical writers on the subject, Gaston Paris, in his 'Le Juif-Errant' (Paris, 1880), expressed the desirability of "a work of bibliographical criticism on the relations to each other of the various books sprung from the famous letter of 1564, on the oldest editions of that letter," etc. What the Frenchman wished for has been carried out by a German through a vast amount of search in libraries and correspondence with librarians. The title of the new monograph, which is not exclusively though mainly bibliographical, is: 'Die Sage vom ewigen Juden. Untersucht von Dr. L. Neubaur' (Leipzig, 1884). The fulness and minuteness of the elaboration are such that one is tempted to ask the author: Was not the Westphalian "Chrysostom" right when he said that, after all, it is "Kein Artickul des christlichen Glaubens was von Ahasuero vermeldet wird"?

—On the 10th of September, at the ripe age of eighty-four, died the most accomplished and fruitful botanist of our day, George Bentham. We may not say the most renowned, for renown attends only certain kinds of scientific accomplishment and fruitfulness. When Humboldt, on a visit to England, told the Prime Minister how strange it seemed that Robert Brown should have no national recognition, he found that this name was unheard of beyond purely scientific circles. That of Bentham is not quite in the same case, for in England the 'Handbook of the British Flora' is a widely popular book. Yet, except to the devotees of the science, it may hardly be understood that in his death systematic botany loses its most eminent, most productive, and, with one exception, most venerable cultivator. The productive period of his life spans more than half of the century, beginning as it did in the year 1825, and closing with the completion of the 'Genera Plantarum' a year ago.

GENERAL BUELL.

Operations of the Army under Buell, from June 10 to October 30, 1862, and the "Buell Commission." By James B. Fry, retired, Assistant Adjutant-General with rank of Colonel, Brevet Major-General, U. S. A.; Chief of Staff to General Buell, November 15, 1861, to October 30, 1862. D. Van Nostrand. 1884. 12mo, pp. 201.

No problem connected with the details of army history during the Civil War has been more difficult of satisfactory solution than the Buell question. What was his character as an officer and his ability as a commander? Did he accomplish all the War Department had a right to expect from him? Was he loyal, earnestly and sincerely loyal, to the national cause? What were the influences that procured his removal from command? How far were they military and how far political? Was he right in declining subsequent service in subordinate positions, at least until the action of the "Commission" which sat upon his conduct should be passed upon by the Government? Was that Commission an act of persecution or a legitimate mode of military inquiry into his official career?

During the war, the general disposition to solve all doubts in favor of the Administration, and the strong tendency in every patriotic mind to favor whatever looked like vigor, and the quick discarding of men and measures that seemed slow or unsuccessful, combined to produce a popular judgment against Buell. He had had splendid opportunities, but had reaped small results. Bragg had turned his positions near Chattanooga and marched to the Ohio River. The battle of Perryville had been indecisive, and the retreating enemy had not been energetically pushed. He was coldly disposed to the national cause, and wished for compromise with the rebellion. He was so hostile to emancipation that he would not receive information from "contrabands." These were the things his critics and his detractors industriously circulated, and the time was one in which detraction was easily believed of any one who was not dazzling the public eye with either the reality or the plausible pretence of brilliant success. The current of opinion, for the time, was against him, and he was easily pushed aside from responsible command. It was not denied that he had more than ordinary ability. He was believed to be a soldier who had mastered the ordinary learning of his profession, and who had intellect to comprehend the problems of the war; but it was assumed that he lacked the executive power which makes a great army mobile and strong, an efficient engine in a competent hand. The prevalent doubt of his enthusiasm in the cause made also a vague but real questioning of his desire to do all with his army that might be done.

The disposition to suspect the motives of generals when their commands seem to be inactive or unsuccessful is a very common thing in all national wars. Ours was no exception to the rule. To put it concretely, we doubt if, during the first two years of the war, there was any general

officer in command of an independent column of whom it was not reported and published at one time or another in the newspapers, that he was the brother-in-law of the rebel officer opposed to him. The frequency of the thing became ludicrous, but it is a type of the feverish imaginings of such a time of convulsion. It was part of his surround ings with which every soldier of prominence had to deal. Discontented and envious subordinates would exploit them to the last degree against their commanders. Unscrupulous politicians would use them to pull down or set up whom they chose. Under such circumstances, Grant held his tongue and bided his time, never failing, however, to keep hammering away at the thing next his hand with imperturbable obstinacy. Sherman rather welcomed a temporary service in subordinate places, where he was saved from the chafing contact with unreasonable expectations, and could wait for the sifting of men and the education of the public which time was pretty sure to bring. Buell proudly refused to bend to any storm, and his career is only the mutilated trunk of what might have been, as his friends believe, one of the finest examples of evergreen military renown.

General Fry's position as Buell's chief of staff makes him a very fit historian of the army under Buell, and we could wish that he had undertaken the task of writing a detailed narrative of the whole period of Buell's command. He has strictly limited himself, however, to the period which the Commission undertook to examine, and to a criticism of their action and their report. What he originally intended for a magazine article expanded into a small volume, though it still retains the cast which was chosen for the briefer form of a criticism. This makes it in some respects less satisfactory than it might be, though it accomplishes in the main the author's purpose. He maintains, first, that Buell accomplished all that could in reason be expected of him with the force he had, and that the responsibility for the insufficiency of this force was wholly with the Department at Washington. Next, that the delay in occupying Chattanooga in the summer of 1862 was caused by the imperative orders of Halleck to repair the Memphis and Charleston Railroad before advancing, when the Nashville and Chattanooga Road was the one upon which he must rely for his supplies and communications. Third, that the separation of Kentucky from Buell's command took away from him the protection of his own line to Louisville, which was his base, and led to the most embarrassing complications of the campaign. Lastly, that after Perryville the campaign was a substantial success, and Buell's delay to march into East Tennessee was more than justified by the events after he was relieved by Rosecrans. These propositions General Fry seems to us fairly to maintain. He does not prove that the campaign was an ideal one, or evidence of military genius of the highest order; but that it was such progress as might reasonably have been satisfactory to the Government—nay, that it *was* satisfactory to the Government till the implacable hostility of Governor Morton, of Indiana, coerced the Administration into relieving him. This step involved the other, of seeming, at least, to condemn the management of the campaign.

The "War Governors" were among our "institutions" in the turbulent period. The emptiness of the national treasury when the war began, and the crippled condition of the executive when Mr. Lincoln was inaugurated, made the earnest support of the loyal State governments of inestimable price. It was their pledge of State credit which gave the means of equipping and supplying the first troops which assembled for the defence of Washington. Several of them sent their men ready clothed and armed as well, and formed camps of reserves at the State expense, anticipating the call for more volunteers. During the first three months all the officers of volunteers, including generals, were appointed by the States, and as the regimental officers continued to be so appointed, it was not strange that the line of distinction between State and national authority was, in the Governors' minds, ill-defined. Their interest in the welfare of the troops they had organized and sent to the field easily ran into an exercise of assumed power to command, or a right to be consulted as to all commands given. They were welcomed when they sent hospital steamboats to bring home the wounded after a Shiloh: why should they not have a word to say in regard to the general organization of the medical service? It is easy to see how the tendency of all this, especially at first, was toward what would seem to a rigid disciplinarian officious intermeddling, and a multiplication of masters, whom, according to the Scripture, no man could serve. A broader view will recognize the fact that the zeal which broke out of ordinary bounds was, in the extraordinary circumstances, a condition of success. States which would take no initiative, and Gover nors who would venture upon no irregular thing, never would have put down the rebellion. The Government at Washington, left to its own resources as the laws stood in 1861, could not have organized, uniformed, equipped, or fed an army. To keep exactly in one's place, to do all that is necessary for a great cause, and to stop exactly upon the line of army regulations; to spend one's energy and the power of States like Ohio and Indiana to put an army in the field, and then to avoid interference with its conduct, would be the part of a philosophic sage, but not of human nature generally, certainly not of the nature of War Governors. From Maine to Iowa it was the same, in varying degrees, and should have been taken into the account as part of the unavoidable circumstances of such a great convulsion.

Buell did not sufficiently recognize this necessity, and he made powerful enemies where a little diplomacy might have given him powerful friends. His reading of military history should have taught him that the dealing with allied powers has often been the most embarrassing part of a general's task; and this was a good deal like having to deal with allied powers. Marlborough in the Low Countries had much more trouble in keeping his allies working together and in preventing local authorities from "making a mess of it" than he had in his campaigns when his army moved. So had Wellington in the Peninsula. Embarrassments of this sort were not peculiar to our war. Indeed, with us there was this inestimable compensation, that the meddling was the result of unbounded zeal for the common cause. Patience, tact, industrious correspondence, and diplomacy were all called for in the general who commanded south of the Ohio River in 1862, and, in the retrospect, we think the warmest friends of Buell must see that he limited himself too strictly to the military idea of his rights and his duties, and did not make proper use of some of the qualities which, in military education, should always be insisted upon as indispensable to a general in responsible command. His early collisions with Tod and Yates, the Governors of Ohio and Illinois, made them more ready to follow Morton when the latter determined to force Buell's removal from command.

It has grown into an historical maxim that zeal for a great cause in leading actors in great events soon becomes modified by desire for power. Personal ambitions become inextricably mixed with public devotion, and to impress one's own will upon the course of things very easily becomes synonymous with success of the cause. Morton's zeal and energy were unbounded. His growing ambition was hardly less so. He was never charged with pecuniary corruption, but he had other traits of character which made him willing to surround himself by vulgar men of a gross, self-seeking sort. To put these in important places, civil and military, was part of his method of accomplishing his ends. It was equally part of his method to crush and put out of his way whoever would not be his subservient follower or his unscrupulous tool. To cross his purpose or his desire, public or private, was to make him an enemy—an enemy of huge, burly strength, perfectly unscrupulous in using it. As we have intimated, the redeeming trait in all this was his purpose to make the success of the national cause consist with, or perhaps it would be fairer to say the result of, his personal success. To refuse to be of his followers, or to cross his passions or his purposes, sealed the fate of an Indiana soldier or politician, if there be any truth in the traditions of the camp or the forum.

Morton became Buell's enemy. It is not hard to understand how this might happen. Each had many ways of crossing the other's wishes. The Governor professed to believe, perhaps did believe, all the gossip sent to him from camps impatient of discipline. Punishment of pillaging was sympathy with rebels. Chariness of personal display was aristocratic hauteur and exclusiveness. Reticence was ignorance of the situation and lack of plan. The result was that Morton adopted and pressed upon the Administration the theory that Buell was a repellent military martinet, without the capacity to handle an army; a "rebel-sympathizer," if not an actual traitor; one who shut himself out from loyal advice and vital information; and that the repulse of Bragg at Perryville was a frightful and needless slaughter of our troops which it was a crime to claim as a victory. It is doubtful, however, if Buell would have been removed at last had he not himself, with somewhat excessive punctiliousness, reminded the War Department that the cessation of the pursuit after Bragg was a fit time to carry out the purpose if it still remained. Halleck knew better than any one else the causes of the delays in the early part of the campaign, and of the difficulties Buell labored under through the whole of it. The President and Secretary Stanton had evidently learned something of all this from him; but Buell's reminder, coming to Stanton when almost overpowering political influences were at work against the general, was enough like a challenge to make the Secretary take him at the word, and he was relieved.

This, with Morton, was a step gained, but only one. He resolved that Buell should not again have the command of an army, and practically dictated the appointment of an irregular Commission, nominally to inquire into the campaign, but really to condemn Buell; for the mere appointment of the court, since its proceedings were secret, was enough to fix a popular impression that serious charges were made on responsible authority, and fasten a lasting stigma upon him. Not a scintilla of evidence affecting his loyalty was produced. The Commission criticised his campaign, but their opinions on this subject would hardly outweigh his, and their report is the best proof that there was never any cause for convening them. But the record of the proceedings strangely disappeared, and could never be found. It has been possible to reproduce it only by reason of the fact that the stenographer had happened to preserve his original notes and furnished a copy to Congress on its order in 1872.

Later in the war Mr. Stanton offered Buell military employment, and, it is understood, rather warmly pressed upon him that he should resume active service. This was at least an acknowledgment that there was nothing affecting

his standing as an officer or a citizen. Buell declined, on the ground that he ought not to be asked to serve under others whose commission was junior to his own. In this he made a mistake. The law which authorized the President to assign generals to command without regard to date of commission, was as much a part of the military system as the grades in rank themselves. The assignment by the President then made a temporary grade in itself just as valid as when the grade of Lieutenant-General was created. General Fry says that no man was necessary to the country, and that Buell had the right to consult his own sense of dignity in the matter. No doubt he had the right, but it would none the less have been a happier thing to-day to record that, like Thomas, he served faithfully under one who had been his junior, and that his abilities and his patriotism, triumphing over malice and enmity, raised him again to an army command, when a crowning glory like Nashville rounded out his fame and left no one to dispute his title to be called a great general and a great patriot.

CATTLE RAISING.

Life on a Ranch. Ranch Notes in Kansas, Colorado, the Indian Territory, and Northern Texas. By Reginald Aldridge. D. Appleton & Co. 1884. Pp. 227, 4 woodcuts.

CATTLE-ranching on the wide plains of the West may be now said to have in part taken the place of sheep-raising in Australia as a resource for the younger sons of our well-to-do British cousins for whom there is no more room on the little island. The novelist may now send his hero to make his fortune on the cattle ranges of Texas, Colorado, or Wyoming, instead of into the bush of Australia. Before the war the cattle king, the descendant of the ranchero of Mexico, found his home on the fertile lands of Texas, now largely occupied by farmers. Here land was comparatively worthless, and the cattle roamed undisturbed, and multiplied at will. There being little or no market for them, their value was but a few dollars per head, so no attempt was made to improve the breed, which gradually assimilated itself to the wild inhabitants of the country. In the unimproved Texas cattle of to-day a singular resemblance to the deer tribe can be traced, in the large, lustrous eye, the long, pointed nose, the immense development of horn, the length of leg and thinness of flank, and the consequent fleetness of foot, which often tries to the utmost the speed of the little Texas horses. During the war the first experiment was made of driving Texas cattle to the distant railroad termini, and sending them to the Chicago market, and an actual money value was thus determined for these wild cattle. Gradually it was found that in more northern regions the steers grew more, and fattened better for market, and when the Pacific Railroad was finished a few adventurous spirits commenced raising cattle in its vicinity, in Colorado and Wyoming, though for a long time the fattening of young steers driven up from Texas formed the bulk of the business. Those engaged in it were largely farmers' sons, whom a restless spirit of adventure had brought into these regions, but among them was also an ever-increasing number of young men of good families in the East, whose connections enabled them to command a capital of a few thousand dollars.

For the first ten years, profits averaged from 25 to 50 per cent. per annum, and the rates for time loans at 2 and 3 per cent. per month. It required strong nerve and an abiding faith in the stability of the business to borrow money for any length of time at such ruinous rates, but fortune has favored most of the ranchmen in proportion to their daring in this respect. Eastern capitalists for a long time smiled incredulously when asked to invest upon such representations; a few, however, intrusted small sums with their friends or relations for terms of three or five years, upon the basis of an equal division of profits, and the success of these ventures becoming more widely known among Eastern business men, the way was gradually paved for the "cattle boom" of 1881-'82. English and Scotch capital had also been somewhat attracted to the business by the reports of younger sons, who had cast their lots upon the Plains with their American cousins. During the "boom year" the price of range or improved cattle increased 50 or 60 per cent.—as much as, if not more than, they had during the ten previous years—and Texans in proportion. Large stock companies, with capitals varying from a hundred thousand to millions of dollars, were formed, and placed upon the New York, Boston, and London markets. This boom differs from the ordinary mining boom in that it has a legitimate and well-established business behind it, but, like all "booms," is subject to reaction.

There are several causes which may produce a reaction in the cattle boom, some of which might have been expected, others which are more or less abnormal and unexpected. Among the first is the necessarily reduced percentage of profit, owing to the greatly increased first cost of the stock in trade, to offset which the price of beef at Chicago has been uniformly higher since the boom than it had ruled during the previous ten years. Again, among so many companies formed, whose stock is held far away from the field of operations, it is probable that the profits have been in some cases discounted, so to speak, by the promoters, who have retained a large amount either in cash or stock as their commission for placing the rest of the stock. In such case, the capital upon which interest is to be paid is unfairly high, and in only moderately unfavorable years it may readily happen that it will be found impossible to pay the promised dividends, and hence a discredit will be cast upon the whole business, in which, in the majority of cases, the basis of capitalization may not have been an unreasonable one.

Among the abnormal causes for a reaction at this time the principal ones are the general financial depression throughout the country and the scare about cattle diseases. Neither of these may be considered to be entirely unexpected, for they had been predicted by far-sighted financiers on the one hand, and cattle men of long experience on the other. The seriousness of the cattle-disease scare has been very much exaggerated by news paper reports. It commenced in the spring with supposed foot-and-mouth disease in Kansas herds; then the Texas fever was pervading Chicago stockyards and northern ranges; and lastly the whole country is found to be full of pleuro-pneumonia. On investigation, the foot-and-mouth disease proved to be only ergotism (a well-known result of eating ergot), aggravated by the filthy condition in which the diseased cattle had been kept during the winter. The Texas fever is an old story among cattle men; its germs are produced among cattle in the swampy regions along the Gulf of Mexico and the Mississippi River, and are developed and transmitted to other cattle through the leavings of these cattle on the trail or in stockyards when they go north. The original cattle do not have the disease, nor do they transmit it by contact with other cattle: it belongs to the infectious, not to the contagious diseases. In former years, during the long drive of two or three months from Texas to the northern ranges, it was eliminated from their systems long before they reached their destination. To the Kansas farmer, however, the Texas drive has always been a source of danger for his domestic cattle, and it has been customary among these in the western borders of the agricultural region to club together and establish a "dead line" beyond the limits of their respective farms. When the advent of a Texas herd on its passage north was reported, armed men rode out to warn them to keep west of the dead line. This year, dead lines and fences have increased the difficulty of driving to such an extent that many herds were put on the cars and shipped directly to the northern ranges, and thus some of the yards and trails in Colorado and Nebraska became infected. The remedy against a recurrence of the danger of infection (which disappears with the first frost) lies in the prohibition of shipment of southern cattle by rail, or the establishment of a national trail on which cattle may be driven north. It is for the pecuniary interest of drivers not to send by rail, as it necessarily costs much more than driving.

Pleuro-pneumonia is probably only pursuing its normal development, and its being brought so prominently to public notice is a result of the passage of the so-called "Animal Industry" Bill, which had been diligently urged upon Congress for some years past by cattle men, but opposed by the shipping interest at Chicago, for fear of its injury to their foreign trade. The disease has been known, with more or less certainty, to have existed for some time past in various parts of the country, but official authority to stamp it out was wanting, and local interests opposed the public announcements of its existence. The writer is credibly informed that for two years past unprincipled dealers in East New York have been selling cattle they must have known had the seeds of the disease—mostly Jersey cattle—for dairy purposes. Although the provisions of the Animal Industry Bill, from deference to State's-rights doctrine, are less stringent and wide-reaching than had been intended by those who originated it, it is to be hoped that it will at least bring us to a realizing sense of what is for our best interests in the long run. The question at issue between those who favor and those who oppose such measures would seem to be whether we are more likely to get our meat products admitted free of restriction abroad by an honest, thorough, and scientific inspection of our herds and pens, or by suppressing all evidence of any possible disease, and indulging in unlimited vituperation of the Lords in Council and Prince Bismarck.

The British who come to this country to go into cattle-ranching in the West may be divided into three classes: 1st. Those with no capital at all. 2d. Those with small capital. 3d. Those with large capital either in cash, or in financial backing. The first class have, as a rule, not met with very great success, for in the cattle business, as elsewhere, it is hard to make something out of nothing, though instances are not wanting of men who commenced in the early days, and, from the product of their labor and skill alone, have become rich in the cattle business. The day for that has now passed, however, and the time is probably not far distant when only the third class may look for a reasonable chance of success in cattle-raising on the Plains. Our author belongs to the second class, and evidently possessed the characteristics, very essential for his work, of endurance, patience, courage, and good physical health. His little book is a plain story of his six years' experience, told with almost childlike simplicity of language and expression, and therefore bearing on its face the impress of truthfulness. Although devoid of any startling adventure, it will be found full of interest to those who have friends upon the Plains, and of suggestive hints to those who may contemplate going there. To the latter it should be said that his experience could scarcely be repeated at the present day, nor does his account cover all the phases of the cattle business, notably the management of the large

herds, owned by companies in Wyoming and Montana. It has the merit, however, of being, so far as we know, the first account of the cattle business by the ranchman himself.

BOOKS ABOUT THE STAGE.

On the Stage: Studies of Theatrical History and the Actor's Art. By Dutton Cook. London: S. Low; New York: Scribner & Welford. 2 vols., 8vo, pp. 287, 332.

The Drama, Painting, Poetry, and Song: Embracing a Complete History of the Stage, an Exhaustive Treatise on Pictorial Art, a Choice Collection of Favorite Poems, and the Popular Songs of All Nations. By Albert Ellery Berg. New York: P. F. Collier. 4to, pp. 718.

An Interviewer's Album: Comprising a Series of Chats with Eminent Players and Playwrights. By G. O. Seilhamer. New York: Alvin Perry & Co. 8vo, pp. 128.

La Tragédie Française au XVIe Siècle (1550-1600). Par Émile Faguet. Paris: Hachette; New York: F. W. Christern. 8vo, pp. 391.

Les Soirées Parisiennes de 1883. Par Arnold Mortier. Préface par Charles Gounod. Paris: Dentu; New York: F. W. Christern. 8vo, pp. 572.

Mr. Dutton Cook's final collection of his scattered magazine articles on theatrical subjects was prepared for the press before his death, although he did not survive to see it published. It was seen through the press by Mr. Moy Thomas, who has allowed two or three slips which the author would, no doubt, have corrected—Mme. Saqni for Mme. Saqui, for example (ii, p. 245), and Monte Christo for Monte Cristo (ii, 206). Like Mr. Cook's other books about the theatre, 'On the Stage' is pleasant reading. The author asks us to accept it as a companion or supplement to 'A Book of the Play,' and most of the essays might well have been included in that amusing treatise, or are, in fact, elaborations of chapters of the earlier work. Although Mr. Cook never forgot that he was a critic, he appears in these pages rather as a compiler or as a gossip about theatrical usages, customs, and traditions. His reading in the history of the English stage was remarkable in its comprehensiveness, and he was fairly familiar with French dramatic *ana;* of American theatrical history he knew less. The twenty-eight essays which make up these two volumes are full of quotation and anecdote. Among the subjects treated are "Strange Players," "Stage Traditions," and the "Illegitimate Drama." There are two essays of interest to the Shaksperian student—the "Eclipse of Shakspere" and the "Shakspere Jubilee." There are studies of the Duke of Buckingham's "Rehearsal" and of Mrs. Gore's prize comedy, "Quid pro Quo"; a paper on Harlequin and another on Columbine, and two others on "Inexplicable Dumb-Shows" and "Suit the Action to the Word." There is also an account of the plays "Adapted from the French," but this is already antiquated and takes no account of the recent great change in the English drama. Formerly most English plays were unavowed adaptations from the French; now most English plays are original, the adaptations are open and avowed, and the exact but condensed translation is supplanting the adaptation. M. Sardou's "Fédora" and M. Georges Ohnet's "Maître de Forges" have been presented as they were written, with no attempt to warp their situations or their characters into pseudo-conformity with English social conventions. One of Mr. Cook's more useful essays is on the French censorship, which gives us an opportunity to mention that an admirable article on the censorship of the English stage was contributed to the April *Westminster Review* by Mr. William Archer. Two other of the essays in 'On the Stage' deserve special mention: one is a discussion of the "Art of Acting," and the other a consideration of the "Status of the Player." From the former the omission of all reference to the didactic poem of Samson or to the theories of Delsarte is noticeable; from the latter, the omission of the plea for the dignity of his calling contained in M. Coquelin's eloquent 'L'Art et le Comédien.' But this latter contains a good anecdote of Thomas Sheridan, the father of the author of the "School for Scandal," and sometime manager of the Dublin Theatre. Sheridan, appearing at the trial of certain young men about town who had been riotous in the theatre, was impudently addressed by their counsel: "I want to see a curiosity. I have often seen a gentleman soldier, and a gentleman sailor, and other sorts of gentlemen; but I have never yet seen a gentleman player." "Sir," said Sheridan, bowing courteously, "I hope you see one now!" (i, 80).

Mr. Berg's book is, in the phrase of the advertising agent, "a library in itself." It contains a little of everything, including a history of the stage from the earliest times to the present day, with biographical sketches of the chief dramatists and performers, and with a wealth of illustrations, sometimes good and sometimes otherwise. To the show business, as Artemus Ward called it, and to its various departments, nearly one-half of Mr. Berg's bulky volume is devoted. The work is frankly a compilation by one who has made little or no original research; but when we consider what it pretends to be, it is not at all ill-done. The compiler falls into error, as any one must who has not given himself specially to the subject; but his errors are rarely of prime importance, and he has generally gone to the best authorities. There is a lack of proportion and perspective in dealing with the contemporary stage, but this is to be expected. The illustrations are sometimes original, but for the most part they are borrowed from everybody. Of course, the attempt to include the dramatic universe must result always in a certain scrappiness; yet Mr. Berg's book is readable, and, in a modest way, useful. It reminds one a little of the grumbler's praise of his dinner: "It is very good, what there is of it—and there is plenty of it, too, such as it is."

The publication of 'An Interviewer's Album' was begun three years ago, and it was to be completed in twenty-four parts. Of these, sixteen were issued when the work abruptly terminated. We have delayed noticing the book, in the hope that it might in time extend to the limit originally promised; but this hope now seems vain, and we delay no longer. 'An Interviewer's Album' is one of the most aptly-named books we have ever met. Mr. Seilhamer, discovering that there were yet alive many performers who had played prominent parts on the American stage a third and even a half of a century ago, sought them out in their forgotten retirement and "wrote up the interview." Sometimes the interview was well worth writing up, sometimes it was empty and perfunctory. Among those whom the interviewer ordered to stand and deliver were Mme. Anna Bishop, Mrs. Alexina Fisher Baker, Mr. E. S. Connor, Mme. Augusta, and Mr. Cornelius Mathews—a list of names full of interest to those who are fond of reading the records of the early days of the American theatre. To each interview is prefixed the portrait of the "interviewee," if a needed new word may be hazarded. These are simple and unpretending lithographs.

M. Faguet's elaborate study of French tragedy in the sixteenth century, and especially between 1550 and 1600, has apparently been written for one or another of the many prizes which recompense the French literary man who gives honest, hard work to a task of literary drudgery. As he informs us in his introduction, it is only the first instalment of a more extended work, which will trace French tragedy from its beginnings to the fulness and strength of its career, when Corneille was going out and Racine was coming in. The present work sketches its rise under Jodelle, its further development under Garnier—the most considerable name in French tragedy before Rotrou—and its condition when Montchrestien wrote at the beginning of the seventeenth century. Space fails us now to do more than call attention to M. Faguet's conscientious study of a difficult period.

It is perhaps a little late to say anything about the 'Soirées Parisiennes de 1883,' which M. Mortier, the very clever "Monsieur de l'Orchestre" of the *Figaro*, gathered into a volume early in the spring. But there are now ten of these annual volumes of "Soirées Parisiennes," and we will not withhold our opinion that they are as instructive as they are amusing. They deliberately refrain from criticism, and confine themselves to gossip and wit and parody and satire, and yet we believe that the force and current of the French theatre during the past ten years can be seen better in them than they could in the reprinted criticisms of any of the Parisian dramatic critics—those of M. Sarcey alone excepted. M. Mortier has had the good fortune to get the preface of every volume written by a dramatic celebrity; and the ten now add not a little to the value of the collection. They have been contributed by Offenbach and Theodore Barrière, both now dead, and by MM. Daudet, Gondinet, Pailleron, Dennery, Zola, Halévy, Becque, and lastly by M. Charles Gounod, who writes an eloquent *apologia pro arte sua.* In these days, when honor is being paid to George Sand, it may interest many to know that the famous marionnettes of Nohant have been brought to Paris by M. Maurice Sand, and that M. Mortier (p. 237) describes one of their performances. Special praise is due to any author who provides an index, more particularly when his book is full of proper names. In all of M. Mortier's ten volumes, the indexes are ample: they double the value of the series.

RECENT ECONOMIC WORKS.

Social Problems. By Henry George. John W Lovell Co.

The Labor-Value Fallacy. By M. L. Scudder' jr. Chicago: Jansen, McClurg & Co.

Excessive Saving a Cause of Commercial Distress. By Uriel H. Crocker. Boston: Clarke & Carruth.

Workingmen Coöperators. Cassell & Co.

Reforms: Their Difficulties and Possibilities. By the author of 'Conflict in Nature and Life.' D. Appleton & Co.

There is something pathetic in the devotion that Mr. George displays towards his hobby. In sentence after sentence, page after page, book after book, with an iteration that is at times damnable, he tells us that all the evils that flesh is heir to are due to one fell cause—Landlordism. The recognition of property in land occupies, in his economic system, a place as important as that of the fall of Adam in the Old School theology. The Millennium will appear, not when all men have experienced a change of heart, but when all taxes are levied upon rents. Poverty is not the result of idleness, or disease, or vice; it is the result of individual ownership of land. The evil habits of the tramp are not due to his laziness and improvidence; they arise from the deep despondency into which he is thrown by the reflection that the landlords of Europe, unsatisfied with centuries of extortion, are now pursuing their wretched vic-

tims across the ocean, and will soon cut off from them the last ray of hope. A few short years, and the last acre of fertile land will have passed out of the hands of the public. Then the hydraulic press of monopoly, manned by a legion of fiendish landlords, will begin to squeeze the vitals from the common people of this country; then the millstones shall be brought closer together, and the tenant be ground exceeding small.

The book now before us seems to contain little that is not to be found in 'Progress and Poverty.' Mr. George's views are so well known, and have been so abundantly criticised, that it is hardly worth while to make any extended comment upon this presentation of them. He shows excellent judgment in omitting here the two propositions which he previously undertook to maintain, and which were so utterly indefensible as to destroy the force of his whole argument. He says very little about wages being paid out of the proceeds of the labor by which they are earned, and nothing at all about the ridiculous theory that an infinite increase in population may result in a corresponding increase of wealth. If he would definitively abandon these untenable positions, his argument, although less portentous, would become far more formidable. But, unfortunately, there would then be nothing original about it. That rent is the result of monopoly was observed by Adam Smith, and that it might justly be subjected to especial taxation was also his opinion. Mill carried the discussion somewhat further, but the enormous practical difficulties to be overcome have hitherto interfered with the development of any satisfactory plan. Had Mr. George chosen to address himself to these problems, he might have contributed something of permanent value to the community. As it is, he has chosen the part of a howling dervish instead of that of a prophet. In his present work he advocates woman suffrage, and frankly avows socialistic views. The Government is to own all the railroads, to undertake the management of the telegraph and the telephone, and the supplying of cities with gas, water, heat, and electricity. Our present government, Mr. George forcibly shows, reeks with corruption, but so soon as property in land is abolished, human nature will become so regenerated that the vast addition to governmental functions which he proposes will be attended with fewer abuses than the existing arrangements.

Mixed up with all his absurdities, there are dashes of sturdy good sense in all Mr. George's writings. His scorn of the fallacies of the protection theory, his denunciation of public debts and indirect taxation, his criticism of the census reports, are all fine. As to the literary qualities of his work, Mr. George needs no praise from us. Barring a few slight blemishes of diction ("will" for "shall," etc.), his style is in every respect admirable. His method of developing a subject greatly resembles that of Herbert Spencer, and at times their styles are indistinguishable; but Mr. George's style is fresher and more brilliant.

Mr. George is favored with another refutation in Mr. Scudder's essay on the 'Labor-Value Fallacy.' We fear that refutations of this character will only harden the heart of the adversary. Mr. Scudder seems disposed to admit that if it is true that all wealth is created by labor, there is no escape from the conclusions of the Socialists. He considers, however, that this unfortunate result may be easily averted by denying that wealth is created by labor. He has never seen any wealth so created, he says, and after a careful inquiry he has failed to learn of any. He finds not "the slightest evidence of the truth of this doctrine in law or tradition or custom, in nature or in revelation." The law recognizes many titles, "but the title by labor is not one of them." Nature does not know it, nor did Christ preach it. It is therefore false. Of course, if labor has not created wealth, laborers have no claim to it, and Mr. George's elaborate pile of argument comes down with a crash. We apprehend, however, that if that redoubtable Socialist should deign to apply the sledge-hammer of his rhetoric to Mr. Scudder's propositions, the ruin of the latter would be more complete than that he has meditated against his enemy.

Mr. Crocker's small volume has for its sub-title "a series of assaults upon accepted principles of political economy." The author, in despair at finding his contributions to economic science persistently meeting with editorial neglect, has determined to make a final attempt to arouse this evil generation. The several letters and essays are prefaced and concluded with brief accounts of their unfortunate history, the most important of them giving occasion to the author to remark that he "can now recall no printed notice of that article, however brief, that treated it with any favor or respect." We must admit that a perusal of the article in question leads us to the conclusion that the writers of the printed notices had considerable justification for their conduct. Mr. Crocker undertakes to show that a general overproduction of commodities, far from being an impossibility, is a very common and disastrous occurrence, and that economy only makes matters worse. His confusion of thought seems to arise from misunderstanding the term "saving," as used by economists. "Saving" is not hoarding, but simply the application of an increased quantity of wealth to production.

Messrs. Ackland and Jones have prepared a manual for the use of those who are engaged in coöperative enterprises, or who expect to be so engaged. Mr. Ackland is steward of Christ Church and a bursar of Balliol College, Oxford, and Mr. Jones has been actively connected with the coöperative movement for eighteen years. Their book is somewhat of the nature of a tract, being filled with exhortations of a tone that indicates that coöperation is prosecuted in England with religious fervor. There are directions for the edification and confirmation of the incipient coöperator, much like those formerly given to the "young convert." This, however, can do no harm, and, in spite of a clumsy arrangement, the manual is to be recommended, for it deals with practical questions—with difficulties that have actually arisen and with solutions that have actually been obtained. Any one proposing to start a coöperative store would find much that would be useful and suggestive in the statistics of such enterprises in England, here collected and tabulated. The work has been evidently a labor of love, and it would be only an impertinence to praise the generous devotion of the authors to a most worthy cause.

The anonymous work on reforms is a collection of opinions upon nearly all the subjects that have engaged popular attention in modern times. So far as we can judge, there is no difference in the value of these opinions, whether they relate to communism, monopoly, coöperation, bi-metallism, banking, protection, taxation, education, female suffrage, divorce, drink, crime, poverty, theology, or feminine extravagance. They are delivered in a tone of easy and complacent superiority, which may be accounted for by the fact that those who are thoroughly versed in the subjects brought up in this treatise are apt to shun such discussion as the writer indulges in. There seems to be little that is erratic in the views that are expressed, and upon the whole we should suppose that the intellectual operations of the ordinary citizen, who gets his ideas from conversation and from the newspapers, might be very fairly represented in these monologues. We can recommend the book only to that class of readers who may desire to learn the views of this author with less expenditure of time than would probably be required by a personal interview.

New Castle: Historic and Picturesque. By John Albee. Illustrations by Abbott F. Graves. Boston: Cupples, Upham & Co. 1884. 12mo, pp. viii-155.

THIS is an engaging little book. The history of the island of New Castle, on the coast of New Hampshire, is told quietly, with much interesting detail, and enough sentiment and reflection to render the narrative vital. There are few dull pages. The ancient records of the town of New Castle were long supposed to have perished in some of the early troublous times, but in 1873 they were discovered, complete and uninjured, in Hertfordshire, England, and were soon afterward brought home. They begin in the year of the incorporation of the town, 1693, and extend to 1726. Nobody knows how they came to be in England. The original charter of incorporation, on parchment, has also been preserved. It is not known when the first settlement was made on the island, but it was some time before 1650. The people of this part of New Hampshire were not so severely puritanical as their Massachusetts neighbors, and thought and life were freer among them. The story of that far time is told in such a way as to inspire a strong desire to know more about it, which is good art in the historian. The reader sympathizes with the author's rebuke of the carelessness which has permitted the obliteration of various old fortifications on the island, and wonders at the vandalism which pulls down ancestral halls and mansions. But indifference to the value of historic remains is, unhappily, common in our country. Many original local designations linger in New Castle, the author says, but he has given us but two of them. The south part of the island is known as *Outalong*, and the north part as *Inalong*. Both names are in the town records. More of the peculiar local terms should have found place in these pages. New Castle was, for a long period, the seat of the Provincial Government, and residence of the governors. The story of "The Stone-throwing Devil" is queer; but it helps to make the little book part of the history of the great world, for similar stories belong to all times and lands. The names of the old families appear here, with glimpses of their several parts in the early history of the province, and of New England. Some of these names are still familiar; others have a foreign or ancient, many a Welsh, aspect.

In more modern times a New Castle meeting voted to admonish a certain man "for anger, peevishness, and swapping horses." One of the many religious sects of our country had its origin on the island, and the story of its rise is picturesquely human. The divisions of the book are: The first settlement of the island; descriptive walks; external annals; and civil and religious history. There are about fifty illustrations, and a copy of the town charter is given. The book is worthy of a more permanent form than that of a pamphlet. It should be put into covers in the next edition, and the description of the transfer of a decomposing body from an old grave to a new one should be omitted. It is an ugly blemish in a fair and graceful study. The book is a valuable contribution to local history, and we hope the author's pen may find employment in other similar fields.

De l'Atlantique au Mississippi. Souvenirs d'un diplomate. Par le Comte Alexandre Zannini. Paris: J. Renoult.

THE title of Count Zannini's book might lead the reader to expect an account of diplomatic negotiations, with portraits of statesmen and public

characters, or at least a foreigner's view of the machinery of our Government. Nothing of the kind. Washington has been called the Siberia of diplomatists, and the chief qualification in an ambassador is skill in the art of doing nothing. If the nation is happy which has no history, the same may be said of one which has no foreign relations—though the Republican candidate for the Presidency, if successful, may break up this monotony. The members of the Diplomatic Corps, moreover, who find their official duties merely nominal, and in the society of members of Congress and their families a rather inadequate satisfaction for their tastes and habits, are cut off even from the resource of grumbling. It would never do to offend the susceptibilities of a mighty nation. On the title-page of the book in hand stands a question quoted from 'Democracy,' the American novel which excited so much attention abroad: "Do you yourself think democracy the best government, and universal suffrage a success?" But the wary Italian is very far from undertaking to answer so delicate a question. His work, while it shows a polished man of the world, is quiet and almost colorless in its statement of the various subjects of interest. The working of the Government is glided over very gently in a description of the White House, the Capitol, and the constitution of Congress. The absence of ceremony, which strikes a European so forcibly, is well illustrated by an Indian reception:

"One day I learned that the President was to receive in his office the visit of a deputation of Sioux, with their chief, Red Cloud. I entered and made my way to his presence. Nobody had invited me; nobody thought of sending me away. I was present at the reception. I saw there thirty warriors armed with axes and revolvers. The only palefaces present were President Grant, his private secretary, the Secretaries of War and the Interior, the interpreter, and myself. If these savages had given way to an impulse of rage, we should have been handed over defenceless to their tender mercies."

It may be doubted whether such a reflection would have occurred to an American.

We welcome heartily the conclusion of the Count that the danger to society in this country is not from the laboring classes:

"The American workman is of a race which has no tendency to anarchy. He, too, joins in strikes, which are inevitable in every industrial country; but he never becomes a demagogue. He does not aim at levelling society or impoverishing the rich, but wishes to raise himself to them. The danger for the United States is not thus in the lower classes, but in the corruption of political manners, in the venality of the administrators."

In other words, defects of administrative organization are the most threatening of the rocks ahead. The prison and educational systems receive a good share of attention from this writer, though, as usual, with a rather pronounced avoidance of definite conclusions. We observe that the Count inclines to the opinion that the negro race will ultimately die out. The sketches of scenery, of the principal cities, of modes of travel, hotels, etc., may probably interest Europeans, but to an American they sound somewhat trite.

Grammaire Française pour les Anglais, suivie d'une série d'Exercises. Par Lambert Sauveur, Docteur ès Lettres et en Droit, Président du Collège des Langues. New York: F. W. Christern. Boston: Carl Schoenhof.

HOWEVER much many French teachers may differ with Dr. Sauveur as to the superiority of his *Méthode Naturelle*, they will agree that his new grammar is a valuable addition to the already long list of text-books from which they are called upon to make a choice. They may use this grammar without committing themselves to adopt the famous *Méthode*, provided their pupils have already acquired a sufficient knowledge of French to understand the text. They can do so with the more freedom and consistency because, at the start, the *Méthode Naturelle* proscribed both grammar and dictionary, and forbade the use of a single English word, and its founder now publishes a grammar of considerable bulk, in which he has introduced many English sentences for the purpose of illustrating certain idioms and peculiarities of French syntax. This, they may say, is a tacit admission of what many of us have held as proved by experience, viz.: that the best way to teach the grammar of our language is by comparison with that of our pupil, and that, after all, one cannot learn a language so as to speak it correctly without studying its grammar.

The principal merit of the 'Grammaire pour les Anglais' is clearness. Not that this important quality is not to be found in many other French grammars—Larousse's, for instance, is just as clear, and has the advantage of being more complete; but Dr. Sauveur writes for English-speaking students, and he dwells more particularly on those rules in the application of which foreigners are apt to make frequent mistakes. Such are the rules that govern the article, the subjunctive, and the participle—the last two the bugbears of even French-born scholars. These subjects are treated in a masterly and exhaustive manner, and the difficulties removed by a series of logical reasonings. Not so satisfactory do we find the instruction concerning the place of the French qualifying adjective. The author tells us that it is "the ear and the sense which should regulate this—the ear alone, in most cases," and that "it is not possible to give rules which shall be of constant application." Therefore, he contents himself with giving four rules which "may be applied" the oftenest, but omits what should be (for the English-speaking student) an absolute rule regulating the position of adjectives that define the color and shape of objects, and of those which are formed from past participles, all of which the English invariably place before, and the French after the noun. A Frenchman may hold that no rule is necessary, that "une bleue robe, une carée table, un cassé verre," are disagreeable sounds which jar upon his auricular nerves; an American cannot see it; he is accustomed to say "a blue dress, a square table, a broken glass," and he will translate naturally without changing the position of the words. If it should happen, for a wonder, that his ear has been so nicely trained already to the soft French sound that he will need no such rule, then there is a great deal in the 'Grammaire pour les Anglais' which he will find just as unnecessary—among other things, the excellent treatise on pronunciation with which the book begins.

We note in the chapter on the subjunctive mood a logical conclusion not to be found in our best text-books. It is that the conditional *je voudrais*, idiomatically used for *je désire*, should not govern the imperfect but the present tense of the subjunctive, the conditional form in this case being but a polite softening of the authoritative "je veux," and implying neither will nor a condition. It is a pity that the author, while he was about it, did not solve that other vexed question: the use of the subjunctive form "je ne sache pas" without any subjunctive clause. Mr. Garner, of the Johns Hopkins University, in a pamphlet published some years ago, held that this peculiar form was probably a relic of the past, and there must have been a time when the present tense of "savoir" was "je sache, etc."

In conclusion, let us add that while most grammars leave much to be explained by the teacher, Dr. Sauveur's explanations are so clear, and his examples so well chosen, that the dullest pedagogue may use this book without fear of discomfiture.

BOOKS OF THE WEEK.

Abbott, C. C. A Naturalist's Rambles about Home. D. Appleton & Co. $1.50.
Art, L.' Nos. 485, 486. J. W. Bouton.

The Nation.

NEW YORK, THURSDAY, OCTOBER 9, 1884.

The Week.

GOVERNOR CLEVELAND'S brief speech to his fellow-townsmen on Thursday night, in response to the magnificent demonstration which they made in his honor, was a model of its kind. Nobody can read its quiet sentences, so full of manly dignity and right feeling, and not be conscious of a greater faith than ever in the man's fitness for the work which he seems destined to enter upon. The address of welcome which was made to him in behalf of his fellow-citizens was a striking document, and contained so much that was complimentary to the Governor's character and ability that the *Tribune* was apparently afraid to let its readers see it, for it suppressed every word of it. We commend both it and the Governor's response to the careful consideration of all our readers.

Governor Cleveland's quiet way of attending to his duties is a sore trial to his enemies. The Blaine organs have been attacking him with great bitterness every day for a month or more because he did not proceed faster with the charges against Sheriff Davidson. Only last Monday the Albany *Evening Journal* had a savage attack upon him for his dilatoriness, and declared that his course in the matter "is a revelation of his true character." The *Journal* spoke with more truthfulness than it supposed, for it was announced the next morning that the Governor had served notice on the Sheriff on September 24, nearly two weeks ago, to appear before him within twenty days and make answer to the charges. He had read carefully the 1,000 pages of testimony in the case, as soon as he reached it in the regular routine of Executive business, and, without any public announcement of his action, sent the Sheriff his summons. The total lack of "bounce" in this way of attending to public business must strike Plumed-Knight followers as very "commonplace."

The following, from the Rev. James Freeman Clarke's speech in Boston the other day, is the most solemnly accurate description of the present extraordinary political situation we remember to have yet seen, and we commend it as such to all honest men, and especially young men, whom so many of their elders—some of them ministers, too—are daily on the stump inviting into paths of dishonor and shame :

"I agree with my old friend Bishop Huntington, of New York, that Cleveland, having risen above these past errors, and left them behind him, is not, if we follow the principles of the Gospel of Christ, to be prevented from rising to any height of usefulness. He has shown his repentance in the true way, by doing works meet for repentance. It is only a hard and narrow bigotry which would condemn a man forever for a past ill deed. 'But,' you may say, 'will you reward a man with the Presidency who has committed this offence against social morals?' Public office is not a reward, but a duty. If we make him, or any other man, our President, it is because he is well fitted for the work of a President. The people of Buffalo took him because they needed him to do a work; and he did it honorably and well. The people of the State did not reward him when he was chosen Governor. He was taken because he was the right man in the right place. If elected President, it will not be as a reward of merit, but as selected to do the work because he has the power. The difference between Blaine and Cleveland as candidates is, that the offence of Mr. Cleveland is not disguised, nor excused, nor defended, but that of Mr. Blaine is denied, or excused, or defended. The great harm to morality does not come so much from the wrong action as from its being defended, palliated, and called right. This great injury to the public morals is now being done by Mr. Blaine's advocates. They are putting evil for good and good for evil, darkness for light and light for darkness, bitter for sweet and sweet for bitter. No young man who has seen what an awful burden Governor Cleveland has had to carry in consequence of his one offence, can possibly be tempted by his example to any like iniquity. But when a man who has devoted himself to making money out of office is defended for doing so by our best men; when asking to be paid for doing justice in a high judicial position is treated as a mere accident; when asking a man to perjure himself by writing a letter prepared for him full of falsehoods is considered as something not worth speaking of—then the morals of society are being cankered at their heart."

The proposition which has been made to Mr. Harrison, the Republican candidate for Governor of Connecticut, goes straight to the bottom of the Blaine issue. Mr. Harrison astonished his friends greatly by saying in a recent speech that he "considered Mr. Blaine's record absolutely without spot, stain, blemish, or shadow." Thereupon a prominent merchant of New Haven offered to give $100 to the Republican fund if Mr. Harrison would make a statement to the following effect: "Were I under the same circumstances and possessed of the same power as was Mr. Blaine at the time of his correspondence with Fisher, I would do as Blaine did." We trust that an answer of some sort will be insisted upon. If Mr. Harrison objects to the money condition, let that be waived. If he makes no answer, we suggest that when he next speaks for Blaine somebody rise in his audience, and in an entirely respectful manner ask him the question either in the above form or in some form like this: "Would you, if elected Governor, use your official position as Mr. Blaine's correspondence shows that he used his?" This is a good question to ask any Blaine orator who happens to be a public officer or to be running for a public office. It should be asked, and a direct answer of "yes" or "no" insisted upon. The effect of an answer either one way or the other is plain enough. If Mr. Harrison were to answer "Yes," does anybody suppose he could be elected Governor of Connecticut? If he answers "No," what becomes of his defence of Blaine?

On the 15th of September Mr. Frank A. Flower, who dates his communication from the Bureau of Labor Statistics, Madison, Wis., wrote to Senator Edmunds asking whether he (Mr. Edmunds) had ever written a letter saying that "Mr. Blaine acts as the attorney of Jay Gould." The terms of Mr. Flower's inquiry related particularly to the act of 1878, commonly known as the Thurman bill, by which the subsidized Pacific Railroads were required to create a sinking fund for the repayment by them of *more than one hundred million dollars* (principal and interest) to the Government. Mr. Flower's letter was both obtrusive and offensive in phraseology. Senator Edmunds replied on the 18th, first marking his letter "private," and then requesting Mr. Flower to treat it as private, explaining that he was not in the letter-writing business. He said that he had never used the expression attributed to him, that "Mr. Blaine acts as the attorney of Jay Gould"; but added for Mr. Flower's private information that he did write a letter to some constituent in 1880 adversely to Mr. Blaine's nomination, and that he (Edmunds) believed it to be true that "he (Blaine) was on the side of the railroads in the struggle of 1878," and that he (Edmunds) believed that he said so in the letter referred to. He concluded by saying that he expected to vote the Republican ticket. What, then, does the ingenuous Flower do but extract the first and last sentences from this doubly private letter and give them to the newspapers, conveying the idea that this was the whole of it! The Chicago *Tribune's* correspondent, or the *Tribune* itself, being more than usually audacious and unscrupulous, put the two sentences together, and printed them as a letter. Thereupon Senator Edmunds sent to the Chicago *Tribune* some days ago a true copy of the correspondence for publication in place of the garbled copy.

The facts regarding Mr. Blaine's connection with the Hocking Valley mines and his letter to the Hon. H. S. Bundy denying that he ever had any interest in them, are gradually coming to light. Mr. W. D. Lee, Mr. Blaine, Mr. Steve Elkins, Mr. William Walter Phelps, General Samuel Thomas, and others united in forming the Standard Coal and Iron Company by consolidating the interests they had previously acquired in mining property in that region. Mr. Blaine's interest was originally represented by one share or block in the Hope Furnace Tract, for which he paid $25,000. When the consolidation took place he received $50,000 of bonds of the Standard Co. in exchange for his stock in the Hope Furnace Co. The Standard Co. bought a patent for mining coal by the use of machinery which would have thrown out of employment most of the miners in the region, and then gave notice of a reduction of wages. A strike followed, and the company then sought to introduce "cheap labor," Italians, Hungarians, and other unskilled hands. This led to riotous demonstrations, and alarmed Mr. Blaine, who was posing as the protector of laboring men, because it was charged that he was one of the owners of the property. He then wrote a letter to Hon. H. S. Bundy in reply to "your [his] recent favor," affirming that he had never owned any coal, iron, or other lands in Ohio, nor ever owned a share in any coal or iron company in that State, adding that there had never been any trouble with laborers in any enterprise with which he had ever been connected. "This," he said, "covers all the points of your inquiry." Mr.

Bundy's letter (if he wrote any) was not published.

It turns out that the allegation that Mr. Blaine was one of the proprietors of the Hocking Valley mines was true. Mr. W. D. Lee comes forward to say that Mr. Blaine bought his stock in 1880, with the understanding that if at the end of two years he didn't like the investment, it should be considered Lee's stock, and not Blaine's. This statement, if true, would still prove that Mr. Blaine told a falsehood when he said that he had never "at any time owned a share of stock in any coal, iron, or land company in the State of Ohio," because, according to Lee's showing, he did own it for two years. Mr. Blaine has not corroborated Mr. Lee's statement, for the obvious reason that the dates and amounts of the so-called loan secured by the bonds of the Standard Company, as given by Lee and Blaine respectively, do not agree. There is a difference of three years in the time, and of $12,500 in the amount. But there is the best reason for believing that Lee's statement is untrue. Mr. J. Henry Brooks, who exposed the falsehood in the *Evening Post*, now says that if Mr. Blaine merely took an "option" on the stock in the Hope Furnace Co., he deceived his associates in the enterprise, and played a trick upon them and upon the investing public. If his subscription was of the kind which Lee represents, viz., that Blaine was to have it if it turned out well, but not if it proved unprofitable, then it was virtually a swindle upon those who were not made acquainted with this underhand arrangement. In either case Mr. Blaine's letter to Bundy was false.

Another very good reason is apparent why Mr. Blaine does not support Mr. Lee's ingenious statement. Mr. Lee's statement was that "The $50,000 of the first-mortgage bonds of the Standard Coal and Iron Company delivered to Mr. Elkins by Mr. Brooks and receipted for by him on the 25th of May, 1882, as set forth in the statement of Brooks, were deposited by Mr. Brooks and myself as collateral security to secure the payment of the amount advanced or loaned to me by Mr. Blaine, and for no other purpose, and are so held to-day.' But there is published in the Boston *Herald* of Sunday a new letter from Mr. Blaine to this same man Lee, dated Saratoga, August 10 1882, in which he (Blaine) says: "You are at liberty, however, to say that *in addition to an investment* in the bonds of the Standard Co., I and a friend of mine jointly advanced a very considerable *sum* of money on your note secured by the bonds." So it appears that the bonds handed by Mr. J. Henry Brooks to Mr. S. B. Elkins for Blaine's account were *an investment* by Mr. Blaine, and that the loan to Lee was additional to the investment. There is another thing in this Saratoga letter which sounds oddly. Mr. Blaine writes to Lee (evidently to be shown to others): "I never in my life recommended a loan to any one, *or assumed any responsibility for another man's investment.*" Read this in conjunction with the letter to Fisher of June 14, 1871:

"And now, in addition to all other troubles, I have $10,000 of coupons, a little over that amount, which I am held to take care of partly through verbal understanding and partly through written agreement—coupons due in April on land bonds and to fall due in July on first-mortgage bonds."

Mr. Blaine has resumed letter-writing, and has constructed a fresh denial of his Hocking Valley interests, but with a material variation from his first denial. The second letter is addressed to the Hon. William McKinley, of Canton, Ohio, and is dated Bellaire, Ohio, October 4. We reproduce the two denials and the stock subscription in the deadly parallel columns:

Full Falsehood.	**Proof.**	**Limited Falsehood.**
LETTER TO BUNDY. Bar Harbor, Me., July 22, 1884. *Hon. H. S. Bundy:* In answer to your recent favor, I beg to say that *I am not and never have been* the owner of any coal-lands or iron-lands, or lands of any character whatever in the Hocking Valley, or in any part of Ohio. Nor have I *at any time owned a share of stock in any coal, iron, or land company in the State of Ohio.* * * * * * * J. G. BLAINE.	STOCK SUBSCRIPTION. Senate Chamber, Washington, Dec. 30, 1880. DEAR SIR: Find enclosed my draft for $25,000 in payment of my subscription to the Hope Furnace enterprise. Touching the interest, I have to ask that, whatever it may amount to, you will permit its payment to be postponed until some matters between Mr. Lee and myself are definitely adjusted.—Very resp'y, J. G. BLAINE. Mr. Denison.	LETTER TO McKINLEY. *Third*—I do not own, and never did own, an acre of coal-land or any other kind of land in the Hocking Valley or in any other part of Ohio. My letter to the Hon. Hezekiah Bundy in July last *on this same subject* was accurately true.—Very truly yours, JAMES G. BLAINE.

It will be seen that Mr. Blaine does not deny in his letter to McKinley his ownership of stock, but only his ownership of land.

There is another vacancy on the Blaine electoral ticket of this State. Dr. W. E. Forest, elector for the Sixth District of this city, has informed the State Committee that he resigns because he "cannot conscientiously support the present nominee for President, James G. Blaine." He declines to give his reasons any more fully, because "they must be patent to everybody," and they undoubtedly are. Every man who talks with his fellow-men knows that nine out of ten Republicans who say that they are going to vote for Blaine admit the truth of the charges against him, but declare their inability to vote for a Democrat. The proof against Blaine grows so overwhelming with each day's additions, that no man, except the editor of a Blaine organ, or a Blaine orator, thinks of disputing it any longer. The question has simply narrowed down to this: Is the Republican party, with a dishonest and mendacious candidate, to be preferred to the Democratic party, with an honest candidate? While there are many Republicans, who are honest men themselves and are upright in their dealings with their fellow-men, who are able to reconcile their consciences with their determination to vote for Blaine, there are thousands of others who will not do this almost unaccountable thing. The moral sense of the American people may have been dulled by specious pleadings, but it cannot be entirely dead.

The *Commercial-Gazette* of Cincinnati agreed to continue to allow the Independents to hire one of its columns, after insisting on their signing the articles with which they filled it. The Independents reappeared the next day with an article signed by no less than fifteen of their number, but it was too much for the conductors of that extraordinary sheet, as it consisted of their own old exposures and abuse of the Republican candidate; so they broke their contract, sooner than lay their own shame before their readers every day—and one can hardly blame them.

Under the double heading of "A German View of the Case" and "Eine Deutsche Stimme," the German readers of the *Tribune* were favored on Monday with half a column of reading matter in their own language, accompanied by an English translation, and introduced thus: "The *Allgemeine Zeitung* is recognized the world over as the ablest of Germany's political journals. One of the later issues received here contains the following review of the political situation in the United States." The date of that issue is omitted, accidentally or not, but we presume the extract to be correctly made, judging from the circumstance that the statement is not left out that "the Independent reformers, belonging mostly to the educated classes, . . . left the Republican party because Blaine, the candidate of the party, had a bad reputation in connection with railway speculations." As we happen to be able to supplement the information drawn by the *Tribune* from "one of the later issues" of the *Allgemeine Zeitung*, by extracts from the *latest* issue of the same journal received here, that of September 24, we deem it our duty to present them to our German readers, in order that they may know the freshest "German view of the case":

"The attempt of some dirty Republican sheets (*einiger republicanischer Schmutzblätter*) to assail Cleveland, whose political life is without a reproach, in regard to his private life, has happily fallen flat upon the good sense of the American people."

"The charges made against Blaine of having enriched himself by the exploitation of his position as Speaker of the House are very weighty, and unfortunately but too well founded (*leider nur zu begründet*). His principal opponents are among the most honorable and most respected politicians of the land. . . . The press which combats Blaine, leaving the Democratic out of consideration, holds the first rank in the country. No wonder, therefore, that the host of his faithful and bold defenders is more and more dwindling away, especially as it becomes clearer from day to day that the cause for which they are called to enter the lists is hopeless. Some of these admirers and worshippers of Blaine, 'because he is the smartest man in the country,' probably already repent inwardly the mistake committed by supporting his cause."

"Whenever anybody, like Senator Hoar, of Massachusetts, still musters courage to defend the thoroughly dirty cause (*durchaus schmutzige Sache*) of Blaine's railroad transactions, and to make them appear harmless by a false, disfiguring presentation, he only makes himself ridiculous, to say the least."

We have no room for more, but we are ready to lend our copy of the *Allgemeine Zeitung* to any Republican editor who may desire to republish the whole of its "review of the political situation in the United States," in the original German or in translation, or in both—as enterprising journals do.

Mr. E. W. Oyster, an employee in the Census Office, and President of the Federation of Labor Unions, was at one time Presi-

dent of the Republican Association of Pennsylvania, in which State he has always been an active worker for the Republican party, whose ticket he and his three brothers have never failed to vote. He now holds, in a speech delivered on Saturday night to a large body of workingmen in Washington, that the workers of the country should cast their ballots solidly for Cleveland and Hendricks, because they had received more favors from the Democrats than from the Republicans, and because the millionaires wanted the party now in power to continue in power, whether the workingmen desire it or not. He denied that Mr. Cleveland had vetoed some of the bills which he has been accused of vetoing, and reminded the audience that the Labor Federation, which had passed resolutions hostile to the Governor, promptly rescinded them when the facts became known. In reference to the tariff, he maintained that the platforms of the two parties did not greatly differ, and added that he was not in favor of a tariff that gave nine cents to the employer and one to the laborer.

The State Civil-Service Commission left it optional with the Trustees of the State lunatic asylums and hospitals to adopt the competitive system as a means of selecting their higher medical officers or not. A gratifying proof of the hold the system is taking on the public mind, is to be found in the fact that the Trustees of the State Hospital for the Insane at Poughkeepsie have decided to use it in choosing a first assistant physician at a salary of $3,000, with board and lodging, and a third assistant at a salary of $1,000, with board and lodging, the examination to be open to all graduates of reputable medical colleges. More attractive openings to young physicians desirous of opportunities of study the profession does not contain. The obligatory subjects will be arithmetic, geography, English grammar and composition, theory and practice of medicine, therapeutics and clinical medicine; anatomy, physiology, and pathology of the brain, and psychological medicine.

The Connecticut election on Monday resulted in the adoption of the Constitutional amendment providing for biennial sessions by a majority of upwards of 15,000. The same amendment was defeated five years ago by a majority of nearly 25,000, and the reversal of this decision now is no doubt due to the continuous discussion that has been going on over the matter ever since, and also to the practical lesson of inutility taught every year to a greater or less extent by the performances of the Legislature itself.

Last Saturday a committee of the workingmen of the District of Columbia submitted a protest to the Commissioners of the District against the present employment of foreign labor on the Boundary sewer and aqueduct in Washington. The reason assigned why the Italians now employed by the contractors should "go," is, that they are so cheap that they displace "industrious citizens" of the United States, who cannot maintain with decency their families if required to accept the same wages, and that the community will, therefore, have cast upon it the burden of their support, and will, besides, have its police expenses increased by the increase of crime and disorder consequent upon their "enforced idleness." On economic grounds, the Committee argues, the alien paupers should be expelled, for any saving to the District treasury caused by an advantageous contract with a company which employs them at a rate of wages lower than that paid to citizens, is more than compensated by the increase of poverty and crime caused by their competition with "our laborers," who are thrown into a state of "enforced idleness," on account of the wages paid being inadequate for their decent support. The real objection to the Italians is clearly hinted at throughout the protest. It is the same objection that has been made against the Chinese in California and against the Hungarians in Pennsylvania. The Italians are "pauperized" labor, possessed of no standard of living, willing to work for wages upon which no one could support himself and family in any decent manner. All of our American laborers, therefore, are by them thrown out of employment, and made dependent for their maintenance (which must be "decent") upon "the benevolent and the taxpayers."

There are said to be so many candidates for instruction in the new Lyceum school for actors that its success as a pecuniary venture is assured. On Friday Mr. Steele Mackaye made an address to the pupils on the dramatic art, in which he promised that they should be taught "voice-building, vocal expression, deportment, pantomime, stage business, costuming, etc." "Vocal expression," we trust, includes the art of pronouncing English correctly, without the cultivation of which we are satisfied that our stage has no great future before it. Nothing is more marked about the drama in New York, and indeed throughout America, than that there is no standard of pronunciation at all. Every actor is allowed to pronounce pretty much as he pleases, and the result is that we have every variety of accent, tone, and "vocal expression," from the school represented by Mr. Gilbert, on the one hand, to such eccentric individualism as that of Mary Anderson or Miss Clara Morris on the other. Now, there is such a thing as correct English pronunciation, and, what is more, it can be taught. It is not the key to good acting, but it at least adds enormously to its attractions and merits—much as correct spelling adds to the charm of correspondence.

A Massachusetts journalist who furnished his paper with two different kinds of despatches —which he called respectively "news" and "stories," the latter being pure invention— explained that there was no harm in it, because he charged different rates for them. The man who keeps the London *Times* Chinese cable so hard at work perhaps carries on his business in the same way. If he does, he must make a good thing out of it. His latest is a revival in a picturesque form of the story of American mediation. It seems that Mr. John Russell Young, "acting under instructions from Washington," informed Li Hung Chang that the French Government had requested the mediation of America. Li Hung Chang replied that he wanted no mediation, and, recalling the story of the French invasion, "asked Minister Young if the smallest state in Europe would submit to a like oppression." "No," said the mediator, probably adding, "Millions for defence not one cent for tribute." Said Li Hung Chang, "Then why should the greatest nation in Asia?" On this Mr. Young "applauded the Viceroy's patriotism, and explained to him that he was obliged to obey the orders from his Government and present the French demand." We hardly know whether this story is injured or improved by the fact that it is accompanied in the despatches by a positive denial that the French Government has asked the United States to act as mediator. It seems worth while to inquire, however, considering how our last attempt at mediation ended, what Mr. John Russell Young is actually doing at his post.

M. Leroy-Beaulieu, the well-known financier, has two articles in the *Journal des Économistes*, taking a very gloomy view of the operations in China in spite of the fact that he has been an ardent supporter of the policy of colonial expansion. He shows that the commerce of China with foreign countries is so small that if it were totally suspended the Chinese would hardly feel it; that the Empire is so loosely organized, and so vast in its extent, that no attacks, and especially naval attacks, on the circumference are likely to produce much impression very far inland; that the treaty ports are very far apart, and if some are blockaded their trade will go to the others, while the blockade of all would be impossible even if the treaty Powers were willing to submit to it; that there appears to be nothing for it but an invasion, but that the cost of such an undertaking would be great, and the losses in men heavy, and if it succeeded in capturing Pekin, for instance, there would be danger that the whole framework of the Government would go to pieces, plunging the immense Empire into anarchy and leaving nobody for the conquerors to treat with.

The claim of Lord Salisbury and his supporters in the House of Lords, that they had a right to insist on a dissolution of Parliament before passing the Franchise Bill, has, it is well known, roused the resentment of the Queen, as an attempt to invade the royal prerogative. She is, therefore, in spite of her dislike of Gladstone, in thorough sympathy with him in his present controversy with the Lords. This probably accounts for the news last week that Lord Salisbury has, through her "mediation" and that of the Prince of Wales, consented to compromise with Gladstone by agreeing to pass the Franchise Bill if the Redistribution Bill is submitted at the same time and is satisfactory to the Tory majority. Gladstone from the beginning offered to pledge himself to bring in a Redistribution Bill immediately after the Franchise Bill was passed. What he now concedes is, that the Lords shall see it before acting on the Franchise Bill, but he refuses to give them any control over it until they have acted on the Franchise Bill. In his Midlothian speeches he has been studiously cautious and moderate in speaking of the Lords, knowing doubtless what was coming.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 1, to TUESDAY, October 7, 1884, inclusive.]

DOMESTIC.

GOVERNOR CLENELAND visited Buffalo last Thursday evening, having gone on a special train that made no stops. The weather was very stormy, but the demonstration in his honor was the largest and most enthusiastic that Buffalo has ever witnessed. The Governor reviewed the parade and made a brief speech, which closed as follows: "Because I love my State and people I cannot refrain from reminding you that she should be in the van of every movement which promises a safer and better administration of the General Government, so closely related to her prosperity and greatness. And let me leave you with the thought that your safety lies in impressing upon the endeavor of those intrusted with the guardianship of your rights and interests a pure, patriotic, and exacting popular sentiment. The character of the Government can hardly rise higher than the source from which it springs, and the integrity and faithfulness of public servants are not apt to be greater than the public demand."

A large and enthusiastic meeting of Independent Republicans was held in Boston on Wednesday evening, October 1. The principal speakers were the Rev. James Freeman Clarke, D.D., Dr. William Everett, and Col. T. W. Higginson. Doctor Clarke, in the course of his remarks, said: "I recently visited Governor Cleveland in Albany, and spent an hour with him alone in his private room. He talked with simplicity and freedom, with a manner which carried conviction of its truthfulness. He did not pretend that he had not done wrong. He did not wish me to think of him as better than he was. But he thought he had a right to say that since he had been in public office, and for the last eight or ten years, no man could truthfully accuse him of having done anything to disgrace himself or to offend his friends. From what he said, I was satisfied that no one had suffered more than himself from his past errors, and I was convinced that he had left them behind. But I gathered this, not from any formal confession or profession, but from the depth of conviction with which he spoke."

A declaration made by the Rev. Henry Ward Beecher, in regard to Mr. Blaine, having been questioned, Mr. Beecher has printed a statement in which he says: "Toward the close of the dinner, September 29, 1877, political matters were introduced, and, among other things, Blaine's failure to receive the nomination that went to Hayes. Mr. Joy (ex-Congressman J. F. Joy, of Michigan) spoke with contemptuous severity of Mr. Blaine, and gave this statement: 'When a difficulty occurred in regard to certain lands in the Southwest, in which I was interested, a committee was about to be appointed by Congress to examine the matter, Blaine being Speaker of the House. Through a friend I asked Mr. Blaine to have one sound lawyer appointed on that Committee, I did not care of which party. I simply wanted a sound lawyer. In a day or two Mr. Blaine sent me word through a friend that he had certain depreciated bonds, and that, if I would enable him to place them at par, "*I could have my Committee as I wanted it.*"' I cannot forget with what cutting scorn Mr. Joy leaned back in his chair and said: '*That is the man Blaine is,*' and he added, 'I refused the offer, and, as the courts soon settled the matter, no committee was appointed.'"

A letter from Warren Fisher to Gustav Kobbe, written in July last, is as follows: "In April or May, 1880, Blaine sent word to have me meet him at the Fifth Avenue Hotel. He then authorized me to get the letters from Mulligan, pay $10,000 if I could not get them for less, and then wanted Mr. Mulligan and myself to go to Europe and remain until after election, all at his expense. Mr. Mulligan declined the offer. He said as Blaine had stolen his letters in Washington, he should never have what he held at any price."

It is reported that a number of influential Boston and New York Stalwarts inimical to Blaine held a meeting in New York recently, at which it was then decided to prepare an address, which will be passed along the lines from the Atlantic to the Mississippi, and circulated in every place where it will do the most good.

Mr. Blaine has spoken during the last week to large crowds in Ohio. From there he has gone to West Virginia. He will spend October 14, 15, 16, and 17 in Michigan. Beginning with the 20th, he will spend four days in Indiana. On the morning of the 24th he will be received by the Illinois State Central Committee at Danville, and will proceed thence to Springfield, Ill.

The Republican State Central Committee of Iowa, in a circular appealing for money, says: "Every Federal office-holder in the State has been recently the recipient of a circular from the Civil-Service Reform Association of New York city, warning him not to contribute to national, State, or other political organizations funds for political purposes. This is but a device of our political enemies to cripple the work of the Republican organization."

Dr. W. E. Forrest, the Republican candidate for Presidential Elector from the Sixth District of this State, has resigned in a letter saying, "I cannot conscientiously support the present nominee, James G. Blaine." Ex-Congressman C. M. Butt, of Wisconsin, G. W. Mygatt, a prominent Connecticut Republican, and ex-Representative E. N. Hill, of Haverhill, Mass., announce that they cannot support Blaine.

Some person fired into the car in which ex-Governor St. John sat, on Wednesday night, October 1, en route from Carlisle to Terre Haute. The ball passed through a window on the opposite side from the Governor, making a clean hole, and lodging in the side of the car a little in front of him. There is no clue to the identity of the person who fired the shot.

Governor Cameron, of Virginia, has narrowly escaped a duel with Col. J. B. Brady, a Republican candidate for Congress in that State. Colonel Brady, in a speech, declared that the Governor's course in this contest had been dictated by a desire to curry favor with the Democratic Legislature to save himself from impeachment on account of his connection with the Planters' and Mechanics' Bank matter. The Governor demanded an apology in the usual terms, and Colonel Brady "withdrew" his remark.

In the United States District Court at Indianapolis last Thursday, in the Blaine-*Sentinel* libel suit, the attorneys for the *Sentinel* filed a bill of discovery and twelve additional interrogatories. The bill denies the statement made by Mr. Blaine that he was secretly married to Harriet Stanwood at Millersburg, Ky., on June 30, 1850, alleges that Blaine was lawfully married for the first and only time to Harriet Stanwood in Pittsburgh on March 24, 1851, and makes interrogatories intended to establish the truth of the statements made by the *Sentinel*.

An influential Independent Republican Club has been organized in Providence, R. I.

A movement is under way in this city to nominate a non-partisan ticket for city officers.

The public debt statement for September shows a decrease of $12,047,039.

The President on Saturday reappointed Mr. Hatton Acting Postmaster-General for ten days.

Secretary Chandler has issued an important order in regard to the assignment of naval officers, which is intended to put a check to the favoritism that has long prevailed in the Department.

The International Prime Meridian Conference at Washington adjourned until Monday, with a motion pending that the Conference proposes to the Governments represented to adopt as a standard meridian that passing through the centre of the transit instrument at Greenwich. The French delegates opposed this very vigorously.

In the case of a man indicted for polygamy in the District Court at Salt Lake City, Judge Lane has decided that the Grand Jury indicted him legally. The exception taken was that all Mormons were excluded from the jury. The Judge says: "A juror, according to all human experience, cannot possibly be impartial in a trial of that kind if he believes in the right of practising polygamy, notwithstanding all human laws to the contrary. If he believes polygamy to be a command, a law proclaimed by the Almighty, it makes no difference how many human laws are passed; he will still believe polygamy right, because he thinks a higher law is governing him. Now, Congress intended to exclude this class of men from participating in the duties of jurors, from acting either as grand or petit jurors."

Connecticut on Monday adopted the constitutional amendment providing for biennial sessions of the Legislature by a majority of about 15,000. It will take effect in 1886.

The report of Superintendent of State Prisons Baker for the year ended September 30 makes the best financial showing in the history of the institutions. The figures are: Sing Sing, earnings, $239,285.27; expenditures, $176,070.95. Auburn, earnings, $114,307.19; expenditures, $115,078.88. Clinton, earnings, $47,506.66; expenditures, $99,371.22. Total earnings, $401,159.12; expenditures, $390,501.05.

The total tonnage on the Erie Canal up to October 1 was 3,589,669 tons, against 4,039,286 for the same period in 1883, and 3,657,171 in 1882.

The inductive influence which one current of electricity exerts upon another current in another wire, even when the two wires are several feet apart, has enabled Mr. Lucius J. Phelps to construct an apparatus for telegraphing between a moving railroad car and a station. It is found that a telegraph instrument in a railroad car will answer to the opening and shutting of the circuit in an insulated wire laid on the ground between the tracks almost as well as if there was actual contact between the ground wire and the instrument on the car.

Experiments with a new electric railroad motor have been satisfactorily made in St. Louis.

A mound, supposed to have been the tomb of a mound builder, was opened in Ohio County, W. Va., last Friday. The body had crumbled to dust, but a necklace made of the tooth of a wolf or bear was in a good state of preservation. A shuttle much like the shuttles now used was also found in good condition. But the most important thing found was a pair of earrings, much like the larger sleeve buttons now in use. They are of copper, rolled or hammered into thin plates, and stamped or pressed into concave and convex ridges or circles. These rings resemble very closely the ornaments seen in the ears of the figure cut on stone by the Maya people in Yucatan.

The will of John W. Garrett gives to his two sons and his daughter all his estate, except that it is provided that $100,000 shall be invested so as to produce $6,000 annually, to be expended by the Baltimore Association for the Improvement of the Condition of the Poor; for objects of benevolence and educational purposes $50,000 a year are to be expended. Thirty thousand shares of the common stock of the Baltimore and Ohio Railway Company are to be retained by his heirs for twenty years, "in order," his will says, "to aid in carrying out a line of policy which I believe has accomplished great results, alike beneficial to the city of Baltimore and to the State of Maryland, as well as to the many other States and communities which have been brought by the Baltimore and Ohio Railroad into close business relations with the city of Baltimore."

Frank S. Chanfrau, the well-known actor, died of apoplexy in Jersey City last Friday morning.

FOREIGN.

The cholera is decreasing in Europe. There were only eight deaths from it in France on

Tuesday, and only four new cases and one death in Spain; in Italy there were forty-three fresh cases and twenty-seven deaths in Naples, and twenty-one fresh cases and seventeen deaths in Genoa.

A cable despatch to the *Times* says: "There has been a sad decline in Dr. Koch stock during the week, since the Marseilles commission doctors made an elaborate report of many experiments with microbes, all of which were failures, and since Dr. Klein, a Bombay official and an expert, has shown contempt for the microbe theory by swallowing a quantity of bacilli without harmful result." Experiments made in the French hospitals show that sulphide of carbon is the best agent to restore the normal action of the bowels in case of cholera.

La Paix, President Grévy's organ, apropos of the reported alliance between France and Germany, says: "To make France strong, she must not be isolated from Europe, even if that implies common action with Germany. The French Government understands this, and cannot be reproached therefor."

A Paris despatch says: "The attempts that are being made here to excite the public mind against England and in favor of Germany meet with no sympathy. At a banquet at the Grand Orient to-day in celebration of the annexation of Strasbourg, a sentiment favoring an agreement with Germany was indignantly repudiated. Per contra, toasts were drunk to an Anglo-French alliance, and universal expressions of good-will to England were enthusiastically uttered."

Jules Vallès, the celebrated French Communard, in an article published in the *Le Matin Français*, bids Germans and Frenchmen beware of rousing the dormant spirit of Englishmen. He says that, although England has no immense standing army, in the event of war soldiers would spring from the ground. The whole militia and volunteers, in fact every man able to use a rifle, would rally round the Union Jack. He warns Germany of the presence in that country of Socialism, which is an ever-menacing danger.

The French Cabinet has sanctioned a credit of 2,000,000 francs for the purpose of rebuilding the Lyons fortifications, and thus providing work for the unemployed.

The French Minister of Public Works has signed a concession for an underground railway for Paris.

It is said that the Budget Committee, upon the opening of the French Parliament, will recommend the conversion of the 4½ per cent. rentes into either 4 or 3 per cents, causing an annual saving of $600,000.

Prime Minister Ferry, in a note to the British Embassy explaining the measures adopted by France for the safety of foreigners in China, says that Admiral Courbet was instructed at the beginning of the war not to injure any of the foreign concessions. The note concludes with assurances of France's solicitude for the interests of English commerce.

A serious riot among the coolies occurred at Hong Kong on Saturday. Some of the boatmen refused to convey cargoes to the French ships, and a general strike followed, resulting in disorder. The populace maltreated the police, who endeavored to preserve order. The military finally quelled the disturbance.

While there have been constant reports of peace negotiations between China and France during the last week, there has been a renewal of active hostilities. Admiral Courbet reports: "I commenced operations against Kelung on Wednesday, October 1, by occupying the height of St. Clement. The Chinese forces, after a fairly warm engagement that night, evacuated two of their works westward of the height, which we afterward occupied. Our loss was four killed, one missing, and thirteen wounded. The Chinese loss is estimated at from 80 to 100 killed, and from 200 to 300 wounded." The occupation was completed without further loss.

The French gunboats *Mousqueton*, *Massue*, and *Hache*, while cruising in advance of a party which was reconnoitring in the valley of the Lochuan, were attacked by Chinese regulars. The Chinese account says that one French officer was killed and thirty men were wounded. General Delisle reports that, hearing that the Chinese troops between Bac-le and Langson were moving forward, he took measures necessary to drive them back. A brilliant engagement ensued, four thousand Chinese troops being pitted against him. The commander of the *Massue* was killed in the fight. When the despatch was sent, the Chinese were being steadily driven back and had lost heavily.

A despatch from China to the London *Times* last Thursday gave a detailed account of the reported efforts at mediation between France and China by the American Minister, Mr. John Russell Young. According to this report, when Li Hung Chang found that Mr. Young was merely to reiterate the French demand of the ultimatum of August 19, with the additional statement that Admiral Courbet would continue operations, he replied scornfully that France had entered the Min River peacefully, but had destroyed the arsenal and a fleet constructed by Frenchmen. After avenging Langson twenty-fold the demand of the French for indemnity was monstrous. The Tien-Tsin Convention made every possible concession to France, and why should she seek more? China had been willing to conciliate and satisfy France. Now she was determined upon war *à outrance*.

Hans Makart, the celebrated Austrian painter, died last Friday of brain disease, aged forty-four years.

The St. Petersburg *Russia*, a Slavophil organ, says that, at the recent meeting of the three Emperors at Skierniewice, a proposition was adopted, at the instance of Prince Bismarck, to permit Austria to annex Bosnia and Herzegovina without Russia or Germany protesting.

The journals of Rome regard the bestowal of a decoration on Signor Mancini by the Czar as a proof that Italy will remain a member of the alliance of the Central Powers of Europe, and that her sympathy with England regarding Egyptian affairs has not altered her friendly relations with the other Powers.

The Belgian Government has expelled from the country two Frenchmen who were publishing attacks upon the King and Queen of Belgium in a Republican journal. A crowd escorted M. Ditre, the French editor of the *Nationale*, who was expelled from the country, to the depot, with shouts of "Vive la République." Troops were necessary to guard the railway, and the mob made demonstrations at the palace.

The Copyright Congress has closed its sessions at Brussels. It passed resolutions that the publication and reproduction of musical works should have the same protection as literary and artistic works; that art ought not to be impeded in its progress by customs formalities; that the right to reproduce a work belongs to its author, independently of its material property; that any reproduction of a work without the permission of its author will constitute an infringement of the author's rights; and that an artist who sells his work to the state foregoes the right to reproduce his picture unless permission to do so is stipulated.

A council of Roman Catholic Archbishops and Bishops, held in Dublin, has passed a resolution to confide to the Irish members of Parliament the duty of submitting to the Government questions upon university education and the grievances of nuns employed as school-teachers. The *United Irishman* says that they thereby proclaim themselves Parnellites and consecrate the National party.

A meeting of the National League announced to be held at Ballinderry, Ireland, has been proclaimed by the Government.

It is said that the British Government will introduce a proposition into Parliament to make an annual allowance to Prince Albert Victor, son of the Prince of Wales, of £10,000. Mr. Labouchere and other Radicals have decided to oppose the measure.

The Marquis of Salisbury, the Conservative leader in the House of Lords, addressing a meeting of that party in Glasgow on Thursday, said that the present state of affairs in Ireland was due to Mr. Gladstone's zigzag policy of extreme lenience and savage oppression. All the European Powers were united against England. The Egyptian dilemma was not owing to the fulfilment of Lord Beaconsfield's engagements, but to the procrastinating policy of the Liberals. Lord Randolph Churchill, in a meeting of Conservatives at Leeds, said that a Franchise Bill and a Redistribution Bill would have been passed by the Tories in 1866 but for the opposition of Mr. Gladstone and Mr. Bright to Lord Beaconsfield's measures. He regarded the opposition of the Powers to England as a serious matter.

A Vienna despatch says: "The tension respecting the suspension of the Egyptian sinking fund is passing away. The Powers are waiting for the term to expire which was fixed for the withdrawal of the measure. They would have consented to the measure if England had consulted them thereon." A Berlin despatch says: "The British Government is about to reopen negotiations with France in relation to the settlement of Egyptian affairs."

General Gordon, after bombarding Berber, has recaptured that town. This will enable Colonel Kitchener to reach General Gordon from Dongola, and to ascertain his wishes regarding the Nile expedition and his opinion as to what necessity there may be for the expedition going to Khartum. The conference may result in the abandonment of the Nile expedition altogether. At Shendy General Gordon, finding the place deserted, nailed to the trees a proclamation offering to pardon the people. The Mudir of Dongola, in an interview with Colonel Stewart, guaranteed that the villages along the route of the Gordon relief expedition should supply the expedition with provisions and camels. It is reported that the Mahdi is advancing toward the White Nile.

The whole of Colonel Stewart's party has been murdered. The steamer struck the rocks and they were unable to float her. A bargain was made with the Arabs to provide camels and conduct the party through the desert to Merawi. The Arabs proved treacherous, however, and massacred the first party which landed; then boarded the vessel and killed those who remained, except four men.

The bullion drawn from the Bank of England last Saturday, £131,000, will come to this city.

An association is forming in London for the protection of holders of American railway securities.

Two of the Atlantic cables—those laid in 1882 from Nova Scotia to the coast of Wales—have broken about 700 miles from the American coast.

Henry M. Stanley was given a banquet by the Chamber of Commerce at Wolverhampton, Eng., last week. In response to a toast, he referred to the trade of the Congo country, and said that in cloths alone at 2d. per yard the manufacturers of Manchester might realize £26,000,000 annually. He said that the way to secure this advantage was to urge upon the British Government the necessity of sending two cruisers to the mouth of the Congo River, pending the decision of the European Powers upon the Congo question.

Mr. George Stephen, President of the Canadian Pacific Railroad, has sailed for England to establish a line of steamers in connection with his road between British Columbia, Japan, and China.

The royal palace at Copenhagen was burned last Friday night with the archives of the Rigsdad and some works of art.

Iceland was on September 11 visited by a terrible hurricane, which caused a great loss of life and wrecked a great many vessels.

POLITICAL NEUTRALITY.

We have received several letters asking for advice as to what voters are to do who "cannot" vote for either Blaine or Cleveland, and some calling strenuously on the Independents to meet this difficulty by nominating a separate ticket, containing the names of men of undoubted integrity and eminence. To the former we make the answer we made a week ago in discussing "the conscience vote," that the phrase "I cannot vote for either Blaine or Cleveland," really means simply that "I do not like to vote for either Blaine or Cleveland."

The difficulty is due to forgetfulness of two things: one is, that no man who has a vote can avoid taking part, either directly or indirectly, in the Presidential election, because if he does not vote himself, he doubles the power of somebody else's vote; the other is, that no man's vote is his property. The use of it does not concern himself alone. When he uses it, he uses it for a purpose which affects all his countrymen as much as it affects him. In other words, he holds it in trust for all Americans. It is, therefore, no more his to throw away than it is his to sell. In fact, the man who sells his vote does so in many cases under the same delusion as to the nature of the franchise as the man who refuses to exercise it. Each fancies that it is somehow "his," to do as he pleases with. One raises a little money with it on election day by taking a bribe. The other uses it to procure himself the feeling of self-satisfaction which comes from having avoided responsibility. But both act corruptly. Neither was entitled to use his vote for his gratification solely. Both were bound to use it in providing the country in which they live with a government. That is what the franchise is for. It was never intended to be something that would make everybody feel comfortable, or that would give everybody the kind of President he liked, or that would enable him to show to the world the sort of man he thought the President should be. We hold, therefore, that in this election everybody is bound to vote for either Blaine or Cleveland as the two candidates one of whom is almost certain to be elected, unless he is a Prohibitionist, and desires to vote for St. John as a means of strengthening the Prohibitionist party, and in the hope and belief that it will one day be strong enough to take possession of the Government. That is to say, a conscientious supporter of St. John ought to be a person who considers prohibition the most important cause of the day, and the one whose triumph will be the greatest national gain. But we should not call a conscientious voter a man who voted for St. John simply because he did not like either Blaine or Cleveland. A vote should express a man's real sentiments on what he considers the greatest question of the day. But a vote cast for St. John by one who was not a Prohibitionist, and who cared nothing about prohibition, would not express his real sentiments on what he considered the greatest question of the day; nor would it indicate clearly that he disliked Blaine and Cleveland both. In fact, it would be a sort of fraud on the public, because it would produce the impression that the Prohibitionist cause was stronger than it really is.

The difficulty which those feel who disapprove both of Blaine and Cleveland will, we think, be removed if they will get rid of this idea that they own their vote, and bring home to themselves the consideration that they hold it simply as a trust for nine or ten millions of other voters. If the ballot be viewed in this way, the notion that one need not vote at all, or may have a little parlor election of one's own and vote for a doll candidate, which some clergymen are preaching, will rapidly disappear. As a trustee the voter's sole duty on election day is to aid in providing his countrymen with the best President within reach—that is, the better one of the two whose election is most probable. With the provision of a perfectly pure, or perfectly honest, or perfectly wise President he is not charged, and has nothing to do. His opinions about what a President ought to be are of no more consequence on that day than his opinions on man's place in nature. Whether Blaine is honest or Cleveland is chaste, will not be the question which voters will have to consider in casting their votes on the 4th of November next, but which of the two is likely to perform best the duties imposed on the President by the Constitution. Much as we dislike and distrust Blaine, we should feel it to be a duty to vote for him if no one better offered, for the simple reason that the United States must have a President, and must take a mendacious man or a jobber for four years, if it cannot do better. Any voter, therefore, who thinks Blaine better fitted for the place than Cleveland, ought to vote for him. Any voter who thinks Cleveland better fitted for the place than Blaine, ought to vote for *him*. To do anything else is really as absurd as would be the conduct of a passenger on shipboard at sea, who, if a successor to a deceased captain had to be chosen by ballot, were to refuse to vote at all because the candidates in the ship were both profane, and were to go to one corner of the cabin and cast his vote for some religious mariner on land whom he greatly admired and respected.

The work of enlightening public opinion about political ethics, and of raising the standard of character for public men, has to be done by constant discussion before nominations are made, and by punishing at the polls the party which makes the worst nomination. All the signs of the times go to show that it is only by acting with one or other of the great parties on election day, that those who seek to purify politics will hereafter be able to accomplish anything. Parties are now such immense organizations, their momentum is so prodigious, the mass of opinion to be moved so huge, that attempts to resist them in the national arena by organizations hastily improvised a few weeks before election, must necessarily prove futile if not ridiculous. Under a government by party, like ours and like the English, abuses of power have to be chastised and prevented either by exclusion or expulsion from power, and this can only be done through the instrumentality of one of the great political armies into which the mass of the voters, through temperament or tradition, naturally divide themselves. And once the nominations are made and the election day set, the work of the moralist is strictly one of comparison. By refusing to vote because there is no candidate in the field who comes up to his standard, he simply brings morality into contempt with the plain people, who know that there never was and probably never will be a ruler of men on whom the eye of the lover of human perfection could rest with absolute content.

LIE BUILDING.

The art of lying is probably the oldest of all the arts, having been practised from the remotest antiquity and cultivated by some of the ablest men of all races, and has been the subject of an enormous amount of discussion in literature and oratory. One might fairly expect, therefore, that by this time any one who resorted to it, either for pleasure or profit, would be fully aware of the conditions under which either pleasure or profit can be got out of it. No one has in modern times made such a public display of love for it as Mr. Blaine, and yet it is curious to see how far short he falls of being a master in it. There is not one of his best-known falsehoods which will bear the examination of a critical eye. It is, we believe, a well-recognized canon of the art that general propositions, covering everything and everybody and all time, should only be used when the subject-matter of the lie is known only to the liar himself, and when, therefore, the chances of detection are infinitesimally small. When, on the other hand, knowledge of it is shared by anybody, however near and dear, were it even the wife of one's bosom, common prudence requires that a public lie should be well guarded by terms of reserve, qualification, and exception. A line of retreat, in other words, should always be left open, because no liar who is in anybody else's power can be perfectly secure against betrayal.

We grant that a perfectly truthful man when repelling a charge on his honor is very apt to make his denial sweeping, and that the more sweeping it is the more credence he is likely to receive. But then a practised and skilful liar, unless he is trying to make his escape from a momentary and pressing emergency, such as arrest by the police, and desires not to be heard of afterwards, and is willing to drop his character in his flight, always leaves himself some little loophole of escape. He knows that the broad generalizations of the truthful man will not do for him, any more than a very extended line will do for a general whose force is small. He is therefore very particular to put limitation into his statements, either as to time, place, or quantity. A real master in the art, in meeting the charge about the Little Rock and Fort Smith bonds, would never have said that he had paid for them at "*precisely* the same rate" as others; he would have said "at *about* or *nearly* the same rate as well as he remembered"; and, above all, he never would have been so clumsy and superfluous as to say he "*never had one* except at the regular market price." He would have said he "doubted if he ever had one," "had only a few," or something to that effect. Nor would he have said that the Little Rock Road derived its "life,

franchise, and value *wholly* from the State." He would have said *mainly* from the State. Nor would he have put the words "directly or indirectly, immediately or remotely," into the Tom Scott falsehood; they were not necessary, and they shut up every avenue of escape.

Similar want of judgment and artistic skill was displayed in the construction of the letter Blaine wished Fisher to sign. All those who have shone as practisers on human credulity are, we believe, agreed that the key in which you lie about a transaction should not be higher than the nature of the transaction seems to call for. If you are describing something very wonderful, your language may be emphatic, ornate, and exaggerated, as indicating the deep impression made by the affair on your own mind. But if, on the other hand, you desire to make an extraordinary transaction seem an ordinary, commonplace one, your language can hardly be too tame and prosaic. Of unskilfulness under these circumstances there can hardly be a better illustration than the letter which Mr. Blaine drafted for Mr. Fisher to sign. The object of that letter was to make people believe that the receipt of a large amount of bonds as a commission was really nothing more than the purchase of a small amount of bonds as an ordinary investment. Fisher ought, therefore, to have been made to tell about it in the coldest, dryest, and most matter-of-fact way. He ought to have been asked to write:

"DEAR BLAINE: I remember your purchase of $30,000 Little Rock and Fort Smith bonds very well. You paid me for them by check, and there the matter ended, as far as I am concerned.
"Yours sincerely, WARREN FISHER."

Instead of this Blaine sought to make him put in a certificate that the transaction was as open as a purchase of "flour or sugar," and that Blaine's share in it "was in the highest degree honorable and straightforward," or in other words to give the transaction the air of something marvellous as a display of virtue.

We may seem to be attaching more importance to this matter than it deserves. But it must be remembered that a good many of us are preparing to put in the Presidential chair the greatest public lie-builder the modern world has seen. The eyes of our young men are fixed on him, of course, and watching how he does his work, and he is receiving warm praise from many of the clergy and other moralists. It is of the last importance, therefore, that we should be sure that he is really a master in this art and not a mere pretender. If our ambitious young men are to lie boldly, they ought to know how to lie well and skilfully, and not to be led astray by false models. Their lies ought, in short, to be so framed as to be capable of an "honorable construction" on the stump and elsewhere, and this is impossible if they are taught to use general terms recklessly, or to call the "great Searcher of Hearts," or 44,000,000 of people, to witness sorry little "business transactions" about which an office boy would be a witness too many.

A CHILIAN VIEW OF "THE KNIGHT."

THOMAS NAST'S recent cartoon showing Tweed, from behind the bars, congratulating the Republican candidate for the Presidency upon being outside, must have revolted many minds. Waiving the question of the justice of the parallel implied, "What!" the Independent's first thought should have been, "can it be necessary to assume that there is a class of voters—of Republican voters—who regard any man as fit for the Presidency who has not been proved to have merited the State's prison?" "Gently," the caricaturist might rejoin. "Let me alone to know when to apply the thin and when the blunt end of the wedge. Must we not suppose the existence of such a class at the bottom, when at the top there are men in plenty on whom your nice points of official trust and honor and personal integrity make no impression whatever? And if the candidate himself draws the line of his friendships (as in the case of Dorsey and Belden) just outside the State's prison, would not satire more delicate than mine be wasted on any section of his followers?"

A candid reply to these interrogatories involves the confession that the alarming symptom of the present contest is not Blaine himself. It is the Senator who sees no indecency in the Speaker's making his decisions merchantable after the fact. It is the Judg eindifferent to the perjurer's forging a lying vindication. It is the Lawyer who finds no breach of trust in the Little Rock National Bank transaction. It is the Merchant who thinks it the Congressman's business to help his money-making constituents. It is the Clergyman who did not expunge from the list of possible Presidential candidates the man who broke his word to Mulligan. It is the Editor who changed from opposition to support after the evidence had become not less, but more—overwhelmingly—convincing. In short, the mortifying truth stares us in the face that the indecent, faithless, self-seeking, speculative, unscrupulous politician whose election we are striving to prevent, truly represents an indefinite number of his countrymen. As "a representative of American manhood" he was nominated by Judge West at Chicago, and if elected he will, in the eyes of all the world, stand as the pattern and measure of that manhood.

To a large extent he already stands for that by the mere fact of his nomination. *We* know how this was brought about—that it was as little spontaneous as the Caldwell cablegram, or the exculpation which Warren Fisher did *not* father. But its acceptance with hurrahs by the self-styled party of moral ideas, and its deliberate palliation and support by politicians of the rank of Senators Hoar, Dawes, and Hawley, have irretrievably made it the gauge of the integrity of the whole people. As such it is being discussed by foreign critics, and perhaps nowhere more instructively than in Chili. That country not only has a formidable navy, which we have not, and so can view Mr. Blaine's accession to the Presidency without alarm, though not without apprehension of annoyance, but has old-fashioned ideas, quite outgrown in the United States, as to official purity and sensitiveness. When the proceedings of the Chicago Republican Convention reached her, a writer in a leading review at Santiago undertook to explain what the nomination implied. His article has since been published as a pamphlet, having "Blaine" for its simple title, though in its range of explication it takes in both the "tattooed" statesman and (like Mr. Nast in his cartoon) the great Ring Boss. The Little Rock ruling and the payment demanded for it he considers "a personal incident which in any other country would have proved fatal (*lápida funeraria*) to a public man, although in the United States it is but a passing shadow, or even an incentive to his following of friends and workers to rally round him."

But Señor Vicuña Mackenna is yet more fastidious, and we doubt if "dude and Pharisee" expresses the degree of political dandyism which he goes on to display. He devotes a chapter to the familiar and endearing abbreviation of the candidate's Christian name, "Jim," and says:

"In the United States, apparently, the law of gravity which in our country is an essential condition of the highest influence and of elevation to the highest office, does not prevail. In the United States, not only is it possible to elect President a man who is called 'Jim,' and who consequently lives in close intimacy (*comunidad*) with the voting class, but he will probably be elected because he is so called. Another well-known Washington politician lately predicted 'Jim's' election on the ground that the Republican candidate lives, like Lincoln, 'close to the people,' whereas in Chili just the reverse would be the result."

Remarks like these will justly offend electors who listen nightly to "the popular campaign song, 'Jim and John,'" or to "Jimmy's Train," as we read in a party organ. But those who study the relation between the rascality of both parties and the prominence of men with nicknames among the leaders, will conclude that the Chilian's instinct is correct; that there will be no surer indication of improvement in the tone of our politics than the disappearance of these nicknames from the circle in which Presidents move and have their being; and that the caricaturist who groups "Jim" Blaine and "Bill" Tweed has at least pointed out a logical nexus between them.

MONEY IN ELECTIONS.

THAT the use of money in elections has become a menace to our institutions, is well understood by all thoughtful persons of whatever political bias. The subject is never mentioned without a shudder, except among those who habitually disburse or habitually receive the enormous corruption funds which are collected and paid out every time the people are called upon to vote for a President of the United States, and the lesser funds that are scattered at lesser elections. The State of New Hampshire has become a hissing and a by-word expressive of the lowest possible depths of degradation, as the State of Rhode Island was some years ago. The State of Indiana was the scene of an awful pecuniary debauch at her State election four years ago, and the most depressing feature of the whole affair was that a public meeting was held in New York, attended by "the most respectable people," to celebrate the transaction, in which the use of "soap" was alluded to by eminent speakers as a most mirthful incident and uncommonly good joke practised at the expense of the other party. The other party were ready to spend all the money they had or could raise to turn the laugh on the Republicans, but they did not have enough, and this was the real point of the jest at the famous Dorsey dinner. Since that time eminently respectable people who attended the

dinner and whose money had perpetrated the great Indiana joke, have never heard the subject alluded to without a creeping sensation along their spinal columns, because they have realized that the event thus accomplished and celebrated was really a step toward their country's ruin. After due reflection they have perceived that, in order to uproot and utterly destroy republican institutions, it is only necessary to multiply the Indiana example and spread it over all the States and election districts of the country.

"Very well, what are you going to do about it?" asks some hardened soap-boiler. "Have not people the right to give their own money to sustain their own political principles and their own party?" Unfortunately, yes, as the law now stands, but they have no natural right to reduce their country to the condition of Rome under the Cæsars, under the semblance and pretence of promoting political principles. Great Britain has gone through all the stages of corruption at the polls that we are now wallowing in, and after struggling many years against *bribery at elections*, as we have struggled, and after being beaten at every turn by the new forms of bribery which have turned up—all proceeding on the theory that people have the right to spend their own money in their own way—she has gone to work at the other end of the problem, and prohibited the expenditure of more than a certain amount of money at any election for all purposes whatsoever.

This remarkable law, prepared after some three years' labor, under the direction of Sir Henry James, Her Majesty's Attorney-General, was finally enacted in 1883. It begins, as we have said, at the other end of the bribery question. Former laws had prohibited the receipt of money for this or that purpose, connected with elections. This law prohibits the contribution or disbursement of more than a fixed amount proportionate to the size of the constituency. A borough constituency of 2,000 electors is allowed £350 sterling to each candidate if one member of Parliament is to be chosen, and £525 if two members are to be chosen. The maximum sum for a borough of 66,000 electors is £3,000. This sum must cover all expenses for printing, postage, hiring rooms, hiring agents, clerks, teams, and everything else. All disbursements must be made by one person, either the candidate himself or his agent. If he employs an agent to disburse money, he cannot disburse a farthing himself—the agent must disburse the whole. An account, with vouchers, must be kept of all disbursements and returned under oath to the proper officers after the election. Penalties for paying more than the allowed sum are visited upon the candidate and the agent in the form of political disabilities if the payment is not accompanied by bribery. If bribery is involved, then the existing penalties for bribery are superadded. The safeguards are as extensive and minute as the evils intended to be cured. The whole act is a monument of painstaking thoroughness. It has not yet been subjected to actual trial, having been put in force only one year ago; but there can be little doubt that it will effect a most wholesome and necessary reform. The last general election in Great Britain is estimated to have cost the candidates for the House of Commons $7,500,000, of which all but a mere fraction went for the purchase of votes under one guise or another.

To this complexion must it come at last in the United States. Our system of government is not as well adapted to one comprehensive measure of regulation as that of England. But Congress has the power to regulate the elections of its own members in every particular. A measure proceeding upon the same lines as that of the British Act, and applying to the election of Congressmen, would be perfectly constitutional and feasible, and if passed would set an example which the several States would be likely to follow. At all events a beginning must be made somewhere, as it was made with civil-service reform. The difficulties attending it would be far less than those which have stood in the way of civil-service reform, because the evils to be combated are more patent and more deeply felt.

THE THREE EMPERORS' MEETING.

The meeting, three weeks ago, of the Emperors of Russia, Germany, and Austria-Hungary at the Czar's château in the Polish town of Skierniewice, was naturally, during and even before its occurrence, the subject of much journalistic speculation in the press of all Europe. That it was not intended to be merely a gathering for the exchange of personal courtesy or neighborly feelings on the part of the three crowned heads, on occasion of Alexander III.'s first visit to his Polish Kingdom, was evident from the presence of all the respective Ministers of Foreign Affairs, M. de Giers, Prince Bismarck, and Count Kálnoky, as well as of a number of other prominent diplomatists and Ministers of State, such as Prince Lobanoff, Counts Tolstoi and Vorontzoff-Dashkoff, General von Schweinitz, and Count Wolkenstein. That its outcome was to be a strengthening of the ties of political friendship between Bismarck's Central-European coalition and the Empire of the Czar, could not be doubted, unless the diplomatic conferences, begun with such august preparations, were to end in total failure. The question was, What were the special aims of the meeting, its first objective points, the conditions of the mutual agreement?

One point was clear: concurrent measures would be considered for the protection of the three empires, their internal peace and order, and the lives of their rulers, against the plottings, secret and open, of anarchical conspiracy. The danger to the various states and provinces is common, and equally pressing. The Socialists of Germany, the Nihilists of Russia, the Anarchists of Austria-Hungary, are equally active and reckless. The race of the Hödels and Nobilings, Ryssakoffs and Zhelyaboffs, Stellmachers and Kammerers, is far from being extirpated. Against the common foe a common policy of repression must be adopted.

Beyond this point everything was mere surmise. Was a Continental union against England contemplated, in the interest of the equilibrium in the East, disturbed by her exclusive and overbearing action in Egypt, of Russia's advance in Central Asia, of Bismarck's new colonial policy, and of general political reaction? Were the affairs of the Balkan Peninsula to form the main topic of discussion, with the object of smoothing away the unfriendly feelings caused by the antagonistic attitudes of Russian and Austrian diplomacy on the Danube and the Bosphorus, by the late Russian intrigues in Bulgaria, and the more recent leanings of Rumania toward Belgrade and Vienna? Was the Czar, for the sake of much-needed peace and moral support, to give in a more unequivocal adhesion to the stipulations of the treaty of Berlin, and acquiesce in Austria's permanent occupation of Bosnia and Herzegovina, though it renders Servia her virtual vassal, places her foot upon Bulgaria, opens to her the road to Salonica, and isolates Montenegro? Or was the Polish question once more to be reopened, and Francis Joseph to give assurances to his allies that the national freedom and preponderance which the Poles of Galicia enjoy under his sceptre would be kept within bounds, so as not to disturb the tranquillity of the Russian military rulers on the Vistula and the Prussian bureaucrats on the Warthe? Was Russia to promise, in compensation, that Panslavic agitation against the Hapsburgs would be discountenanced among Ruthenes, Serbs, and Croats? Were possible changes in France, certain eventualities in the Dutch succession, or even the chances of a general disarmament in Europe to be taken into serious consideration? Were new treaties to be concluded? All these questions were mooted in the unofficial press. The Government organs were almost completely silent.

And to all these questions no answers have as yet been given officially, semi-officially, or by "well-informed" correspondents. The European newspapers of the 15th, 16th, and 17th of September teem with telegrams from Skierniewice, but these refer only to trivial particulars of arrival, reception, salutation, housing, dining, embracing at leave-taking, etc. The secret of the conference has to this day been strictly kept, as far as our information, through mail and cable, of what is publicly known in Europe goes. Certain impressions, however, prevail which, owing to reasons inherent in the situation, to more or less vague semi-official utterances—such as those of the *Journal de Saint-Pétersbourg* of September 18—to the absence of communications to the contrary, and to certain indications posterior to the Imperial meeting, have the value of great probability. They may be summed up thus: The discussions were brief, harmonious, and friendly. The leading influence was that of Germany, through Prince Bismarck. No new treaties have been formed. The Austro-German *entente cordiale* remains unshaken. Russia informally accedes to the alliance, and the old three Emperors' union is thus revived. Its main object is peace and the preservation of the order of things as created by the last international treaties. Anarchy is to be vigorously combated by harmonious action, repressive and preventive. No race agitation detrimental to the interests of one of the empires is to be allowed free scope in another. Mutual interests are to be cordially promoted, possible collisions in the field of foreign diplomacy avoided, and all complications that may arise approached in a spirit of friendship. France is to be treated with friendly forbearance. England's encroach-

ments on rights internationally established are to be checked by concerted opposition. No common external movement, no partition or repartition of territory, no reactionary crusade is meditated.

All of which, if correct, means that the three Emperors would like to live in peace with their subjects and their neighbors; that they are afraid of revolutionists, and will do their best to keep them down; that they are too much distracted by difficulties within to think of great foreign enterprises; that national propaganda, as being revolutionary in character, is distasteful to them; that they are not afraid of France, and are annoyed by England; that they know there are many new complications ahead, but find no formulas under which to shape mutual action; that they are ready to follow Bismarck, as the wisest and strongest of guides, as long as he can lead and they are allowed by their subjects to be led by him; and, finally, that thus the *status quo* remains—with all its conflicting interests, discontents, ferments, underground activities, iron exigencies, and uncertainties as to the morrow.

DISINTERESTED CURIOSITY.

In Mr. Matthew Arnold's admirable remarks on the position in literature of George Sand, which appeared in the *Pall Mall Gazette* a few weeks ago, he somewhat inadequately and vaguely, but still very effectively, distinguishes the work of the idealists and realists among writers as being inspired the one by the motive "Let the good prevail," the other by disinterested curiosity. The influence and spread of the first motive we do not propose to discuss; but let us consider this point of "disinterested curiosity." Mr. Arnold is not the inventor of the phrase, but in adopting it he has, after his familiar fashion, made a catch-word of it, and we shall all be using it now. Let us see with what justness, if we continue to apply it—as Mr. Arnold applies it—to Balzac and his imitators and followers.

One must think twice before "doubting" Mr. Arnold, but certainly in this case the more one thinks the more one feels sure that had the phrase been of his own coinage it would have been an apter one. It is, indeed, in our judgment, so inapt, so inappropriate in such connection as this, that, while it might be permitted to pass heretofore, now that Mr. Arnold has made use of it as criticism, such use should be shown to be false, and such criticism unfounded.

Disinterested curiosity is precisely the quality of which Balzac and his successors give the least possible proof. Mr. Arnold justly admits, with regard to his followers, that "we can hardly say that the motive of their work is the sheer motive of curiosity. It has become a mingled motive of curiosity, cupidity, and lubricity." Something of all this their great master had, but far beyond any "curiosity" in him is his quality of a magnificent *showman*, and the kindred quality of appreciation and enjoyment of the *dramatic* element in common life. It is in regarding this that M. Taine's comparison of him to Shakspere ceases to seem absurd; and it is his extraordinary power in this direction which Mr. Arnold overlooks with his odd antagonisms of "Let the good prevail," as Shakspere's "motive," and disinterested curiosity as Balzac's.

Disinterested curiosity is perfectly descriptive of Jane Austen's view of life. One feels at once that she had been "curious" about the human beings she saw, that consequently she had observed them, and that observing them she had most "disinterestedly" and carefully painted them. Hers is the true disinterested curiosity of the scientific naturalist working from interest in the investigation itself, and giving his results to the world with perfect accuracy unaffected by any personal bias and impelled by no desire for fame. Balzac's method was certainly not such. The desire for fame was not only the ruling passion of his life, but it throbs through all his work, infusing into it a personality of exceptional force. All Balzac's characters talk his language, the Balzac dialect — they are marionnettes, mere marionnettes, but the most wonderful marionnettes ever seen, which his genius, by its immense dramatic power, places in positions and relations in which they excite as keen an interest as if they were real flesh and blood. This is not an achievement due to disinterested curiosity. And all the weaknesses of Balzac's work—its grossness, its snobbishness, its infinite engrossment about money—are *his* weaknesses, and are due to the fact that his curiosity, such as it was, was always of a singularly *interested* kind, and occupied itself only with the things which appealed to his own nature, and were precisely serviceable to his needs as a creator. One feels that he was always consciously searching for men and women to fill up the "cadres" he had already arranged, and was forever selecting his models for the great picture on his easel. He did not go about the world disinterestedly observing and constantly taking here and there careful little sketches. We doubt even if he made many of those excellent notes which Mr. Henry James considers so essential to the novelist. He was too eagerly busy at his writing table, he was too much hurried by the debts forever knocking at his door. He knew where to find what he wanted to see, and he knew how to paint it, in such light and shadow as he chose to throw upon it, with incomparable vigor in the delineation of detail.

This character of indoor work still more markedly belongs to the (so-called) realists of to-day, M. Daudet and (but we speak here with less fulness of knowledge) M. Zola. Their brilliant ingenuities are for the most part wrought from their own intelligences, with little direct reflection of the vast world outside and the play of human nature under eternal skies. Even their successes connect themselves with limitations of outlook and reveal astounding ignorances. Such work is not realism, is not naturalism. We must maintain that Balzac was no true naturalist, though his design was to make the 'Comédie Humaine' "a *natural history* of mankind," and though M. Taine declares his talent to have been in harmony with his design. Mr. Arnold ought to bestow on the world, which has too long submitted to this nomenclature, a new word for the results which Balzac attained, and a new phrase for the process by which he attained them.

KING AND CHOLERA.

Florence, September 15.

In the good old times which a certain class of northern travellers lament because they were so "picturesque"—and not so very old, either, that some of us cannot remember them—the King of Naples, nicknamed Bomba, being displeased with the performance of a military band, ordered them to be thrown on the ground and a body of cavalry to ride over them; and the general officer who did *not* obey the royal mandate was put under arrest. This was the way the Bourbons had disported themselves for generations on the necks of their subjects; nobody interfered till the French Revolution, after which Nelson restored them to the throne they had forfeited, because they were the lawful sovereigns and had a right to do what they liked with their own. "Only let me have Naples in my power for twenty-four hours and I will be content," cried the demoniacal Caroline, and she had her vengeance on the devoted city. But the æsthetic travellers found all charming as an Eastern romance, and the poet Goethe writes of the "noble qualities" of Ferdinand and Caroline. It was altogether a tolerable state of things, except for the people trodden upon. Now and then they turned, as a worm will, and were stamped on more furiously every time. Their heads were cut off, they were exiled, imprisoned. Their priests made no pretext, no attempt to raise them from their grovelling condition. Thus the Liberator found them, a hungry, semi-nude, uncivilized people, but not wanting in some fine native qualities. They ran riot, and, with all their passionate gratitude to him, and his wonderful powers of fascination, he could not rule them. The wildest disorders prevailed till the royal authority at last was invoked and put an end to the anarchy.

Since then roads have been made, railways introduced, schools opened; but the clergy, being in a state of normal opposition to the Government, and averse always to the idea of educating the *basso popolo*, have acted as a drag on the progress of the country. Still, much has been done the last twenty years, and let us hope when this terrible scourge is passed, much more will be done to cleanse the beautiful city and improve the condition of the inhabitants. When we take into consideration the antecedents of this people, we cannot be so severe on the recent outbursts of folly and superstition in the cholera panic. They shut their gates against the invasion of cholera, and they attempted to kill some of the doctors as poisoners, but the municipal authorities did not desert their posts, nor did the poor abandon their helpless relations.

As a set-off against the behavior of the poor Neapolitans, the rest of Italy to-day presents a spectacle of calmness, courage, activity, and brotherly kindness which, I venture to say, few nations have ever surpassed. The Government is spending an unlimited amount of money, which the nation is willing to pay; every town is sending large collections of money and provisions, bands of doctors, nurses, and young people ready for any service. However, nothing is enough for the demands. The immense population of Naples and its suburbs, sick, dying, and out of work, has to be cared for by the public. The King and his brother, with some of the Ministers, have been in Naples for more than a week, working incessantly to reduce the wild chaos to something like order, and restore a feeling of courage to the horror-stricken population. It is a terribly difficult task, when there are 900 cases and close on 500 deaths in twenty-four hours. In the royal palace alone five men were cut off in the space of three days, and those who are carrying the sick and dead are continually falling: coffins cannot be made fast enough. When the King arrived the hospitals were already overflowing, and he had to clear two barracks and send the troops to camp out, to make room for the patients. According to his suggestion, also, huts are being constructed in haste, to accommodate a great number of the healthy portion of the population, and so remove them from the infected districts, giving breathing space for the invalids. Besides the sums spent by Government, Umberto has given from his privy purse 300,000 francs for the relief of the poor and the establishment of a refuge for orphans. The people almost worship him—he is followed by prayers, benedictions, and plaudits wherever he goes; and they regard him as a sort of guardian angel. A woman the other day said, "Majesty, make the cholera cease." "I have all the will, if I could," he replied, sadly. One day a deputy was ceremoniously making way for the King to pass first.

"Go forward you—we are all equal," said Umberto. And when the Ministers insist on his departure, he smilingly pleads that they ought "to respect the rights of the individual."

There are kings and kings; and to the Neapolitans this quiet, grave man who talks like a doctor about their diseases, clasps the hands of dying paupers, promising to be a father to their children, pretends to no superiority, dislikes servile homage, is a different person from the old conception of a king who reigned by divine right and trod on necks. Umberto reigns by "the grace of God and the will of the nation," and if the demonstrations in every town in Italy, in the piazza, and in the theatre, and the telegrams, expressive of the most enthusiastic devotion and affection, which shower in upon him daily, mean anything, they may be taken as a new plébiscite. The great mass of the Italian nation is heartily loyalist; only one dissenting voice has been raised against the chorus of praise, and that from a Republican deputy who lived "at home at ease" while the King was performing the most repulsive duties, at the imminent risk of his life. They are royalist, not from any attachment to the principle of monarchy, which was rendered hateful to all Liberals in the past; but because they think their *casa Savoja* unique among royalties. Victor Emmanuel was their liberator, the elect of the nation, who alone had power to unite Italy when all other leaders failed. Every member of his family is dear to them for his sake as well as for personal worth. Umberto is a citizen king in the true sense of the word. No one thinks more of the interests of the working-classes. No one respects the dignity of man more than he. He is the least pompous, and one of the most laborious, practical, duty-loving men in the kingdom.

A satisfactory feature in this great calamity is the deportment of the present Archbishop of Naples, who has behaved in the most praiseworthy manner, aiding the civil power in every way possible, and carrying out the King's suggestions instead of thwarting them, according to the policy of the Church. But political differences have been laid aside in the face of the national misfortune, and all act like brothers. There are no offences in the police reports in Naples this week—absolutely a white sheet is presented, though the poor wretches are starving. While the royal carriage moved slowly along, receiving thousands of petitions, some poor ragged women stood near it weeping, and cried, "Your Majesty, give us something; we used to live on figs and now we are forbidden them." The King opened his pocket-book and distributed money among them. He left Naples yesterday, feeling so exhausted and melancholy that he declined to receive any demonstrations on passing through Rome, to his villa at Monza.

Before you receive this, we have hopes that the worst phase of the visitation will have passed. Among the charities are registered the gifts of 70,000 and 10,000 francs from two anonymous donors. G. S. G.

CHOLERA, MISERY, AND SUPERSTITION.

BOLOGNA, September 20.

ONE all-absorbing topic occupies the public mind in Italy, the cholera, which at this moment in Naples alone has swept off from the underground 5,000 victims into earth's lower depths. I say from the "underground" because, while barely 300 deaths have occurred in the higher quarters of Naples, the remainder were all tenants of the *bassi*, the *fondaci*, the grottoes of the Naples unknown to and undreamed of by any save Neapolitans themselves and a few incorrigible misery-hunters. When Professor Villari, known to Anglo-Saxon readers as the author of the lives of Savonarola and Macchiavelli, published his 'Lettere Meridionali,' wherein he gave but a faint sketch of the horrors that had come under his own eye, he, that most moderate of politicians, was branded as a "Neapolitan who had calumniated his native city," as a communist, a destroyer of social order! We ourselves, after much experience in 1860, and after months spent in diligent research of haunts and facts, published in the *Pungolo* of Naples the result thereof. Then Neapolitans of every rank and party denounced the statements as gross untruths and romantic exaggerations, and counselled the writer to return to London and write about fever dens, thieves' haunts, and baby-farming; but neither then, nor when the articles were published as a book in the Le Monnier series, was one single fact refuted or one single statement disproved. On the affair being brought before Parliament by Doctor Agostino Bertani, the Duke of San Donato, a *pur sang* Neapolitan, denied all the accusations, and promised to disprove them at a more convenient season. This season, however, never came, but some attempt was made to reform certain abuses of moneys belonging to charitable establishments; and San Donato, when he became Mayor, caused some of the worst tenements in the quarter of Porto to be pulled down, expelling the denizens without, unfortunately, making any provision for them. So the last state of the poor wretches became worse than the first, and the "bonifications" ended in a pompous tablet to the Duke of San Donato, set in one of the unfinished buildings, and the agglomeration of thousands of the expelled in underground grottoes and cellars built below the level of the streets. Now that the cholera reappearing has brought kings and princes on the scene—a fact exceedingly creditable to King Humbert, and an undeniable and well-earned addition to his popularity—it is curious to notice how the very men, proprietors and publishers of newspapers, who so stoutly denied the existence of misery and opposed any organized efforts for its relief, are now the first to proclaim it in all its hideousness, and to put themselves forth as champions and patrons of the sufferers.

Let us hope that the Italian proverb, "Tutto il male non viene per nuocere," which answers to our English one, "It's an ill wind that blows nobody any good," may this time prove true. Depretis, famous for his phrases and non-fulfilment of pledges, has promised to *sventrare* Naples, but the question presents itself, When the disembowelling process has been carried out, what is to be done with the diseased intestines? In other words, when San Donato's plan, practised on a small scale in 1880, shall be applied to all the underground quarters of Naples; when the inhabitants of the holes and dens and caves and cellars shall be driven forth like rabbits from their warren, where are they going to be housed, at what price and how near to their daily occupations? That is the question which ought to be solved before any general exodus can be resolved upon; and in the reluctance which the poorest inhabitants of the cholera-stricken quarters evince to leave their squalid dens, one sees their conviction that when cholera panic and spasmodic philanthropy have passed away they will be left without a hole wherein to lay their heads. For it must be borne in mind that the population of the city of Naples alone, without the outlying towns of Resina, Portici, etc., amounted at the end of December, 1881, to 494,314, and will now doubtless be several hundreds over half a million. Of these, two-thirds, to say the least, live in the aforesaid dens, grottoes, *bassi*, *fondaci*, huddled together like herrings in a barrel—that is, when they have any known habitation to call their own. Thousands on thousands instead pay from a penny to fivepence for a bed or portion thereof in one of the many *alberghi* (hotels), as they are called, supposed to be under the surveillance of the police.

Now, that no words, either in the Italian or English language, can give those who have not seen them an idea of what these habitations are, I have had the proof over and over again by inducing disbelievers in my assertions to accompany me alternately on a midday or midnight tour. Here I should say that without an order from the Minister of the Interior, assistance from a well-inclined prefect, personal acquaintance with numbers of syndics, policemen, and probably not a few members of the *camorra*, I could not have explored Naples as I have done, especially in one of her most hideous aspects—the haunts and homes of legalized and clandestine prostitution. One day I remember having with me two young ladies, one German and one English, and a Neapolitan gentleman and journalist, who challenged me to prove that any of the underground grottoes of Naples were still inhabited. We were walking on a bright balmy day in May along the broad, boulevard-like Toledo, then above the Riviera di Chiaia; the spacious, glorious bay of Naples spreading out before us, Vesuvius smouldering in the distance. Without any word of warning, I stopped at what seemed merely a jut of broken wall on the left hand, and said: "We will go down here"; and surely "out of the sudden glory" down a slippery, slimy, broken, natural staircase "into the dark we trod," and were suddenly surrounded by clamorous voices, some of wonder, some of welcome. We had made our entry into the grotto of the Rampe di Brancaccio; this is a cavern branching out in various directions, excavated in the tufa rock. It is divided into about fifty imaginary "apartments"—that is to say, nails in the wall and strings tied across divide the space of damp earth and dripping tufa roof, which is let out by the proprietor to fifty families, who pay respectively per month prices varying from 9 to 6, 5, 4, even 2 francs, the greater and smaller prices being determined by various considerations. In what may be styled the *appartamento nobile* there is a faint glimmer of light from a grating as one of the branches of the cavern rises toward the upper air. Let your readers try to realize to themselves that every function of life before and after birth till death, the liberator, comes, is performed publicly in this grotto; that there is but one cesspool for the 200 human beings hived there; that every drop of water has to be fetched from a fountain nearly half a mile away, and then consider that the people are orderly, honest, law-abiding, and religious; that they keep lights burning night and day at the Madonna's shrine, and club together to pay the rent of a poor, old paralytic man, who had been refused at every hospital and at the great Albergo dei Poveri; that no priest ever visits those subterraneous regions; that only the landlord or his agent or the tax-gatherer ever enters. Let them imagine the herds of rats and swarms of cockroaches that co-inhabit this grotto, the almost total absence of oxygen in the atmosphere; let them remember that the people were always civil, many cheerful and even humorous, showing that they took things as a matter of course and did not think themselves hardly used. Then, those who can conjure up the picture may form some idea of the homes of the poorer classes of Neapolitans.

As may be imagined, we did not prolong our visit. The ladies came out white and faintish; the gentleman journalist staggered like a drunken man, and has never since ceased to proclaim the misery of Naples with about the same result as other prophets in the wilderness. The same evening, without the ladies and well escorted by an inspector of police and two subalterns in plain clothes, we went through some of the worst

quarters of Naples, down into cellars, under archways, into holes and crannies that dogs and pigs would have declined, seeing sights which could not be recounted to the ears of newspaper readers. On another evening, mistrusting the assertions of the police that the new municipal law enforcing on the keepers of night lodgings the separation of the sexes in the various wards was strictly carried out, we visited with a policeman a considerable number of these *alberghi*. Close, filthy, stinking as they were, we convinced ourselves that this rule, at least, was obeyed; but even there what horrible sights! In one bed, or rather on a large, dirty sack of straw, were huddled together an entire family—father, mother, and five children, a baby a few days old hanging in a basket by the side of the bed, for which half a franc a night was daily paid to the owner of the *albergo*, as the poor father told us, and we ourselves verified by the books. But on recounting our satisfaction to a friend who had accompanied us on other tours of inspection, he only laughed at our credulity, and bid us follow him, which we did into other lodging houses, where men, women, and children of both sexes, unknown to each other till becoming such strange bed-fellows, were huddled together, waking and sleeping, fighting, drinking, etc., as the case may be: everywhere the same old, old story as we had seen and described it in 1860 and 1876—no shadow of amelioration, save in the quarters of the upper ten thousand, where on public gardens, new promenades, fountains, and gorgeous gaslights, the municipality managed to squander millions of francs per annum, while the Government, with its lottery tickets, and the priests, with their processions, their feasts, their *sagras*, their masses and requiems, extorted from the poor, ignorant multitude their scant earnings, compelling them to stint themselves and their children, whose most sumptuous repast consists of snails and cabbage stumps!

Lest you should think that I am purposely drawing a sensational picture, let me give you two or three sketches drawn from life by a well-known Tuscan writer, Renato Fucini, who visited Naples after Villari's works and mine were published and criticised. After describing a group of houses built at the foot of the hill Pizzofalcone, in the quarter of Santa Lucia, where 20,000 persons are crammed together, he describes their aspect, their livid countenances, deformed persons, faces and bodies covered with hideous open sores: here an old hag and a young family of her son's children packed in a *sotto-scala—i. e.*, a dark hole under the staircase, generally let to charcoal-sellers and rag-pickers—one child having had its eye eaten out by a rat; another, part of its cheek and an ear devoured. He ascertained that on one mouldering heap of straw the whole family, consisting of eight persons, slept at night, and for this "accommodation" paid nine francs per month. Crossing the passage, he found an orphan girl, sixteen years of age, with six brothers and sisters all younger than herself, for whom she was boiling twenty-one winkles in an earthenware pot lent her by a neighbor. His wonder was how any one of them could crawl in and out of the hole; measuring it and one of the children, he found that none of them could lie straight. He went through all the quarters of Pendino, Porto, and Mercato, finding worse miseries and more loathsome horrors on every step. Under the title of 'Napoli ad occhio nudo,' Renato published his experiences, which were contradicted and reviled like the rest.

Now, considering that all these various testimonies were placed on record by disinterested persons at different periods—not in times of panic, as at the present, nor for sensational purposes—can it be wondered at that the cholera, once getting hold of Naples, should have made such rapid and fearful havoc, now as in 1864, when the cholera cemetery was first opened, and when, for the first and last time, a few houses were whitewashed? Its spread was also furthered by the frantic terror, the unreasoning selfishness of those first attacked in Naples, as in Spezia; the families concealing the cases, sometimes fleeing from their homes to other provinces, leaving their sick unattended and their dead unburied. When it spread to squalid quarters above described, the poor, ignorant people, in many cases instigated by their priests, attributed the scourge, as did the Milanese the pest, to poisoners. Hence, doctors were insulted and mobbed; soldiers and officers, who had behaved with wonderful courage, patience, and kindness, were stoned and beaten, despite all the efforts made by the municipality and police. Despite even the peremptory order of the Archbishop of Naples himself, processions of thousands, bearing torches and crosses and pictures of their patron saints, paraded the streets to the Church of S. Gennaro, the patron saint of Naples, and to other revered shrines, deaf to all remonstrances, refusing the most normal precautions, declining the simplest remedies. The King's visit has had some effect in calming the panic; the stern orders issued by the Archbishop to the priests to discontinue the processions, and to induce the sick to listen to the doctors and to take the prescribed remedies, are beginning to tell; but the terrible facts that the cesspools filter into nearly all the wells, that the poverty of the people is such that it is impossible for them to obtain such nourishment as alone could be a preventive in this case, the shameful and shameless combination among the butchers to keep up the prices of meat, the aforesaid difficulty of inducing the people to quit their dens and lairs for barracks, convents, and encampments—all these and many concomitant circumstances will, I fear, postpone for many a sad day the disappearance of the cholera in Naples. At present, poets, surgeons, and doctors, old Garibaldians, who have survived four or even five campaigns, are serving as actual nurses to the sick and dying, in their filthy homes and in the hospitals. Those who do not succumb will live to tell many an awful tale.

But the main question to be solved is, "What is going to be done to furnish decent homes for the thousands who are to be turned out of the present sties and dog-kennels for which they pay such unheard-of prices?" No public subscription, no royal munificence or individual bounty could put together anything like a sufficient sum for a commencement; there is no poor law in Italy of any kind, no legal provision even for the supply of medicines to the poor. Private charity in Italy is next to unknown—charity as it is regarded in Anglo-Saxon lands. I can see but one way of ever commencing a reformation. There exists in Italy at the present moment a fund of 1,190,932,603 lire, the exclusive property of the poor, without assigning any money value to the enormous and numerous edifices, hospitals, almshouses, etc., especially built for and bequeathed to the poor. Naples alone possesses 349 *opere pie*, with an annual income of 7,154,859 lire, of which sum, to say the least, 65 per cent. goes to so-called administration and *culto*—in other words, to functionaries placed in office, not for merit but through influence, and to the priests. Ever since 1860 there has been very "tall talk" about reforming the *opere pie*, and Garibaldi really set about it, beginning with that abode of horrors, the Foundling Hospital. Then the Moderates or Conservatives reigned with undivided sway for sixteen years, promising ever this reformation. One of the ostensible reasons for which they were ousted by the Liberals was the nonfulfilment of this pledge. The Liberals have been now eight years in power, and nothing has been done; the wealth of the poor is squandered as heretofore. Clearly, therefore, one of the first steps toward bettering the condition of the poor must be the restoration to them of their rightful property, the reception of the really poor, infirm, deaf and dumb, idiots, and orphans in the hospitals, *alberghi dei poveri*, orphan and foundling asylums, etc. In the second place, a law will have to be passed compelling owners of houses to render them fit for human dwellings, laws inflicting punishments on those who let rat-holes at the present exorbitant prices. Then a very keen surveillance will have to be kept on the contracts for the construction of new houses; otherwise the entire sums subscribed or voted by Parliament, province, or commune will go into the pockets of speculators, and the poor wretches turned out of their old houses will be no better, but even worse off than heretofore. If one could but hope that this would be the case, one would indeed say that all evil comes not to harm. But alas! I have but the very faintest hope of this, and fear that nothing will be done to better the condition of the poor classes of Naples, as of Italy, until, when patient suffering has exceeded its utmost limit, the people rise up in their own defence and take their rights into their own hands. J. W. M.

Correspondence.

WHY FISHER WAS LIBERAL TO BLAINE.

To the Editor of The Nation:

Sir: Mr. Blaine, in his letter of July 2, 1869, to Mr. Fisher, remarks: "*Your liberal mode of dealing with me in all our business transactions of the past eight years* has not passed without my full appreciation"; and again, in his letter of October 4, 1869, he says: "But your conduct toward me in business matters has always been marked by *unbounded liberality in past years* and, of course, I have naturally come to expect the same of you now."

What was this "liberal mode of dealing," this "unbounded liberality," extending back over a period of eight years, for which Mr. Blaine was so grateful? Something of light on this also appears from his letters. In his letter of August 31, 1872, Mr. Blaine mentions a "note of $10,000 given in 1863 for Spencer stock," which "note was consolidated into [the] a large note" which Fisher at that date (August 31, 1872) still held.

Again, in his letter to Mr. Fisher of August 9, 1872, Mr. Blaine says: "Besides, the cash memorandum January 9, 1864, $600, which with interest amounts to $904 10, was obviously included in the *consolidated note which was given to represent all my indebtedness* to you, and which you repeatedly assured me *would be met and liquidated in good time by Spencer dividends.*" And in the same letter:

"You credit me, April 26, 1869, with $12,500 dividend from Spencer Company; but there were two subsequent dividends, one of $3,750, the other of $5,800, of which no mention is made in your statement, though I received, in June, 1870, your check for $2,700 or $2,800, which was a part of these dividends, I believe. I think my 'cash memorandum' of June 25, 1869, for $2,500, with which you charge me, represented at the time a part of the dividends. . . . In other words, as I reckon it, there are dividends amounting to $9,550 due me, with interest since June, 1870, of which I have received only $2,700 or $2,800, entitling me thus to a credit of some $7,500."

Mr. Blaine, then, was admitted into the Spencer Rifle Company, not for cash, but for his note of $10,000, which it was agreed should "be met and liquidated" by dividends, and upon which he never paid a dollar. And from the company on this investment he received $12,500 dividend, and the further sum of "$2,700 or $2,800," and claimed in addition thereto "some $7,500."

As Mr. Blaine paid no money for this stock, what consideration did he give? In his letter of May 26, 1864, to Mr. Fisher, we find at least a partial explanation. He says:

"I am very glad, all things considered, that the Government has accepted your proposition to take all your manufacture till 1st September, 1865. It gives a straight and steady business for the company for a good stretch of time. . . . The provision which you inquire about was not in the original bill, but was an amendment moved from the Ways and Means Committee by Mr. Kasson, of Iowa, *to whom I suggested it.* It is just and proper in every sense, and will affect a good many interests, *including your company.* I am glad to hear of such accounts of your progress in the affairs of the company, *of which I have always been proud to be a member.*"

It is clear that, long prior to 1869, Mr. Blaine had learned how not to be a "deadhead" in any "enterprise" to which he might be admitted, because he was an active and "magnetic" member of Congress; and that in shaping legislation in 1864, to help a company of which he was "proud to be a member," he had, thus early, found a channel in which he might be "useful."—Respectfully, CHAS. R. WHITMAN.

YPSILANTI, MICH., September 29.

THE VOTE ON GROUNDS OF MORALITY.

TO THE EDITOR OF THE NATION:

SIR: Every worker in the ethical and religious movements of the country must feel it a matter of profound interest that the coming election may be decided by an extensive vote which will be given on the grounds of morality alone. Some of us believe that the cause of morality should take precedence above every other cause whether political, economical, or social; that in fact the world has only one great cause for our enthusiasm any way, and that, the sacred cause or morality and duty. To such a one, the vote in the coming election must be of the deepest significance. At the outset of the campaign it was easy enough to decide in which way a vote of moral convictions ought to be cast. It was a simple choice between public official purity and public official profligacy. Our enthusiasm appeared to have but one voice, and that was for Cleveland. The antagonism to the morally destitute character of Mr. Blaine was so great, that religion and morality united by contrast to throw a halo about the whole character of Mr. Cleveland. He was idealized by all of us. We clothed him with all the virtues under the sun. And Mr. Cleveland had really given grounds for such enthusiasm. His political character was really unique in contrast to the stock politicians. Instead of the simple consciousness of expediency in every movement, which characterizes most of our politicians, he appeared to have a consciousness of duty to his position. He had a conviction as to what an official position meant for him—what he was put there for—and he acted as though he was aiming to be true to that conviction. What is more, he appeared to have political principles of his own. In his signature to the bills and in his vetoes, he gave statesmanlike reasons. When he was tempted to withdraw from his principles for expediency sake, he did not flinch. We believed that we had found a man with character, statesmanship, and reliability. We felt justified in our enthusiasm.

And then came the shock! The halo was torn away, a heavy stain was found upon the private character of our candidate, our enthusiasm for the *personality* of Cleveland was shattered. The blow was a bitter one. It was now a complicated matter whither to cast our votes. The decision which had been so simple was now profoundly delicate. To put it strongly, it was a choice between public official profligacy and personal private profligacy. As put in that way, every moral nature had to decide for itself, in casting a vote, whether the moral influence of the election of Mr. Blaine would be worse upon the country than the election of Mr. Cleveland, and if so, whether a moral nature could vote for Mr. Cleveland without compromising itself by accepting his character such as it was known to be. A few went back to Mr. Blaine. Many despised Mr. Blaine; and now, when the halo was rudely torn from the character of Mr. Cleveland, they lost all their respect for him also, and withdrew from the contest in despair. But the calmer minds must think it all out for themselves. One fact is certain: either Mr. Blaine or Mr. Cleveland will represent the nation as the President. The moral effect of one kind or the other must take place. The *nation* will have to choose between them any way.

The vice which the character of Mr. Blaine represents threatens the very existence of the nation and all its free institutions. Already several republics of Europe have been destroyed by that very vice. The one test of a republican system of government is simply whether we can get responsible men to represent us in governing. If we cannot get them or do not choose them, the whole system must collapse, and our theory of government be a failure. Blaine does not appear to be a responsible man. He represents the prostitution of the honor of the nation to the success of a party, the prostitution of the honor of a party to its success in the nation, the prostitution of the honor of the nation and the party to his own personal and private aggrandizement. The election of a few such men would inevitably destroy our existence as a republic. The success of Mr. Blaine would stand as an example to the country of the national respect for cleverness of mind above public sense of honor, for intellectual brilliancy above moral integrity, for illicit pursuance of private power and gain above conscientious devotion to public trusts. The vice of Mr. Blaine applies immediately to the functions of the very office for which the nation would choose him. If the nation chooses Mr. Blaine to a position for which the vice of his character morally disqualifies him, the nation then puts the stamp of justification upon that vice and sets that character up as an example. The effect of such an acknowledgment and example upon the morality of the country must be simply stupendous.

But the danger would perhaps be even greater to the national future. It has generally been noticed throughout the civilized world, that the States have everywhere been centralizing, the functions of national governments have been constantly assuming wider proportions, the states have been gradually absorbing into the central power the various affairs which have heretofore been left to private enterprise. We may not know where this will end; but we do know that every addition to the central power makes it additionally dangerous to intrust that power to untrustworthy hands, which could manipulate it to our national ruin. It is not that we anticipate that such a ruin would be effected by one administration. It is the *moral momentum* of such an administration that we dread. The seeds of moral decay could be sown in our institutions at this time, when the nation is still young, and it would perhaps be impossible to recuperate. It would be but a step from Blaine to Butler—and so on downward. With the whole machinery of state debauched by a set of moral profligates, what material would remain for a spirit of reform to rebuild upon? Every other virtue in an executive, then, ought to be subordinate to honor and trustworthiness; *they* are absolutely essential. But Mr. Blaine does not appear to have these virtues, it is the want of them which constitutes his vice. The nation could not *rely* on Mr. Blaine.

The vice which the character of Mr. Cleveland represents, though it threatens our social institutions, does not necessarily affect his reliability. His public virtues continue just as we at first conceived them. We may sacrifice our allegiance to the private character of Mr. Cleveland; to his public character we may still continue loyal. It is for the sake of his public character that we choose him, any way. There are certain functions of government for which we must choose an executive; we choose him with respect to those functions only. We may select Mr. Cleveland because we can rely upon him. We may deprecate his private character; we may even have lost our respect for his personal life. But the nation must have an executive; the nation owes the duty to itself of having the functions of that executive faithfully fulfilled; the nation, then, owes the duty to itself of selecting a faithful executive. Mr. Cleveland would be faithful to that position and Mr. Blaine would not; we, the people of this nation, will have one or the other for that position; we, the people of the nation, ought then to select Mr. Cleveland. That is the simple logical statement. It is true, the private character of such a man may have an unfortunate influence from his public position upon the morals of the country. But the nation cannot be held responsible. No man can plead that the nation has put him up there as an example for private life. The nation does not choose him with respect to his private life, but with respect to his public qualifications as an executive, and hence gives no stamp of justification to his private life. We may vote for him and elect him, and after we have elected him, if we wish to do so, we may with perfect consistency denounce his private life with all possible vehemence. In voting for him we only commit ourselves as to his character for the functions for which we have chosen him. We make no compromise as to his private conduct. With an honest executive the cause of morality can still be active. Give us an honest Government, by the people, and for the people, and we will *make* the people moral. Give us a dishonest government which is by the people themselves, and the cause of morality is paralyzed. The people as a nation have committed themselves to dishonor; what can moral pleading do? Religion and morality should support Mr. Cleveland for Executive. Loyalty to the nation appeals for it; devotion to the universal cause of good requires it. That loyalty and devotion should come from all of us. W. L. S.

CANT, CHASTITY, AND CHARITY IN POLITICS.

TO THE EDITOR OF THE NATION:

SIR: In these dark days of "the national humiliation," as *Harper's Weekly* aptly terms the state of affairs into which we have been plunged by the nomination of Blaine, I really hate to open my copy of the *Nation*. The fact that I've read each one of its thousand and five weekly issues is a voucher for my general approval of its character; but the political editorials of the issues latest at hand almost make me melancholy. I mean by this that those utterances so thoroughly commend themselves to my admiration and approval—their robust manliness and plain-spoken logic seem so convincing—that I am melancholy over my own inability to reprint and circulate them by the million. I see so many channels in which I know I could make them useful!

It is easy, of course, to brag of the brave things one would do if he were only wealthy. When I caught sight of that supplement to *Harper's Weekly* of September 27, containing the Blaine letters in such admirably effective form (because of the typographical clearness with which his con-

tradictory declarations are brought simultaneously before the eye, without a word of editorial comment or embellishment), I said to myself that, if I were a millionaire, I would have that supplement sent forthwith to every voter in Ohio, as well as to every subscriber of the *Weekly Tribune*—since the Blaine letters were unfortunately crowded out of that sheet, as its editor alleged, by pressure of important agricultural, household, literary, and foreign matter upon its limited space. I mentioned this noble aspiration of mine in a note to the editor of *Harper's Weekly*, respectfully suggesting that the great public service which he had rendered in thus "allowing Mr. James G. Blaine to place once again before the American people the story of his railroad speculations while he was in their employ," would be increased by "reprinting the supplement at such a nominal price as would make it a popular classic." Assuming that such reprint is put in the market (and, in any case, the Democratic managers, unless they are incredibly stupid, should circulate four or five millions of it), the relative importance of further pushing the *Evening Post's* July pamphlet, whose wide distribution has helped so much to open people's eyes about "Mr. Blaine's railroad transactions," will be thereby decreased. No citizen possessed of either document need lack the ability to show that this notorious trickster, whose triumph would signify the degradation of popular government, is a liar and a thief; but the possessor of the *Harper's Weekly* edition of "the Blaine letters" (its editor's wise example in designating them thus should be generally followed, for none of them were written by "Mulligan") will enjoy the special advantage of showing the fact by pointing to the culprit's own words, printed in parallel columns without comment.

I have confessed to you that I mourn my lack of riches, when I think of the pleasure I should take in circulating a million copies of a "*Nation* extra" containing such pieces as "The Conscience Vote," "The Landreau Claim," and "Cleveland's Independence" (Oct. 2), "The Best Work of the Canvass" (Sept. 25), "Keep My Name Quiet" and "The Standard of Official Morality" (Sept. 18), "The Republican Managers and the Civil Service," and "Mr. Blaine's Latest Ideas of Statesmanship" (Sept. 11)—not to go back any further. But I have a more practical purpose in writing than merely to profess my desire to do impossibly magnificent things. I want to urge the publication of another *Evening Post* pamphlet, containing those articles which show so clearly why the one solitary human weakness which stands proved against Governor Cleveland should not prevent his receiving the support of people who are most particular and conscientious concerning personal chastity. "What We Think About It Now" (Aug. 7), and "The President as an Example" (Sept. 11), are a pair of wonderfully powerful articles, which would form an appropriate introduction to the numerous sensible letters on the subject which have been contributed to the paper by its clerical correspondents and others. The report of the Buffalo Committee, the announcement of the editor of the *Independent* of his reasons for differing from the policy of that paper as shaped by its publisher, the letter of Col. T. W. Higginson, in the *Woman's Journal*, of the Rev. G. S. Merriam, in the Springfield *Republican*, and of the Rev. T. R. Bacon, in the New Haven *Palladium*, might be combined with the rest to form quite an imposing mass of testimony. As it is within my personal knowledge that each one of these articles and letters has had power to turn back to Cleveland the hesitating votes of certain pious people, I am confident that the circulation of a pamphlet containing them all would be vastly influential in "clearing of cant" the public mind, and producing a juster public sentiment concerning the "comparative value of the virtues."

I sincerely hope that you may reconsider your refusal to issue a campaign document of this sort, as addressed to a Brooklyn correspondent who asked for it in your issue of September 11. "Any good book on morals would do," you tell him; and truly, no doubt, for the distinctions between public and private virtues are so elementary and so obvious that they ought not to need explanation or argument. In practice, however, no such "good book" is attainable; neither would a primer of elementary morals be read by the people who need it most, even if it could be brought to their attention. But a pamphlet, showing the direct application of moral rules to rival candidates for the Presidency, as freshly presented by a variety of writers, would certainly challenge attention. An excellent letter on "Ministers in the Canvass," which an Ohio minister supplies to the same issue of your paper, says that "a good electioneering enterprise on the part of the Independents would be to furnish every preacher in the United States with the documentary facts about Blaine"; and I should like to have every one of them also furnished with such a collection of pieces as I have spoken of concerning the political significance of Cleveland's single fault. I regret that your Ohio correspondent did not mention exactly *how* "the names and addresses of all the clergymen are easily obtainable"; and I will help remedy the omission by saying that 'The Lutheran Year-Book for 1884,' which will be mailed postpaid on receipt of a quarter-dollar by its author, the Rev. Sylvanus Stall, at Lancaster, Pa., contains the names and residences of all the Lutheran ministers in the United States, about 4,000 in number. I think I might persuade a friend of mine to send the pamphlet to every one of them, if such decision would insure its publication by you. Individually, I would agree to circulate a hundred copies, anyhow.

I should like to see the proposed pamphlet reprint two other letters from your September 11 issue, both that of the physician who pleads for "the charity which values the chastity of re-established character equally with the chastity of innocence," and that of the Chicago writer in regard to "assimilating the decalogue." I would remind the latter, however, that he puts forth a dangerous doctrine in declaring that the sin of adultery is no greater than the sin of fornication, for that is the logical result of "arriving at the conclusion that the seventh commandment forbids" the latter, though it mentions only the former. This recalls the perversion of Scripture concerning the miracle of Cana, for which Charles Astor Bristed used to denounce the ultra prohibitionists, when they "arrived at the conclusion" that "the word οἶνος, which in all recognized Greek writers means an intoxicating liquor, was used by the writers of the New Testament to mean a non-intoxicating liquor." It is just as well to be exact about these little matters; and while the Chicago writer may perhaps be justified in "giving thanks that the Christians of the North have generally arrived at the conclusion that the seventh commandment forbids" what it does not forbid (such vague assertions are necessarily incapable of proof or of disproof), the severe simplicity of the commandment itself will not be changed an iota by any amount of "arriving." We might perhaps wish that the decalogue prohibited all sorts of lying, but we cannot logically "arrive at the conclusion" that it does so. It only says, "Thou shalt not bear false witness against thy neighbor." That and the rule "Thou shalt not steal" are the ones which "the Blaine letters" show the eminent author of them to have repeatedly violated. Our honest and truth-telling Governor, on the other hand, has never yet, so far as appears from public evidence, violated the rule "Thou shalt not commit adultery."

The atrocious injustice of raking up and parading against a candidate for public office the sexual sins which he has hitherto kept entirely secret, and which he may have for years outgrown—and of parading them, "not to increase the spread of virtue but to make the basest political vices of the rival candidate seem respectable in comparison"—consists chiefly in this: that the similar private sins of that rival may be just as bad or even worse, but that he may have had better luck in concealing them. The very nature of things forbids that the public shall really *know* all about the private life of any man who is not in jail; and hence society really pretends to exact in self-protection only what it *can* exact, namely: that sexual irregularities shall be kept out of its sight. If society is to exist at all, it must say to Jim Fisk, jr.—when he flaunts his carriage-loads of courtesans through the public streets, and builds a grand opera-house in order that he may sport with them openly in the sunshine instead of secretly in the customary shade—that he shall have none of its honors. To pretend, then, that a man who has stood unscathed the ordeal of election to the Mayoralty of a great city like Buffalo, on a plainly-drawn issue between the respectable and the vicious elements of its population; who has been promoted by an unexampled popular majority to the Governorship of the Empire State of the Union, and has fulfilled its responsibilities with a fidelity and singleness of purpose which every intelligent citizen of that State knows to be most admirable—to pretend that such a man was suddenly transformed, by the mere act of his nomination to the Presidency, into "a notorious libertine and profligate, the frequenter of haunts of drunkenness and lust," is to exhibit such an entire disregard not simply of probabilities but of possibilities, as to make the audacity of the pretence almost equal its unparalleled malignity. I say unparalleled, because Blaine is the first Presidential candidate on record so lost to a sense of public decency as to attempt to discredit an otherwise invincible rival by wantonly dragging a lewd woman into the case. There has been, unfortunately, more than one candidate in previous campaigns against whom his rival has had the power to prove not simply fornication but the worse offence of adultery; yet hitherto the rule has wisely been by common consent adhered to, that if a man's shortcomings of that sort were not notorious enough to defeat him in the fierce rivalry of the nominating convention, the family life of the whole nation should not be polluted by a public discussion of them. Does any sane man suppose that if Governor Cleveland had lived a life of "notorious profligacy and libertinism" at either Buffalo or Albany, John Kelly's Tammany gang would not have effectively urged that fact to defeat his nomination at Chicago? Is language strong enough to designate the loathsomeness of the clerical slanderer who served as Blaine's willing tool in calling upon the country to save the White House from being transformed into a sort of harem by a second Fisk, jr.?

The thought of that other "eminently magnetic" and "distinctively American" railroad plunderer reminds me of the fine sarcasm in the obituary lines which James Russell Lowell wrote for the *Nation* concerning him—as one whose crowning infamy it was to have, "living, Gould's friendship; dead, the tears of Tweed." Yet Blaine, living, has that friendship; and there can be no doubt that, if Gould's former pal were now alive, he, too, would feel that "Blaine is an important man for us to have feel all right towards us." There can be no doubt that the obtrusively-adulterous Fisk would join most hearti-

ly with those strict moralists who support the lying and thievish Blaine because he "best represents the sanctity of the home." I never heard the suggestion made by the bitterest enemy of Gould or of Tweed that either one of them, in his capacity as husband and father, was open to the slightest censure; yet how many respectable people, whose party frenzy blinds them to the fact that Blaine is as dangerous a man as either of these, would have the hardihood to vote for Gould or for Tweed as their best means of rebuking the incontinence of Daniel Webster, were he their only alternative candidate for President?

Assuming that the *Tribune's* alleged reprint from the *Evangelist* be genuine (for no apparent quotation in that lying sheet can longer be accepted as such without proof, since it deliberately represented the *Evening Post* as saying that "Cleveland's *vices* are those which bind human society together?" when the opposite word "virtues" was what the *Post* really used), and assuming that the editor of that religious weekly still hesitates about rebuking official rascality for fear of exalting an unchaste "example," I should like in particular to call his attention to the force of the alternative which I have assumed as an illustration. I say this because, while serving as clergyman in a little farming town in Massachusetts, he preached the funeral sermon of my father, who died simultaneously with Daniel Webster, in October, 1852, and who was such an enthusiastic admirer of that statesman that the last gift which he was fated to give his boys chanced to be of a sort to commemorate that statesman's name. The editor of the *Evangelist* has met a good many people in the years since then; but I am sure he will recall my father as a man of the strictest puritanical notions in respect to the family and personal virtues. Did he, therefore, knowing Webster's weakness in respect both to women and wine, commend him to me as an example in those respects when he taught me to reverence him as one of the mighty men of that time? Would he, while sharing the *Evangelist's* disapproval of Cleveland's single private fault, share for an instant its hesitation about rebuking the incomparably greater public faults of his disgraced antagonist? Ah, Mr. Editor! if you recall my father rightly, you must know that no sophistries about "the home" would have blinded his eyes to the supreme duty of defeating a self-convicted betrayer of public trust. You must know that he would have worked from morning till midnight rather than have the present "national humiliation of the nomination of Mr. Blaine" culminate by his election in "ineradicable national disgrace"!

General Grant may appropriately serve to point another illustration, since "his chastity has never, to the *Nation's* knowledge, been impugned, though he was surrounded, when President, by men to whom the atmosphere of the bar-room and the brothel was congenial and habitual." No one pretends that, in the case of a private citizen, drunkenness is half as censurable as unchastity; but, when that citizen is put in command of an army on the battle-field, drunkenness becomes in his case a supreme evil—more to be censured than a violation of all the rules of the decalogue, because it wantonly exposes numberless innocent men to needless slaughter. President Lincoln, however, never said a more popular thing than when, after some of Grant's victories, he replied to the busybody who solemnly warned him against that warrior's excessive potations, "I wish I knew how to supply the other general with the same lucky brand of whiskey!" Yet is there any prohibitionist rabid enough, or stupid enough, to pretend that Lincoln thereby "encouraged drunkenness"—or that he could not always be depended upon to rebuke it as a most detestable crime for an officer in the field to be guilty of? But supposing that Grant, like so many an other famous soldier, had had a different weakness—a weakness incomparably less criminal than drunkenness, considering the lives that depend upon a general's clearness of head, though more censurable in the forum of absolute morals—supposing that, in those last dreadful days of carnage, when we were "wearing the enemy out by the process of attrition," and when we pinned our faith to the man whose impassive stubbornness gave token that he could be depended upon to the bitter end—supposing that, in that terrible crisis a delegation of Illinois clergymen had wended their way to Washington, and laid before President Lincoln the proofs that at Galena, a dozen years before, Grant had been guilty of cohabiting with a middle-aged widow; that to allow so sinful a man to crush the rebellion and thereby win for himself unbounded personal popularity, would be to set before the youth of the country a dreadful example of incontinence; and that, therefore, he must be superseded by some general whose private purity was unquestioned, and whose success would not be a threat to "the family relation"—supposing that this incredible cant had really been uttered, who doubts the nature of Lincoln's reply?

"The ignominy," as you so aptly phrase it, "of helping the Republican party at this crisis in an attempt to capture the Presidency for a trickster, as Joshua captured Jericho, by the aid of a harlot," seems to me so extreme that I would strive to defeat him, on that account alone, even if he were the equal of his distinguished rival in those sterling qualities which fit a man for the position, instead of being inferior to him in all except chastity. I cannot doubt that Blaine is absolutely chaste, for nothing but a consciousness that there was no loose link of that sort in his own armor could have given him the effrontery to aim so scurvy a stab at the one vulnerable spot in the harness of his opponent. I hold him directly responsible for this unprecedented step of introducing the sexual passion as an "issue" into Presidential politics, because, except by his approval, the scandalous slanders concocted by a characterless sheet in Buffalo would not have been reprinted in the Boston *Journal* and distributed broadcast by political committees, thereby compelling the honest newspapers and the friends of honest government to recognize the single unfortunate fact on which these slanders were based, and to explain its relative significance to voters by discussing those elementary principles which make human society possible. The necessary evils of such discussion are so patent—the demoralizing effect of having great men's weaknesses prominently dwelt upon, instead of their characteristic virtues, is so certain—that Blaine's attempt to personally profit by raising such discussion deserves an exemplary defeat. The fatuity of those moralists who think that Blaine's triumph on the "chastity issue" would prevent such discussions in future, by preventing the nomination of unchaste candidates, is indeed surprising. Let demonstration once be made of the fact that the Presidency of this nation can be "captured by the aid of a harlot," and there will never be any lack of them to assist in the capture! No matter though every candidate be "chaste as snow, cold as ice," yet would he not escape the suspicion of the rival campaign committee, nor the scandalous "testimony" of the courtesans who would rejoice to sell such testimony to the committees, and thereby advertise themselves as the mistresses of possible Presidents. In other words, the "arguments" could not be publicly discussed by decent people; and the mass of obscene literature, "running through the press as a common sewer," would be something appalling. A glimpse of this possibility is shown even this year in Mr. Blaine's own case. The fact of his living for a whole generation, plainly, in the sight of all men, as an exemplary husband and father, has not been a bar to the promulgation of a sickening slander against him, based upon the admitted fact of a clandestine marriage, with which the public has no possible concern.

The election of Cleveland, while helping in a measure to demonstrate that scandalmongering must be kept out of future Presidential contests, will not be likely to make nominating conventions any less careful than hitherto in regard to the private blemishes of the candidates before them. Furthermore, the consciousness, in Governor Cleveland's mind, when he enters the new office, of "the sincere and clean-handed reprobation of his offence against the moral law" entertained by so many of the best of citizens who have voted for him or against him, will supply a tremendously powerful stimulus in the right direction. That consciousness will be a pledge to the country of his unswerving endeavor to serve it with faithfulness and zeal; to administer the high trust committed to him in such a way as shall bring to shame his calumniators and detractors, and shall justify the faith of those who believe in him as a sincere and incorruptible patriot—not anxious for office or personal preferment, but anxious, when such things come, to use them with the wisdom that belongs to simplicity and straightforwardness, in working out the national destiny. Let it not be forgotten, either, that his consciousness of entering the Presidency under a sort of moral cloud, even though he be elected by a tidal-wave majority, must needs impair the sense of personal elation. Even in success, he must needs pay a heavy penalty for his fault, must needs offer an impressive example of the truth proclaimed by King Lear:

> "The gods are just; and, of our pleasant vices,
> Make whips to scourge us."

LYMAN H. BAGG.

WASHINGTON SQUARE, N. Y., October 2.

ON THE EATING OF ONE'S FRIENDS.

TO THE EDITOR OF THE NATION:

SIR: Your last issue contains editorially the following words, which have shocked at least one, probably many, of your readers: "A man who loves life will always take his chance of the gallows by consuming a friend if death by starvation is imminent."

It is earnestly submitted that the above is false. It contains the obvious implication that "a man who loves life" will, at the approach of starvation, not only "consume" his "friend," but will deliberately murder him for that purpose. All men love life, but assuredly all men are not so utterly base and ferocious as this. The average human being is honestly believed by most earnest-minded people to be far above the bestial level here indicated. So broad and terrible a charge proceeding from a source like the *Nation*, ought not to pass unnoticed. Your paper is too widely circulated and has too much influence to afford a statement so terribly untrue and so degrading to our common humanity.

J. L. H.

KANSAS CITY, MO., September 28.

[We would gladly retract this statement wholly if we could; but conscience forbids it. The best we can do is to tone it down—that is, admit that it is too sweeping, and that perhaps we ought to have said will "often" or "sometimes," instead of "always." If anything we have said has, however, prepared any one for the consumption of a friend when in danger of starvation, or inclined him to seek a mode

of escape from death, we deeply regret it, and urge him to banish these dreadful thoughts from his mind. But we will add that we consider it far nobler to be eaten than to eat, to be consumed than to consume, under such circumstances. Willingness to be eaten is, in fact, the highest mental and moral condition of every member of a shipwrecked crew, and the highest height of heroism would be reached by a fat man who for his brothers' sake rejoiced that he was fat.—Ed. Nation.]

A WORLD GIVEN TO LYING.

To the Editor of The Nation:

Sir: You ask an historical parallel to the present era of falsehood. I can cite one, though not exactly within the Christian era. In Jeremiah, vv. 30, 31, I find it written: "A wonderful and horrible thing is committed in the land. The prophets prophesy falsely, and the priests bear rule by their means, and *my people love to have it so;* and what will ye do in the end thereof?"

When the public teachers of morality are false to their convictions in order that their party leaders may be kept in power, and when the people not only tolerate it, but love to have it so, truly a wonderful and horrible thing is committed in the land. Do the people not love to have it so? Not long ago, I heard a young man, well-dressed and apparently intelligent, maintain that the attacks on Blaine's character were making him hosts of friends. "I have no use for a man that's *all right*," he continued; "and I don't think the people have, either." It was George II.—was it not?—who could not relish the fresh oysters of England, having been accustomed to consume his oysters just a trifle "off"? It may be—it probably is—pharisaical to dispute the popular verdict on questions of morality, but, just the same, the declared preference of the people for a politician somewhat corrupt reminds one of nothing so much as Bubbley Upmore's seeking a whiff of sewer gas to get "toned up."

W. I. Chase.

Chicago, October 1, 1884.

CHEAP FREE-TRADE LITERATURE.

To the Editor of The Nation:

Sir: Our attention has been called to a note from a Washington correspondent of yours, signed with the initial "L.," printed in a recent number of the *Nation*, in which he inquires where he can obtain cheap free-trade literature, and complains that the cheapest pamphlet he has been able to obtain in the Washington bookstores sells at forty cents.

We trust you may think it worth while to refer this correspondent (and other subscribers of the *Nation*) to the office of the New York Free-Trade Club, No. 39 Nassau Street. The Club does *not* benefit to any extent by "British gold," but, as far as its modest treasury will permit, it interests itself in the work of circulating throughout the country trustworthy and inexpensive information on the subject of free trade and revenue reform. These publications are issued at from five to fifty cents each, or can be secured in lots at presswork cost.

It may be worth while to add that if the publishers who have interested themselves in connection with the Free-Trade Club and other similar associations in the preparation and distribution of this class of literature are "avaricious men planning to make money by the operation," they have shown very little business judgment. The interest in such publications is unquestionably increasing, but thus far there are very few volumes or pamphlets devoted to "missionary work" of this kind which have been, or which can be published without bringing a deficiency to the investors.

Yours very truly, G. P. Putnam's Sons.

New York, September 30, 1884.

[We print the above, though it was not intended for publication.—Ed. Nation.]

BREVITY THE SOUL OF POETRY.

To the Editor of The Nation:

Sir: In your last issue you comment upon the perversity of the French critic who "notes prominently Poe's opinion that a poem must be brief in order to deserve the name, puts this down as purely American, and ascribes it to our national restlessness."

Perhaps some of your readers may like to be reminded that the idea of an essential difference between a long poem and a short one is not only older than Poe, but also far older than Coleridge—in fact, as old as the practice of literary criticism. In the dictionary of Nonius Marcellus (p. 428, 5 ff.) occurs the following:

"Poesis et poema hanc habent distantiam. Poesis est textus scriptorum; poema, inventio parva quae paucis verbis [Willmanns conjectures that this word should be *versibus*] expeditur."

Then follows a quotation of several lines from Lucilius:

"Non haec quid valeant, quidve hoc inter siet illud,
Cognoscis? Primum hoc quod dicimus esse poema,
Pars est parva poema, poema epigrammation vel
Distichum, epistula item quaevis non magna poema est.
Ilia poesis opus totum, tota Ilias una est,
Una θέσις sunt Annales Enni atque ἔπος unum,
Et maius multo est quam quod dixi ante poema."

Of course, in these Roman reproductions of the commonplaces of Alexandrine learning it is usually the formal parts that predominate—the earmarks of classification, so to speak. Still, it is clear enough that the critics with whom this distinction originated had in mind a difference in respect to the possibility of continuous and equally-sustained inspiration, and of unity of effect upon the reader's mind. So the passage of Lucilius continues:

"Qua propter dico, nemo qui culpat Homerum
Perpetuo culpat, neque quod dixi ante poesin:
Versum unum culpat, verbum, enthymema locumve."

And the possibility of reading at one sitting, on which Poe insisted, seems to have been the ancient test: a tragedy counted as a *poema*, not as a *poesis*.

J. H. W.

University of Virginia, October 4, 1884.

Notes.

The first volume of Leslie Stephen's "Dictionary of National Biography," embracing part of the letter A, is now nearly ready for publication. The American sale of this great work will be in charge of Macmillan & Co.

The first two hundred pages of the new "American Catalogue" are now ready for delivery. This instalment forms one-half of the author-and-title alphabet. Every public library, every bookseller who takes pride in his calling, every studious owner of a private library, ought to be found among the subscribers to this useful and important work, which is one more memorial of the late Frederick Leypoldt. The *Publishers' Weekly* issues the Catalogue, and the editor announces his intention to keep at his office a continuous catalogue of American publications from this date, ready five years hence to go to the printer with only the necessary revision. The price of the volume is ten dollars to subscribers.

From the same office we have received the 'Publishers' Trade-List Annual for 1884,' an inestimable book of reference for the trade, with its series of publishers' catalogues and the prefatory bibliography.

Doctor Billings's great 'Index-Catalogue of the Library of the Surgeon-General's Office' has been carried along through another volume, the fifth (Flaccus-Hearth). The wonderful minuteness of this infinitely laborious and meritorious work is illustrated by an entry which strikes our eye as we glance at its compact pages, naming a certain physician only to record that he was a "co-editor" of a certain medical journal in certain years. The division *Great Britain* fills more than thirty pages, the earliest document being of Henry VIII.'s time—"an acte concernynge the approbacion of phisicions and surgions," and one "concernyng unlawfull oyles to bee serched and seene that they be good and lawfull" (A. D. 1511-12). The titles in the vernacular under *Greece* are scrupulously printed. *Hœmorrhage* fills upward of thirty pages. *Hay-fever* occupies but a page and a-half, and the earliest date we have detected is 1819; the name does not appear to occur earlier than 1829, though doubtless in common use before that date. The *Head* requires some sixty pages; the *Heart* one hundred. *Guiteau* and his trial occupy more than a column; *Garfield* not less. But there is no end to the interesting revelations of this orderly array of titles.

Stormonth's 'English Dictionary,' in the Franklin Square series, reaches the word *gash* in its seventh issue.

The annual exhibition of the New England Manufacturers' and Mechanics' Institute has an art department which last year distinguished itself by a very handsome illustrated catalogue. For this an 'Art Year Book' is now and will be hereafter substituted (Boston: John Mason Little). Its aim is, in addition to the list of exhibits, to pass in summary review the year's achievements in American art, and to give examples of the various graphic processes which are so rapidly multiplying. The quarto volume before us is a beautiful specimen of printing and bookmaking, for which Mr. Arthur B. Turnure, of the *Art Age*, has cared. Etchings, wood-engravings, chromos, steel engravings, albertypes, heliotypes, phototypes, artotypes, etc., fairly represent existing modes of original design or reproduction. Mr. Elbridge Kingsley's "Tragedy of the Nest," Mr. Frank Fowler's "At the Piano," Mr. Kenyon Cox's capital drawing of the founder of the Sailors' Snug Harbor, have special intrinsic interest. The most decorative typographical features of the work are Mr. George Fletcher Babb's head and tail pieces, introducing eleven examples of the processes above enumerated.

Messrs. Scribner & Welford, who make a specialty of musical literature, have issued an attractive catalogue of thirty-two pages, containing a list of the most important works in English, on the opera, church music, history, criticism, theory, biography, piano and organ, etc. In the section on the pianoforte we miss Franklin Taylor's admirable primer, and under the head of Theory it seems odd that no mention is made of Richter's popular treatises, of which there are several translations. Otherwise the catalogue is pretty complete and very tempting.

J. W. Bouton has received the 'Illustrated Catalogue of the (Paris) Luxembourg Gallery,' with its large number of memoranda sketches of the works of living artists purchased for the nation and preserved in this depository. A history of the Palace itself, with some curious ancient views of the building, terminates with a brief statement of the use to which Louis XVIII. ordered it to be applied in behalf of art, and for which it has now become too contracted.

R. Worthington announces 'The National Ga-

zetteer and Geographical Dictionary of the United States,' edited by L. de Colange, LL.D.

Heine's Memoirs have been Englished by or under the supervision of an American, Dr. T. W. Evans, of Paris (London: George Bell & Sons). He could not have done better than to reproduce the German edition of Eduard Engel, which is admirably elucidated. But in place of the prefatory history of Heine's attempts at autobiography, Mr. Evans has substituted a sketch (filling half the volume) of the poet's life, with special reference to the likeness between him and Byron. For this task he was but slenderly qualified. A crucial test of his critical capacity is the absurd praise he bestows on Mr. Leland's wooden translations of Heine's verse. The indelicacies of the Memoirs have been discreetly omitted. The appendix contains but a small fraction of the valuable material to be found in this part of the German edition. Doctor Evans has profited by Mr. Engel's labors without the slightest acknowledgment. The translation is not too subtle. In the story of the first flogging, "our Lord, who ordained (*erschaffen*) the whipping," misses the point: "who invented flogging" is the phrase leading up to the philosophical reflection on the good Providence which also provided that the flogger should tire at last—else the flogging would be unendurable.

A posthumous paper by the late Henry James, having a subjective significance, and entitled "Immortal Life; illustrated in a brief autobiographic sketch of the late Stephen Dewhurst," will be published in the November *Atlantic*.

Some months ago we noticed the earlier numbers of a series of excerpts from Friedrichs's 'Bausteine,' translated, with notes, by Mr. D. Cady Eaton, of New Haven. They have now been published in a volume, under the title, 'Hand-book of Greek and Roman Sculpture,' by J. R. Osgood & Co. It is not necessary to repeat what we said before of the merit of these selections. Perhaps their chief interest, except as a book for occasional reference, will be in showing the quality of German criticism of art. In this number we have more of Mr. Cady's own comment than in the others. His remarks are generally sensible and to the point, though he does not assume to be a searcher of hearts like the German critic. A more careful proof-reading would have done the work good, for clerical errors are unpleasantly numerous. The indexes which Mr. Eaton appends will have a value apart from the text.

Once in a while a hobby can be made to serve as a courser, and the treasures of the numismatist or the bibliophile can be drawn upon for real contributions to knowledge. It is outside their purpose, and the genuine collector always hesitates a little about putting the choicest of them to any such practical use, for there is a certain degradation in placing even the slightest load on his Pegasus. Still, he consents sometimes, and the anonymous little monograph on 'The Coins of the Bible' (New York: Scott & Co.), with its facsimiles of the widow's mite, the tribute penny, and the shekel, will render useful assistance to the Sunday-school teacher in giving the scholar a more vivid notion of the life of Israel. None of her coins date back, it is true, to the time of her commercial greatness; still, there is sufficient later mention of them in the Bible to make them interesting, and the author furnishes the necessary historical details.

Among the latest American additions to the Tauchnitz collection are 'Dr. Breen's Practice,' 'A Roman Singer,' 'On the Frontier,' and 'Portraits of Places.'

Le Livre for September expends itself mainly on a long but very readable article by Maurice Jametel on "The Book in China." It is an account of the pursuit of bibliomania in the Flowery Kingdom, and describes the special quarter assigned to booksellers in Pekin, the interior aspect of the shop, and the nature of the wares in a graphic manner—pornographic, we were going to say, but this epithet belongs rather to the class of books called in French (as on p. 568 of the current number of *Le Livre*) "livres d'amateur," which, among others, were freely shown to M. Jametel. He found their grossness as repulsive as that of any similar product of European civilization. In some old, centuries-old, works, the typographical feats (often in many colors) extorted the Frenchman's admiration.

—A new 'Pacific Coast Pilot,' Part I., for the shores, islands, and inland passage of Alaska, from Dixon Entrance to Yakutat Bay, has just been issued by the United States Coast and Geodetic Survey, and, like all our Government publications, is offered for sale at a low price—two dollars. It has been prepared by Assistant W. H. Dall from all available sources, not least of which is his own extensive acquaintance with the Territory during many years of scientific research. Navigators and ship-owners are the necessary patrons of a work like this, and commerce the prime beneficiary. But close behind the trader comes or will come the tourist, who can already visit Alaska as easily as Europe, with less danger and at less expense; with equal benefit to his health, and with recompense in the shape of magnificent scenery such as Europe does not afford. The coast elevations scattered through this handsome volume, many of them from Mr. Dall's own pencil, show what the artist has in store for him in this region, while no voyaging can well be more romantic or delightful than that which the inland passage provides. Mr. Dall's qualifications for compiling and editing the present 'Pilot' do not need to be insisted on; but he has even given it a literary quality by furnishing a geographical index to Beechey, Vancouver, Billings, Cook and King, Dixon, La Perouse, Langsdorff, Lisianski, Lütké, Meares, Portlock, and Galiano, by which for the first time the classical works of these explorers are made accessible. The laboriousness of this task may be imagined. Its effect is to entitle the 'Pilot' to a place among the reference-books of any public or special private library.

—Mr. Henry H. Sprague, of the Massachusetts Bar, has prepared a readable and valuable essay on the status of women under the laws of that commonwealth. As in most of the older States the laws on this topic, as Mr. Sprague says, do not form "a logical, well-considered, well-balanced system, but rather . . . a fabric in which the original groundwork has almost disappeared from sight"; under irregular amendments, we may add, so complicated that very few lawyers can feel sure of their memory of the details, and errors about them are unfortunately frequent. The old common-law theory of the family as a unit has gone, and the later view of the independence and equality of the members has not been symmetrically worked out. Our Anglo-Saxon way of curing evils by patching the old fabric prevents any explosion, but does not produce a code; and this is particularly true of the law of women. Mr. Sprague might have mentioned that, as far as the poorer part of the community is concerned, the law is more favorable to the woman than to the man except in the matter of franchise. Her protection from criminal liability in many cases, and from arrest in most civil proceedings, her right to a widow's allowance and to waive the provisions of her husband's will, and her freedom from liability to support her children or helpmate, are privileges far more valuable than any accorded to him, except the franchise. In the wealthier ranks of society the case is different, and, as Mr. Sprague points out, where there is $20,000 or more of property the rights of the wife are in many cases inferior to those of the husband. It is difficult to see how any good can result from this complexity and inequality, but it is, no doubt, too much to hope that it will soon be cured.

—Mr. William Heinemann has reprinted from the *Bibliographer* 'An Essay towards a Bibliography of Marlowe's "Tragical History of Dr. Faustus"' (London: Elliot Stock; New York: Scribner & Welford), which is in some sort a supplement to his earlier 'Bibliographical Text of the English Translations and Annotated Editions of Goethe's "Faust,"' contributed to the *Bibliographer* two years ago. It is compiled with scientific precision and conciseness, and we can suggest scarcely any additions to its seventy-one numbers. From the criticisms on the play, perhaps M. Taine's brief but pertinent references in his 'History of English Literature' may fairly be omitted, but we think that it would have been well to mention the five essays on the various Fausts of literature contained in the first volume of Mr. Sutherland Edwards's rambling book about the 'Lyrical Drama.' We may note also that while Mr. Heinemann records (p. 22) the French translation of Marlowe's play by François Victor Hugo, he allows himself to refer to it (p. 24) as though it were the work of Victor Hugo. The publication of Mr. Heinemann's neat little pamphlet affords occasion for the expression of a wish that the librarians and bibliographers who have of late shown that they could come to an agreement about many things, should further agree on another—on a uniform size and shape for stray bibliographies like this of Mr. Heinemann's. Most of these are almost too thin to be bound alone without the padding of blank leaves, even if most libraries could afford the expense of separate bindings. But if a superficial uniformity were observed it would be easy to bind eight or ten or more in a single volume, broad enough in the back for a full lettering of its contents. We suggest this to the next conference of librarians as a desideratum easy of attainment and certainly deserving of discussion.

—Turgeneff, in his 'Mémoires,' says that in 1848 he saw at a representation at the Théâtre Français all the *beau monde* in white and blue blouses, above which starched collars and frills appeared with a very strange effect. The *Intermédiaires* was astonished at the story, and thinks that he must have been dreaming or jesting. This moves Maxime Gaucher to confess that, long ago as 1848 is, he was present at these representations. The Provisional Government, very likely at the instigation of the workman Albert, who was one of its members, undertook to elevate the working-classes by free representations of the chefs-d'œuvre of the French drama. Tickets were sent into the more democratic quarters of the city and distributed by lot. The wearers of the blouses were not the *beau monde*—quite the contrary. It was supposed, says M. Gaucher, that the poisoner Agrippina, and Hermione the assassin, and the incestuous Phædra would strengthen the virtue of the blue blouses and the cotton caps. Perhaps they did; but some of those who were lucky enough to get tickets did not wish to be elevated, preferring a good dinner for self, or, possibly, for wife or child. They hung round the theatre doors and sold their tickets, which gave M. Gaucher and others equally curious a chance to see what was the effect of Corneille and Racine on utterly unaccustomed ears. As might have been expected, the people hardly understood the plays, and cared very little for what they did understand. To an audience used to the melodrama of the Porte St. Martin "Phèdre," "Andromaque," "Cinna" are dull; indeed, they

have been thought so by persons who do not wear blouses. But one feature of the performance was not heavy. After the curtain fell, Rachel came forward with flag and Phrygian cap and sang the Marseillaise. That was moving enough, as those who heard her sing it on her visit to this country can testify. Possibly the spirit which her fury awakened may have had something to do with the bloody contest in the following June.

— It was unfortunate for Dr. Harkavy, of the Imperial Library of St. Petersburg, to have to come before the learned world with the Old Testament manuscripts recently discovered in Russia, for which a remote origin is claimed, at a time when the late Shapira's Deuteronomy forgery was still fresh in everybody's memory. It was more unfortunate still that the circumstances of the discovery, as divulged, were so curious and wore so suspicious a look. The story is this: In May, 1883, Mr. Z., a Jewish resident of a South-Russian seaport town—the names are withheld, though communicated to members of the Russian Academy of Sciences, his report to which, in German, Dr. Harkavy has just published—fell in with a sailor, who spoke to him in Hebrew, told him he was a Jew, led him to his vessel, and there showed him some fragments of the manuscripts in question. These were old parchment scrolls, and seemed to be regarded by the superstitious sailor as possessing a lucky charm. They had been found by his father about thirty years ago in the city of Rhodes, after a destructive conflagration. The father died when the heir to the treasure was only ten years of age. Mr. Z., after various efforts at various times, obtained from the seaman possession of all the rolls, fifty-one in number, and Dr. Harkavy eventually received them all for examination. They contain the text of part of the Minor Prophets, and of the Books of Lamentations, Esther, and Daniel. Many of the fragments are badly damaged, and the writing on some of the rolls is only perceptible when held up to the light. The style of writing is very peculiar, some of the letters being undoubtedly of very ancient form, and others of a form wholly unknown to the learned examiner. The deviations thus far discovered from the accepted texts are of very slight importance. Dr. Harkavy, in his "Bericht," shows himself fully conscious of the singularity of the circumstances and character of the find, and declares his incompetence, as a palæographer, and in other technical respects, to arrive at a positive decision in regard to the genuineness of the interesting manuscripts, or as to their age, if they are genuine, though he is inclined to consider them about a thousand years old. The same, in the main, is the opinion of Dr. Neubauer, and of Professor Sayce, in England. The latter, after stating in the *Academy* several obvious objections—"Jews are not usually sailors, and sailors do not usually speak Hebrew," etc.—discards scepticism in the matter on the following grounds: "Forgeries are made in these days for the double object of profit and fame; the owners of the fragments have sought for neither. The fragments, moreover, contain no startling novelties in the way of variant readings, and lay no claim to antiquity of date. But, above all, the characters in which they are written are such as only a few palæographical scholars could have invented. And these scholars are not likely to have undertaken the enormous trouble which the preparation of the MSS. for the mere sake of mystification would have occasioned."

—Petrarch is more generally thought of as the author of the *Canzoniere*, as the lover of Laura, and as the erudite scholar, than as the indefatigable traveller, the tourist *par excellence* of his age, the Anacharsis whose ceaseless wanderings had for their object, not geographical discoveries, but the essentially modern gratification of literary and artistic tastes and the taste for landscape. The seventy years of his varied career were spent in travels, voyages, trips on horseback, journeys over mountains, up and down rivers, and through kingdoms, principalities, and powers; indeed, even when at last he succumbed to disease, he was accompanying his friend Francesco Novello di Carrara on a *viaggio* to Venice. It is claimed for him, too, that not only was he the first *tourist* of modern times, the first man of leisure and letters who travelled for the especial gratification of an inherent taste for the picturesque, but he was the first Alpinist, the virtual founder of the Alpine Clubs who in our day take delight in climbing mountain-tops, breathing rarefied air, and collecting edelweiss. It was in 1336 that he persuaded his brother to climb with him the dangerous heights of Mont Ventoux, near Vaucluse, and that he enjoyed from its summit the unrivalled panorama below. Though so much of his time was spent at Avignon and Vaucluse, and though his wanderings led him even to England and Germany, Italy was the special object of his affections—the lovely land which, in one of the finest of his poems, he addresses as "Salve, chara Deo, tellus sanctissima, salve." And the centre of his innumerable Italian journeys, the centre and passion of his travelling soul, was the Eternal City, or, as he expresses it, "mia avidità di vedere e rivedere questa Roma, la quale, quanto più io contemplo, tanto più disposto sono a creder le grandi cose che sono scritte di lei." Florence he did not like, calling it "mercantessa e lanaiula," thus contrasting vividly with Dante and the modern world; while Venice he would not visit for years, coupling it perhaps with his well-known aversion to sea-travelling. The towns of the *piccoli tiranni*—Parma, Bologna, Genoa, Milan, Naples—he traversed and retraversed continually, pursued by a restlessness and impatience characteristically modern. The occasions of his incessant peregrinations were, to be sure, numerous—a passion for antiquity and ancient books, a desire for novelty and novel landscapes, admiration for the beauties of nature, ambassadorial, æsthetic, or friendly missions; but above and beyond all these was the natural restlessness of his disposition, the dawning germ of the modern man with all his multiplicity of affairs, the consuming fever for change, innovation, physical and intellectual relief, resulting in the gigantic and grotesque arrangements by which the people of the nineteenth century are enabled, season after season, to run away from the cares of home and business. Who would have expected to find in the mild and melodious Petrarch the progenitor of the omnipresent Cook?

—An astronomical society of English amateurs, organized at Liverpool a few years ago, has been doing good work of late, largely in the direction of photographing the stars with a large camera belonging to Mr. Howard Grubb, the celebrated optician of Dublin. The apparatus employed — a compound lens of four and one-half inches diameter, in combination with the very sensitive dry plates made by a well-known English house—is remarkable for its space-penetrating power, the faintest of telescopic stars impressing themselves on the plates when the exposures are made of unusual length. The photographs thus far obtained are principally valuable for the reduction of the magnitudes of the stars, and a catalogue of the magnitude of 500 stars has already been made up from the photographic plates, and lately published under the direction of the President of the society. In the case of two-thirds of the stars, there can be no doubt that the photographic impression is nearly equal to the eye-magnitude; while the remaining third fall into one or other of two classes, the bluish stars increasing in magnitude, while the reddish ones decrease. The photographs, so far, fail to corroborate the statement of Dr. Gould that most of the stars are liable to fluctuations of light; but this conclusion will be tested more minutely, and it is to be expected that new variable stars will be thus discovered.

RECENT NOVELS.

Women are Strange, and other Stories. By F. W. Robinson. Harper's Franklin Square Library.

The World We Live In. By Oswald Crawfurd. [Trans-Atlantic Series.] G. P. Putnam's Sons.

Miss Tommy, a Mediæval Romance; and, In a House-Boat. By the author of 'John Halifax.' Harper & Brothers.

Where the Battle Was Fought. By Charles Egbert Craddock. Boston: James R. Osgood & Co.

The Adventures of a Widow. By Edgar Fawcett. Boston: James R. Osgood & Co.

Rutherford. By Edgar Fawcett. Funk & Wagnalls.

Among the Chosen. [American Novel Series.] Henry Holt & Co.

The King's Men. By Robert Grant, John Boyle O'Reilly, J. S. of Dale, and John T. Wheelwright. Charles Scribner's Sons.

The Mistress of Ibichstein. By Fr. Henkel. Translated from the German by T. C. Boggs. [Leisure Hour Series.] Henry Holt & Co.

Good Stories. By Charles Reade. Harper & Brothers.

On the Frontier. By Bret Harte. Boston: Houghton, Mifflin & Co.

Our general impression that Mr. Robinson is more successful in the story than in the novel, is confirmed by this new collection, in which the shorter tales are the best. "Miss Anderson's Colors" and "A Fight for Him" are well carried out, the former losing nothing by comparison with the tale of the Boots at the Holly Tree Inn.

Mr. Crawfurd has apparently seen fit to reverse the now common process of making a play out of a novel. His little sketch of 'The World We Live In' is unmistakably worked up from a play, though it may be quite true that the play itself was never written. It has just the surprises, the hits, the telling situations which make the success of a play. Something more is required for a novel, for, though it may be only the force of habit, we sit down to a book in such a different frame of mind from that in which we take our seats before the curtain, that the intermediate steps, the gradual preparation for the different events, are fatally missed in a story constructed on such a pattern as this. The little intrigue is by no means a new one—the device of the millionaire to test his friends old and new by passing himself off as penniless, and the unmasking of an adventurer of a very familiar type. The American girl appears again, still beautiful, and speaking that remarkable dialect with which English novelists have endowed her. If the reader is a little staggered by finding a whole pocketful of diamonds in a remote highland glen, he will be amused by the easy sketches of the luxurious life in a great country-house.

The author of 'John Halifax' gives us in 'Miss Tommy' a little tale not unworthy of her best days. It is a portrait, or rather a pair of portraits, which she may first have studied when writing 'The Afternoon of Unmarried Life.' In its present shape, it ought to reach a much wider and more appreciative circle of readers than it found in the *Bazar*. 'In a House-Boat' will introduce to many persons an entirely new form of

summer pleasure. It is a brief journal of a week spent in a barge moored in a tiny bay of the river Thames—

"adorned with William Morris's furniture, perfectly 'æsthetic' in its decorations, and as convenient as a well-appointed yacht. . . . To live in a house-boat on the broad river, with a safe barricade of water between you and the outside world; to fish out of your parlor-door, and, if you wanted to wash your hands, to let down your jug from your bedroom-window; moreover, to have unlimited sunrises and sunsets, to sleep with the 'lap-lap' of a flowing stream in your ears, to waken with the songs of birds from the trees of the shore—what could be more delightful?"

There is not much to be said for the illustrations of the longer story, but the little bits in the journal are suggestive. That on page 238 has in it a touch of genius—not for the umbrellas, which are a trite enough subject at present, but for the puzzled attitude of the sheep as they trot into the foreground, turning their startled heads toward the intruders.

A single reading will do no justice to Mr. Craddock's 'Where the Battle Was Fought.' Picture follows picture, and incident hurries after incident, so quickly that the reader himself hastens on to the dénouement without clearly separating the characters that pass before him. It is only upon a review that he will realize how rich and varied a material can be found in a dull, deserted country neighborhood by an imagination keen in detecting the poetic value of inanimate things. It must be owned that the story is handled rather as a series of sketches, of which the interdependence is hardly close enough to form a solid logic. Nor is there such exquisite balance, such fine harmony, as 'In the Tennessee Mountains'* showed. Yet there are figures as unique and distinct as any in that book. "Quick Pickie" and "Mirandy Toole" must once have lived. The two love-stories by themselves are not very different from the rest of their kind, and the scheme for getting possession of the Fortescue property is of a familiar sort. Clever impostors are no novelty. But where Mr. Craddock shows great original force is in the end to which he brings the man. The criminal works out his own condemnation; the sin brings its own punishment. There is a deep moral as well as a rare pathos in the scene in which the adventurer appeals to the friend who, he believes, has risen from the dead to accuse him. Taken apart from any plot or narrative, the book presents a picture of the condition of the country desolated by the war, as it seemed six years after the peace, such as we have never had before. There have been wanton misrepresentations, there have been unconscious misapprehensions, there have been party pamphlets in the guise of novels. None of them, like Mr. Craddock, drew simply life as life. The great battlefield, weird and ghastly in winter or gorgeous in summer bloom, is the impressive background against which all the figures are thrown in high relief. We do not ourselves find the reiteration with which the author returns to it tiresome, but we can imagine it to be so. Longer study may give him the power to produce the same effect with less word-painting. How few are the lines which carry the rush and roar of the storm in our ears as we read "King Lear," or the glancing light of the green woods through the pages of "As You Like It." Mr. Craddock's next venture in fiction will be awaited with much interest. If he escapes the perils of melodrama, if he learns to marshal his crowding fancies, the highest places are open to him.

We sometimes think no one comes so near to great work as Mr. Fawcett. In some conceptions of character, in some detached scenes, he almost attains it, but in a moment he falls so far below it that we wonder at our own faith in him. 'The Adventures of a Widow' in parts deserved something better than the infelicity of its title. The poorer chapters in it are thrown by some failure of perspective into altogether undue prominence. The main theme has been often enough worked out, but it is by no means exhausted. It is the development of character in a woman who enters upon a loveless marriage without any experience of life whatever. Mr. Fawcett has tried something of the same kind before, and returns to it as if he sought a wider scope for the play of motive and passion than is furnished in the simple story of an early or an only love. The heroine is married out of hand by her mother to an old man. His death soon leaves her the mistress of herself and her fortune. Her love for a fascinating Irishman and her engagement to him, her discovery of his double-dealing, her despair, and a finale which foreshadows marriage with the friend of her childhood, are the real points of interest in the plot. The Irishman was well conceived. He was by no means the out-and-out villain who is so easy to draw: "There was none of the fortune-hunter's deliberate method. . . . But his insecure, precarious conscience was incapable of pointing to him the one straight imperative path." The failure is in the selection of incidents by which the action is carried on. There are but few of them, and nearly all are connected with the grand scheme with which the heroine, after her mourning, reënters the world of New York: "I mean to organize a *salon*, a veritable *salon*."

It is the third time this *salon* has appeared in fiction this very summer. The first time, it was the solace of the superlative creature of the 'San Rosario Ranche,' after the discovery that she had married a man with one wife already. Mr. Fawcett himself is responsible for the second, in 'Tinkling Cymbals.' In fact, many chapters of this later book may be read, if not as an integral part, then as a variant of the former. Therein Leah Tremaine is likewise a young and lovely widow, and "picks her little *salon* with great care. . . . But I feel that it is quite a failure, after all." "The disappointed fashionables," "the scholars," and "the Bohemians," between them ruined it. Pauline Varick, in 'The Adventures of a Widow,' proposes "to wage a vigorous crusade against the aimless flippancy of modern society." "She was a young leader in the cause of culture, without a following," which last is drolly proved when she has to borrow the visiting-book of a lady, almost a stranger, in order to make out her list of invitations for her *salon*. How she succeeded and what came of it fills more than half the book. It is possible that some years of life in Paris might not have taught her that no *salon* is made, that it grows by reason of certain fine and gentle yet far-reaching social forces; but the author for his own sake should have been more careful to show that her ignorance is not his own. He takes the opportunity to make a number of caricatures which the reader will not find real enough to trouble himself about identifying. He is more successful in his portrayal of the solid resistance to new impressions, the scorn of all not itself, which characterize a pride that is called family pride, but which is only pride of purse intensified by the inheritance of a generation or two. All this may be more words than are worth while, but it is sometimes the duty of the reviewer to defend an author against himself, by pointing out the merit of a design which he has deserted in allowing himself, as in this case, to be drawn off upon a minor matter.

Mr. Fawcett's 'Rutherford' is so badly constructed that one half has little to do with the other, and that either half might stand alone a complete and tedious tale. The characterization of Rutherford as the highest expression of birth, wealth, and the world's cultivation would grace that kind of fiction where vulgar falsification is substituted for both idealism and reality. He is egotistic, luxurious, effeminate, while on the other side of the scale there are only his "robust, nervous equipoise," and the "uncommon faculty of always appearing equally high-bred." He loves Constance Calverley, and, a few hours after she rejects him, is the accepted lover of Adelaide van Cortlandt. A hint that his haste was due to the mortifying suspicion that Constance's letter of refusal had been copied from the 'Christian Gentlewoman's Complete Letter-Writer,' would have gone far towards excusing it. In the final catastrophe, his unconcern about his wife while he applies his "massive symmetry" to rescuing Constance from drowning, is a fine illustration of his high breeding, and his declaration of passion at this crisis a neat example of gentlemanly indifference to domestic disturbance. Constance presents a pitiable confusion of ideas about what constitutes nobility of character, and an ignorance of the kind and extent of weakness possible in women with great ideals and liberal natural endowment for their achievement. We should like to accept as satirical this wordy delineation of a grandiloquent female humanitarian, and to enjoy as ironical the references to her "wise and orderly soul," her "placid firmness," and her strange accomplishment of shaking her head "with a stately yet playful sadness." But the picture is drawn with awful seriousness. Serious, too, is that of her brother, Mr. Stuyvesant Calverley, whose "impervious composure gave him a tremendous suggestiveness when viewed in the light of that pitiless idea, caste." From this elegant creature's actions we infer that gentlemen shield themselves by their sister's presence when they insult a man whose temperament they have reason to believe is not patrician. We infer, further, that a special air of distinction is imparted by a *single pink* rose in the buttonhole. Perhaps plebeians habitually wear a bunch of roses, red or even yellow, in the buttonhole. Very possibly their obnoxious presence in Penrhyn's led Mr. Calverley to the just assumption that he was a spiritless person, who, being smitten on one cheek, would at once offer the other, lit with its "rich and mellowing joviality." A very slight sense of humor might have prevented the perpetration of much of the nonsense in this book; it certainly would have saved the author from the artistic blunder of lowering on a tragedy a curtain with the placard: "It was not until two days later that diligent and patient investigations resulted in the recovery of Adelaide's body."

Since Hawthorne's 'Blithedale Romance,' novelists have seemed to shun those communities of humanitarians or idealists which have had a short and mostly unfortunate existence in almost every State of the Union. They have probably taken the popular view of such communities, which is that they are made up of eccentrics at war with orthodox religion and laws relating to marriage, not worth a moment's thought from a world with any pretension to sanity. The author of 'Among the Chosen' has therefore either the advantage of an unknown field, or the disadvantage of a despised one. His scene is laid in a community where were preached and accepted many rules of life hostile to those long believed and proved by society to be vital to its welfare. Any effort of the individual to secure to himself material goods or pleasures was denounced by the leader, Father John, as fatal to spiritual advancement, and natural affections were combated as the most insidious wiles of the devil to lure weak humanity from a pure and absolute love of God. Men and women who abandon friends, fortune, home, and children, slavishly subjecting themselves to the

*It is interesting to compare these sketches with the letters written by Tom Hughes to the London *Spectator*, and reprinted in his book about the new "Rugby." Each helps the other.

caprice of one obviously the incarnation of selfishness, may appear to the conventional world hopelessly mad. Even those acquainted with that restless element in human nature which expresses itself most violently in religious exaltation and whole-souled abandonment to the pursuit of a vaguely-imagined spiritual perfection, may regard so extreme a development as monstrous or impossible. As a matter of fact, the author of 'Among the Chosen' has neither misrepresented nor exaggerated the actions or motives of a community which for some years existed in one of the Middle States. And the people attracted thither by their own yearning after higher things were not from the ranks of the unfortunate, the uneducated, or the licentious; nor were they mad, unless all enthusiasts and iconoclasts are to be considered madmen.

But all this, of course, has nothing to do with the worth of the story, which is more than the reproduction of a peculiarly painful phase of life; it is a protest against the perversion of natural law, from the full heart of one who has seen its iniquity. The protest is neither wild nor incoherent; on the contrary, it owes its force largely to the hand of the story-teller—a hand both strong in tragedy and light in comedy. From an artistic point of view, the only conspicuous defects are that the tragic element is introduced too soon, and that the minor characters are not dwelt on long enough to fix them in the mind of the reader. Father John is drawn so sharply and unflinchingly that we have no doubt about his hypocrisy, his impudence, his cruelty, and no charity for that degree of self-deception which he has attained through long and incredibly successful deception of others. Better still, in the way of fine and accurate delineation, is Rosalie. In her unhappy girlhood all the atrocity of a system which separates parents from children is laid bare. Only with the irresistible Ted and Mozy does she escape from the oppressive sense of terrible wrong somewhere in the scheme of life; never, though rebellion seems most impotent, does she hesitate to rebel. Truthful and fearless, her natural antagonism to the duplicity and craft of Father John shows itself first in suspicion and dislike, then in defiance, then in that deadly hatred which prompts her desperate attempt at vengeance. From the beginning she attracts our imagination and sympathy, holding both until, with the horrors of her life behind her, she cries to Felix, "I am not fit to love—I have suffered so." As a lover for such a girl none could be more fitting than Felix, upon whom care would always sit lightly. The scene between them in the wood has the freshness of the world's youth, if it ever had a youth when a man and woman embodied purity and passion without consciousness of the significance of either.

It is quite possible that any effort of the four authors of 'The King's Men' to regain what literary reputation may hitherto have been theirs, will be as vain as that of the king's horses and the king's men to put Humpty-Dumpty up again. If it is a merit for four men to write with uniform dulness, the book has the merit of a rigid uniformity. With the exception of two scenes, it is so feeble and so purposeless that we see no reason why the author of 'The Average Man' should not have written the whole. These scenes, it may be said at once, are the escape of the political prisoners from Dartmoor, and the renunciation of allegiance by Geoffrey Ripon. The first is graphic, and there is poetic fancy in permitting the selfish old professional wit to do a really heroic deed. In the last, Ripon breaks his ancestor's sword and breaks for ever with the miserable last of a line of kings in a manly and dignified way. For the rest, the plot has no "go," the people have no life. However, since sympathy is always in proportion to conviction of reality, and since nothing short of genius could stamp with reality a drama of the twentieth century, the failure to excite interest in the people could be overlooked. But we could reasonably expect a mitigation of failure by some imaginative, witty, or ingenious evolution of the world's most noticeable tendencies. The only original venture in this way is the development of the catering business in the person of "Jarley Jawkins, individual caterer." The degree of melancholy inspired by this person can be best expressed by mentioning that the ancient and cherished witticism of a pianist weeping over his own composition does not lighten it. Readers 'The King's Men' will probably have, since no man can dispute the drawing power of a four-headed baby at a show. Admirers it may have, too, for there breathes no Irishman with soul so dead as to grudge admiration to seers foretelling a great and good O'Rourke who, as first President of the British Republic, will dispense Irish justice beneath a tricolor of red, white, and green.

'The Mistress of Ibichstein' has no striking originality or force, but it is gently interesting, and the scene and characters are chosen with discrimination. This gives a value to the story beyond the curiosity about the fate of Esther and Von Costar, the misguided lovers who

> "—sahen sich an so feindlich,
> Und wollten vor Liebe vergehen."

Esther, with her pride of birth, her loathing of poverty, her evident fitness for luxury and pleasure, is just the sort of girl to become the tool of the mysterious, cynical Fräulein von Uern. Esther, with her sense of personal dignity and love of personal freedom, is equally the sort of girl to fling over fortune when she finds that a marriage for money "imposes conditions to which none but the most degraded serf would submit." The triumph of the nobler elements of her character over the baser fairly entitles her to the rank of a heroine and to ultimate happiness. The destinies of the minor characters are closely woven with hers. There is justice in the final disgrace of the wicked Count Malstädt and in the disappointment of the young Prince, who, not being beautiful, is rather a novelty in young princes. Among the best of these lesser persons is the whimsical little Princess. The deference paid to her seems eminently beautiful and proper, and the hopelessness of her childish passion for Von Costar is genuinely touching. This effect in itself is no small achievement, since common people are not easily grieved by the woes of a princess.

The comparative value in literature of cleverness backed by energy and industry, and genius without zeal, is always open to debate. The vitality and force of Charles Reade's score of 'Good Stories,' contrasted with the limpness and indecision of Bret Harte's 'On the Frontier,' may be taken as evidence that the inferior natural qualification is productive, in the long run, of the greater quantity of acceptable work. The artisan may labor in vain for that glory which the artist wins with ease, but the ingenious, skilful, wide-awake artisan is really a fine figure beside the indolent, careless, shiftless artist. Most of Bret Harte's stories have hitherto displayed those wonderful intuitions which enable men to construct from a hint a whole history of heart and spirit; they have exhibited broad sympathies, wit, humor, a sense of the picturesque and dramatic, an instinct for the selection of models capable of idealization, a gift of fit expression—most of the qualities that go to make greatness in fiction, marred only by a leaning toward sentimentalism. But, though imagination may make the food it feeds on, it must be stimulated, especially when it assumes the responsibility of entertaining the public. In the three stories before us, "At the Mission of San Carmel," "Blue Grass Penelope," and "Left Out on Lone Star Mountain," it is evident that Mr. Harte's imagination is languishing; that he no longer creates; that, lacking the energy to seek subjects which shall attract and excite his genius, he is content to imitate—his former self. His method has deteriorated in a corresponding degree, and his bold, confident strokes have vanished amid a multiplicity of feeble, meaningless lines.

Reade, on the contrary, cultivated assiduously what was at most artistic ingenuity. He looked at the world, listened to it, read about it with amazing interest, and he imparted the results with great vigor. He told his impressions quite freely, and he put a pretty high value on his personal estimate of other men and women. This estimate of the superficial man, and especially of the superficial woman, was apt to be false, but sure to be amusing. Though he often believed that he thrust deep beneath the surface, and very knowingly too, probably no reader ever shared the delusion. No author ever counted for less in his stories; no author of any distinction ever fell further short of that lofty niche in the temple where stand the few who have made all feel "of this joy, this madness, this despair I was a part, else I never could have told you." Even his rough-and-ready composition, one of the most elaborate and sustained literary affectations on record, never impressed itself as spontaneous and natural, responsive to personal feeling. But without rare intellectual endowment, lacking breadth of vision, and defying good taste, he kept his hold on the public, he spun good yarns to the last. His action was always swift, but there was no haste. His detail was profuse, but all necessary to the structure. Nothing was clumsily jointed. Fact was clapped upon fact with the dexterity of a master bricklayer, and every fact asserted its importance as does each brick in those houses where the mortar of the interstices is painted a glaring white. He detested circumlocution and finical phrase, and every word seemed to have a distinct value, almost to assume an aggressive attitude. So, though he often irritated and offended, he never bored.

In these 'Good Stories' his dread of being dull, of becoming a bore, has pushed his curt, coarse phraseology to an extreme limit. He goes out of his way to scold about the bad English—meaning the roundabout, nonsensical English—of to-day. He apologizes for being old and infirm, and therefore almost half as garrulous as his juvenile contemporaries. Had he read in "Blue Grass Penelope" that the heroine married the "male of her species," and that an old woman "glittered as with the phosphorescence of refined decay," he would probably have singled out Mr. Harte for special chastisement. In addition to this praiseworthy dread of being dull, professional pride unquestionably spurred him to seek out new incidents, and to make over with effect what had already been used. If he had been called on to tell a story, and out of his vast store of materials could find no story to tell, there is little doubt that this pride would have stayed his hand. It may be dispraged as small vanity, but if Mr. Harte had it, he would never have given 'On the Frontier' to the public. He would perhaps care to assure himself of that appreciation to which his earlier work entitles him, and that admiration which it will probably have when Reade may be looked upon only as a collator of curious facts, spasmodically excited to fiction by public evils, and pretty constantly in a rage about the corsets worn by the women of his time.

GENIUS AND INSANITY.

Genie und Wahnsinn. Von Dr. Paul Radestock. Breslau: E. Trewendt. 1884.

A FEW weeks ago the newspapers announced that

two prominent artists, Makart and Múnkacsy, had lost their reason, almost simultaneously. The news did not create much surprise, as the close relationship between genius and insanity is proverbial, and not only in the sense that extremes meet. Isolated assertions, aphorisms, and essays on this subject exist from Plato to the present day. Schopenhauer devotes five pages to it in his principal work, and the French alienist Moreau de Tours wrote a special work, 'La Psychologie Morbide,' in which he boldly announced and endeavored to prove that "le génie est une névrose." Perhaps the oldest definite statement is that of Aristotle, who asserted, according to Seneca, that "Nullum magnum ingenium sine mixtura dementiæ fuit"; and the best known is Dryden's

> "Great wits to madness sure are near allied,
> And thin partitions do their bounds divide."

Dr. Paul Radestock, the author of an interesting work on 'Sleep and Dreams,' is the latest investigator in this field. He belongs to the modern school of psychologists, who believe that mental phenomena can best be studied in connection with physiology and (mental) pathology; and although his brochure is to a large extent a compilation of facts mentioned in the works of various alienists, it differs from most of these in more critically sifting the biographic data, of which a very rich collection is offered.

Among the men of genius who actually became insane, temporarily or permanently, are Schumann, Donizetti, Swift, Southey, Lucretius, Torquato Tasso, Lenau, Hölderlin, Comte, and Albrecht von Haller. Much longer is the list of those who had isolated symptoms of mental and nervous derangement. Richelieu had an attack during which he imagined he was a horse and ran neighing around a billiard table, though on recovering he had no remembrance of the event. The mind of Don Carlos, according to the alienist Hagen, was undoubtedly affected. Rousseau saw everywhere enemies and a general conspiracy against his person—a common initial form of derangement, from which the poet Rossetti, too, is said to have suffered. The conduct of Diderot, Byron, and Beethoven was often marked by an irritability and eccentricity next door to insanity. Cæsar was epileptic, Molière was subject to convulsions and nervous attacks which sometimes interrupted his work for a fortnight. Peter the Great had nervous attacks, during one of which he lay motionless three days and nights. Pascal had convulsions lasting twenty-four hours, to which he succumbed at an early age. Schiller swooned away several times and had convulsions. Flaubert had epileptic seizures. Alfieri was excessively eccentric, suffered periodically from an attack of deep melancholy, and says himself that but for love and poetry he should either have become insane or drowned himself before he was thirty. Paganini's eccentricities are notorious. At an early age he had a cataleptic attack; and the superhuman force he possessed while playing, together with the utter prostration following, bore a close resemblance to an epileptic fit. Mahomet was doubtless an epileptic, subject to vivid hallucinations; and the visions of Swedenborg also had their origin in a morbid cerebral state. Handel succumbed to his work and pecuniary reverses in 1837, and remained mentally disabled for several months. Newton, Kant, Linnæus, Boerhaave, lost the normal use of their faculties in old age; and among those who in their youth had a very weak physical constitution are mentioned Demosthenes, Newton, Kepler, Voltaire, Walter Scott, Fontenelle.

Temporary derangement frequently shows itself in a suicidal impulse. Beneke, Merck, Raimund, and Kleist died by their own agency; Schumann threw himself into the Rhine from a window, but was rescued; while Goethe (in the 'Werther' period), Alfieri, George Sand, Beethoven, and Raphael struggled successfully against such impulses. Almost every gifted person has moments when he seriously questions if life is worth living, and considers the relative advantages of electricity, water, the noose, the pistol, and poison. With authors there is a tendency to overrate their own ideas when they are first conceived, and to underrate them after execution. The brain, having so long been worked in one particular channel, feels exhausted; attention is directed to minor imperfections in workmanship, which for the moment assume an importance out of all proportion to what is due them, and the result is a general despondency, which with a sensitive person may lead to a desperate and absurd action. Ordinary people cannot understand such exaggerated elation and depression, based on so inadequate a cause; hence they naturally class these eccentricities with the doings of madmen—which, in truth, they resemble.

Professor von Krafft-Ebing, who is the best psychologist among alienists, states in his 'Lehrbuch der Psychiatrie' (i, 157) that "Schopenhauer's grandmother and uncle were idiots; and there is no doubt that men of genius frequently have relatives who are insane or mentally defective, and beget children who are weak in mind and even idiotic. It seems as if a mutually higher and more delicate organization of the nervous elements in one case, aided by especially favorable conditions, results in a higher development, and under unfavorable conditions leads to psychic degeneration." Byron's ancestors were noted for their eccentricity and passions; Diderot's sister died insane; Richelieu's sister was a lunatic; Beethoven's father was a drunkard, and dipsomania is closely related by heredity to the severest phases of mental pathology. But the most remarkable chain of evidence is afforded by the family of the two German poets Kerner and Hauff. Kerner himself relates that his mother's sister became a victim to melancholia; her son became insane, and her daughter, the mother of the poet Hauff, was a somnambulist. This case is also of interest because it touches the question of hereditary genius, and gives weight to Schopenhauer's theory that great men inherit their intellect from the maternal, and their character or will from the paternal side—in support of which he mentions Buffon, Kant, Schiller, Schwab, Bürger, Bacon, Hume, Rousseau, D'Alembert, Goethe, and others. He might have added his own name (for which he was none too modest), had it not been for the standing feud between him and his mother. Goethe furnishes a double illustration: his mother was intellectually far above his father; whereas his own son, by Christiane Vulpius, "resembled his father in physical strength, but was of limited intellect, like his mother; wherefore Wieland called him 'the son of the maidservant.'" Men of genius seem to be much more attracted by the æsthetic and domestic than the intellectual qualities of women, which may, if Schopenhauer's theory is correct, account for the rarity of hereditary genius. The long-continued inheritance of rare musical gifts in the Bach family may, on the same theory, be traced to the frequent intermarriages between the different branches of the Bach family; and even here there is no direct transmission of the highest order of genius that would militate against J. B. Meyer's generalization that Talent creates Genius, and Genius is followed by Talent.

Of all the abnormal phenomena of mind which are to be noted in the case of men of genius, the most frequent are probably sense illusions. Of these there are two kinds—illusions proper and hallucinations. Illusions make up a large part of our commonest perceptions. When we look at a distant object, our eyes see only certain outlines and colors, the details being filled up by the imagination with material supplied by past experiences. Less normal is the mental process in a timid person who sees a black stump in the twilight and transforms it into a bear: this being divided by only a "thin partition" from the state of the maniac who sees a dog which his diseased imagination converts into the devil with horns and tail. Hallucinations, on the other hand, are sights (or sounds, etc.) which are supplied by the diseased brain alone, without any external object suggesting them. Hallucinations have played a conspicuous rôle in the history of religions, especially in the Orient, where they were brought on by exhaustion due to ascetic practices. We have already cited Mahomet and Swedenborg. It seems less doubtful that the Socratic "daimon" was an hallucination when we are told that the philosopher once remained standing in the same spot a whole day long. The devil at whom Luther threw his inkstand was another hallucination, the product of a brain morbidly excited by brooding over religious questions. Of course such incidents do not prove that these men were ever quite insane, but only that they were so for the moment and partially. There is no distinct dividing line between sanity and insanity; and just as a real lunatic may in every respect but one appear perfectly normal, and even as to that have lucid intervals, so a man of healthy mind has moments when it would be impossible to distinguish him from a maniac. Benvenuto Cellini had frequent hallucinations, as he relates in his autobiography. Byron and Goethe had similar experiences; and Pope once saw an arm come out of a wall, and asked the physicians whose arm it was. Nor is it at all necessary that one should be either a genius or a lunatic in order to have such visitations. Under abnormal cerebral tension, any person may have them.

Sense illusions appear to be less frequent among men of science and statesmen than among artists and poets, for the simple reason that the faculty chiefly in use with artists and poets is the imagination. Kant and Schopenhauer go so far as to limit the application of the term genius to artists (including all the fine arts) and philosophers; all other great minds being ranked as talents. This may seem an arbitrary distinction, but it has a large element of truth, inasmuch as great thoughts almost always originate in images—*i. e.*, concrete cases. Thus, Newton was led to the discovery of gravitation by the fall of an apple, and in so far may be classed as a poetic genius. In reality, there is no boundary line between genius and talent so far as individuals are concerned. Under the influence of a strong emotion like love many a prosaic mind becomes temporarily poetic; while, conversely, the greatest men of genius have written much rubbish. There is an analogy between insanity and genius even in this, that both are more common now than ever before. There may be fewer geniuses than at some previous epochs, but there is more genius. Perhaps, too, there are as many geniuses as at any time. It is difficult for contemporaries to decide. At Zermatt, in Switzerland, Monte Rosa and the Matterhorn do not appear so much higher than the neighboring peaks as they do at a distance. In thinking of the past we unconsciously lump all geniuses together, and think of them as having existed at the same time. When this optical illusion is corrected the facts present a different aspect.

If it be conceded that there is more genius, as there is more insanity, now than ever, it will be clear at once that the causes are the same in both cases—overpressure and sustained excitement following the keen and ambitious struggle for existence. Those who have a spark of the divine fire are urged on not only by necessity and competition, but by a creative impulse which is quite as irresistible as the impulse of the madman who

has a fixed idea that he must kill somebody, and who forthwith runs into the street and makes a victim of the first person he meets, whereupon the pressure on the cerebral centres ceases. A well-known instance is afforded by Goethe, to whom a complete poem sometimes presented itself ready-made in a moment, and who in his eagerness to get it on paper did not even take time to arrange the paper, but wrote on it diagonally, if it happened to lie that way. Goethe also testifies to the great relief he felt after having, in great ferment, written his 'Werther' in a few weeks. During the progress of original literary work the brain is in a condition of abnormal excitement, which Moreau compared to fever and which Alfieri designated by the same name. In such a state the pulse rises, the eyes, "in a fine frenzy rolling," assume an unnatural brilliancy; the forehead is hot; the personality of the author and his surroundings are completely forgotten, and every facial muscle is electrified by the strong nervous currents in such a way that a countenance ordinarily homely and gloomy may assume an expression of radiant beauty. It is in this seething cerebral process that immortal thoughts are brewed, and associations formed between ideas and facts that no mind had previously connected. Thinking is usually considered a laborious process, and so it is to a beginner, as playing is to one who first learns his scales on the piano; but when he has learned improvisation—the spontaneous reproduction of spontaneous thoughts—the accompanying mental state is one of intense pleasure: for happiness is simply a state of consciousness which ensues when cerebral processes are easy and rapid—sadness being the reverse.

This is a point of great importance in explaining the affinity of genius to insanity. Almost any professional writer may, physically at least, get himself into the state just described if he will form the habit of working very late at night, assisted by such a stimulus as very strong tea or coffee. At about 1 o'clock thoughts will begin to flow with delightful ease, and everything become wonderfully clear. This is sure to be followed next day by great fatigue and prostration, and if often repeated will end in headaches and nervous collapse. But while the state of inspiration lasts it affords perhaps the most intense and certainly the most sustained pleasure of which man is capable; and it is for this reason that men of genius are tempted to yield to the craving for nocturnal labor. Schumann's biographers mention that he smoked a large number of very strong cigars, which he himself called "little devils"; and his excessive activity was very aptly described by his physician as "psychic dissipation." There can be no doubt that some great thoughts in art and literature would never have been created except in these conditions of pathologic excitement; and this may have suggested Gérard de Nerval's statement that "suprématie intellectuelle et santé physique ne peuvent guère se rencontrer qu'exceptionellement dans le même individu." The reason, however, why many great minds are not recorded in the annals of insanity is perhaps chiefly to be found in this, that they did not yield to nocturnal "psychic dissipation." There is another way of obtaining valuable results. In the morning, when the brain is refreshed by sound sleep, the thoughts flow as readily, and the memory of scenes and facts is as vivid, as late at night. And morning meditation differs from nocturnal dissipation in being positively healthful and conducive to longevity.

English Caricature and Satire on Napoleon I. By John Ashton. With illustrations by the author. 2 volumes. Scribner & Welford.

We advise Mr. Ashton to take a literary partner. He has good sense in the selection of subjects for books of a popular character; he appreciates the advantage of the many processes for pictorial reproduction; he is a very industrious antiquary—but there his qualifications end. He needs at his elbow some one more orderly in mind, more scholarly in training, more dexterous in composition, and more conversant with the typographic art. We made this criticism when reviewing Mr. Ashton's 'Humor, Wit, and Satire of the Seventeenth Century' last winter, and we need not enlarge upon it now. The scheme of the present work is a chronological tracing of the principal events in the career of Napoleon, with the aid of the great store of English caricature that mocked at his fleets and his armies, and put the worst construction on his acts, however conflicting the evidence in regard to them. Mr. Ashton is fair-minded, and gives Napoleon's version of the ugliest episodes; but he does not systematically appeal, by way of summing up, to any standard life of the Emperor, and the reader's mind is necessarily left in a state of suspense. The neglect to even mention Lanfrey, who, being a Frenchman, might properly have been taken as the constant *point de repère*, is significant of Mr. Ashton's limited scholarship or scanty historical outfit. As an original investigator his simplicity is amusing. He says, in his preface, of the "inconceivable contradictions which occur in different histories and newspapers," "To cite an instance: in three different books are given three different dates of Napoleon leaving Elba, and it was only by the knowledge that it occurred on a Sunday, and by consulting an almanac for the year 1815, that I was able absolutely to determine it." What these three books were is not stated, and the resort to the almanac suggests Mr. Ashton's unfamiliarity with universal calendars. A similar naïveté is shown (i, 181) in speaking of the handbills "which were circulated to arouse and stimulate martial fire and patriotic ardor in the Britannic mind." "Their name is Legion," he avers, "and I have had to read them all in order to pick out the examples given in this book."

The advertisement on the title-page that the illustrations are by the author, might justify the inference that Mr. Ashton was a caricaturist himself, contemporary with Gillray, and Rowlandson, and the Cruikshanks. The truth is, that he has outlined with more or less cleverness the prints or parts of prints that suited his purpose, often with great reduction in size, and always with a definite loss. There are a few exceptions to this rule, but the result is almost a complete sacrifice of the artistic value of the illustrations. Great as the difficulties might have been, facsimiles should have been preferred, and to make room for them Mr. Ashton could well have spared us the fatiguing descriptions of prints that he has handled but does not reproduce. It is also a serious defect that there is no index to these cuts, and that the designer's name has commonly to be sought for in the text instead of beneath his work.

It would be unjust not to admit the capacity of these volumes both to entertain and to instruct. Any student might be glad to have them at hand as a relaxation from the serious investigation of recent French history.

The Great Republic. By Sir Henry Lepel Griffin, K.C.S.I. Scribner & Welford. 1884.

Whatever other qualities the honorable baronet may possess, he is certainly a good hater. The ferocity of his opening chapter is almost as provocative of laughter as the effusions of Mark Twain. His struggling emotions are a choice compound of disgust, jealousy, and fear. With triumphant joy he proclaims that "Republican institutions have had a trial for a hundred years, and, as far as outsiders can judge, their failure is complete." While he is obliged to admit that Americans are more popular than Englishmen on the continent of Europe, it is "probably" because they are less known. "The chief beauty of Niagara consists in its being the largest waterfall in the world, with greater capacity than any other for producing by water-power those manufactured abominations which, as American fabrics or novelties, are gradually debasing the taste of the civilized world." Denying the beauty of American women, he says, "Even at Saratoga the most attractive face seemed that of a young English lady passing through on her way to Australia." Of course nobody would ask the impertinent question to whom it seemed so. Being forced to admit that some of the loveliest women in Europe are Americans, he argues that all the beautiful girls are anxious to get to Europe, and being there are likely to remain. "If American girls be anxious to marry Englishmen, as a study of contemporary novels, plays, and society would seem to show, it is a proof of their good sense." It is rather curious that the entire chapter on "Liberty" is given up to the discussion of American women.

The word "equality" has an effect on some Englishmen like that of a red rag on a bull. Sir Lepel denies not only that such a thing ought to be, but that it ever is or can be. He flies into a passion of scorn at the idea, which nobody in his senses ever attempts to maintain, that all men can be equal in personal qualities, in pecuniary or in social position. He either cannot or will not see that in the United States, as to a great extent in France, the artificial barriers of caste have been swept away, that position in life is wholly an individual matter, and that any man can take any position for which his personal qualities, possessions, or achievements may qualify him. This may be desirable or not, but it gives a practical meaning to the much-abused term, equality.

The opening bitterness of tone steadily softens through the book till in the closing chapter on "Foreign Policy" we are forcibly reminded of Balaam, who blessed when he meant to curse. There is a good deal of wholesome criticism, which would have been more effective if the writer had put a little less gall in his ink.

BOOKS OF THE WEEK.

Almost a Duchess. [No Name Series.] Boston: Roberts Brothers.

Baldwin, Lydia Wood. A Yankee School Teacher in Virginia. Funk & Wagnalls. $1.

Black, W. Judith Shakespeare: Her Love Affairs and Other Adventures. Harper's Franklin Square Library. 20 cents.

Cook, J. Boston Monday Lectures. Occident, with Preludes on Current Events. Boston: Houghton, Mifflin & Co. $1.50.

Dickinson, E. B. Official Proceedings of the National Democratic Convention, held in Chicago, July 8-11, 1884.

Evening Rest; or, Under the Shadow of the Great Shepherd. Boston: D. Lothrop & Co. 25 cents.

Fiske, J. The Destiny of Man, Viewed in the Light of His Origin. Boston: Houghton, Mifflin & Co. $1.

Garratt, Dr. A. C. Myths in Medicine, and Old-Time Doctors. G. P. Putnam's Sons. $1.50.

Gatschet, A. S. A Migration Legend of the Creeks. Philadelphia: D. G. Brinton.

Grey, H. Trowel, Chisel, and Brush. A Concise Manual of Architecture, Sculpture, and Painting. E. P. Dutton & Co.

Guernsey, Lucy Ellen. Loveday's History. A Tale of Many Changes. Thomas Whittaker. $1.50.

Half a Century of English History. In a Series of Cartoons from Punch. G. P. Putnam's Sons. $1.25.

Hamlin, A. C. Leisure Hours Among the Gems. Boston: J. R. Osgood & Co. $2.

THE BOOK FOR PRACTICAL PEOPLE.

THE MEISTERSCHAFT SYSTEM

By Dr. RICHARD S. ROSENTHAL.

A wonderfully simple and practical method, enabling any one to learn, with scarcely any effort, to speak fluently and correctly

SPANISH, FRENCH, AND GERMAN.

Pupils learn to speak from the very first lesson in long and connected sentences. Exact pronunciation given. All exercises corrected and all difficulties explained free of charge. Ten weeks' study sufficient for entire mastery of every-day and business conversations.

From the *Nation*, New York: "This is, without doubt, the best system yet devised for learning to speak a foreign language in a short time."

Send $5.00 for books in each language, with privilege of answers to all questions and correction of exercises. Sample copies, Part I, 25 cents each language.

ESTES & LAURIAT, 299-305 Washington St., Boston, Mass.

NOTE.—Dr. Rosenthal will hold classes during the winter at 45 West 31st St., New York.

IMPORTANT ANNOUNCEMENT.

Dodd, Mead & Company's Retail Department has just issued a Catalogue of Rare Books, chiefly from the library of a well-known Collector, which we have recently purchased.

Turner's Liber Studorium; Shakespeare, second folio, Garrick's own copy; Kilmarnock Burns; 100 Titles of Cruikshankiana; Set of Thackeray's Works, First Editions, in beautiful condition; First Editions of Lamb, Shelley, Keats, Wordsworth, etc.; Chapman's Homer, elegant copy of First Edition; Pickering's Chaucer, one or two copies on India paper—are among the gems it contains.

The books described in this catalogue represent the best editions, in the best possible condition, and, as a rule, in superb bindings, Hayday, Bedford, Riviere, Mathews, Bradstreet, etc., being represented by especially fine workmanship.

The Catalogue will be sent to any address on application.

DODD, MEAD & COMPANY, Publishers, Booksellers and Importers,

The Nation.

NEW YORK, THURSDAY, OCTOBER 16, 1884.

The Week.

THE Republicans have carried Ohio in the State election, after a contest in which undoubtedly the Presidential issue played a very prominent part, but which nevertheless did not present it squarely enough to make the result decisively indicative as to the result in November. Considering that Ohio has always gone Republican in the Presidential year, a Democratic victory would have meant a more widespread dissension in the Republican ranks than anybody has supposed to exist. The same thing may be said of a very small Republican ma jority. As it is, this majority seems to have fallen short of what it was in 1880, when there was no Republican defection in New York, but when Garfield, nevertheless, only carried this State by 21,000 plurality. There has been no organized Independent opposition to Blaine in Ohio, but it was supposed that the Germans would evince their hostility to him as a veiled Prohibitionist more decidedly than they seem to have done. It has been greatly in fa vor of the Republicans, however, that they have had an excellent candidate for Secretary of State, whom few Republicans were willing to discredit for the sake of showing their disapproval of the Presidential candidate.

It would be a mercy to the State of Ohio if her October election were abolished, as those of Pennsylvania and Indiana have been. An October election is an awful temptation to politicians. So many people in other States are governed in their political action by what appears to them to be the "drift"—so many, in fact, are themselves nothing but drift, liking nothing better than to get into the current, if they can find out what it is, and float with it—that efforts are made to carry the October States out of all proportion to their numerical or electoral importance. Consequently $5 will be spent in an October State to $1 which is spent anywhere else. This is the greatest possible misfortune to the State which gets the money. It demoralizes whole communities. It creates a class who come to regard elections as a means of livelihood and their own votes as a source of regular income. These evils were long felt in Pennsylvania. The abolishment of the October election in that State was carried by an earnest effort of the better class in both political parties to rid themselves of this corrupting influence. It was brought about by a Constitutional Amendment in the face of desperate opposition from the Republican politicians. The same reform has been effected in Indiana, where the opposition came from the Democratic party. Ohio is now the only October State whose vote is of any great importance. If she cares to save herself from becoming the mere battlefield of dollars and the sink-hole of politics, she must abolish her October election.

We call President Arthur's attention to the work which the Commissioner of Pensions is doing in Ohio. A more flagrant abuse of official power and a more gross violation of civil-service rules could not be committed than Mr. Dudley is guilty of. He is drawing salary as an officer of the Government, yet he is using the whole power of his office, not merely as a campaign speaker and worker, but as a direct bribe for votes. As head of the Pension Bureau, he promises every soldier who has an adjudicated claim against the Government that if he will vote for Blaine his claim will be given a preference. If he could keep his promises, he would do thousands of other claimants gross injustice by discriminating against them; but, as Mr. Schurz showed in a speech on Thursday, he cannot keep his promises, for he has made thousands of them, and the preferred claimants will stand in one another's way. His promises are simply frauds, but that does not lessen his offence in making them. He has resigned his office, to take effect after election, undoubtedly with the hope of earning by his disgraceful labors in the canvass a higher office under Blaine in case the latter is elected. As we have previously pointed out, he earned an appointment from Garfield, in defiance of the Civil-Service Law, by his work in Indiana in 1880. He is evidently taking little stock in the assurances that if elected Blaine will be the champion and preserver of civil-service reform.

Mr. Schurz made his first speech in Western New York at Buffalo on Monday night, and was greeted with an outpouring of the people which affords strong evidence of the way the tide is running in this State. It has been evident for several weeks past that Mr. Blaine's prospects here, which from the first have been poor, have been becoming more and more hopeless. That there were "kickers" more or less numerous in this city and Brooklyn, even the Blaine organs have always admitted. But they denied vigorously that there were any in the State above the Harlem River. Now it has become apparent that not only are there "kickers" in every county, but there are also thousands of Stalwarts who are preparing to "knife" Blaine more or less openly. As they wrote to the late Secretary Folger, and as he himself reported their words to Blaine in the letter which Mr. George Bliss garbled, "they assert that if Grover Cleveland was good enough for Governor over Folger in 1882, Grover Cleveland is good enough for President over Blaine in 1884." We have believed all along that there were Independents enough alone to give this State to Cleveland. Mr. Conkling is quoted as saying there are Stalwarts enough to do it who will not vote for Blaine.

By the way, where is the organized Republican canvass in this State? For the first time in many years there is no official list of meetings and speakers published in the regular Republican organs. In 1876 and in 1880 the publication of a column of this kind began in the *Tribune* on September 20 and was continued daily till the close of the campaign in November. All through October a vigorous canvass was in progress, and eminent speakers were going up and down the State. Now there is no list at all published, and, aside from spasmodic meetings here and there, there are no indications of a canvass. In this city no great Republican ratification meeting has been held. There was a meeting early in the canvass, in midsummer, in the Grand Opera-house, but that was only a one-sided affair, and could in no sense be called a representative gathering of the Republicans of the metropolis. There has since been one meeting in Brooklyn, at which Senator Hawley made a defence of Blaine so damaging that the Blaine papers did not dare to print it. That is all the canvass which has been made. What can the matter be?

Mr. St. John's response to the request of an improvised temperance assembly that he withdraw from the Presidential contest in the interest of Blaine, is the largest dose of cold water that the Blaine cause has yet received. The estimable gentlemen who constructed the "appeal" will be able to see that they gave the Prohibition candidate an opportunity to issue a first-rate campaign document in his own behalf, and that he has improved it in a way which will greatly strengthen his candidacy. Thousands of voters who did not read the labored "appeal" will read Mr. St. John's spirited answer, and enjoy every line of it. He writes with all the force of a strong conviction, and with an intellectual strength which few have given him the credit of possessing. The humbug of the assumption that the appeal was of genuine temperance origin is completely exposed, and the specious reasoning of the whole document dissected in a way which cannot fail to delight the judicial perceptions of one of its distinguished authors, Judge Noah Davis. Will the Blaine people never learn that their cause is an uncommonly vulnerable one? Will they never cease going out of their way to call out evidence against themselves? From the opening of the campaign to the present time their policy seems to have been to load the enemy's gun for him and then deliberately get in front of it.

The "aggressive campaign" which the Blaine organs were intending to start, but which they never did start, has turned into a disorderly retreat. For a long time they ignored the charges against their candidate. Now they are doing little else than explaining, defending and equivocating, and every time they attempt an explanation they make the case worse than it was before. They are in just the plight which the Cincinnati *Commercial*, the Cincinnati *Gazette*, and the Chicago *Tribune* said in 1876 that they should be in if Blaine were nominated. These newspapers have realized their own predictions beautifully. All the aggressiveness that they ever had has gone out of them. They are as diligent in defending, and explaining, and retreating, and throwing up breastworks as they said other people would be if the author of the Mulligan letters were made the standard-bearer of the Republican party. The Boston *Journal*, too, is using the spade with

great industry. That paper has become little else than a mass of bastions, buttresses, reëntering angles, and *chevaux de frise*, all field work having been abandoned. But the most masterly fortification of all is Chairman Jones's notice that any new charges of bribery against Mr. Blaine, especially if supported by "receipts, convincing proofs, etc.," will be false.

An Organ says, that now that Mr. Theodore Roosevelt is about to take the stump for Blaine, and is disposed to depreciate Cleveland, who helped him to pass the reform bills to which he owes all his fame, we shall probably abuse him, and say we always knew he was several bad things. The truth is that, though no one regrets Mr. Roosevelt's mistake with regard to his real position more than we do, we prepared for it fully in the article on his career which we wrote, in April last, when we said: "Mr. Roosevelt is still a young man, who has been but a short time in politics, and whose hold on public opinion of course still wants the final and binding stamp which nothing but prolonged trial in a variety of situations ever gives. He may still lose his hold on popular confidence through great mistakes. It may turn out that his intellectual and moral qualities fit him better for strife and struggle than for assured success." He has committed one of the mistakes we had in mind when we wrote this, and the greatest of them all—the mistake of supposing that he owed his success to anything but his pertinacious adherence to a good cause in defiance of party opposition, and above all in defiance of that element in politics with which he has now thrown in his lot. The other young men of his class who went to Albany committed the same mistake, but sooner. That he can bring anything worth mention to the support of Blaine is a delusion. In going to Blaine he leaves behind him nearly all that constituted his real strength, and in case Blaine is defeated he will not occupy that high and trusted place in the better politics which will, we trust, rise on Blaine's ruin, that he would otherwise have had. And then the pity of it is that he is so young and could so well have stood firm and waited for what is sure to come if this Government be not a failure, and this nation be not a den of thieves!

Lieutenant-Governor Ames, of Massachusetts, has now "put his foot in it" by making a public statement on the Hocking Valley matter, saying that Mr. Blaine stood in relation to the Standard Coal and Iron Co. in the same way that he (Ames) stood. What this way was he proceeds to tell. He subscribed for stock in the Hope Furnace Co., paid for it, and took a receipt. These receipts, he says, were exchanged for bonds of the Standard Coal and Iron Company. "That," he says, "is just where Blaine stood exactly." So we supposed. But Mr. W. D. Lee said that Blaine didn't own the bonds at all—that he (Lee) owned them and gave them to Blaine as collateral security for a debt of $25,000. Blaine himself has never corroborated Lee's statement, but it is in evidence that both Ames and Blaine were directors of the company and therefore necessarily stockholders. Mr. Ames insists strongly that Mr. Blaine did not own an acre of coal land in Ohio, and that the bonds are now worthless. All of which is irrelevant to the point whether Mr. Blaine "ever owned a share of stock in any coal, iron, or land company in Ohio." By putting Mr. Blaine into the same category with himself, Mr. Ames has settled the question whether the Bundy letter was a true statement of facts, and settled it in the negative.

Our esteemed contemporary the *Sun* wishes us "to justify our assertion that it (the *Sun*) considers Mr. Blaine's denial of ownership in the Hocking Valley lands a lie important or unimportant," alluding to a charge of ours that it considered it "a not important lie." We hasten to comply with its request. The justification will be found in the editorial columns of the *Sun* of October 9, where it heads an article explaining its failure to notice this lie, "Not an Important Lie," and in the article itself suggests that the reason of its silence may be that it only notices "the first-class lies." We presume that had our contemporary considered Mr. Blaine's denial a truth, it would have headed its article, "Not a Lie at All," and have explained that its silence was due to the fact that in this case Blaine had not told a falsehood—at least this is what we should have done, and we think most papers not engaged in "supporting Blaine." Our esteemed contemporary is clearly in error, however, as to the unimportance of the Hocking Valley Lie, and indeed seems in the dark as to the proper mode of estimating lies. Let us say, then, that an important or first-class lie is a lie of which the consequences are serious. Of course all lies are sins, and among theologians stand nearly on the same level. But among jurists and politicians a lie has to be weighed against its results. A lie which produces considerable effect is always a first-class lie. Therefore a lie told by a candidate for the greatest trust in the world is an important lie, as indicating dishonesty and deceitfulness, or, in one word, untrustworthiness of character. The Blaine lies are, we think, the most important lies ever told—the only lies, in fact, which, like the first shot at Concord, have been heard around the world. A newspaper which fails to notice such lies, therefore, really fails in its duty almost as much as if it kept silent about a great battle.

The Madison (Wis.) *State Journal* sits down heavily on Mr. Frank A. Flower, Commissioner of Labor Statistics, first, for publishing a private letter from Senator Edmunds, and again for mutilating the letter and imposing upon the newspapers, including the *State Journal*, by telling them that the omitted portion was immaterial. The *State Journal* is particular to say that when the fraudulent copy was offered to itself for publication, "Mr. Flower's attention was called to the asterisks, which he explained by saying that 'the matter omitted was irrelevant,'" and that the editors accepted his statement as correct. "The communication thus vouched for," it continues, "was published over Mr. Flower's own initials, the editors presuming that they had taken all necessary precautions to protect themselves and in the interests of truth." It then washes its hands of Mr. Flower and his doings in a crushing paragraph as follows:

"The *State Journal* desires to say most unequivocally that while the published sentences were complete in themselves, as before stated, and evidently meant just what they said and no more, they should never have been published by Mr. Flower. The letter was a strictly confidential one, and Mr. Flower had no right to inform the public of its contents in whole or in part. Had the *State Journal* been aware of its private character, it certainly would never have consented to publish the extracts, even in the body of a communication in its columns; had it been made aware, also, of the exact nature of the omission, it would never have consented. Its editors were misled in the matter, and, while regretting the entire affair, must positively disclaim all responsibility. The issue is solely between Mr. Flower and Senator Edmunds, and the *State Journal* begs to be excused from participating in it."

The Chicago *Tribune* of the 7th inst. does not deny the genuineness of the ungarbled letter from Senator Edmunds to Mr. Flower. It merely says that it never received this letter, and therefore was not aware that the pretended copy, which it had twice previously published, was a mutilated copy. It says that this mutilated copy was transmitted to it by telegraph from Madison, and that the copy put into the hands of the telegrapher had a hiatus marked by asterisks, to which his attention was specially called, but that he failed to take notice of it in the transmission. It is to be observed that the copy telegraphed to New York the same evening did indicate the hiatus, and that it was this indication and nothing else which first led to our demand for the publication of the omitted parts. Although the Chicago *Tribune* does not itself question the genuineness of the letter, it prints the following communication from Mr. Flower:

"MADISON, Wis., October 6.—[To the Chicago *News*.]—The letter published by you to-day as a pretended copy of one written by the Hon. George F. Edmunds, of Vermont, to myself is not a copy of any letter ever received by me from that gentleman.

"FRANK A. FLOWER."

Mr. Flower has evidently been demoralized by supporting Blaine. It is possible that some word may have been misprinted in the copy which reached Mr. Flower, so that he may prevaricate a little and pretend that the meaning was different from that conveyed in the letter which he received. Anybody who would violate confidence as he violated that of Senator Edmunds, would be capable of prevaricating about the contents of the letter afterward.

In the elaborate and learned argument which Mr. Evarts made in the famous Stokes will case (p. 117), he entered into a disquisition on the subject of truth-telling, which it might be beneficial for him and other Republican orators to recall at the present time. He says: "Now there is a maxim of our law, *Qui non libere veritatem pronunciat, proditor est veritatis*, 'He who does not tell the truth is a traitor to the truth,' and that idea is insisted upon by a distinguished commentator, more at large, after quoting this maxim, as follows:

"'A lie is never half so dangerous as when it is woven up with some indisputable verity, and hence the use of the comprehensive form of oath administered in English courts of justice, that the deposing witness is to "tell the truth, the whole truth, and nothing but the truth." So, an extensive field of mischief is opened by mere exaggeration; for, as truth is made

the groundwork of the picture, and fiction lends but light and shade, it often requires more patience and acuteness than most men possess, or are willing to exercise, to distinguish fact from fancy, and to repaint the narrative in its proper colors. In short, the intermixture of truth disarms the suspicions of the candid, and sanctions the ready belief of the malevolent.'"

This admirable sentiment illustrates in a striking manner the successful characteristics of Mr. Blaine's peculiar methods, and accounts largely for his ready invitation to the public to inspect his scrupulous honor and integrity. A principal reason, perhaps, why it has been so difficult for good old-fashioned Republicans to see the extent of Mr. Blaine's falsehoods is, that he has so brilliantly interwoven with them bits and scraps of attractive verities.

The appearance in the field of McSweeney, the American "suspect," bodes no good to Mr. Blaine's cause. His story is a plain and straightforward one. He was an American citizen, staying in Ireland for his health. He was arrested, under the provisions of the English law doing away with habeas corpus, when Mr. Blaine was Secretary of State, and, being thrown into jail and denied any form of trial or any knowledge of the charge against him, naturally appealed to his Government to protect him, and to demand his trial in a court of justice or his release. His appeal was just the appeal that any reader of this paragraph would have made had he been arrested abroad in such a manner. It has nothing to do with McSweeney's original nationality. Had he been a Pole or a Hungarian travelling in Russia the case might have arisen in exactly the same way. But Mr. Blaine's action in the matter has a good deal to do with his impudent demand for Irish votes, or for the votes of all who want to see "American citizenship protected abroad." What did Mr. Blaine do? Nothing at all. He simply let McSweeney lie in jail, and when he went out of office, McSweeney was still lying there, and it was through Mr. Frelinghuysen that the case was investigated and the man released. McSweeney will devote himself for the next three weeks to exposing Mr. Blaine's pretences as a defender of American citizens abroad.

The legal rights and duties arising in the course of life on the rail are always interesting and very often exciting. A curious action has been brought by a lady passenger in the United States District Court in Oregon against the Pullman Palace Car Company, to recover $25,000 for injury to her person caused by the accidental discharge of a pistol through the carelessness of the porter of the car in which she was travelling. It appears from the pleadings that the pistol was handed to the porter, who let it fall on the floor. If the porter was acting, as the lawyers say, "in the course of his employment" in receiving the pistol, then the company is liable; otherwise not. Without desiring to anticipate the decision of this case, we must say that there is room for strong argument in the plaintiff's favor. It is decidedly in the interest of the Pullman Palace Car Company that passengers should not travel armed. The discomforts of nocturnal travelling by rail are so great as often to irritate the tempers of passengers, and be likely, if they were generally armed, to lead to bloodshed. When an armed passenger boards a train by night, therefore, and requests the porter to keep his pistol for him until morning, he simply acts in the interest of all, including the company. It ought to be the duty of the porter, if it is not, to relieve him of his revolver, and deposit it in a place of safety. Indeed, it might be well to make it his duty to disarm the car before the train started. The only objection to this would be that in many parts of the country the passenger would then be without means of protecting himself against the robber who occasionally "goes through" the palace car and takes the watches, while the porter is blacking the boots at the other end. This danger, however, might be avoided if the palace car, like a hotel, had a safe where valuables could be stored.

Mrs. Kendal, whose theatrical standing gives her the right to speak with authority on the subject, has been reading a paper on the drama at the Birmingham Social Science Congress. She discussed, among other points, the complaint that is constantly made that the moral condition of the drama is not so high as it should be, but insisted that for this playgoers were in part to blame; for the world runs after notoriety on the stage, just as it does elsewhere, and the fact that a new actor is known as having "done wrong and taken to the stage" is enough (provided the wrong-doing has been made sufficiently public) to draw good houses. Such a state of affairs would certainly seem to show a low dramatic taste in the public if it were common; but has not Mrs. Kendal generalized from one or two instances? Would it be possible to keep alive the business of any theatre long by means of a constant supply of new actors or actresses who have qualified themselves for the work by doing wrong in a private capacity? The experiment, as a substitute for the "star" system, would be very interesting in the United States. The country is full of people who have done wrong in one way and another and have been well advertised by the newspapers. As a rule, we believe, they prefer the lyceum to the stage, partly, no doubt, because it is an easier career, requiring no preparation or artistic capacity or thought; in fact, only a fair amount of lungs.

The publication by the London *Standard*, through a breach of confidence on somebody's part, of a draft of the English Redistribution Bill created a great sensation, mainly because, although the bill does not reduce the number of Irish members, it proposes to disfranchise a considerable number of Irish boroughs, nearly every one of which is a Parnellite stronghold. Of course this is calculated to intensify the bitterness of Parnellite hostility to the Ministry. That this is considered serious a late speech of Mr. Trevelyan shows, in which he predicts, in melancholy strain, the probable return to the new Parliament of a Parnellite force which will inevitably hold the balance of power. In fact, eighty is talked of as its probable strength. The recent adhesion to it of moderates like Mr. George Errington, who figured so prominently a year ago as an intermediary between the Ministry and the Vatican on Irish questions, shows clearly the opinion which is entertained everywhere as to the importance of Parnell's future in British politics. The Ministry deny that the published draft was more than one of three now under consideration, and negotiations are going on with the Lords which seem likely to lead to a compromise. The way for this was prepared by a recent article of Lord Salisbury's in the *National Quarterly*, which sought to show that, under any scheme of redistribution, the Conservatives would gain by the new Franchise Bill.

The French are not making headway in China, evidently for want of a sufficient land force. Admiral Courbet has taken possession of Kelung, in the island of Formosa, and has the coal fields at his mercy. But Tamsui, on the west side of the island, which has the better harbor, and is one of the treaty ports, thus far has resisted all attempts at capture. The harbor is well defended by torpedoes, and all attempts to remove them have been thus far unsuccessful. Admiral Lespès has suffered a severe check in an attempt to approach them from the rear. A landing party of 600 men fell into an ambush and was repulsed with heavy loss. No serious impression has been made at any point on the coast of the mainland. What makes this serious is, that it is another sign that nothing can be accomplished without a large army, which would cost enormously, and which the Ministry dreads to ask for, as they have promised that all this glory in the East should be cheap.

The rumors of American mediation continue. The last is that the Chinese Government has made some very handsome offers of compromise through the American Government, involving a six months' armistice and American arbitration, but that M. Ferry wonders why the offer was not made to him directly. The explanation seems to be that nothing is known of the matter in Washington. The Chinese continue to get the better of the French in the argument over the question who broke the Treaty of Tientsin, and not only is there a dispute about the responsibility for fight on the road to Langson, but over the authenticity of the draft of the treaty itself, which the Chinese accuse Captain Fournier, the interpreter, of tampering with. The same charge has been made against him in France.

It is proposed in France to put a tax on bachelors, and a bill has been drawn up for the purpose which declares the object of the measure to be the increase of the population. It seems very doubtful whether the plan will work, as the tax could hardly be made so large as to drive large numbers of unmarried men into marriage. The true method, if what is wanted is an increase of the population, and not revenue, is an application of the protective principle, and the payment of a bonus for every child born. This adds to natural instinct a powerful pecuniary motive, and it is chiefly pecuniary motives operating in the other direction which make French families so small, and which, therefore, need to be counteracted. The money needed for the bonus could be got out of the Chinese, or some other "foreign devils," as a war indemnity.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 8, to TUESDAY, October 14, 1884, inclusive.]

DOMESTIC.

THE political event of the week was the October elections in Ohio and West Virginia on Tuesday. The day was fair and all the conditions were favorable for a very large vote. All through Ohio the excitement was intense, and the country participated in the anxiety. The vote polled in Ohio was the largest ever known, and will probably exceed 750,000. Cincinnati was the scene of a number of disgraceful occurrences. There were many arrests on charges of illegal voting. All the ballot boxes were guarded by Federal, State, and city officers. In one of the numerous disturbances a colored Democrat was killed, and two men were mortally wounded in a general fight in the Eighth Ward of Cincinnati. Nine persons were wounded during the day. The Republicans had appointed about 1,000 Deputy United States Marshals for Cincinnati as an offset to the regular city officers and Special Deputy Sheriffs who were Democratic. This engendered much bad feeling. The polls closed at six o'clock, and the returns, which soon began to come in, indicated Republican gains. They claimed the State early in the evening by about 20,000 plurality, but later, though incomplete, returns seem to indicate a Republican plurality of about 16,000. Robinson, for Secretary of State, is the highest officer on the Republican ticket. In Cincinnati (Hamilton County) the Republicans wiped out the Democratic majority and carried the county by about 2,500. The Prohibition and Greenback votes in Ohio will aggregate about 7,000. The Republicans have probably gained three Congressmen. In the Forty-eighth Congress there were 13 Democrats and 8 Republicans. The delegation will probably now stand Democrats 10, Republicans 11. The reëlection of Frank Hurd in the Tenth District is uncertain. Jacob Romeis is his Republican opponent. His free-trade record has been used against Mr. Hurd. A great fight was made in the Twenty-first District over the reëlection of Martin A. Foran (Dem.) to Congress, but he succeeded by 350 majority. In the Western Reserve the Republicans greatly increased their majorities. The Republican plurality in 1880 was 19,000; the Democratic plurality in 1883, for Governor, 12,629.

The election in West Virginia was for Governor, a full list of State officers, and the Legislature. Questions of taxation, and the course of the Supreme Court in the Wheeling *Intelligencer* contempt case, were made State issues. A fusion ticket of Republicans and Greenbackers was put up against the Democrats. Meagre returns indicate that the fusion scheme has been a failure, and that the State has been carried by the Democrats by an increased majority over that of 1880. The election of Wilson (Dem.), for Governor, is claimed by 10,000 majority.

At a meeting of the Straightout Republican State Committee of Virginia on Wednesday, Gen. W. C. Wickham, Congressman J. F. Dezendorf, and A. B. Cock tendered their resignations as electors on the State electoral ticket. A resolution was adopted withdrawing the entire electoral ticket and requesting the remainder of the electors to resign. This leaves a clear field to Mahone.

The Independent Republicans of Connecticut have issued an address stating the grounds of their objections to Mr. Blaine, and saying: "His success would be a declaration to the world that our people have either ceased to hold honor and honesty the first conditions of political advancement, or begun to rate loyalty to party above loyalty to principle and to country." Among the signers are the Rev. Dr. Anderson, of Waterbury; Doctor Binney, of Berkeley Divinity School at Middletown; the Rev. Joseph H. Twichell, of Hartford; and Dr. George T. Ladd, Professor of Moral Philosophy at Yale.

The Houses of the Vermont Legislature, in separate session on Tuesday, reëlected Senator Morrill for a term of six years.

Judge Sawyer has been nominated for Congress, after a long contest, by the Republicans of the Thirty-first New York District. Mr. Wadsworth is the present incumbent.

Dr. William Everett, of Quincy, Mass., will run for Congress against ex-Governor Long (Rep.).

William J. Wallace, of Syracuse, United States Circuit Judge, has announced that he will vote for Cleveland. He has heretofore been a Stalwart Republican.

Ex-Governor Seymour has written a letter in which he says: "Governor Cleveland, the Democratic candidate, is an able, firm, and thoughtful man, who has risen to the position of Governor of this State by the faithful performance of duties in the official positions he has held. His unflinching courage in carrying out his trusts and his unquestioned integrity give him a strong hold upon the confidence of the public. The excitements of the Presidential contest have not drawn him away from his duties at the Capitol of this State."

There was a great mass meeting of business men and merchants on Wall Street, on Thursday afternoon, in favor of Cleveland and Hendricks. The speaking took place on the steps of the Sub-Treasury. The demonstration was enthusiastic. At 3:30 o'clock the gathering occupied every foot of available space within hearing distance of a flag-draped stand, and it was a crowd fully equal in size and quality to that which assembled at the Garfield meeting in the same place four years ago. The speeches by Roswell P. Flower, who presided, ex-Lieutenant-Governor Dorsheimer, ex-Governor Salomon, and Algernon S. Sullivan were heartily applauded. Great enthusiasm was manifested throughout the proceedings. The meetings and parade on Thursday evening, under the management of the County Democracy and Irving Hall, were equally successful. Union Square was crowded with people, and fully 15,000 men and boys were in line during the torchlight parade. Fireworks and music were among the attractions in the Square, and there was speaking at four open-air stands. The Academy of Music was crowded by an audience which listened to A. S. Hewitt, W. W. Eaton, of Connecticut; Governor Abbett, of New Jersey; Joseph Pulitzer, and Charles H. Winfield. In Irving Hall addresses were made by Gen. Franz Sigel, ex-Governor Walker, of Virginia, and others.

At a meeting of the Union League Club, of this city, on Thursday night, more than 500 members being present, the nominations of Blaine and Logan were approved. The opposition vote is estimated at from 30 to 40 per cent. of those present.

The Rev. Henry Ward Beecher has written another letter to Gen. R. A. Alger on the Joy-Blaine affair, in which he says: "Mr. Joy's second telegram to you makes a languid and foolish denial—which I attribute to his not having seen or understood my statement. But if Mr. Joy has seen my statement and denied it, or if, when he lands in New York, he shall declare that no such conversation was had in my presence, then I have only to say that, whereas I did not imagine that there could be more than one continental liar, I am compelled to think that there are two. Please accept this letter as the only retraction and apology that I am prepared to make to you, to Mr. Joy, to Mr. Blaine, and to the Republican party."

To offset Mr. Blaine's assertion, telegraphed on Thursday from Canton, O., that Warren Fisher's statement that he (Blaine) had offered a sum of money for the Mulligan letters was utterly untrue, and a mere malicious invention, it is replied that Mr. Fisher again asserts that Blaine did offer the money, and that the sum named was $20,000.

The General Term of the Supreme Court of this State on Wednesday gave a decision holding that the law passed in May last, prohibiting in cities of more than 500,000 inhabitants the manufacture of cigars in tenement houses, is unconstitutional.

Chief Clerk Healy, of the New York State Labor Bureau, who was dismissed last week, has been reinstated. A card signed by him and Commissioner Peck says: "The differences heretofore existing between the Commissioner of the Department and its Chief Clerk have been amicably adjusted through the intervention of mutual friends and after explanations thorough and satisfactory."

The Supreme Court of the United States reassembled in Washington on Monday with a full bench and a large attendance at the bar. Among the first cases to be heard are the "war premium" or "Alabama claims" cases of the Great Western and Columbia Insurance Companies against the United States, brought by appeal from the Court of Claims.

President Arthur, on Tuesday, appointed First Assistant Postmaster-General Frank Hatton to be Postmaster-General.

In the International Prime Meridian Conference at Washington on Monday the Greenwich meridian was recommended, twenty-one nations voting for it, San Domingo against it, and France and Brazil abstaining from voting.

The second Mackay-Bennett cable between Waterville, Ireland, and Dover Bay was completed on Thursday.

The ceremony of reinterring the bones of Red Jacket and four contemporary chiefs of the Iroquois or Six Nation Indians in the lot provided by the Buffalo Historical Society in Forest Lawn Cemetery, Buffalo, took place on Thursday. A considerable number of Indians, a remnant of this once powerful confederation, were present.

The will of Mrs. Augusta M. Huntington, formerly Mrs. Shumway, at Cincinnati, gives $300,000 in trust to Bishop Whipple, of Minnesota, and directs that $100,000 be applied to the building of Shumway Hall on the Shattuck School grounds at Faribault, Minn., and $50,000 for its endowment for the education of boys. Another $100,000 is for the erection of Johnston Hall, in memory of her father, in Seabury.

The well-known rabbi, Dr. Adolph Huebsch, of the Congregation Ahavath Chesed, whose synagogue is at Lexington Avenue and Fifty-fifth Street, in this city, died suddenly on Friday morning. Doctor Huebsch was one of the most popular men in the Jewish Church in this country, and a linguist of considerable attainments. He was fifty-three years of age.

FOREIGN.

An official despatch from Hanoi on Wednesday said that Colonel Donnier, with two battalions of the foreign legion, two companies of infantry, and a section of mountain artillery, had an engagement with Chinese troops in the valley of the Loo Chuan River, on October 6, which lasted six hours. The Chinese made a stubborn resistance, but were finally completely routed. Four gunboats assisted the French forces. Four of the French, including a captain, were killed and twenty wounded. One thousand Chinese were killed. General Negrier's column had gone up the Phulang River to cut off the retreat of the Chinese.

A despatch received in Paris from Hanoi on Thursday night stated that General Negrier's column had had an engagement at the village of Kep with 6,000 Chinese regulars, occupying intrenchments around a central redoubt. The Chinese began the attack at 9 o'clock in the morning by trying to surround the French, and the fighting lasted until 2 o'clock in the afternoon, when the retreat of the Chinese toward the frontier of China was cut off. The Chinese troops then fled in the direction of Dargnan, pursued by the French. The Kep garrison defended their position bravely, compelling the French to surround the redoubt and carry it at the point of the bayonet. The Chinese loss in the village alone was 600 killed.

The French troops captured all of the Chinese war material, mules, and horses. A French captain and twenty men were killed, and eight officers and fifty men were wounded. General Negrier was slightly but painfully wounded.

A despatch from General Brière Delisle, under date of October 8th, said: "General Negrier is pursuing the Chinese toward the village of Yentke. I have ordered that Kep, the town where General Negrier's forces had an engagement with the Chinese, be strongly occupied, and that the Loo Chuan River and other outlets be closed. Western and Southern Tonquin are tranquil. The Chinese bands have been driven off and their chief killed. Our fleet is closely watching the coast. I assume immediate command of the troops, and am about to leave Hanoi."

The Paris *Gaulois* of Monday said: "It is idle to conceal the fact that Admiral Lespès has failed before Tamsui. He was unable to break the line of torpedoes or disperse the Chinese force guarding the torpedo posts. This is another instance of attempting too much with an inadequate force."

The news of the defeat of Admiral Lespès and the French fleet at Tamsui is confirmed. The Chinese, by hiding in the brushwood, suffered some 600 of the French forces to land and come within easy range of their guns before they appeared. The Chinese General Tso then led an attack upon the rear of the French force, which became panic-stricken. The Chinese forces killed seventy men and captured one gun. The Chinese loss was 200 in killed and wounded. The fighting lasted five hours, at the end of which time the French retired to their ships.

Admiral Courbet is reinforcing the French squadron before Tamsui, and is preparing to renew the attack upon that town. He has sent Admiral Lespès back to Kelung.

The Paris correspondent of the London *Daily Telegraph* said on Monday that he believed that China a week ago made the following offers to Premier Ferry, through the American Government: The Chinese forces to withdraw from Tonquin; Kelung to be temporarily occupied by the French; the conclusion of a six-months' armistice, the dispute being in the meanwhile settled by the arbitration of America. The correspondent says that M. Ferry objected to the last suggestion, asking why China could not make overtures directly to him.

Premier Ferry, in the course of a frank conversation with friends in his own political circle, said recently that he expected that the coming session of the Chambers would be a brisk one. He denied that France was on bad terms with England, but said France was prepared to make arrows of every sort of wood to fire at England unless she gave France satisfaction in Egypt. He declared that he had no exact understanding with Prince Bismarck, but that if he could turn an enemy into an ally, even at the cost of a heavy sacrifice of *amour propre*, he would do so.

The French Chambers reconvened on Tuesday. The Minister of Marine asked a credit of 10,800,000 francs to defray the expenses of French operations in Tonquin during the last three months of the year.

Late advices from the Nile state that after the steamer on which were Colonel Stewart and his men had stranded, three natives came on board and told Colonel Stewart that he was only a short distance from Meraweh, which he could easily reach on foot, and where he could obtain assistance to float the steamer. They offered to guide the party there. Colonel Stewart and two companions started for the village, and when they had travelled out of sight of the steamer a number of men sprang from an ambush and murdered them. The natives afterward attacked those remaining on the steamer, killing all except four. The Sheikhs of the tribes between Khartum and Shendy have arrived at Shendy, and have tendered their submission to the Egyptian Government. Colonel Stewart's murder was confirmed on Saturday, though there were rumors on Monday that he might still be alive.

A messenger from Ambukol reported at Cairo on Saturday that after General Gordon returned to Khartum a boat with forty Europeans and Egyptians, accompanied by five negroes and three servants, grounded at Salamat. The Sheikhs offered hospitality to the party and enticed them to their houses, where they massacred all but fourteen of them, who are now prisoners. It is unknown whether there are any Europeans among the survivors.

General Gordon is reported to be at Sennaar, fighting the rebels and collecting the taxes.

Rumors were current in Dongola on Wednesday that the Mudir is quelling the rebellion at Jub-el-Dair. The news of the Mudir's victory at Korti has reached Khartum and has greatly encouraged the garrison at that place. Other advices from Dongola state that the Mudir of that place is sending out spies to assist the Nile expedition.

Spies from Khartum reported at Dongola on Monday that the Mahdi is sending two large armies to attack that place, one across the desert and the other along the Nile.

Osman Digna has abandoned his attack upon Suakim, and is engaged in massacring women and children and stealing cattle belonging to the Amarar tribe.

It is reported that General Wolseley has sent to the British War Office despatches in which he bitterly complains that his advance has been paralyzed by the failure of the commissariat and transport service. He says that the railway to the First Cataract is broken down, that the stores at Wady Halfa are inadequate, that the camel corps is without camels, and that the equipments of the corps have been found in a rotten condition.

The Khedive of Egypt has written a letter to Nubar Pasha, saying that the Egyptian Government will consider itself responsible for the indemnification of Nubar and the Minister of Finance in the event of the Tribunal's sanctioning the seizure of their property on account of the suspension of the sinking fund.

England has accepted Bismarck's invitation to the Conference at Berlin, on Congo affairs, provided it be confined to commercial questions. The Conference will meet on November 6, Bismarck presiding. France and Germany will propose that the Danubian system be applied on the Congo.

The last session of the English Cabinet Council before the assembling of Parliament was held on Wednesday. Mr. Joseph Chamberlain, President of the Board of Trade, was not present. The dissension between the Marquis of Hartington, Secretary of State for War, and Mr. Chamberlain, upon the question of a compromise in the House of Lords upon the Franchise Bill, is still in abeyance.

A draft of the Redistribution Bill has been prepared by a British Ministerial Committee, and will be submitted to the Cabinet on October 21.

Consultations among the British Conservative leaders have resulted in a decision on their part to reject the redistribution scheme, to maintain their opposition to the Franchise Bill, and to try to force a dissolution of Parliament.

The London *Times* understands that the English Cabinet Council have concluded to adopt measures forthwith to stop the audacious encroachments of the Boers in South Africa.

Sir Hugh Childers, the British Chancellor of the Exchequer, it was reported, held a conference on Thursday with Prime Minister Gladstone upon the question of prolonging the period for the conversion of the English consols, which expires on October 17. It was decided not to prolong their conversion, the scheme being a failure, as bankers and insurance companies refuse thus to convert their funds. Only a number of small investors have exchanged their 3 per cents for 2½ per cents.

Conservative meetings announced to be held in Birmingham, England, on Monday, were prevented by organized bands of Liberals. The mob swept the officers of the meeting and speakers from the platform, at the Town Hall. The Hall was badly damaged, and Aston Grounds were almost ruined. The Conservatives propose to prosecute the Liberal leaders on a charge of inciting the riot.

The British Commodore on the Australian station has been instructed to proceed to New Guinea and proclaim a British protectorate over the southern coasts of that island, to the eastward of the 141st meridian of east longitude. The protectorate will include the islands adjacent to southern New Guinea. Settlement within the protectorate will not at present be permitted.

Edward Augustus Freeman, D.C.L., LL.D., the English historian, has been appointed Professor of Modern History at Oxford University.

The marriage of Miss Ida Therese, daughter of Captain Foote, U. S. N., to Lord Montague Paulet, son of the Marquis of Winchester, was celebrated in London, on Tuesday, at St. George's Church, Hanover Square. United States Minister Lowell and a large and fashionable audience were present at the ceremonies. The wedding presents were numerous. Queen Victoria sent an antique diamond bracelet and a gold breakfast service. The Prince and Princess of Wales sent a diamond necklace and an Indian shawl.

The steamers *Roseville* and *Europa* came in collision off Greenock, Scotland, on Saturday, and the *Europa* sank almost immediately. The captain, engineer, and four men of the latter vessel were drowned.

King William of Holland and the Duke of Nassau have held several interviews recently, which have resulted in an agreement being arrived at in relation to the succession to the throne of the Netherlands. It is as follows: King William recognizes the right of the Duke of Nassau to the Duchy of Luxembourg, and the Duke of Nassau, in turn, admits the right of the Princess Wilhelmina (daughter of King William) to the throne of Holland.

The election excitement in Germany is increasing. Conservative groups are agitating against Herren Stoecker and Wagner, anti-Jewish leaders. There have been Socialist riots at Brandenburg.

During the twenty-four hours ending on Tuesday morning, there were 140 fresh cases of cholera and 104 deaths from that disease reported in Italy, including 57 cases and 43 deaths in Naples.

Intelligence was on Wednesday received at Rome of a hurricane at Catania, on the island of Sicily. Trees were uprooted and houses destroyed. Twenty-seven persons were killed and 400 were injured. Owing to the severity of the storm, it was impossible to render any assistance to the sufferers during its prevalence. There is great distress among the poor. In the suburbs of the city many summer mansions are in ruins. The damage will amount to 4,000,000 lire. Three thousand dwellings were destroyed. Catania was visited on Sunday by another hurricane. Thirty persons were killed.

The Madrid *Official Gazette* announced on Monday that the cholera epidemic in Spain is at an end.

F. Marion Crawford, the novelist, was married on Saturday, at Constantinople, to Miss Berdan.

The new Parliament building at Quebec was wrecked by an explosion on Saturday, at 12:40 P. M. It is supposed to have been caused by dynamite. At 3 P. M. there was a second explosion about thirty feet from the place where the first occurred. The new building is so badly damaged that it is believed half of it will have to be taken down and rebuilt. Great excitement has been caused in Quebec and Ottawa, and the guards of public buildings have been increased.

IF THE DEMOCRATIC PARTY SHOULD SUCCEED?

This is not quite the same question as, If Cleveland should be elected? True, the Republican Machinists have always denied that you could separate the candidate from his party. He might be better or he might be worse, but if you said A you must say B. Their trump card to-day with all conscientious Republicans who would like to escape voting for Blaine, is the awful responsibility of replacing the Democrats in power. Yet everybody knows that this country is governed by a Congress, and that a vote for President does not mean a vote for public measures or policy, but for simple administration. Thousands will at the polls next month make this discrimination by voting with the Democrats for the Administration, and with the Republicans of their district for Congressmen, and for members of the State Legislature who are invested with the choice of Senators. This process has been going on for a long time, and has enabled the Republican party to keep control of the White House, while losing its majority in the lower, and barely retaining it in the upper, house of Congress. The Independents who are now pledged to resist the ascendency of Machine methods and standards in national politics by making an example of Blaine, are notoriously divided on all the leading issues which are the concern of Congress, and of Congress alone. As the honest Gourgues said, three centuries ago, when avenging the Spanish massacre of French Lutherans in Florida, "I do not this as unto Spaniards, nor as unto sons of Moors, but as unto traitors, robbers, and murderers"; so of Blaine and his kidney the Independents now declare, when casting their votes against them, "We do not this as unto Republicans, nor as unto protectionists, but as unto Star-routers, whiskey thieves, railroad jobbers, blackmailers, and perjurers."

Conversely, they vote for Cleveland, not as a Democrat, but as a patriot—that is, a man who cannot be bound by a party name to consult the interest of any man or set of men before that of the people at large. Looking to his use of the patronage, they anticipate at his hands fewer changes not for the express good of the public service than from Blaine; appointments with reference to fitness, and not as rewards for personal favors or as a means of furthering his own ambition; in short, an administration which, however labelled, will be conducted for the benefit not only of the constituency which elevated him to the Presidency, but of the whole body of electors. He seems to them the man best fitted, by professions, past actions, and native strength of character, to resist the extraordinary pressure to which he will be subjected by his own party in its hungry pursuit of office. Not Hayes, nor Garfield, nor Arthur brought to the task the independence and freedom from obligation which Cleveland will; while General Grant's persistence, which was so marked a characteristic in the field, failed him miserably in the short struggle with the spoilsmen, to whom he became an easy prey. Cleveland, too, will be fortified, as none of his predecessors was, by the civil-service legislation (of Democratic origin), whose successful working has already won for it popular acquiescence, not to say favor. Finally, if we can be certain of anything, it is that no mercy will be shown to corruption masquerading in the party livery, and that personal and party friends "under fire" will have to find some other body than President Cleveland's to thrust between themselves and justice.

So much for the Executive: a Democratic head, if you please, but no partisanship in his view of official duty. In electing him, however, it may well happen that, with or without the Independent accession, the Democrats may make such local gains as to secure a larger majority in the House of Representatives, and to pave the way for ultimate control of the Senate. Then the contingency will arrive which our conscientious Republican so much dreads, for both branches of the Government will be in Democratic hands. Well, the first consideration is that, unless Republicanism is a failure, no harm is to be apprehended from a majority of the people managing the national business in their own fashion. The "saviours of society" will generally, on examination, be found themselves to need some looking after; and this must be true in the case of the Republicans, else their long lease of power, having given perfect satisfaction, should have been indefinitely prolonged. In fact, both parties have been implicated in all the legislative follies of recent years, as in the profligate modes of getting rid of the surplus (like the pension swindles and the river-and-harbor raids), or in the mischievous humbug of the silver coinage. The responsibility for all these has, of course, in the last analysis, rested on the party in power, and every Republican who has reason to fear their continuance ought to be willing to see that responsibility shifted upon the opposite party. As for the great question of revenue, the non-achievements of a Democratic House have shown that there is no effective agreement among Democrats as to the principle of protection or to the method of amending the tariff; and, such are the natural difficulties of the task, it is not possible to foresee what would be the result of a hearty attempt to deal with this subject, even if the Opposition were left out of account.

We say a hearty attempt, because hitherto neither party has been disposed to lay down its doctrine on the tariff frankly and squarely. Equivocation has been the favorite art of the framers of platforms on this as on all other questions likely to affect votes seriously. The extent to which this has been carried ought to remove the last vestige of surprise at Mr. Blaine's nomination, since nothing could better typify the demoralization sure to result from years of studied insincerity in the most solemn political manifestoes. If we could be reasonably certain that, once masters of the situation, the Democrats would formulate and give effect to their views on the tariff with reference solely to principle, it would be hard to overestimate the ensuing moral gain to the country. Such a new departure would compel the Republican minority to follow suit on the other side, and to speak their minds in candor, and at last we should see an end to that disgraceful embargo on the most necessary legislation which the war, reconstruction, and the memory of both have, by the craft of the Republican Machinists and the impotency of the Democratic party, until now imposed upon us. The padlock on genuine utterance would then be removed, and we should have to confess that, thanks to our adversaries, another cardinal principle of Republicanism had been finally established. The movement out of which the present Republican party grew had for its shibboleth "Free soil, free speech, free labor, and free men"—rights demanded not alone for black men but for white men. Free soil we have certainly obtained. Whether labor is to be regarded as free, will depend upon one's views of the protective policy. That men are not free while Machines can produce and make accepted a nomination like Blaine's, needs no argument. Free speech since the war has not been known in Congress or on the stump. If Democratic success gave us nothing more than that, it ought not to be either feared or deprecated: it ought to be welcomed.

PANICS AND POLITICS.

One of the latest arguments for Mr. Blaine is that a change of administration—meaning a change of party control of the executive branch of the Government—would bring on a financial and commercial crisis. Of course, no reasons are given for the supposition. If any were given, it would be easy to show that the country is in such a crisis now. The record of business and banking failures during the past nine months proves this conclusively. There is no other test or gauge of commercial health than the chronicle of insolvency, and we find that in nine months of the present year there have been 117 bank failures, against only 28 in the corresponding period of the previous year (which was itself a very bad year), and 8,290 business failures against 7,358 the previous year. For the twelve months of 1884 *Bradstreet's* estimate of business failures is 11,500.

Now, it is a curious fact that every great financial crisis in our history—certainly every one that is within the memory of men now living—has occurred immediately after an election in which there was *no change* of party control. The crisis of 1837 came in the beginning of Van Buren's Administration, his predecessor, Jackson, having been of the same party, and the same faction of the party, as himself. The crisis of 1857 came in the beginning of Buchanan's Administration, his predecessor, Pierce, having been of the same party, and the same faction of the party, as himself. The crisis of 1873 came in the beginning of Grant's second term, and it will be remembered that one of the most effective arguments against Greeley was that his election would bring on such a crisis. These arguments were effective because Greeley was considered an erratic man. Greeley was beaten, but the crisis was not. It came at the appointed time—that is, when a wild course of speculation had exhausted itself. It came, as it always comes, regardless of elections, regardless of Presidents, regardless of parties.

It is not easy to fix the precise date of the oncoming of the existing crisis. Speculation started up in the latter part of 1879. It ran

riot for two years, received a check, started up again, and proceeded fitfully till the Grant & Ward explosion took place last May. Then there was a general uncovering of all the commercial and financial rottenness that had been long gathering, and Wall Street was "put to its trumps," as it had been in 1873, to avoid a general bank suspension. Loan certificates again came in vogue, by means of which the strong banks carried the weak ones over the period of immediate peril, and thus averted a general suspension. Few persons, except the Clearing-house Committee, knew how near the banking and business community were to a general collapse at that time.

Business men know perfectly well that one commercial crisis does not follow on the heels of another until after the lapse of some years. Before a new one can come, the débris of the old one must be got out of the way, and the spirit of caution which every panic plants in the minds of the trading community must be more or less effaced by the lapse of time. In a word, a new panic cannot come until the ingredients for it have been prepared. These are expansion of credits, inflation of prices, and general speculation. When business gets into this condition panic will come, no matter who is President or what party is in power. That there is no saving grace in the Republican party to ward off panics is proved by the fact that the party has been in power twenty-three years continuously, during which time we have had two such explosions of the first magnitude, among the ruins of one of which we are still scrambling.

But, supposing that there were some connection between panics and politics, so that a change of administration were likely to have an effect of some sort upon business prosperity, what are the fair presumptions to be drawn from the character of the two candidates for the Presidency? Mr. Blaine is himself a speculator, and a peculiarly reckless one. Money-making by hook or by crook (and mostly by crook) runs through his entire career, from the time when he was selling guns to the Government during the war down to his Hocking Valley speculation. He is also extremely restless and fantastic in his ideas of public policy. His record in the State Department is one continued series of bullyings and blunderings, all calculated to bring us into difficulties with foreign nations, and this at a time when we were in no sense prepared for such difficulties. With Chili and Peru, with Mexico and Guatemala, with Columbia and Costa Rica, with Great Britain about the Panama Canal, he was in trouble all the time, and the country was not free one moment from the danger of most serious and embarrassing complications until he was superseded and his irritating foreign policy reversed. The effect of such a policy upon commercial interests, if renewed by his election to the Presidency, could not be otherwise than hurtful. The very apprehension of it would dampen confidence and check the spirit of commercial enterprise.

What business men want is stability, security, and safety. In Governor Cleveland we find qualities the very opposite of Mr. Blaine's. Governor Cleveland is no speculator. He is not given over to money-making. He has no gang of Hocking Valley, Little Pittsburgh, Richmond & Allegheny, or Little Rock and Fort Smith adventurers and sharpers about him. He is a man of solid parts, devoted wholly to his public duties. He has shown by his action as Governor of New York that he cannot be swerved from his convictions of duty either by the clamor of demagogues or by the seductive influences of corporations. He is as safe a man for all business interests as Senator Bayard would have been had the latter been nominated in his stead. These facts have pressed themselves upon the thoughts of thousands of property-holding Republicans in New York and elsewhere—men who have something to lose, and who ask for nothing at the hands of Government except that the laws shall be faithfully administered, and that the Chief Executive of the nation shall be a man who has shown by his life and career that he thinks more of his duties to his constituents than of filling his own pockets.

THE PRESIDENCY AS A BUSINESS.

Paradoxical as it seems, one great reason why business men are afraid of James G. Blaine as a President is that he is so much of a business man himself. It is a fact not generally remembered, that nobody has yet been elected President, or even seriously thought of, whose chief pursuit in life had been money-making. We have had farmers and lawyers and soldiers, and men of some fortune and men of no fortune at all; but we have never had a man who had devoted himself with ardor and assiduity to getting rich by trading and speculating. Moreover, we believe it is safe to say that we have never had a Presidential candidate, till now, who, during his canvass, was not surrounded by political as distinguished from business friends. Almost every prudent man belonging to any of the professions or callings from which our Presidents have hitherto been taken, has a friend or friends in the world of trade or finance whose advice he takes as to the investment of his savings; but we cannot recall any case in which these friends have surrounded him in his canvass as being also his political friends, with the strongest claims on him for such political honors as it would be in his power, if elected, to bestow. In fact, their appearance on the scene as his most conspicuous advisers would have been considered a great mistake and a grave scandal.

The old usage, followed from an early period down to 1869, was that the incoming President's Cabinet should be made up of prominent statesmen, including his own competitors before the Convention, and it was with them that he took political counsel during his candidacy. Mr. Lincoln acted on this usage when the Republican party came into power. It was not until General Grant had got well seated that he began the practice of putting obscure men into the Cabinet, simply because he had taken a fancy to them, as good fellows, or "old cronies"; and he, too, was the only President who kept company which the country did not like or felt uneasy about. In other words, the public were not used to seeing the Chief Magistrate surrounded or influenced by men of whom it knew nothing, or only knew that they were rich and good hands at making money.

Blaine, however, goes far beyond Grant or anybody else in the treatment of politics as business. During all this canvass he has apparently had no political friends, properly so called, at all. His most conspicuous counsellors have not been leading politicians, but active and successful speculators. There is no need to mention names, but nearly every prominent backer he has is a man far better known for his success in making or keeping money—the last, on the whole, perhaps requiring most talent—than for his success as a legislator or leader of public opinion. They are the men who, whenever one of his business ventures is unearthed, are found in some sort of partnership with him. He does not keep them in the background to watch his political success from afar and rejoice in it. They surround him publicly and manage his canvass for him, and let themselves be talked of for good places in case he is elected; and this so openly and unblushingly that one cannot resist the conviction that both he and they really consider the Presidency as a new and important speculation, into which he is going for all he is worth, and they as a "small flyer for eight or ten of them," like his Northern Pacific interests. He and they have, during the last twenty years, been in all sorts of things known and unknown—Government contracts and land-grants, railroads, mines, and probably other things of which we have not as yet heard. They are now evidently preparing for what has long been in their minds as the greatest and best venture of all. As politicians, nobody knows much about any of them except Blaine himself, but as "business men" their names are household words. There is even more uncertainty about their political ideas than about the candidate's. All that is known is that they stand like adamant for protection to every species of American industry, and especially their own, whatever it may be; and it will be observed that the combination is watched with the greatest interest and approbation by all the speculative class. Sage, Gould, Field, Robeson, Brady, Dorsey, Joy, and nearly all the great railroad men, who have got into the habit of having their own way with the State by hook or by crook, and like it, are enthusiastic Blaine men. Far from being disturbed by the Blaine letters and lies, they feel the deepest sympathy with Blaine under these exposures, every one of them probably having been in affairs of the same kind which he would not have revealed for worlds, and would get out of, if caught, with the best lies he knew how to construct.

In fact, the more one considers Blaine's career and surroundings, the more satisfied one becomes that if he were elected, the executive office would be for the first time administered as a business by a firm, of which Blaine would be the head, and no "dead-head" either, and that the annual net profits would probably be greater than any ever made by a single concern, not excepting the Rothschilds. Its great value would be in the fact that, unlike the Little Rock Railroad and the Hocking Valley mines, no capital would be needed, and

the returns would be so steady and sure that the profits might be divided at the beginning instead of at the end of the year.

DR. BALL AND HIS BROTHER MINISTERS.

THE *Evening Post* prints a communication from a clerical correspondent, giving some account of the much-talked of dealings of the Buffalo Ministers' Society with the Rev. Dr. Ball. We must say of it that it will be considered a very singular story by most honorable laymen. A society of ministers—of course gentlemen also—have a weekly meeting for "literary improvement, the reading of original papers, and free discussion." At one of these meetings one of the members—Dr. Ball—was allowed to entertain the company with a story reflecting severely on the character of an absent man and absent woman, which could only have been prepared by invention, or by a sort of investigation which is never undertaken except by hired detectives for the use of criminal or divorce lawyers, and which no layman with any self-respect would engage in for any purpose whatever. It ought not to have made the slightest difference to this society whether Grover Cleveland, of whom this story was told, was a candidate for office or not. Candidates for office have their rights like other men, and one of these rights is that their private character shall not be grossly assailed in their absence on evidence collected in this way, even before a clerical society for "literary improvement." The society had no more business to listen to Dr. Ball's attack on Governor Cleveland's character than to one on that of any other citizen of Buffalo, without warning him, or allowing some one on his behalf to subject the Doctor to a little wholesome cross-examination. The Doctor, of course, cannot be restrained from pouring his indecencies into the ears of any individuals who are willing to listen to him and enjoy that kind of intelligence, but when it comes to giving him a hearing before clerical meetings for "free discussion," it is a different matter.

The impropriety would have been gross enough if his tattle only concerned one man. But it also concerned, as all such tattle must concern, a woman, against whom, if innocent, it was an offence for which seven years in the penitentiary would be a slight punishment, and toward whom, if guilty, this dragging of her into shameful notoriety, thirteen years after the fact, was a piece of cruelty which we should have thought an assembly of ministers—of all men—would have considered revolting, and would have visited with instant and indignant reprobation. Moreover, ministers, unless very young, are usually men of the world, in the larger and better sense of the term—that is, they are men with enough experience of what has been happily called "the seamy side" of human life to know how strong and widespread the appetite for a certain kind of scandal is; how readily prurient imaginations concoct it; how eagerly it is received and spread; and on what flimsy evidence it is often allowed to blast reputation. In fact, there is no body of men in the country who ought to know more about it than ministers, for none suffers from it so frequently. That the Buffalo ministers, therefore, should have been willing to let one of their own number fill one of their literary evenings with a very disgusting dish of it, will fill most gentlemen of other callings with amazement. "No action was taken" on this dirty story, we are told, and "no response elicited." But there ought to have been very prompt action taken and a very decided answer given. The Doctor ought to have been told that that was neither the time nor the place for such revelations; that a body of clergymen was the last audience in the world to listen to an *ex-parte* and unsifted attack on the private morality of an absent man and woman, and a Doctor of Divinity the last person to make it. Ball ought to have been sent off with his pickings to the only proper market for them—the low and blackguard newspaper in the columns of which they finally appeared.

Moreover, if there be any place in the world in which one would expect the golden rule, "Do as you would be done by," to be treated as of solemn obligation, it is in an assembly of Christian ministers. And yet was there one man at that meeting who would not have felt outraged to the last degree had he learned that for any purpose, however good, a Buffalo physician had devoted some of his leisure to collecting stories reflecting on his private character, and served them up in "a paper," without notice to him, at a meeting of the County Medical Association?

The correspondent's notion that the society escaped responsibility for the Doctor's performances by remaining silent, and expressing neither dissent nor approval, is refuted by the facts. On the contrary, its listening to him at all enabled him and his backers to give out to the world that his tale had satisfied the members and had their endorsement; that they had accepted it as an "original paper," and a means of "literary improvement." In fact, all his stories about sexual immoralities are now advertised as having had the approval of thirty-five ministers, or thereabouts. Since the meeting described by "X.," he has prepared another and more disgusting tale, which in the grossness of its assertions and innuendoes can only be matched by Paul de Kock's novels. He has evidently come to the conclusion that if this be the way to improve a corrupt society, he is the man for the work, and that awful examples shall not be wanting while he can hold a pen. One of the Republican Buffalo papers, the *Express*, which is strongly opposed to Cleveland, was compelled in August last to refuse further credence to the Doctor's stories, on the ground that although they had no doubt he meant to tell the truth about Cleveland, it knew of its own knowledge that he sometimes failed to do so. His brother ministers will do well to imitate the caution and economy of the editor.

THE POSITION OF THE ENGLISH NAVY.

THE question of the year in England is Egypt; the question of the day is the Franchise Bill and the House of Lords; but the question of the hour is undoubtedly the condition of the navy, and so agitated has the public mind suddenly become upon the subject that a little more strain in European relations would be very likely to produce a panic. The question has been seething, so to speak, for some weeks, and now it has suddenly been brought to the front with almost explosive violence by the enterprising *Pall Mall Gazette*. This evening journal, under the editorship of Mr. Stead, has distinguished itself and greatly increased its circulation by the vigor of its conduct and an enterprise not unfrequently tinged with sensationalism. It was the *Pall Mall Gazette* that practically started the agitation about the "outcast poor," and that forced the Government to send out General Gordon; and now it has roused the whole country by printing a tremendous *communiqué* of ten columns on "The Truth About the Navy," by "One Who Knows." This "alarming revelation" has evoked further elaborate statistical arguments, innumerable letters and suggestions from correspondents, and a general discussion in all the papers. From the confused mass of discussion we shall endeavor to extract the main features and proved points, and place them succinctly before our readers. The "One Who Knows," we may add at the start, may reasonably be guessed to be Sir Edward Reed, a well-known authority on shipbuilding and coast defence, formerly Chief Constructor of the Navy, and now M.P. for Cardiff.

To avoid misunderstanding, it must be kept clearly in mind that the question under discussion in England is not whether the English fleet is more powerful than that of any other nation, but whether it can be demonstrated beyond all gainsaying that England is irresistibly superior at sea to any combination of fleets which it is reasonable to believe could be brought against her. The first point at issue is, Has the navy, which is the national insurance, increased in proportion to the war risks? This is easily answered by an overwhelming negative, as may be seen by a glance at the following table of increase and decrease since 1868—that is, during fifteen years of household suffrage:

INCREASE (1868—1883).	
Population of United Kingdom	4,994,098
Imports and exports United Kingdom	£210,089,981
Corn imported	80,000,000 cwt.
Property assessed to income tax	£171,082,006
British shipping (1869)	1,528,545 tons.
Tonnage entering and clearing ports United Kingdom (1869)	15,144,716 tons.
DECREASE.	
Naval estimates	£80,000

This startling result is still further emphasized by two considerations: first, that whereas in 1868 England was spending on her navy almost as much as the four other great naval Powers combined, last year they had increased their vote by 4½ millions, while she had reduced hers by £80,000; and second, that the costliness of every item in naval shipbuilding—hull, armor, engines, guns—has increased enormously, in many cases 100 per cent.

The second point at issue regards the superiority of England in actual ironclads afloat. This is apparently the most important question of all, although, as we shall show hereafter, it is doubtful whether it be really so. Leaving out any discussion of the superiority of England to any "reasonably possible combination" of hostile fleets, tables have been published showing her relation to the French

navy, from which it appears that while of ironclads and coast defences afloat England has 329,520 tons displacement, France has only 193,775 tons displacement, and of ironclads building England has 66,450 tons, while France has 51,080 tons. Numerically England has 51 ships of all sizes, and France 37, while England has 8 ships building and France 7. We omit the figures showing age and weight of guns. At first sight it would appear that England is vastly ahead of France in almost every respect. This, however, is not the case. In the old days of the great naval wars a line-of-battle ship was an easily estimated naval integer, and by pairing off, one against another, those of rival Powers, a correct account of their relative strength could be obtained. But this simple method of counting noses is no longer of the slightest use. Generally speaking, displacement or tonnage affords the best standard of relative fighting power, but only when the compared displacements are contemporary—that is, when the compared ships embody the same stage of the science of naval architecture. An older ship may be both much bigger and much weaker than a more modern one. Similarly, number of guns is an uncertain criterion, for an ironclad with one or two guns of greatest calibre, if her speed—another most important point nowadays—enabled her to do it, could keep out of range of any number of hostile vessels and destroy them at long range one after the other. The relative value of guns, too, almost as much as that of ships, depends upon their age. The new 18-ton breech-loader will pierce 18¾ inches of armor, which was the penetrative power of the old 38-ton. And the employment of steel instead of wrought iron has made such a difference that the newest 64-ton is believed to be equal to a 100-ton made a few years ago. Nor is the great preponderance of England in third-class vessels of much significance, as in time of war these vessels would hardly be permitted to venture to sea.

What the tables do show is that England is much superior to France in first-class vessels, and superior, though very slightly, altogether. But *per contra*, they show that this superiority is almost solely numerical; that the armor of the two navies has about the same thickness; that the French navy is, taking it all round, eighteen months younger than the English, and, therefore, stronger to that extent; and that the French, ship for ship, carry more guns and heavier ones than the English. A commander in the English navy is responsible for the statement that with the exception, perhaps, of those of the *Inflexible*, there is not a heavy gun afloat to-day on an English vessel that will not be consigned to the "sepulchre" at Woolwich as soon as it can be replaced. At present the *Inflexible*, 1876, 11,880 tons, 24-inch armor, four 80-ton guns, is probably the most powerful vessel afloat, but by next spring Italy will have one, and perhaps two, much superior to her. Moreover, the English navy will be in a worse relative position in 1886 than it is to-day.

But an examination of England as a naval power cannot by any means stop here. Can England in time of war protect her merchant shipping from swift cruisers of the *Alabama* type? The answer is that she has 19,000 merchantmen scattered all over the world to protect, and only twenty-four unarmored ships of a speed exceeding fourteen knots for their protection. This statement, however, must be qualified by the fact that on a declaration of war all the "greyhounds of the Atlantic" would be at the instant disposal of the British Admiralty. Again, are the English coaling stations protected against the dash of a rapid hostile cruiser? An ironclad without coal is absolutely unmanageable, and is far worse than useless—a mere floating target; and yet half the places at least where English ironclads can coal are entirely or almost undefended. Of the telegraph stations second only to the above in importance, "One Who Knows" says humorously, "A single 'midshipmite' with a hatchet might land at Port Darwin, and by a single blow banish Australia and the whole of our ships and commanders to a month's distance from London." As regards the defence of home forts, there are not more than two harbors in the United Kingdom adequately protected, and many of the principal port-towns would be liable to be burnt within a few weeks of a declaration of war. Moreover, the French have a naval reserve twice as large as the English and better drilled, which is of great importance, as an ordinary sailor is of little more use than a land-lubber on board a modern complicated man-of-war.

Even after all the foregoing, however, the most serious point of England's weakness on the sea still remains unmentioned. There is a word which the bravest commander on board the most powerful ironclad afloat cannot hear without uneasiness. That word is torpedo. A recent course of important experiments has shown that nothing with which an ironclad is provided can prevent a torpedo-boat from steaming within 400 yards of her and discharging a Whitehead torpedo, which would send her to the bottom. It follows with certainty, therefore, that in the naval engagements of the future the ironclads will not venture to approach one another and open fire, thus creating the smoke which would conceal the approach of their deadliest foes—the swift and reckless torpedo-boats—until these latter have fought out a preliminary engagement of their own. A large number of these is consequently of the most vital importance, and for the cost of one ironclad fifty of them can be built. Moreover, besides the enormous loss, the moral effect of the sinking of a great ironclad with all on board would be terrible, whereas a few torpedo-boats would hardly be missed. How then is England provided in this respect? The answer is easily given: Of first-class sea-going torpedo-boats ready for action there is not one in England. At the end of the present year the respective strength of the naval Powers in torpedo-boats will be as follows:

	First-class.	Second-class.
England	24	53
France	50	32
Italy	43	20
Russia	10	90

Germany has just ordered seventy, in addition to the eight first and three second she possesses already. To bring England into line with her rivals, says "One Who Knows," a hundred torpedo-boats should be laid down at once.

It is thus clear that the condition of the English navy is such as to warrant much of the agitation which has so suddenly sprung up, and it is a remarkable evidence of the power of the press that a single newspaper article should have evoked an outburst of feeling from a public which has been deaf for years to protests in Parliament, and the ceaseless entreaties of almost all the leading members of the naval service. The reason for this anxiety, however, is not far to seek. In France, Russia, Italy, Germany, the navy is the second or even third line of defence; for the defence of the fatherland, equally with great aggressive movements, there exists in each of these cases an enormous army. In the time of war, if every ship in the navy of one of these countries were at the bottom, the country itself would be in no specially greater danger of conquest and partition. But in England the navy is not only the first line of defence, but also practically the only one. An overwhelming defeat of the British fleet would leave England at the mercy of either France or Germany. The British army, even admitting that man for man it is superior to any body of troops in the world, can hardly be seriously considered in comparison with the enormous forces of the Continental Powers; as M. Philippe Daryl, in his recent volume on England, says, it would be "un déjeuner de soleil, une bouchée de canon." Therefore, for England, the question of the navy is the question of her very existence. This has been fully recognized even by her statesmen who were the greatest lovers of peace and of the development of home life instead of foreign conquest. Cobden said: "I would, if necessary, spend one hundred millions sterling to maintain an irresistible superiority over France at sea." Mr. Gladstone, in his former Midlothian speeches, distinctly and forcibly laid down a policy of naval supremacy instead of military conquest. And even Mr. John Morley, than whom there is not a more consistent anti-Jingo in England, has just said that "economy in that vital part of the national defence would certainly be fraught with peril and disaster." It would therefore seem incumbent upon the English Government to take immediate steps to strengthen it. "En marine," as Colbert says, "rien ne s'improvise."

There are, however, finally, a few considerations to be urged from the other side. In the first place, is it not rather a morbid exaggeration to regard all the other great Powers of Europe as waiting to swoop down upon England the moment she is sufficiently unprotected? If England is in this danger, has she not brought it upon herself by her aggressions and annexations, the list of which, from 1868 to 1884, all over the world, fairly takes one's breath away? Where is the development of her navy to stop if she is to keep "irresistibly superior" to any reasonably possible hostile combination? Will she endeavor to be stronger than all others together, in all parts of the world? It is impossible. As soon as her foreign policy shall be under the control of the people, will not her "patriotic anxiety" be directed to her affairs at home, her outcast classes there and the need for justice in Ireland? Will not the question of imperial responsibility give way presently to the simpler one of right and wrong? If England

is compelled to spend more money on her navy, will she not do better to economize it by stopping her costly and useless expeditions in Afghanistan, in Zululand, and in the Sudan, than by putting more pennies on an income tax already too large at home? There is, moreover, no small advantage in making haste slowly in these days of compound armor, wire guns, and liquid fuel, when each new invention renders former constructions useless. And if Cobden is to be quoted at all, should it not be from the letter to John Bright in which he says that in all his travels three reflections constantly occur to him: "How much unnecessary solicitude and alarm England devotes to the affairs of foreign countries; with how little knowledge we enter upon the task of regulating the concerns of other people; and how much better we might employ our energies in improving matters at home"?

GERMAN AND ITALIAN OPERA.

THE recent collapse of Italian opera in London appears to have created an impression that opera itself is threatened with extinction. Nothing could be more groundless than such an apprehension. Dramatic music can no more be killed than the divine art itself of which, in its latest developments, it is the highest form. But one thing is undeniable: among all those who have a fair amount of musical education, a change of taste has occurred within the last decade amounting almost to a revolution. Among the greatest musicians of the time, such as Liszt, Bülow, Tausig, Raff, Franz, etc., this change took place several decades ago, and from thence it slowly made its way to the amateurs of the younger generation, until now, in one country at least, the whole population is leavened with the modern ferment. To those who have studied the history of music there is nothing surprising in this phenomenon. The life of an opera seldom exceeds a quarter of a century, and what one generation laughs and weeps over appears hollow and commonplace to the next. Those who, not so many years ago, went into ecstasies over "Norma" and "Favorita," would have yawned over the old operas of Handel and his contemporaries of the famous Hamburg school; while those who now are competent to appreciate Weber's "Euryanthe" and Wagner's "Meistersinger" have no ears for the flimsy and soporific productions of Bellini and Donizetti. There are indeed some few works of genius that survive and gratify one generation after another, such as the best operas of Gluck, Mozart, and Weber; yet even they do not retain all their eloquence and warmth as time flies on.

When Beethoven produced his "Fidelio" in Vienna, about eighty years ago (1805), it proved to be too "advanced," and after a few performances before small audiences it was shelved till 1814. Rossini was then the arbiter of taste in Austria and Germany; and where is Rossini now? Of his thirty-nine operas but two or three are now heard, and at very long intervals. Of Donizetti's sixty-three or more operas, "Lucia," "Favorita," and "La Fille du Régiment" alone have retained a small portion of their popularity; and as for Bellini, not one of his operas was heard during the past year at the royal houses of Berlin, Vienna, and London. In Germany, opera ceased to be given in the Italian tongue long ago, and even in London last season half the operas, and almost all the singers, were non-Italian. The current, in short, is decidedly against the Italians. No one denies that for the Italian lyric songs and *fioriture* the Italian language and style are alone appropriate; but opera has now become more dramatic; it aims at painting all the passions, and not alone the sentimental and amorous; and for such purposes the expressive consonants of the German language are often more effective than the mellifluous vowels of the Italian.

In Germany, the change of taste from lyric to dramatic opera was effected gradually; in England, it promises to be more abrupt, aided as it is by the circumstance that productivity has ceased in the former line. It is safe to predict that a successful lyric opera in the style of Rossini or Bellini will never again be written, because no composer who has talent enough to write a successful opera has remained uninfluenced by the modern dramatic spirit—witness Verdi. England and America will therefore have to follow in the wake of Germany or else drop out of the race altogether. It is quite possible that this winter the verdict will seem unfavorable to German opera in New York. Dr. Damrosch has secured a company with some good singers in it, but he will be confronted with an opposition company, including the two most famous living representatives of Italian opera—the only ones that draw full houses; and they will be assisted to a certain extent by the traditions of fashion and the greater familiarity of their repertory, which many frequenters of the opera do not regard with as unfavorable eyes as do musicians and critics.

One amusing feature of the present situation is the cry of alarm raised by some that German opera means Wagner, and nothing but Wagner. "In Germany matters have come to a deadlock. Though conservative critics may be loth to fully admit the fact, the influence of Wagner is complete and crushing. In every lyric theatre his works take an enormous lead in the repertory, and we look in vain for the appearance of a composer capable of challenging the supremacy of the master." This statement, which appears in the last number of that excellent periodical, the London *Musical Times*, seems to lend color to the assertions of the Wagnerphobists. But although Wagner does gain every year over his colleagues in every city of the fatherland, a glance at the repertory of their opera-houses must convince any one that in music the Germans are the most cosmopolitan people in the world. They welcome everything that is good, no matter what country it comes from. Verdi, Boito, Gounod, Bizet, are quite as popular in Germany as at home; and in many cases foreign composers find their first recognition in Hamburg, Vienna, or some other city across the Rhine. There is indeed no "composer capable of challenging the supremacy of the master," but there are living opera composers whose works will become popular before long. Delibes and Goldmark are not of the first order, but their operas contain more interesting musical material than any number of "Semiramides." The operas of Saint-Saëns we have not heard, but to judge by the criticisms passed on them, and by his orchestral works, they must be remarkably good. But the coming man in the operatic world is Rubinstein, who has been absurdly neglected outside of Russia and Germany. His "Maccabees" is a magnificent work of genius, and "Nero" is considered better still by Rubinstein himself and by those who have heard it. When we reflect that all these operas, as well as Wagner's dramas, are as yet practically unknown in England and America, the laments we hear every day of the dearth of new operas appear very absurd. The trouble lies not with the composers, but in the incompetence of our opera companies, and the scarcity of people who have sufficient musical culture to appreciate the best dramatic music.

A serious difficulty in the way of making good opera successful lies in the attitude of some of our best people, who patronize concerts but object to the opera for the same reasons that they taboo the theatre. Perhaps these worthy folk will learn in course of time to discriminate, and not condemn one of the highest forms of art because some authors have abused it. There is nothing in "Der Freischütz," "Lohengrin," "The Flying Dutchman," and scores of other operas that can give offence to any one. An appreciation of this fact will ultimately help, we doubt not, to make good opera as popular here as it is in Germany.

ENGLISH OPINION ON THE PRESIDENTIAL CONTEST.

LONDON, September 28, 1884.

NOTHING is easier than to lay before American readers a full, fair, and strictly accurate summary of English opinion on the struggle which now occupies their nation from the Atlantic to the Pacific. There is no English opinion at all. Nobody—neither journalists, statesmen, nor private individuals (except, of course, those extremely few persons, countable almost on one's fingers, who, having been in America, have continued to follow the course of American politics)—nobody knows anything of the matter or has any views about it. I gather from American newspapers that an idea prevails that the English are opposed to Mr. Blaine because he is what we call a "Jingo," and likely to adopt an ambitious, aggressive, anti-English policy. There is not a grain of truth in this notion. One of our most ingenious journals, the *Pall Mall Gazette*, which combines radicalism in domestic politics with the advocacy of a spirited and energetic assertion of the imperial position of England in the world, cited Mr. Blaine's nomination as an evidence that Jingoism, so far from being incompatible with democracy, was in the ascendant in the United States. But neither it nor any other organ has thought of considering his Jingoism formidable to English interests. Just as little has the protectionist platform of the Republican Convention affected English sympathy. Our Conservative party coquets with protection, or at least tried to begin coquetting three years ago, though the results of its first efforts have not encouraged it to persevere. The Liberal party are by tradition free-traders, but the practical issue has been so long settled that one hears little of the question, and it excites no warmth. The Cobden Club, which appears to be considered in

other countries a powerful and active organization, has no importance in England, and recalls itself to men's minds only by giving a dinner once a year, at which some political notability delivers a speech. The notion of its conducting a propaganda only amuses us. So far from desiring to see a protective tariff abolished in the United States, our economists are beginning to hold that it is a piece of great good fortune for English trade and manufacture that your tariff is maintained; and even the Lancashire men, who used to expect so much from its suppression, would now be rather alarmed than gratified to hear such news. They would probably lose more by increased American competition in other markets than they would gain by the opening of American markets. Thus England has absolutely no selfish interest for desiring the success of any one rather than of any other among your Presidential candidates.

This is one reason why so little is known here about the matter. It does not affect the country nor any class in the country, whereas the political changes of all the great European States do, or shortly may, sensibly affect us, by bringing into power men whose conduct of affairs will touch our position in Egypt, or the colonies, or India. Still, one might have expected that the great quadrennial contest of a country in which we feel so much social interest, and with which our social ties are so numerous, our intellectual and moral sympathy so close, would excite a lively curiosity, and be closely followed by our newspapers. Why is this not so?

One reason may be found in the preoccupation of our people with the constitutional conflict between the two Houses of Parliament. Although the agitation which has been going on for the last two months against the Lords is as gentle and good-humored as any agitation can well be, it employs the newspapers and fills the mouths of men to the exclusion of other subjects. But a more permanent and effective reason is found in the ignorance which prevails in England regarding American affairs—an ignorance by no means confined to the ordinary run of educated men, but extending to our statesmen, our leading personages in literature, our oracles of journalism. Not one man in 10,000 among the educated classes had ever heard either of Mr. Blaine or of Mr. Cleveland. Some few may remember the name of Benjamin F. Butler, but how much they know of him may be gathered from the fact that that "superior" paper, the *Saturday Review*, lately spoke of him as Governor of New York. The character, objects, principles, achievements of the two great American parties are equally dark to our people. They never could make head or tail of your politics except during the Civil War; and even then they mistook the attitude of the Republicans, and either supposed them to be identical with abolitionists, or complained of them as timid time-servers because they were not abolitionists. Reconstruction puzzled them, and since that issue disappeared they have entirely "lost touch," as the phrase is, of what passes beyond the Atlantic, and can neither associate leaders with parties nor make out what claims on European sympathy either party has to make. To most people the only way of comprehending the parties of another country is to establish an analogy between them and those of one's own. An Englishman naturally supposes that the opposition of Liberals and Tories, the party of equality and the party of order, is one which must appear everywhere, and he is encouraged in this belief by finding something of the kind in all European States. He compares the Fortschrittspartei of Germany, the Republican majority in France, the monarchical Left, or perhaps the Republicans and Irredentists in Italy, with his own Radical party, and their opponents with his own Tories. But when he comes to the United States this method fails: all the parallels he seeks to establish between either of your parties and either of ours, vanish when closely examined. He abandons the task, and pronounces American politics incomprehensible.

To state this is only to throw the question a step further back, and ask why it is that Englishmen are so ignorant of the political affairs of a country where their own language is spoken, where so many political ideas and habits are identical with their own, whose political institutions have been derived from the same stock. It is not any greater than the ignorance of English politics one discovers among intelligent Frenchmen and Germans. But it appears remarkable when compared with the knowledge which intelligent Americans have of the issues and struggles that occupy England, of the characters and records of the leading English statesmen. It is not to be explained by the fact that more Americans pass through England than there are Englishmen visiting America, for most of the latter come back as ignorant of American affairs as they went. It is really only an instance of the truth that in every country, but far less in America than in Europe, an intelligent—what one may call a philosophical—curiosity is one of the rarest qualities. The love of knowledge, the desire to comprehend and explain things with which one has no direct personal connection, strong as it is in childhood, disappears from the grown man, and his interest is seldom roused except either by what is going to affect himself or by some person or event strongly appealing to his imagination or emotions. Twenty-five years ago Garibaldi, Cavour, and the whole Italian movement did so touch the imagination and emotions; twenty-three years ago the American civil war did so; but now that nothing striking happens and nobody striking appears either in Italy or the United States, our attention has slackened. The best instance of English want of enlightened curiosity is afforded by Switzerland. It is the country of Europe which our people most visit—some to climb the Alps, which they have explored with eminent energy and courage; some to meet their friends and because it is fashionable. It is also the country of Europe most interesting to a politician, and particularly to a politician coming from a country where democracy already makes strides. Yet there is not one Englishman in ten thousand of those who visit Switzerland who could give the most general account of its political constitution, while the majority do not even know, or care, what the form of government is. More remarkable still, although Switzerland is full of political instruction for England, there is not a single book in English which gives either a readable history of the country, brought down to recent times, or a description of the Swiss Federal system and of the working of democracy in the Confederation and in the cantons. If you want to learn anything about Swiss affairs, you must learn German, and then go to Berne, Zurich, Geneva, fortified by introductions, to make out something on the spot.

It may be thought that this obstacle does not exist as regards the United States, because so many Englishmen, including Mr. Henry Irving, although not including Chief Justice Coleridge, have written books about America. But it would be hard to find among these books any that conveys to an Englishman a just conception either of the constitutional system of the United States in its theory, or of the practical workings which that system has come to take. I do not know that any European since De Tocqueville has even attempted to do this. The books that appear in this country about America are usually either records of travel impressions, more or less acute according to the observing faculties of the writer, but always sketchy, casual, hasty, personal; or else they are virtually political pamphlets, in which a description of some American phenomena (usually the doings of the late Mr. William M. Tweed and his associates) is made the basis for an attack upon democracy, and a warning to Europe to pause, while it is yet possible, on the downward path. The general result is to give the English reader a confused notion that New York is in a very bad way, and that New York, which he is apt to fancy the capital of the country, is America. This suggests the observation that there is a great deal in American conditions to puzzle the European reader. He cannot get rid of the notion that a country must have a capital, a city which is the biggest place, and the centre of society and literature, as well as the seat of government. He cannot realize the nature of a federal government, and never does quite realize, not even after he has visited America, to how many differences the existence of autonomous States gives rise. He fancies that Congress is just like the Parliament of England or the Chambers of France, and cannot understand how it should happen that a majority in Congress does not control the government of the country. Of late, some English writers have discovered that there are certain elements of solidity and conservatism in the American system which do not exist in Europe; and the first use which Lord Carnarvon, a man exceptionally cultivated and thoughtful among our statesmen, makes of the discovery is, to suggest that the English Constitution would be safer if placed under the guardianship of an institution like the Supreme Court of the United States, apparently quite forgetting that such an arrangement depends on the existence of a fixed written Constitution, and would be utterly incompatible with that sovereignty of Parliament which is the characteristic of English government.

After dilating on English ignorance and want of curiosity, it may seem strange to say that there is the liveliest desire among our people to hear about America. This nevertheless is true, and it is proved by the number of books annually published on the subject. The social conditions of your country, its natural phenomena, its economic state and prospects, are all matters full of interest for us. It is only the politics which we do not and apparently cannot understand. I return, therefore, to the statement that there is no English opinion regarding the Presidential contest, no English sympathy for one side or the other, no feeling at all except a wish, springing from the increasing good-feeling which prevails here toward the United States, that a good man may be chosen, and that no troubles may arise like those which marked the election of 1876. Least of all, in spite of what we see here of Irish implacability, and what we are told of the power of the Irish vote beyond the Atlantic, is there an apprehension that the election of any President could disturb the amicable relations between the two countries.

Y.

THE MEETING OF THE THREE EMPERORS.

PARIS, September 25, 1884.

THE late interview of the three Emperors on Russian ground has an unusual significance, not only because the Emperors were accompanied by their Ministers of Foreign Affairs, but also because this interview followed a period during which the relations between Prussia and Russia had become somewhat difficult. It is not so long since we heard it said that it was the "manifest destiny" of Russia to make war on Germany. The Slavophiles proclaimed that such a war would be a sacred war; that Russia could not allow Germany, under the name of Austria, to es

tablish her influence in the valley of the Danube, to conquer the peninsula of the Balkans, and to hinder her from seizing Constantinople. Klaczko, the author of the 'Two Chancellors,' says that as soon as Germany and Russia seem on the point of quarrelling, there is nothing more to do in order to effect a reconciliation than to say "Poland." The interview has taken place in Poland. Before meeting his brother-sovereigns, the Emperor of Russia had made his entry into Warsaw amid an enthusiasm well regulated by the police. Constantly haunted by the memory of his unfortunate father's end, the Emperor of Russia can be said to have received, on the day of his coronation at Moscow, a crown of thorns. Nihilism, an unknown, intangible, invisible force, is for ever dogging his footsteps; it fills his solitude at Gatchina, it attends him on the railway, it neutralizes all his desires, his aspirations. He finds it in his own palace, in the highest ranks of society, in the army, in the Administration. For a moment the Emperor tried to inaugurate an active policy, but he soon found himself powerless. He saw that his army required reorganization, that it would take years to accomplish this task, to finish the network of the most necessary railroads, to restore the finances. Meanwhile, what was there better to do than to fall back on the old alliance with Prussia? Prussia, to be sure, was now hand in hand with Austria. At the moment when a great war with Russia was almost imminent, Prince Bismarck had gone in person to Vienna. "Veni, vidi, vici." He had concluded with Austria the strongest alliance we have seen in our time, as it had its foundation in the wishes, the sentiments, and ambitions of all the German race. It is not an alliance of courts so much as a bond between the German provinces of Austria and the new German Empire. If the alliance should be broken, it is felt that these German provinces, following a law as inexorable as the law of gravity, would join the sister provinces of Central and Northern Germany.

I said that the alliance satisfied all the ambitions of the German race; for if we see in the north an Emperor surrounded with German confederates, kings, or princes, like a sun round which revolve planets and satellites, what do we see in the south? The Austrian Emperor ruling not only over German provinces, but over Hungary, Croatia, Bohemia; and, in the peninsula of the Balkans, new kingdoms, new principalities emerging from a sort of nebulous state, and drawn invincibly, some toward Russia, some toward Austria. To think that these kingdoms will long remain independent, that these creatures of diplomacy can ever form powerful dynasties, would be an idle dream. Their fate is sealed: they will become the satellites of the Austrian Empire, as Bavaria, Saxony, Baden, and Würtemberg are the satellites of the Emperor of Germany. Future ages will see a dual empire, each with its confederates, and the mission of the *Oesterreich* will then be accomplished: it will bring civilization to the East, and defend Europe against the barbarism of the Slavs. The statesmen of Austria have completely espoused these views; it seems as if Sadowa had been fought a hundred years ago. All eyes are turned toward Salonica and the Ægean Sea.

Meanwhile, a sort of *modus vivendi* has been formed with Russia. It is agreed that things shall be for the present left to themselves in the peninsula of the Balkans. The new kingdoms of Rumania and Servia are allowed to live by themselves and for themselves; and during this period of expectation Russia has been allowed, has been invited, to extend her possessions almost indefinitely in Asia. There she meets only barbarous races; there she extends her influence as naturally as the soil imbibes water; there her semi-pacific, semi-military conquests are noiseless and harmless. From time to time only we hear a question raised in the English Parliament; but what can England do in Turkestan? She submits, after a while, to accomplished facts. She tries to have a neutral zone marked in Afghanistan; she feels always a little uneasy about India and the approach of Russia; but she has her hands so full at present in Egypt that she is obliged to affect almost ignorance and indifference.

The mind which may be called the commanding mind in the present concert of the three empires of Europe has for some time past shown little sympathy for England. There was probably more said about England than about France at the meeting of the Emperors. It is always difficult, of course, to know the undercurrents of politics; to all appearances, it is the desire of Germany to be, if not on friendly terms, at least on easy terms, with the French republic. The feelings of the German Chancellor are probably, with regard to France and to the French republic, exactly the same as those of the Emperors, but these feelings have all tended in the same direction. Ever since the days of Versailles, of M. Thiers, of Arnim, the invariable policy of the German Chancellor has been not to express any general or theoretical opinion upon the republican form of government—to let France "cuire dans son jus," to use a strong French expression; to wait for the natural development of events; to see how the monarchical and republican parties, how the Church and the Revolution, how even the worst revolutionary elements would work. France is a sort of huge political laboratory, and Prince Bismarck has not been willing to hinder its natural reactions by the addition of any acids. It may be that the reactions have not been quite as sudden, as destructive, as some people could have desired; the French Government has perhaps become stronger than would suit the secret enemies of France. But there is nothing alarming yet in this strength. The activity of the country is no longer expended on the continent of Europe: it is looking for new fields in Asia, in remote parts of the world. It is quite satisfactory to Germany that France, in the general breaking-up of the world produced by the progress of science and the rapidity of communications, should claim and establish her right to a colonial empire. The colonial fever has seized Germany. The Chancellor sees with regret that German emigration is absorbed by the Anglo-Saxon elements; he would like to see it adding strength to German centres of culture and of power. In such an attempt he has the whole German race behind him, but he has naturally encountered the more or less open resistance of England. Wherever a new flag is planted, England arrives and tries to prove that some hundred years ago she had already planted hers. "La maison est à moi, je le ferai connaître." No, the whole house is not hers, and cannot be hers. Germany is now trying to make England feel how easily she could isolate her; she is holding secret councils with her allies, and is helping France, not only in Tonquin, not only in China, but in Egypt.

The financial *coup d'état* of Lord Northbrook must probably be considered as the answer of England to the interview of the three Emperors. England felt that she could not remain out in the cold; that if the Continental Powers settled the affairs of Europe without even asking her advice, she must adopt a British, an independent policy. The question had arisen long ago: Shall the Egyptian finances be administered in the interest of the bondholders or in the interest of Egypt? The law of liquidation, which is an international arrangement, was inspired chiefly by the interest of the bondholders. By denouncing this arrangement, England declares indirectly that she will no longer consult the Powers, that she will govern Egypt under the name of the Khedive. The act of Lord Northbrook is even bolder than the expedition of Lord Wolseley.

If England is in earnest, if she gets possession of Khartum and remains there, if she organizes Egypt, if she makes a semi-repudiation of a debt contracted by corrupt and imbecile Governments, if she gives to Egypt justice, order, and peace, who will really come between her and her task? Who will tear Alexandria, Khartum, and Suakim from her hands? The enemies of France (and their name is legion) would probably like to see France enter into an open quarrel with England on the subject of Egypt, and make herself the soldier and the champion of European rights as opposed to British rights. If the French Government is wise, it will keep in the background. I am sorry that M. Barrère, the French agent, was the first to protest against the *coup d'état* of Lord Northbrook. Why should not Prussia, why should not Austria or Russia, protest before France? The Egyptian question is full of dangers, but it has perhaps more dangers for France than for England, or at least as many. We did not quarrel with England when she went to Egypt alone; she had invited us to join her, and we had distinctly refused. We ought not to quarrel with her now, when she is struggling as well as she can against the difficulties of a situation which we have ourselves been unwilling to face. We must never forget that the English Government is a free Government, a Government *de plein jour*. We do not always know all its intentions, but we can always know something of its intentions. What do we know of the meeting of the three Emperors? What is there behind this formidable silence? France has enough on her hands; she has perhaps too much on her hands with Tonquin and China; it would be madness for her to come forward in the interest of all Europe—which has in reality become to her a great unknown—and to come into direct collision with a Power like Great Britain. Under all forms of government—under Louis Philippe and the constitutional régime, under Napoleon III., under the Republic—an irresistible force has always brought France and England together. History shows that England has not been always the safest of allies; in our quarrels with Europe, she has always been found at the end with Europe. But would Europe, if we chose to quarrel with England, not also be found in the end with England?

Correspondence.

PLACING THE DEMOCRATS IN POWER.

To the Editor of The Nation:

Sir: You must think Republican voters are a set of "chumps" if you seriously believe that many can be led, by your Mulligan-letter tirade against Blaine, to place the Democrats in power. I don't know how soft-headed they may be in the East, but, in this part of the country, Republicans who have supported party candidates on account of the principles of that party, will not be deceived by clap-trap cries of fraud into placing a party in power which, notoriously, has opposed nearly all decent legislation brought forward in the past quarter of a century. Neither will your slurs that this kind of talk is mere political stock-in-trade talk, lessen their belief that the Republican party has more and better principles than the Democratic, and, notwithstanding its shortcomings, that it is more likely to carry them into execution. If you would show that the Democratic party is safer to be trusted with national affairs than the Republican, then you might make converts to Cleveland. Out West we are

looking further ahead than the succeeding Presidential term of four years, and care more for the success of the party than for that of any mere man who may chance to be placed in nomination; and we will not consent to placing Democrats in power for a long term of years simply because they have for once nominated a man who has a cleaner (?) record in his short political career than his opponent.—Respectfully, J. B. Adams.

Chicago, October 9, 1884.

[The tone of this letter is not such as we commonly exact of those who seek a hearing in our columns, but we print it out of deference to the widespread sentiment which it represents. On another page we have endeavored to show why the return of the Democrats to power would not be an unmixed calamity.—Ed. Nation.]

A CLEVELAND PROHIBITIONIST.

To the Editor of The Nation:

Sir: I am a temperance man, a total-abstinence man, and a Prohibitionist, and yet I am going to vote for Grover Cleveland—and this is the reason why. Let me illustrate by a story which I did not borrow of the Rev. Mr. Ball, of Buffalo.

Several nights since I was called into the heart of this city (you may say to see a patient or a sick parishioner, or, as a great statesman, "to cast an anchor to the windward," just as you please), when, almost directly in front of our City Hall, where the Treasury is located, I saw several drunken men lying in and about the gutter. Of course, my first impulse was to help the poor fellows up and to a place of safety, and to that end I thought of summoning the policeman, St. John, and exhorting him to prohibit the repetition of such scenes in our city; but before I had time to move one step, I heard a low whistle in the direction of the Public Treasury, and, glancing up that way, I saw a man on a ladder with a kit of burglars' tools in one hand and a dark lantern in the other, and heard footsteps of confederates near; and the man on the ladder I could see had made a hole in the wall opposite the money-safe, and as he peeped through I heard him say to his pals: "Boys, there's millions in it! I do not feel that I shall prove a deadhead in the enterprise. I see various channels in which I know I can be useful." And just then the light of the lantern flashes full in his face, and I see, for shame! it is the face of one we had trusted in exalted positions, and of one who was still masquerading before the people as a worthy claimant for further promotion. What was my duty under the circumstances? Although I am a Prohibitionist, I did not hesitate long between my desire to lift up the fallen in the gutter and to prevent that fellow on the ladder with a dark lantern from lifting himself up any further in the direction he was going. I knew the former would stay quietly there for some time—for a good while, indeed—but I knew that the latter must be arrested speedily in his career, or never, so I paid all my attention to him.

Who tells me it is unjust to liken James G. Blaine to a common thief? I would not, by any means, do so. He is not a common thief, because he is a very uncommon one. No one ought ever to suspect him of the crime of robbing neighbors' hen roosts, or of presenting his pistol at the head of the traveller on the highway and demanding, "Your money or your life!" I do not believe there is anything of the petty sneak-thief about him—no highway robber in his character, no midnight house burglar; but I do believe that he is incomparably a more dangerous man than if he were any or all of these put together, for his vice is an insidious evil, that grows like a hidden cancer at the heart of all law, order, freedom, national security, and prosperity; a moral dry rot, which, unless checked in its growth among public men, will eventually and inevitably undermine the very pillars of this republic. If our Government officials are to use public position as a ladder to reach up to private gain; to use public influence as a jimmy to pry open vaults of wealth (private or public, it matters little), then they are nothing more nor less than burglars of the refined sort, plying their trade on a grand scale. And this burglarious conduct is what James G. Blaine has been convicted of out of his own mouth, as any one who runs and reads should see—unless he be a Republican office-holder or office-seeker.

Now, sir, it seems to me the national peril is so great that every Prohibitionist should turn for the moment from the men in the gutter and go for the fellow on the ladder with the dark lantern in his hands. And how shall we catch him and arrest his career? By the only possible means—voting for Grover Cleveland. If he does not get in as guardian of our rights and trustee of the nation, the other man will. Whatever stain there may be on Mr. Cleveland's private life, this we know, that he possesses those political virtues which are not only important, but absolutely essential, in the incumbent of the chief executive office, if he is to resist the peculiar temptations and perform the special duties of that position. This is the way the political situation looks to at least one Prohibitionist, and he may add also (as a preacher) to one who thinks he fully estimates the value of personal purity as a virtue in the social economy.—Respectfully,

W. H. Spencer.

Florence, Mass., October 13, 1884.

COMPARATIVE VALUE OF THE VIRTUES.

To the Editor of The Nation:

Sir: To the quotations given in last week's *Nation* regarding the standard of official morality, allow me to add the following from Cicero, De Officiis, Lib. ii:

"No vice, then, is more foul . . . than avarice, especially in great men and such as administer the republic. For to make a gain of the republic is not only base, but wicked also and abominable. Therefore, that which the Pythian Apollo delivered by his oracle, 'that Sparta would perish by nothing but its avarice,' he seems to have predicted not about the Lacedæmonians alone, but about all opulent nations."

Respectfully, F. M. G.

Cambridge, Mass., October 6, 1884.

To the Editor of The Nation:

Sir: The following aphorism I copy from Mr. Henry Cabot Lodge's 'Daniel Webster,' page 360:

"The only thing worth having in history, as in life, is truth."

I think it deserved a place with the quotations published by you last week under the heading, "Comparative Value of the Virtues." O. S.

Chicago, October 5, 1884.

To the Editor of The Nation:

Sir: You have several times in your columns referred to those who decide the question of who shall be our next President on moral grounds only, and hence decide for Mr. Blaine. Of course the political fitness should always be the main issue. What we want is a wise and honest ruler. A perfect man is unattainable; even a saintly man might make a sad failure as President; but even on moral grounds, for those who profess to be guided by the ethics of the Bible, there ought to be no hesitation as to who is the better candidate. There is no sin which the Bible denounces more terribly than the sin of lying. In the judgment of the last day this sin is chosen out as specially worthy of punishment. At the bottom of the list of those excluded from the Holy City stand conspicuously the liars, "all liars," "whosoever loveth and maketh a lie." The Master, when choosing a name to express the very embodiment of all evil, calls Satan "the *father of lies*." The severest words that ever fell from his lips were against the hypocrites, the arch-liars of that age. No definition of lust was ever more thorough than his in the Sermon on the Mount, yet no one was ever so tender to its penitent victims. To-day, alas! we play the part of Simon the Pharisee rather than imitate the example of Jesus in this matter.

Mr. Cleveland is accused of a single instance of want of chastity. "It was a grievous fault, and grievously hath Cæsar answered it." But he *has* answered this accusation truthfully, manfully, and, it would seem, sorrowfully. Apparently he would "rather be right than President of the United States." Mr. Blaine is accused of making an unfair use of his official position, and of lying to conceal the fact. This is the gravest charge which can be brought against a statesman. No one has a right to vote for such a man until he has thoroughly investigated the charges against him. Mr. Blaine comes before the country as an honorable statesman. He appeals to the religious sentiment of the community as a pious man. Yet thousands of fair-minded people of *his own party* believe him to be a hypocrite. Christ once said to the hypocrites, "The publicans and harlots go into the kingdom of God before you." Let the Christian who loves his country thoroughly investigate the charges against both candidates, and decide upon this principle who shall go into the Presidential chair.

Presbyter.

October 6, 1884.

A WOMAN ON THE QUESTION OF THE HOUR.

To the Editor of The Nation:

Sir: As a woman who, although not yet a convert to female suffrage, has been interested in politics ever since I studied Peter Parley's Histories, I should like to say in a few words what I believe to be the feeling of scores of women in regard to the vital importance of the issue of the present political campaign.

The *Woman's Journal*, although edited by a clever and no doubt honest set of female writers, no more expresses the sober thought of intelligent women on the question now before the people than do the utterances of the New York *Tribune* represent the sentiment of the Independent voters of the country, who, we have every reason to believe, will cast the decisive vote in the impending contest for Reform, in November.

For the first time in our political history, the private lives of the Presidential candidates have been subjected to an analysis and public exposure which will, when we return to our sober senses and one of our besmirched standard-bearers is installed in the White House, make us as a people blush for our gross curiosity and disregard of decent national self-respect. But the so-called "facts" having been thrust violently into the front of the battle, and into a position of relatively undue prominence, it behooves every voter, but particularly the non-partisan class, to consider the true moral import which a vote cast for Cleveland or for Blaine will have to the rising generation of citizens. It is just here, it seems to my illogical woman's mind, that those who do not find it in their conscience, "from moral scruples," to vote for Cleveland, make a grave moral as well as political mistake, confounding beyond the just limits of justice and common sense the character of the citizen and the personality of the individual.

The writer condemns, with the proverbial un-

compromisingness of her sex in such matters, Governor Cleveland's admitted fault: there is no possible or admissible excuse for it, and he has made none. By action, and the words of his friends, he has uttered the contrition of the guilty but repentant King of Israel. Such sins bring their punishment with merciless certainty, and Governor Cleveland's, like David's, has found him out, and the national verdict is, absolute condemnation.

But what the man who has a vote to cast in November must consider is, that he is not called upon to select a husband for his daughter or sister, a family intimate, a good physician, a rector for his parish, a tutor for his son, or the president of a society for the suppression of vice; but a chief executive officer of a great organization, in the honest business administration of which he is much concerned, and for whose good order he is, to the extent of his influence, responsible. What is of equal importance in this discussion, his freedom of choice is not entire; his selection is limited to at most four—I beg Mrs. Lockwood's pardon—five candidates, and it is his duty to vote for that man who will best serve the public interests over which he is called to preside. Will Blaine or Cleveland, judged by the light of their past careers, make the most efficient and honest public servant? Cleveland, in every relation of life, public and private, save one, is admitted to have done his duty faithfully, honestly, quietly, and above all, as a public officer of the people, to have evidenced the possession of those qualities which all thoughtful men, irrespective of party, concede that the political purity of the country now stands in dire peril for the lack of. Blaine's public record, when scrutinized, reveals the fact that personal interests have been ever with him paramount to public weal and national needs. His faith both to woman and man has been questioned, and, as a public official during the twenty-five most critical years of our history, he has identified himself with no measure of reform or great question of public policy. Which is *to-day* (and sufficient unto the day is the evil thereof) the most pressing and menacing evil to us as a *people*, social immorality or political dishonesty and greed? That is the question for men to put to themselves, and to the non-partisan observer without a vote, it seems that the answer is written clearly on every page of our domestic and public records.

Although there may be some signs of moral decay in our social life—such as the alarming increase of cases of marital infelicity and unrighteous divorce which disgrace our dockets—these signs are warnings which are being heeded, and the very horror which such revelations excite shows that the great fountain of the nation's life is pure and undefiled; whereas the unprecedented increase in all kinds of mercantile and fiduciary dishonesty and *breach of trust*—the Star-route cases, the Grant & Ward "Government contracts," the late unearthing of defalcation in every Government department in Washington, the duplication in a decade of our municipal indebtedness (shown by an article in *Harper's Magazine* for October, 1884, to have increased from $328,244,520 in 1870 to $698,271,199 in 1880)—speaks to us with startling clearness of the extent to which lying and stealing have undermined our civic virtues, and a people once given over to public and private fraud and faithlessness is far on the road which leads to social and domestic ruin.

The question to-day is not one as to the comparative value of the virtues, but as to whether extravagance, jobbery, and bluster shall rule our national expenditure, administration, and diplomacy, or whether these shall be directed and controlled by intelligent economy, honest merit, and conservative statesmanship. If *men* can be persuaded to look at the matter earnestly, and with the sincere desire to do what is *right*, and not what is expedient for this or that interest, there will not be so many *women* to fall under the condemnation of the *Nation* for their unsound and childish political opinions—opinions, as a rule, unfortunately, only filtered down from their ignorant and one-sided Republican or Democratic male relations and friends. C. B.

Baltimore, Md., October 4, 1884.

WHY PEOPLE DISCREDIT THE TRUTH ABOUT BLAINE.

To the Editor of The Nation:

Sir: Some of the correspondents of the *Nation* have been accounting for the attitude of Republicans toward Blaine's railway operations by assuming that the people—especially the ministers who are supporting Blaine—are morally obtuse. Such a view seems to me neither correct nor helpful.

Let any one recall for a moment the stories which have been set afloat during the last two or three campaigns, and the way in which voters were compelled to estimate them. Take for an example the account in a recent number of the New York *Tribune* of the origin of the Morey letter. If the account is true, the Democratic Campaign Committee was responsible for a monstrous outrage; if it is false, what a falsehood it is! And yet who knows anything about it? The whole thing, evidence, interpretation, and application, rests upon the authority of the *Tribune*, and I do not suppose any sane man would consider the story true simply because he saw it in the *Tribune*. Your editorial note on it showed, apparently, that you did not know what to make of the matter, and how, indeed, can any one find out? I may be particularly ignorant, but as to all that matter of the cipher despatches I am still in a hazy condition, and not at all sure that I have ever had a chance to see the facts in the case. To put it in general terms, the newspapers have told so many doubtful stories that they have lost their credit with ordinary people. In itself that is a very good thing, but it has its harmful side; it is working now very strongly for Blaine. When you consider his personal popularity and the natural desire which so many men have to find themselves in the hands of a real leader, and add to that the contemptuous impatience which is the only notice most campaign stories deserve, there is nothing surprising in the fact that some men have stuck to Blaine all the more tenaciously because of the attempts to prove him dishonest. The impulse is not one which deserves reprobation; it may not be discriminating, but it is generous, and the assumption that such men have not been evolved up to the point of comprehending what stealing means, may be a clever piece of sneering, but it will not be likely to convert anybody.

I think it may, perhaps, be of some use to point out the fact that the charges against Blaine are essentially different from those which I have spoken of above, in that no man need rely upon a reporter or a newspaper for the facts. For once, we can get at the facts for ourselves and pass judgment upon them without the intervention of any partisan, bound to carry his case at any cost. The records of Mr. Blaine's operations in railways are to be found in every public library, and a few hours' work will put any intelligent man in a position to judge for himself. And this, I take it, is all that is asked: that men will not let their righteous indignation at slander lead them to shirk the plain duty of examining these facts. The strength of the effort against Blaine lies in the fact that five out of every ten men who read those letters will never vote for the man who wrote them.—Very respectfully,

E. P. M.

Leipzig, Saxony, September 26, 1884.

"BLAINE'S IDEA."

To the Editor of The Nation:

Sir: The Republican newspapers here, and I presume in other cities also, are displaying in their office windows a map of the United States labelled "Blaine's Idea." At the top of the map, obliterating a large part of the country, and the most prominent thing in it, is Blaine himself! Truly, does not this represent Blaine's ideal and idea ever since he has been in public life? We must thank the Republican Committee for so frank an avowal of Blaine's modest and patriotic "idea." Vol.

Cleveland, October 9, 1884.

RUSSIAN COMPETITION IN PETROLEUM.

To the Editor of The Nation:

Sir: The editorial note concerning Russian petroleum in your issue of October 2 was widely read and commented upon here, and its views fully endorsed by the more careful and conservative members of the petroleum trade. Such publications cannot but be of the greatest service in helping to form a public opinion favorable to the maintenance of fair prices for American products, and discouraging senseless panic and the wild speculation that always precedes and commonly follows such a state of affairs. There is no question, I think, that the best-informed and most intelligent men connected with the petroleum interest are steadily of the opinion that no foreign fields or influences are likely to affect the prosperity of the American petroleum industry; but the great outside public do not seem to understand this, and the producers and holders of American petroleum are thus led to sacrifice not only their own interests, but for months have exerted a depressing influence upon prices—an influence not warranted by the facts.

From present appearances, the world must for many years depend upon American petroleum fields for its supply of this great product; and the trade and the public should calmly consider how little reasonableness there is in allowing a Russian field, or even the opening of a limited territory in the old American producing regions, to cause disastrous panic and depression, affecting thousands of producers and workmen and their families. To-day the stocks of crude petroleum are not larger proportionately than the stocks of our other great natural products, and, indeed, not so large when it is considered that America has practically no competition in supplying the world with its cheapest and most efficient light. Work in the American fields has been almost completely stopped; and if it was not for the senseless fear of a small undeveloped field in one of the counties of western Pennsylvania (Butler)—a territory that could hardly supply more than 6,000 to 10,000 barrels a day for a very limited time, even at the worst—all connected with this industry might be reasonably happy and prosperous. But unreasoning depression and fear seem to prevail in most of the speculative markets; and so long as so little good sense and stability are shown in American business, possibly no great improvement is to be expected.

Business.

Pittsburgh, Pa., October 7, 1884.

FRENCH COINAGE AGAIN.

To the Editor of The Nation:

Sir: Your correspondent "T. B." is in error in saying that no coin bearing the legends "République Française" and "Napoléon Empereur" can

be "found without the dates of 1804 or 1805." I have a 20-franc gold piece bearing these legends on opposite sides, dated 1808. R.

BOSTON, October 7, 1884.

THE ETYMOLOGY OF "BUG."

TO THE EDITOR OF THE NATION:

SIR: Can any of your readers throw light upon the name "bug," so often given to light-houses, *e. g.*, the "Little Bug," Portland, Me., and the "Bug Light-House," Boston?

INQUIRER.

CAMBRIDGE, MASS.

[Perhaps the down-East Americanism "fire-bug," meaning an 'incendiary,' would also be covered by the explanation sought for.—ED. NATION.]

Notes.

LITTLE, BROWN & Co. have nearly ready a new volume by Francis Parkman, forming the seventh in his series of historical narratives, "France and England in North America." It will be entitled 'Montcalm and Wolfe'—1748-1763; the period between 1700 and 1748 having still to be treated before the French chain is complete. They also announce 'Studies in Wordsworth, and Other Papers,' by the Rev. Henry N. Hudson; the second volume of Baird, Brewer, and Ridgway's 'Water Birds of America'; and a new edition of Bacon's 'Essays, and Wisdom of the Ancients.'

Ginn, Heath & Co. have in press a school edition of Schiller's 'Song of the Bell,' annotated by Charles P. Otis; 'An Introduction to the Study of the Compounds of Carbon; or, Inorganic Chemistry,' by Prof. Ira Remsen, of Johns Hopkins University; a translation by Prof. Geo. T. Ladd, of Yale, from Lotze's 'Grundzüge,' under the titles 'Outlines of Metaphysic,' 'Outlines of the Philosophy of Religion,' and 'Outlines of Practical Philosophy'; a 'Handbook of Latin Synonyms,' by Prof. E. A. Shumway, of Rutgers College; a 'Sanskrit Primer,' based on Buehler's 'Leitfaden,' by E. D. Perry, of Columbia College; and a new and enlarged edition of Prof. Stanley Hall's 'Methods of Teaching and Studying History.'

Cassell & Co. will begin at an early date the publication of "The Artist's Library," a series of handbooks on the history and practical application of art, originally published under the patronage of the Administration of Fine Arts, at Paris, and now translated under the editorial supervision of Mr. John Sparkes, Principal of the South Kensington Art School. Numerous engravings will be given in each volume. They also announce 'Fisheries of the World,' by F. Whymper, profusely illustrated; and 'Rambles Round London Town,' a book for children, by C. L. Mateaux.

The third volume of "Griggs's German Philosophical Classics for English Readers and Students," under the editorial supervision of Prof. George S. Morris, Ph.D., will be issued about October 25, from the press of S. C. Griggs & Co., Chicago. This work will be a critical exposition of Fichte's 'Science of Knowledge,' by Dr. C. C. Everett, of Harvard. Other volumes will follow shortly.

Readers of the interesting articles on 'The Literature of Introspection,' signed by "M. A. W.," in recent numbers of *Macmillan's Magazine*, will be glad to learn that a larger work on the subject by the same writer is in the press, and will be issued by Macmillan & Co. early next month. Mrs. T. Humphrey Ward has made a complete translation of the 'Journal Intime,' of Amiel, with whom the above articles were chiefly concerned, and will furnish an original introduction. M. Edmond Scherer, the well-known critic and Senator, who introduced Amiel to French readers, and through whom Mrs. Ward has introduced him to English ones, has given much assistance to the forthcoming work.

A novel of contemporary Indian life, called 'The Poison Tree,' or in Hindustani 'Bisha Briksha,' by Mr. Chatterjee, has been translated into English, and will be published immediately by T. Fisher Unwin, London. Mr. Edwin Arnold, who has written an introduction, considers that in Chatterjee Bengal has produced a writer of true genius, and praises highly the author's faithful pictures of Hindu life.

We have received some sheets of a new publication by Mr. S. Reinach on 'Greek Epigraphy, which promises to be for students of that branch of literature an important acquisition. The inscriptions given are classified (as to subject) as legal, religious, etc., and extend from the earliest known down to the introduction of Christianity as the State religion of the Roman Empire. The inscriptions discovered in the sanctuary of Esculapios at Epidauros by Cavvadios, the ephor charged with the excavations at that place, are of unusual interest. They are engraved on two of the steles mentioned by Pausanias, and, by way of specimen, Reinach gives the translation of one with portions of the Greek text. The inscription records, not cures, in the medical sense of the term, but miracles performed by the Lord through dreams. They offer a curious parallel to the "miracles" of the Church and those of Buddhism, not to say also those of the modern biologists, etc. The work of Mr. Reinach is not a *corpus inscriptionum*, but a treatise on inscriptions, which will be found of great utility, not merely to epigraphists, but to all critical students of Greek, especially of early forms.

Mr. Reinach writes to the *Revue Critique* that M. Tissot, the learned Africanist, has left him all his papers, maps, and drawings; that the proofs of the first volume of the great 'Géographie Comparée de la Province Romaine d'Afrique' were corrected by the author, so that it can be issued at once, while the manuscript of the second volume, including notices of the latest discoveries, is ready for the printer; and that the greater part of the maps and drawings will form a third volume. The others will appear in the second.

An important historical magazine is announced to appear next January, the *Archiv für Litteratur- und Kirchengeschichte des Mittelalters*, to be edited by a Dominican, Father Heinrich Denifle, archivist at the Vatican, and a Jesuit, Father Franz Ehrle. It will be devoted to articles founded on or composed of unpublished documents.

B. Westermann & Co. send us the prospectus of an epitomized companion to the great work on universal history, 'Allgemeine Geschichte in Einzeldarstellungen,' published by G. Grote in Berlin. The smaller history will be called 'Allgemeine Weltgeschichte,' and will fill ten volumes, divided among Antiquity, the Orient, Greece and Rome, the Middle Ages, Modern Times, Our Own Time (*Die neueste Zeit*). As is customary, it will appear in weekly parts—140, at forty cents each. The mechanical execution and the illustrations will be of the same high order as those of the larger work, while the text has been committed to most competent scholars.

A philosophical library is in course of publication at Buda-Pest. The 'Méthode' and the 'Méditations Métaphysiques' of Descartes, Schopenhauer's dissertations, Hume's 'Human Understanding,' Taine's 'Philosophes Classiques Français du 19e Siècle' have already been translated into Hungarian by two professors, B. Alexander and I. Banoczi; and Aristotle, Aquinas, Hartmann, Leibnitz are to follow.

Volume iii, in the handsome new edition of Tennyson's works now being published by Macmillan & Co., consists of the "Idylls of the King"; volume iv consists of "The Princess" and "Maud." Three more will complete the series.

'Half a Century of English History' (G. P. Putnam's Sons) is the title, not quite "accurately true," of a volume of 150 selected cartoons from *Punch* for the years 1846-1878. As a whole leaf facing each picture was allowed for the legend and the necessary explication, the brevity of the latter is not excusable. Too often the American reader will find it insufficient for his proper understanding of the situation delineated, and a re-editing for the American market was clearly called for. We need not except the cartoons relating to our Civil War, though these explain themselves, for the text is not guarded against being offensive.

Is there a special call for Scott's 'Marmion'? We have already noticed the red-line edition of Thomas Y. Crowell & Co. The same publishers now send us a more expensive issue of the same poem, in which the letter-press is very good, and there are a dozen full-page woodcuts from designs by American artists. These, with possibly one exception, do not merit a second glance.

Quite a different affair is the 'Marmion,' which J. R. Osgood & Co. have prepared, at much greater expense, and with taste in every way superior. The illustrations are both more numerous and of a higher grade, but are very unequal. The designs involving either figures or (imaginary) architecture are weak, and the landscapes, as usual in our work of this kind, are the only satisfying residuum. Mr. Fenn's seem to us conspicuous among these in beauty and sentiment.

We recognize in the loose portfolio of 'Picturesque Sketches' (Osgood) a large number of the "process" memorandum sketches which adorn our excellent contemporary, the *American Architect*. A great variety of subjects are represented on the twenty-six card-board sheets, and both in the ensemble and in detail. The department of monuments and statues is particularly full. We hardly know to what class such a publication recommends itself.

A fourth edition of the late R. L. Dugdale's striking social study, 'The Jukes,' has been issued by G. P. Putnam's Sons, with an introduction by Mr. William M. F. Round, who asserts that little change has been made in the conditions which in this State favor the propagation of criminals.

If, as we believe, the approaching election will mark an era in our national development, the student of the time must be glad that the proceedings of the two rival conventions at Chicago are accessible in book form. Rand, McNally & Co., of that city, publish the Republican proceedings; the Democratic volume comes to us from Mr. Edward B. Dickinson, official stenographer of the National Democratic Committee, No. 11 West Twenty-fourth Street, New York. Both have indexes, and the former a diagram of the hall. A careful reader of either will find much food for reflection.

We would not question the utility, either, of Mr. Green B. Raum's 'Existing Conflict between Republican Government and Southern Oligarchy' (Washington), and Prof. J. Harris Patton's 'The Democratic Party: Its Political History and Influence' (Fords, Howard & Hulbert), though they are mere party weapons, and have as little historical as literary merit. Their function is to draw a red herring across the fresh trail that leads up to the Mulligan letters. Incidentally, of course, they must tell some truths which were once relevant and vital. The essential dishonesty of Professor Patton's book is shown in the chapter on civil-service reform.

The 'Ohio Voter's Manual' (Cleveland: W. W. Williams) is an exemplary publication having more than a transient value. It is a compendium of the laws relating to every officer eligible at the polls in that State, and in addition has fourteen appendices, furnishing statistical information which ought to be at every voter's command. No State should be without a similar manual, yet how few have one!

From H. T. Wright, Kansas City, Mo., we have received a map and business guide of that thriving municipality. The topography is not indicated. A brief historical sketch shows that in the memoir of Daniel Boone, published by Filson in his 'History of Kentucky,' occurs the first literary mention of the site of Kansas City. The population of the city is now about 110,000.

The growing interest in the opening up of Africa to European settlement is catered to by a separate publication of Map No. 33 in Kiepert's Hand-Atlas (Berlin: Dietrich Reimer). This is a general view of the continent on a scale of about 300 miles to the inch, and includes the whole of Arabia and the intervening country to the Indus. A side map on a larger scale is devoted to the Cape Colony. Supplementary to this is a map from the same well-known house, showing the west coast of Africa from Accra, on the Gold Coast, to the Ogowe delta, and a side-map of the Cameroon mountain district, which is under the German protectorate.

Two sonnets on the theme "Adjustment," by John G. Whittier, stand at the front of the *Andover Review* for October—a *rapprochement* somewhat noteworthy in itself, though it is more to be remarked that this form of verse is one to which the poet has not been addicted. Longfellow, too, took to the sonnet late in life, and left hardly any more admirable monument of his genius.

The Proceedings of the Newport Historical Society for 1883-4 have reached us. The papers here published are partly local—on the geology of the picturesque "Paradise" tract, on neighboring geological disturbances, on the Rhode Island coal measures (with special reference to their flora), on the birds of Newport; and partly relate to the other side of the continent. Mr. Bailey Willis treats of Mount Tacoma, in Washington Territory, of which he furnishes a very impressive sketch. The writer was engaged in the summer of 1883 in laying out a practicable trail to the summit.

The September *Antiquary* quotes from Bliss's 'Reliquiæ Hearnianæ' (3:18) the following passage taken from the diaries of Thomas Hearne (1678-1735). It shows that the present practice of the United States is what that of the mother country was a century and a half ago: "The transporting of books from beyond sea is a vast charge at the Custom-house in England. No country but England knows a tax on learning. The doctrine of Naples broached by the Emperor Charles V. is *libri sint liberi*, and that in a country fertile of taxes."

Mr. W. Watkyss Lloyd essays in the *Athenæum* for September 27 to fix the true reading of the well-tortured line in "Romeo and Juliet," "That run-awayes eyes may wincke," etc. "That rude day's eye may wink," is what he would make it; but the dissidents will not be few.

—Mr. W. E. Foster analyzes, in the Providence *Journal* of October 8, the Fiske-Harris collection of Rebellion literature which has just fallen to the Public Library of which he has charge. It numbers more than 8,300 pieces, embracing 1,316 books and upward of 6,000 pamphlets, the difference being made up by newspapers, periodicals, sheet music, portraits, autographs, etc. Thus, there is a lot of posters offering rewards for runaway slaves (chiefly from Virginia). There are thirty-two separate editions of 'Uncle Tom's Cabin,' translated into various Continental languages; and, in general, the foreign department of the collection seems to have been well looked after. "Several hundred volumes in French, German, Dutch, Italian, and Russian are devoted to comments and discussions on the American people, government, resources, armies, and prospects, in the Confederate States, and in the Northern States as well." The original Confederate documents are very numerous and important. Curiosities are not wanting, but the library will evidently prove invaluable to the working student. Mr. Foster observes: "Mr. [John Russell] Bartlett's 'Literature of the Rebellion,' published in 1866, might almost pass for a catalogue of the Rebellion portion of this collection, as is shown by a copy of the work checked in ink; though Mr. Harris had several thousand more entries than were here included." We are glad to learn from the same source that our recent suggestion about a coöperative index to the principal anti-slavery collections of the country has at least led to correspondence on the subject.

—The contents of the second volume of the Transactions of the Linnæan Society of New York are a continuation of "The Vertebrates of the Adirondack Region (Mammalia concluded)," and a "Description of a new Genus and Species of the Soricidæ" (*Atophyrax bendire*, with a plate), both by Clinton Hart Merriam, M. D. This work is an important addition to the literature of North American natural history. The vertebrate fauna of the Adirondack region is, with few exceptions, that of the entire northeastern portion of the United States, which gives the publication before us more than the local interest claimed by its title. The space devoted to each species is filled with information concerning habits, migrations, changes of pelage, benefits, destructiveness, modes of capture, etc., drawn from the author's observations, or, when these are lacking, from others of the best authorities. Especially important are the field notes. In not a few instances the author has had exceptional advantages for study, and the systematic manner in which his notes have been gathered enhances their value. He uses trinomials in some cases; in others, as if the long names tired him or he was but a partial convert to the unwieldy system, he bundles together all the varieties or races of a species under its ordinary binomial systematic title. For the specialist most often the systematic name will fix the identity of the species treated; the vernaculars will commonly do the same for ordinary readers, in the Adirondacks. It would have been better, however, if the author had given a thought to the much wider circle of readers, sure to be attracted by a work of such merit and so much interest, and had placed at the head of each chapter in a few lines a concise summary of the characteristics of the type to which, in the author's opinion, the various names belong. In the remaining volumes of the series the need of short diagnoses will be still greater, since those who make special studies of the lower orders so often disagree in respect to identities or applications of names, and the vernacular names are so often worse than worthless as guides. The volume is comparatively free from errors. Atophyrax (ἄτοπος, ὕραξ) is the name given the new genus; it does not look well divided thus: Atoph-yrax (p. 221).

—The American Ornithologists' Union held its second Congress in New York recently, the session lasting several days. The election of officers resulted in no change from last year. Foreign members elected, filling the maximum number of twenty-five, were Seebohm, Saunders, Gaetke, Taczanowski, and Burmeister. A few associates were added to those of last year, and about sixty correspondents were selected; the whole membership now including practically all the leading ornithologists of the world. The chief business transacted was the adoption of the reports of several committees, prominent among these being that of the Committee on Nomenclature and Classification, read by the Chairman, Dr. Coues, and unanimously adopted as the sense of the Union. This report was voluminous, occupying several hours in reading, and embodying a set of "Canons of Nomenclature" which provide for the use of trinomials, and in some other respects depart widely from the provisions of the Strickландian Code of 1842, and the British Association Code of 1865—even largely affecting the Linnæan System itself. This report may be published within a year. Dr. Holder presented the report of his Committee on the sparrow question; it was unqualified in its condemnation of the English sparrow. Dr. Merriam read a report of progress of the Committee on Migration, showing a very large amount of work done in this field. The meeting was largely attended, and included some distinguished foreign naturalists, among them Dr. P. L. Sclater, Mr. Howard Saunders, and Dr. G. E. Dobson, of England. The social feature of the occasion was the dinner given to the guests of the Union at the Albemarle Hotel.

—Students of geology and palæontology will learn with satisfaction of the appearance of another instalment of Zittel's excellent 'Handbuch der Palæontologie.' Although now upwards of eight years in appearing, this manual has held its own during the entire period of its publication, and, indeed, bids fair to be the guiding work for systematists, no less than for students, for a very considerable number of years to come. Its worth lies not so much in the fact that the science treated of is brought practically up to date, but in the circumstance that its editor possesses, beyond his own profound knowledge, a combination of critical power and mental balance rarely met with among editors or compilers of scientific textbooks. No. 3 of part 2 of the first volume deals exclusively with the highest group of the Invertebrata, the Cephalopoda, a class of animals which, proportionately to their importance in their relations to geological chronology and zoölogical position, have proved troublesome to the systematist. Professor Zittel reviews at considerable length the classification of the *Nautilidæ Ammonitidæ*, a hot-bed of discussion and dissensions among naturalists, and, while fully cognizant of the value of the classificatory attempts of his own countrymen, the German and Austrian geologists—Suess, Waagen, Neumayr, and Mojsisovics—does not fail to recognize some merit in the much abused, but here greatly lauded, classification of Professor Hyatt of Boston. The almost total lack of books in the English language of the character and quality of the one before us has long been felt by English-speaking students of natural history, and many suggestions toward filling the void have from time to time been made by both publisher and scientific author. But so far practically nothing has been effected, and the prospect for the immediate future does not appear very bright. It is almost incredible that at the present time there is not in the English language a single original manual or handbook of zoölogy which would rank above third-class in a comparison with similar works that are constantly appearing in one or other of the Continental languages. Indeed, even among translations, the only one that can be considered to be of practical service to any one but the simple beginner, is the 'Manual' of Claus, which is about appearing. As to palæontology, one solitary and sorry publication, that of Professor Nicholson, alone recites the tale of literary poverty.

—The sociological uses of genealogy are illustrated in the October number of the *New England Historical and Genealogical Register*, in an article on "The Supposed Decay of Families." Dr. Edward Jarvis, of Dorchester, Mass., examines this subject in the light afforded by the records of a single town, Concord, Mass. It is difficult to summarize his discoveries, but the first is as interesting as any, that the voting-list in 1881 contained the names of 166 men, corresponding to forty-four families found among the town residents prior to 1700, and indicating in all probability descendants of those families. The disappearance of the hundred families (in round numbers) also known to have lived in Concord before that date is accounted for by migration, extinction in the male line, etc. "The descendants in the male line of families that once lived in Concord, keeping up their respective names now in many, probably in most, of the States of the Union, in probably every county of the State and a very large portion of the towns in Massachusetts, are a host far greater than all the present residents of Concord." Dr. Jarvis discusses family by family the apparent decay of the farming class particularly. Mr. Waters's "Genealogical Gleanings in England" do not flag in interest; and since we have been speaking of Concord, we may notice that the will of John Scotchford, of Brenchlie, Kent, is given as that of the probable ancestor of the town clerk of Concord who died in 1696. This name is found in Dr. Jarvis's list for the early period, but not in the poll-list of 1881. Wills of Thomas Nelson, of Rowley, Mass., nephew of Richard Dummer; of Benjamin Woodbridge, who leads the Harvard College graduates; of Ezekiel Culverwell, of London, who makes one of his legatees Ezekiel Cheever, the famous master of the Boston Latin School: and a letter, in the nature of a will, of Theodore Pargiter, which speaks of his "Cosen John Washington" in Barbadoes (the date is 1654, just before the first Washington came to Virginia) — are some of the interesting features of the present collection.

—Owing to the great interest which the citizens of Zwickau took in matters of the Reformation in the sixteenth and seventeenth centuries, the Rathsschul-Bibliothek of that Saxon town is more rich in *anecdota Lutherana* than are incomparably larger libraries of Germany. These hitherto inedited writings of the great reformer embrace exegetical and dogmatic discussions, letters, sermons, sayings, and table-talk. Most of them are contained in one large manuscript codex, comprising ninety numbers, and abounding also in Melanchthoniana. Dr. Georg Buchwald, principal teacher at the gymnasium of Zwickau, has undertaken the publication, in independent instalments, of these interesting remnants. He has begun with the first number of the codex just mentioned, embracing fifty folio pages, and containing a Latin "Prælectio" on the book of Judges. He has issued it in the original, with introductory notes in German and a preface by the biographer of Luther, Professor Köstlin ('Dr. Martin Luthers Vorlesung über das Buch der Richter,' Leipzig, 1884). The lecture covers only the first eighteen chapters of Judges. It was written down by a hearer. It is mainly homiletical, in the reformer's well-known allegorizing vein. Its diction is vigorous and clear, and it abounds in bold though impersonal attacks on profligate priests and monks, prelates and popes. The editor, Dr. Buchwald, thought he had discovered indications of its having been composed or delivered about the year 1529 or 1530. Professor Köstlin, however, proves in a convincing manner, by intrinsic evidence, both positive and negative, that it must have been produced prior to Luther's revolt against the papal authority, though very shortly before it. In his digressions, Luther still inveighs against presumptuous heretics who abuse the word of God for their arrogant purposes, and on the whole he speaks as a monk to monks; and Rome, though he denounces her wickedness, is to him still the holiest of places. The lecture is thus highly interesting as a contribution to the history of Luther's theological and ecclesiastical development.

—The German magazines for October are of remarkable interest, though, in some cases, the articles are only reproductions of matter with which we were familiar in another form. Thus, in *Nord und Süd*, we find a translation of Mr. Schurz's *North American* article on the strikes, with a note by the editor, in which he gives no hint that the paper had been printed in English, but says it was intended to delay its appearance until a biographical article, by Mr. Udo Brachvogel, and an etched portrait had been completed. In view of the great timeliness of the article, however (it appeared in January in this country), the editor had advanced its publication. Another old friend is the *Macmillan* article on Neuberg, the greater part of which is translated, with slight annotations, by Mr. Rodenberg in the *Deutsche Rundschau*. In *Vom Fels zum Meer* (November, corresponding to the October number of the other magazines) is an article on the New York Custom-house, which is boldly conveyed, without a hint as to its origin, from Mr. R. Wheatley's article in the June *Harper*, by one Benno von Maxsen. As the illustrations are of the exact size of those in *Harper's*, it is possible that they are from duplicate plates. The paragraphs are transposed, and occasionally abridged; we subjoin a sample:

Harper, p. 53.	*Vom Fels zum Meer, p. 233.*
The Cuban steamers have been wont to bring men who enclosed cigars in rubber bags and threw them into the waters of the lower bay. Confederates in boats then picked them up, placed them in express wagons. . . . One French steamer, notorious for smuggling by driblets, when searched by this force, was found to contain 1,300 bottles of spirits, which it was intended to send ashore bottle by bottle. This about an inch deep, and fitted to the body under the armpits, have been taken from the bodies of men who were thus stealthily bringing in valuable bay oil.	Dampfer welche aus Cuba kamen, hatten nicht selten Passagiere an Bord gehabt, welche Cigarren in Gummisäcke verbargen und sie im unteren Teil der Bai ins Wasser warfen. Männer, welche mit Ihnen im Einverständnis waren, fischten diese Paketen Booten auf, und luden sie am Strande auf eigene Wagen. . . . Ein französisches Dampfschiff, welches bekannt dafür war, auf ähnliche Art Schmuggel zu treiben, enthielt bei genauer Untersuchung 1,300 Flaschen Wein, welche einzeln *in das Wasser geworfen, und an das Ufer getrieben* werden sollten. Kleine Zinndosen, kaum einen Zoll hoch, und mit wertvollem Lorbeeröl gefüllt, sind unter den Achselhöhlen von Männern gefunden, etc.

—In addition to the article mentioned, the *Rundschau* has one on Delos, by Prof. G. Hirschfeld; on Angra Pequeña, by the well-known political writer F. H. Geffcken; and on travels in the Southern Andes, by Paul Güssfeldt. Its most important article, however, judged by the interest it is likely to excite, is a forty-page paper on Charlotte Diede, based on hitherto unpublished letters. Mrs. Diede was a person of no consequence in herself, but her life was picturesque from its misfortunes, and was ennobled by the friendship of Wilhelm von Humboldt. As in the case of Friedrike Brion and Goethe, so here the episode of Charlotte Diede contributes human, and in some degree romantic and pathetic, interest to what, so far as is known to the public, was the otherwise cold and bare life of the statesman and scholar; while his 'Briefe an eine Freundin,' from their intrinsic merit even more than from the circumstances of their publication, will long keep her memory green. Among other articles which, for one reason or another, are of interest, are a translation of a part of 'The Grandissimes,' by Rudolph Lindau; a paper on reforms in the English universities, by Professor Gneist; and one on the cholera, by Professor von Pettenkofer, all in *Nord und Süd*. In the September *Unsere Zeit* will be found a paper on the Russian author Dostoievski, on "Meine neuen Ausgrabungen in Tiryns," by Schliemann, and on the German population of London, by L. Katscher.

—Joseph Rubinstein, a distant relative of Anton Rubinstein, and at one time an intimate friend of Richard Wagner, committed suicide at Luzern a few weeks ago, for reasons unknown. He was a good pianist, though not of the first rank, and his taste did not allow him to join the band of mere *virtuosi*. His name will long remain familiar, as he prepared the piano score of "Parsifal"—a meritorious work, while not on a level with Bülow's version of "Tristan und Isolde" and Tausig's "Meistersinger." Two other noteworthy incidents in Rubinstein's life were a series of concerts he gave in Berlin, and a certain notorious article on Schumann. At these Berlin concerts he undertook the Bülowesque task of playing all the fugues in Bach's "Well-tempered Clavichord" in a series of matinées lasting several weeks. The eccentric experiment proved successful, the concerts being largely attended by the best circles in Berlin. The critical article referred to contained a very unfavorable analysis of Schumann's symphonies; and as it appeared in the *Bayreuther-Blätter*, Wagner's special "organ," Wagner himself was held responsible for the opinions it advanced. It is possible that Rubinstein based his essay on remarks made by Wagner in conversations with him, although this has never been proved. In his own writings Wagner repeatedly indulges in sneers at Schumann, in reading which it is but charitable to remember that Schumann threw the first stone, and that at a time when Wagner was struggling hard for recognition and a living. The recent death of Laube has brought to light some remarks of Heine on Wagner that may here be translated. In 1843 Heine remarked to Laube that he had known Wagner for the last ten years:

"I had always been interested in his inexhaustible productivity, urged on without interruption by a lively and active mind, and I had often hoped that a noble modern music must find its source in such a personality imbued with modern culture. An adventurous fate which drove him as far as Russia, removed him for some time from my vision, and I was not a little astonished to see him suddenly, in the winter of 1838, enter my room in Paris. Truly, he had all the audacity of an artist, to make the trip from the Düna straight to the Seine, through storm and ocean, in order to make his reputation in Paris, accompanied by his wife, an opera and a half, a small purse, and an enormous Newfoundland dog with an enormous appetite! . . . Well, he did not make his reputation, nor did he fail, and, poorer in external goods, but richer internally, the wandering musician returned to Saxony, which gave its son a glorious reception, and will surely yet find him a source of much joy."

PALMER'S RHYTHMIC PROSE ODYSSEY.

The Odyssey of Homer. Books I-XII. The Text and an English Version in Rhythmic Prose. By George Herbert Palmer, Professor of Philosophy in Harvard University. Boston: Houghton, Mifflin & Co. 1884.

THE 'Odyssey' has charms that cannot be disguised by the most absurd travesty. Many writers of commentary cannot quench the love of it; and the poorest translation cannot altogether neutralize the effect of the wonderful story. The coldness of Bryant does not chill its life; the sweetness of Worsley does not destroy its strength. The song of the Sirens retains something of its music even in the version of Hobbes; and when the fame of Professor Palmer's readings from the 'Odyssey' spread through the classic circles of America, those who had ever put the power of the 'Odyssey' to a similar test—as many teachers have done—could easily understand why this course should have been so successful, apart from

the literary attractions of the rendering itself, of which we are now permitted to judge more quietly than was possible for Professor Palmer's enthusiastic audiences. And yet a quiet judgment is hardly fair. Professor Palmer's version of the 'Odyssey' is meant not for the eye but for the ear, and it is the ear to which he appeals. If this translation when read aloud produces the sense of movement, the sense of directness and rapidity, on which Mr. Arnold insists so much, then it is a success, and detailed criticism of the renderings does not affect the result.

A purely literary estimate is a very different affair. The version undertakes to be rhythmic prose, but rhythmic prose is not regulated by the same laws as verse. The ancient rhetoricians, who studied the laws of prose rhythm as moderns have no time to study anything, condemn as prose any combinations that remind one too much of poetry. Greek is an iambic language, and one might expect to find in Greek pure trimeter after trimeter. How many perfect trimeters can you find in a morning's reading? Shall we call a succession of tuneless decasyllabics rhythmic prose? Take a passage of Professor Palmer's translation at random (i, 213):

"Then answered her discreet Telemachos: 'Yes, stranger, I will plainly tell you all. My mother says I am his child; I myself do not know, for no one ever yet knew his own parentage. Yet would I were the son of some blest man on whom old age had come amongst his own possessions. But now the man born most ill-fated of all human kind—of him they say I come, since this you ask me.'"

This passage is near enough to a sort of blank verse to be irritating:

"Then answered her discreet Telemachos:
'Yes, stranger, I will plainly tell you all.
My mother says I am his child. . . .
. . . Yet would I were
The son of some blest man on whom old age
Had come amongst his own possessions. . . .
Of him they say I come, since this you ask me."

This is not rhythmic prose; it is unsuccessful verse. The rhythms of Walt Whitman, to whom Professor Palmer refers so admiringly, have more variety, and at their best much more music. It is true that Butcher and Lang in the same passage fall into verse, and we find:

"Then wise Telemachus answered her and said:
'Yea, sir, now will I plainly tell thee all:
My mother verily saith that I am his.'"

But the verse is better, the resolutions make it livelier, and the dead ten-foot rule is not felt so crudely.

Recited with fervor, recited to those whose ears have not been trained to the niceties of rhythm, to the βροτῶν εἴδωλα καμόντων, to whom Professor Palmer so humorously alludes in his preface, such rhythmic prose may have an unqualified success. In print, the charm of the half-improvisation is lost, and we must measure by artistic standards, which are not satisfied by this simple iambic movement. Any one with a little training can talk blank verse after a fashion all day.

As Professor Palmer has himself laid great stress on the rhythmical feature of his version, it seemed best to despatch this element first. To the present reviewer it is by no means the most pleasant theme that the translation suggests. The next most aggressive peculiarity is the familiarity of the tone. Now, there is great danger lest the classics die of too much respectability, and it is refreshing to find a man of the much-hampered professorial class bold enough to throw off certain conventional constraints. But where Professor Palmer thinks he has been boldest he has least to fear. Few will wage war on him for displacing the consecrated "thou," which sensibly retards the movement of the translation. "You" is the only true form for the poetry of life, and the success of certain verses of society is due in a measure to the use of the only second person that is heard in real love. But if this innovation is conceded, it does not follow that we are to vulgarize the noblest artistic language known by such trivial words and phrases as "worried," "sensible," "after you have enjoyed your meal," "they were amusing themselves." Professor Palmer's unlucky comparison of the language of Homer with the language of 'Uncle Remus' must have imposed on him. "To find language equally free in our time," he says, "we must seek it in the mouth of Uncle Remus." But the dialect of 'Uncle Remus'—and Mr. Harris, we believe, is fairly faithful to his original—is a steady dialect. Uncle Remus does not say "Brer Rabbit," "Brudder Rabbit," "Brother Rabbit"; it is "Brer Rabbit" all the time. "Sis Cow" never figures as "Sister Cow." Final g's are uniformly clipped off: "gwine" is "gwine" always, not "going," nor even "goin'." This regularity is in fact the philological charm of popular dialect, whereas artistic dialect introduces so many elements that the study becomes perplexing in the extreme, and an attempt has been made to translate Homer back into a supposed original Æolic, in order to reproduce the uniformity of the popular speech. The fluctuations of the Homeric forms show more distinctly than anything else that the language itself is a work of art; and while the looser structure of Homer's syntax may seem to justify the statement that Homer is free from the trammels of literary convention, the closer study of this side also reveals a delicate and subtle handling of language that betrays the school of the poets. In his eagerness to have life and movement at any price, Professor Palmer has shut his eyes to the philological character of the language he had to translate, and has committed himself to an untenable theory.

Fortunately his literary instincts are much better than his theory. Besides, he has had the admirable good sense to draw largely on his predecessors, and a comparison of his rendering with that of Butcher and Lang is an interesting study, into which lovers of Homer will need no encouragement to enter. Butcher and Lang, mindful of the character of the Homeric language—not unmindful, certainly, of Mr. Arnold's exhortation to be noble—have kept their diction up to the higher levels of English prose. The archaisms are seldom repellent, the atmosphere of the older words does not distort too grossly. Professor Palmer, as we have seen, is more familiar in his tone, and this very familiarity forbids the introduction of any archaic word at the risk of a sad incongruity. "Telemachos sits at peace on his demesne" runs well enough in Butcher and Lang; but "In peace Telemachos farms your demesne," in Palmer, seems out of keeping.

For consistency, or rather uniformity, in translation, Professor Palmer has little respect. Πότνια most scholars would render 'lady,' but he translates it generally 'potent,' sometimes 'honored.' The fact is, there are no two words that answer to each other absolutely, and the same word in different positions takes on a different coloring. To translate by mechanical rule, to translate by principle, often leads to the most unhappy results, artistically speaking, as is amply shown by the revised version of the New Testament, in which a wooden uniformity has taken the place of the elasticity, the variety of the authorized version. The men of King James knew their own language too well not to know that English rebels against iteration; and this rebellion is only a phase of the fancifulness, the moodiness of the nation. Boys born to English speech have to be taught formally that Greek and Latin are not afraid of repeating the same word. In this respect Professor Palmer shows the freedom of the healthier and more natural school of translation. He does not consider himself bound to translate the same word in the same way everywhere. The troublesome ἀμύμων, which is applied to an adulterous coward, to a hero, to a fair maiden, to an island, and to a house, gets a different rendering every time: 'gallant,' 'blameless,' 'gentle,' 'pleasant,' and the prosaic 'esteemed.' True, the formulas are tolerably steady, as they ought to be; but there are variations that would seem to be unaccountable. Why ἀμφίπολος should have such an array of renderings—often to the disguising of the sex—is a puzzle: 'servant,' 'attendant,' as well as 'handmaid,' 'woman,' 'waiting-woman.' ἑκατόμβη begins as 'sacrifice' and ends as 'hecatomb'; ἥρως sets out as 'lord' and then turns up as 'hero.' The 'trim ships' become 'the balanced ships,' without any rhythmical reason discernible. 'Reck' is not a bad rendering for ἐμπάζεσθαι. Why, with so good a word at hand, indulge in the affected translation of ἐμῶν ἐμπάζεο μύθων—'Make my words your guide'? Why not 'Reck my rede,' or, if position is to be the norm, 'To my words take heed'?

The English language, in cutting loose from its Germanic traditions, renounced its power of composition in large measure. Any one who attempts to make compound words with Anglo-Saxon freedom simply reminds the reader, and reminds him disagreeably, of German. Quote Chapman, Shakspere, Beddoes, as much as you choose; these only show what the language might have done. It is not what the language does, and Homeric compounds are mostly out of our reach for poetic purposes. Certain combinations have passed into our language confessedly as Homerisms. The rest, if we are honest, must be broken up. And this Professor Palmer has honestly done. There are few new compounds in his rendering; few of any kind. In fact, long compounds are not compatible with the fundamental rhythm of his version, as they are not compatible with the rapid movement at which he aims.

How far Professor Palmer has succeeded in making the 'Odyssey' easily accessible to those whose Greek has become rusty, it is for those whose Greek has become rusty to say. Those who have only a schoolmasterish knowledge of the language will doubtless find fault with many renderings which those who have tried to reproduce the effect of the original will be disposed to applaud. The trouble is that such passages may possibly mislead those βροτοὺς καμόντας whom Professor Palmer has undertaken to "deadhead" along the track of the adventures of Odysseus.

The Greek text which faces the English is taken from Merry's edition, and is a pleasure to the eye. Artistic translations faced by the text are common enough in France, where professed scholars are sensible enough to retain their hold on those whose technical knowledge may not be so great as their literary appreciation is keen and vivid. Almost any Greek classic is accessible in a French version, whereas scores of Greek authors wait for an English rendering. Surely in these days, when assaults are made on Greek all along the line, it is time to try to retain the friends that Greek had won in earlier days by making the return to the old pastures easier; and while the specialist may and will find many faults in the detail of Professor Palmer's work, the lover of Hellenism will thank him most cordially for the influence that he has exerted personally in promoting the study, and for the publication of a version that will make Homer a living thing to many. That this review has been written chiefly from the professional point of view was in the circumstances inevitable. That it was written at all is a tribute to an achievement of an unusual character and especial value.

GEORGE SAND AND GUSTAVE FLAUBERT.

Lettres de Gustave Flaubert à George Sand. Précédées d'une Étude par Guy de Maupassant. Paris: Charpentier. 1884.

George Sand. C rrespondance. 1812-1876. Tomes V et VI. Paris: Calmann Lévy; New York: F. W. Christern. 1883 and 1884.

THE whole series of letters which passed between Flaubert and George Sand are now before the public, but they have been presented in a very imperfect way. When will those who think it desirable to publish letters at all recognize that they should be carefully edited, and that the interest is doubled when, if both writers are eminent, their letters are brought into connection with each other? In the present case the first thirty-six letters from George Sand appeared last year in the fifth volume of her collected correspondence. About the same time was published the volume of Flaubert's 122 letters to her; and now come the thirty-seven last letters from George Sand.

It is a correspondence which peculiarly suffers from this brokenness, for it was the expression of so cordial and intimate a friendship that the letters "answer" to one another to an unusual degree, and large portions of them are comparatively of little value, and are liable to considerable misapprehension, if we do not know what has been said on "the other side." There is not the slightest elucidation given by either of the editors; and M. de Maupassant has done his work so carelessly—merely tossing into print the bundle of papers in his hands—that Flaubert's letters are constantly misplaced and misdated by two or three years, so that these confusions add to the other annoyances. A very interesting volume for translation with notes might be made by rearranging all these letters in juxtaposition, if it were not that part of their charm is peculiarly untranslatable. The admirable individuality of both these writers' use of language, their frequent adoption of words not to be found even in Littré, has the fatal *noli-me-tangere* quality of all literary excellence. The delightful aroma of their letters must evaporate in any transfusion from their own tongue. Yet it is our purpose to indicate the interest of such a possible volume by attempting here the task on a small scale, and looking only for such success as carefulness may attain.

The simplicity and sincerity of the close relation between these two original and influential minds make the study of it peculiarly interesting. There was seventeen years' difference in their ages, and at least half a generation's difference in their views, and the utmost difference in their temperaments, but in one heart and the other there was equal warmth of mutual attachment and sympathy. Madame Sand's feeling took the form, as in all her strongest affections, of maternal interest and tenderness, of great patience and hopefulness, of compassion for his sad solitude of life, with endless efforts to win him from it; she "tutoies" him almost from the first, while to him she was always "chère maître," and he never drops the "vous." His unbounded confidence in her qualities expresses itself with a delicate fervor of admiration delightfully mingled with freedom of criticism. The foundation had long been laid for such feeling. On receiving from her two portraits of herself he writes, "Of the two portraits I like best Couture's drawing. Marchal saw in you only the 'the good woman,' but I, who am an *old Romantic*, I find the other 'the head of the author' who made me dream so much in my youth."

Though they had known each other personally more or less for some two or three years, it was in August, 1866, that they became familiarly acquainted, when she was sixty-two and he forty-five. She then made him a visit at his home at Croisset and wrote to him afterward:

"First, embrace for me your kind mother and your charming niece. I am really touched by the kind welcome I have received in your canon-like surroundings, where a wandering animal of my species is an anomaly which might be found a constraint. . . . I was very happy during those eight days with you. It cost me something to depart, but I prevented you from working, and then, and then—a malady of my old age is not being able to remain in one place. I am afraid of becoming bound to it, and of becoming wearisome. Old people should have extreme discretion. At a distance I can tell you how much I love you without fear of being tiresome. . . . Good courage for your novel! it is charming, but it is odd that there is a whole side of you which neither reveals nor betrays itself in what you do, something of which you are probably unconscious."

In September she writes: "You are a being quite apart, quite mysterious." At which he exclaims: "I a mysterious being, dear master? Come now! I find myself of a sickening commonplaceness, and I am sometimes greatly annoyed by the *bourgeois* that is in my skin." She had told him that Sainte-Beuve said he was "frightfully vicious." "Sainte-Beuve, between ourselves, knows nothing about me, whatever he may say. I swear to you (by the smile of your little granddaughter) that I know few men less vicious than I." Their affection rapidly grew strong. In November, when much touched by the death of a friend, she says to him: "Love me *more* than before, for I am in trouble." He answers her: "To love you *more* is difficult to me, but I embrace you very tenderly. . . . All the doors between us two are not yet open." And he adds, echoing previous words of her own: "You inspire me with great respect, and I do not dare to put questions to you."

He had told her of his mental struggles in literary composition, and about this time she writes: "You always astonish me by the painfulness of your work." And he answers:

"I am not at all surprised that you understand nothing of my literary tortures. . . . You do not know—not you—what it is to remain a whole day with your head in your two hands, squeezing your unfortunate brain to find a word. With you the idea flows largely, incessantly, like a river. With me it is a slight thread of water. Great labors of art are needed before I can obtain a cascade. Ah! I shall have known indeed the *terrors of style* ["les Affres du style"]. In short, I pass my life in preying on my heart and brain: that is the true *fond* of your friend."

After this, questions of the laws of "production" of their common work came up frequently for comment, and sometimes for discussion. Their respective views of the artistic aim and effort of literature, of its means and its results, found expression in letters which have already been noticed in these columns. We will, therefore, confine ourselves to more personal topics. In February of the next year something makes her think that he is in money troubles; but he assures her—

"No, I have not what are called money anxieties; my revenues are very limited, but sure. Only, as it is your friend's custom to use them in advance, he is at moments restricted, and he grumbles 'in the silence of his study,' but not elsewhere. Unless there be extraordinary catastrophes, I shall have enough for food and fire to the end of my days. . . . As for making money with my pen, it is a thing I have never thought of, knowing myself to be radically incapable of it. I must therefore live as a small country gentleman, which is not very amusing. . . . One word more about dollars and cents, and which is entirely between ourselves. I can, without being in any way inconvenienced, lend you a thousand francs if you have need of them to go to Cannes. [She was half ill just then and wishing to go there, and had said in her last letter that she had neither money enough nor time enough for it.] I make you this offer squarely, as I should to Bouillet or any other familiar friend. No ceremony. Take care! I know it would not be suitable between people of the world, but between Troubadours [so they always called each other] many things are passed over."

She writes back immediately:

"You offer me a thousand francs to go to Cannes, you who are a beggar like myself; and when you wrote me that you were bothered about money matters, I opened my letter to offer you the half of my fortune, which amounts always to two thousand: that is my reserve. And then I did not dare to do it. Why? It is too bad; you were better than I—you simply did it. So I embrace you for this good thought, and I do not accept. But I would accept, be sure of that, if I had no other resource."

A little before this he had said:

"Life is not easy! What a complicated and costly business! I know something of it. Money is necessary for *everything*, so that with a modest income and an unproductive trade one must be resigned to have *few things*. . . . Ah, yes! ah, yes! I would gladly follow you into another planet. [She had asked, "Will you come into the world of my dreams if I succeed in finding the way to it?"] And apropos of money, it is that which will render our own planet uninhabitable in a near future, for it will be impossible, even for the richest, to live in it without being entirely occupied about one's *property*. Every one will have to spend several hours every day in managing their investments [*à tripoter ses capitaux*]. Delightful! As for me, I continue to 'manage' my romance."

His life at this time, as before and after, was too quiet and lonely—terribly quiet:

"I pass whole weeks," he says, "without exchanging a word with a human being, and at the end of the week it is impossible for me to recall a single day or any event. I see my mother and my niece every Sunday, and that is all. My only company consists of a band of rats, who in the garret over my head make an infernal disturbance when the river does not bellow and the wind does not whistle. The nights are black as ink, and a silence like that of the desert surrounds me. One's sensibility is exaggeratedly excited in such circumstances. I have palpitations of the heart at nothing at all."

In such a description there must have been to Madame Sand a strange and pathetic contrast to the circumstances of her own life. The domestic happiness she had after her son's marriage, with his family, was complete and unbroken. She had a very warm affection for her daughter-in-law as well as her son, and she loved her grandchildren passionately. The spacious house at Nohant was often full of guests, and always full of activity, gayety, and amusements. Through this happy life, interrupted only by the suffering of the German war, George Sand entered into the serenity—must we call it also the deadness?—of old age, while Flaubert, alone and wretched, became more and more gloomy and hopeless as the years went on. Such differences in the existences of the two friends were necessarily of separating force, and the effect of this, in connection with Flaubert's desperate and misanthropic sadness, gives a character to the later letters which it is grievous they should have. There was no break in this friendship—it remained constant till her death ended it; but on her part it became somewhat dull and uncomprehending; and on his, incapable of much activity or exhilaration.

But, before this period, there is so much that is interesting in the letters that the choice for quotation is most difficult. In a letter of 1868 Flaubert gives an amusing account of his own impoliteness to a lady who, in speaking of Renan, called him a "coquin": "Observe," he says, "that she had not read his books. Such things make me lose all patience, and when a friend is spoken ill of before me my blood boils. Nothing is more foolish, for it is no use, and it does me horrible harm. But this vice, nevertheless, the *running down* [*lâchage*] *of friends in society*, seems to me to assume gigantic proportions." About the same time George Sand tells him: "A person whom I much love has become *dévote;* oh, and indeed, with ecstatic, mystic,

Molinistic devotion, anything you please. . . . Is it comprehensible? A very noble mind, a real intelligence, a worthy character! and there it is!" Flaubert replies: "I am sorry for you. For it is sad to see those one loves change. That substitution of one soul for another in a body which remains precisely what it was,is a heart-breaking spectacle. One feels betrayed! I have been through that, and more than once."

He did not feel himself to have many friends. He says in 1870: "Except you and Turgeneff, I do not know a mortal with whom I can pour myself out about the things that are nearest my heart; and you live so far from me, both of you." And four years later:

"I am going to say something very assuming. No one understands me; I belong to another world. The people of my kind are so little of my kind. It is only Victor Hugo with whom I can talk about what interests me. Day before yesterday he quoted to me from memory Boileau and Tacitus. It seemed to me like giving me a present, the thing is so rare. Besides, the days he has no politicians with him, he is an adorable man. . . . He personally pleases me infinitely, but his court! —God have mercy on us!"

She writes much about her grandchildren, and he warmly responds to her: "What you tell me of your dear little girls stirs me to the bottom of my soul! Why have not I that? I was born with every tenderness, it is certain. But one does not create one's destiny, one yields to it. I was cowardly in my youth, I was *afraid* of life. I pay for it now." He enters into her discussions on moral education with great good sense often, and very suggestively. Among other things, he says:

"The child and the barbarian (the primitive man) do not distinguish the real from the unreal. I very distinctly remember that when I was five or six years old I wished 'to send my heart' to a little girl of whom I was enamored. (I mean my material heart.) I saw it lying in the straw in a hamper, an oyster basket! But no one has gone as far as you in these analyses. There are pages of that kind in the 'Histoire de ma Vie' which are of immeasurable depth."

There was scarcely a greater dissimilarity between them than George Sand's passion for the country and Flaubert's intolerance of it. "I like the country," he says, "only in travelling, because then the independence of my individuality makes me overlook the consciousness of my nothingness." And he writes from Switzerland: "You would despise me too much if I tell you I am dying of dulness here. . . . I would give all the glaciers of Switzerland for the Vatican Museum. It is there one dreams." Their religious *opinions* did not widely differ: their religious *feelings* were very dissimilar. George Sand says (not to Flaubert but to another friend): "Your life . . . will have its pure recompense in eternity, where you will be reborn; in what form? I know not that, but still better than you are and certainly happier; . . . and it is this ignorance concerning the fate which God has in store for us which makes the sweetness and the merit of our trust in him." Flaubert says: "We trick ourselves with words in this question of immortality, for the question is to know if the 'I' continues. The affirmation appears to me an assumption of our pride, a protestation of our feebleness against the eternal order. Death has perhaps no more secrets to reveal to us than life."

It is only lack of space that puts an end to these quotations.

History of the Thirty-fifth Regiment Massachusetts Volunteers, 1862-1865. With a Roster. By a Committee of the Regimental Association. Boston: Mills, Knight & Co. 1884. Pp. 409.

This is one of the best regimental histories that we have met with. It is the work of different hands, but it is written throughout in a spirit of sobriety and of impartiality. There is no glorification of the doings of the regiment; there is no excessive laudation of any one, no matter how bravely or skilfully he may have conducted himself.

The Thirty-fifth Massachusetts was raised in the summer of 1862, and was assigned to the Ninth Corps, then under the command of General Burnside. Its first experience in war was in the brilliant and successful battle of South Mountain. Here its Colonel, Wild, lost an arm, and General Reno, commanding the division, was killed. Three days afterward the regiment was in the thick of the fight at Antietam, losing something like seventy officers and men killed and more than twice as many wounded. At Fredericksburg, on December 13, leading the charge, fell Maj. Sidney Willard, one of the best officers in this or any regiment—"our great and irreparable loss," say the authors of the history. Soon afterward the Ninth Corps was sent to the West to coöperate in the siege of Vicksburg, and the Thirty-fifth was present at that most important surrender.

"Looking back over the campaign in Mississippi, it forms," our authors say, "one of the pleasantest chapters of the war. It was laid among scenes where everything was novel and interesting; and, while upon it, we enjoyed a share of the success which accompanied Grant and Sherman from that time forward. We had a taste of the wine of victory, and began to see the dawning of a successful end of the war, of which, in the neighborhood of the political strife and inefficiency about Washington, it was hard to continue hopeful."

From Vicksburg the Ninth Corps was transported to East Tennessee, and before it was again reunited to the Army of the Potomac the Thirty-fifth had its share in the repulse of Longstreet's attempt upon Knoxville. Reorganized at Annapolis, and greatly augmented in numbers, this corps made the terrible campaign of 1864 in Virginia, under General Grant. The experience of the Thirty-fifth in this series of assaults was substantially like that of most of the infantry regiments in the army, and it is briefly and well told in the pages before us. But it was the exceptional lot of the regiment to participate in the attempt on Petersburg on the 30th of July, when the mine was exploded. The story of this most unfortunate day is full and very clear, and the explanations and comments of our authors constitute a valuable contribution to our knowledge of its events. There is a noticeable absence of unnecessary criticism on the conduct or misconduct of the generals charged with this undertaking, but the reader finds a sufficient amount of material for praise and blame after he has finished this temperate and carefully-written narrative. Finally, the Thirty-fifth took its full share in the dangers and the rewards of the final campaign, and found the end of its labors in the surrender at Appomattox Court-house.

We have said enough to show that the story of this regiment embraces a greater variety of experience than has fallen to the lot of most of our military organizations. The book before us, therefore, possesses considerable interest for the general reader. For a careful student, who desires to get acquainted with the actual life of a regiment during the late war, this work would be of great value. One feature is especially to be remarked, and that is the insertion (in chapter xiii) of the diaries of several officers and men, prisoners of war at Richmond, Danville, Andersonville, and other places. Some of their stories are intensely interesting, and we notice with pleasure that acts of kindness and consideration on the part of their captors or jailers find, as they ought to find, as full a recognition as is accorded to the neglect or brutality which was not infrequently the fate of our unhappy prisoners. We cordially commend this history to all those interested in the war of the Rebellion.

A Sanskrit Reader: with Vocabulary and Notes. By Charles Rockwell Lanman, Professor of Sanskrit in Harvard College. Parts 1 and 2: Text and Vocabulary. Boston: Ginn, Heath & Co. 1884.

An introductory guide to Sanskrit, at once worthy of our researchful age and calculated for incepting students whose mother-tongue is English, has long been desiderated. Not of such a character, however meritorious, is, for instance, either the 'Anthologia Sanscritica' of Lassent with its explanatory apparatus in Latin, or Böhtlingk's 'Sanskrit-Chrestomathie,' which lacks the important accompaniment of a vocabulary. Unsatisfactory, especially from the point of view of advanced philology, and even of exact philology-are, further, the elementary text-books which have appeared in England. For it is impossible to designate as duly scholarly those which were prepared by the late Professor Johnson, on the same plane with which range the companion volumes of Professor Monier Williams, while Professor F. Maximilian Müller's edition of the 'Hitopadeça' is mentionable chiefly as evincing aberration of judgment.

Not only classical Sanskrit, but Vaidic and post-Vaidic, are represented in Professor Lanman's selections. The various compositions which he has laid under contribution for materials have, also, for the most part, been repeatedly and critically edited; so that all doubt as to the purity of their texts stands at a minimum. The principal exception is the 'Hitopadeça.' Two Benares editions of that work, accompanied by a Hindi translation, Professor Lanman seems to have overlooked. They would supply him, here and there, with readings deserving of his attention, in comparison with those which he has exhibited. In passing, it is to be hoped that some one will by-and-by undertake, for the behoof of those who are entering on the study of Sanskrit, an edition of the 'Kathâmṛitanidhi,' an epitome, like the 'Hitopadeça,' of the 'Panchatantra,' but in many respects a more eligible epitome.

Sanskrit, as dealt with by Professor Lanman in his most thoroughgoing Vocabulary, is a very different matter indeed from the language, all but apart, which it seemed to be in days before the evolution of scientific linguistics. It is by such a treatment of it as he has exemplified that it becomes invested, for the student, with an irresistible interest, despite its formidable difficulties. More than this, it may be not too much to expect that, thanks to his labors, American classical scholars will widely be brought to discern that Greek and Latin are, to one who is a Sanskritist, far other things than they are to one who is no, so; and that their favorite disciplines, unsupplemented by an acquaintance with the ancient speech of India, are, justly, properties of a period which widened investigation and enlightened culture have essentially superannuated.

The typographical finish and sumptuousness of the 'Sanskrit Reader' not only leave nothing to be asked for, but, it may be feared, somewhat overstep expediency. Though its third and concluding part, to contain notes on the text, is still unpublished, it may securely be predicted that its execution will not fall short of that of the Vocabulary. Already, however, Professor Lanman has won, and at a bound, a conspicuous position in the very foremost ranks of American scholarship.

Blason Populaire de la France. Par H. Gaidoz et Paul Sébillot. Paris: Léopold Cerf. 1884.

This volume, of which the signification of the title is somewhat obscure, is an anthology of pro-

verbial sayings concerning France and the French, Paris, the colonies of France, and the closer allies and neighbors of France, with the addition of French judgments of other nations. The conscientious carefulness and patience of its editors are indicated not only by its surprising fulness, but by the wish they express with evident sincerity that *Tout-le-monde*—"the real author of the book," as they proclaim—should continue to assist them by local investigations. Such a wish should be widely known, for unquestionably there are many persons interested in such researches who would be glad to respond to it.

The quotation of some of the more pointed phrases in the volume may show the character of the contributions desired. The larger number of these sayings, we must confess, have become dull rather than brilliant from constant use, if the beliefs of the collectors in this regard are to be accepted. "Faire France" means in Upper Brittany success in any undertaking. From Poland we have, "The ass who goes to Paris does not come back a horse"; this finds its counterpart in, "The dog who goes to Rome none the less returns a cur." The inhospitality of Saint Malo has become "proverbial" with, "When they see a stranger they ask him, 'How soon are you going?'" The Provençal poet Mistral supplies many sentences. One of his verses may be translated, "You are a guesser from Carpentras; you guess what you see"—wisdom as great as "Don't never prophesy onless you know." The Corsican proverbs are perhaps the most effective, as "Quandu u Corsu sta bene, cerca di sta male" (When a Corsican is well off, he does his best to be ill off). Another may be freely rendered, "Blessings on you, O friend! for curses come." They say of themselves, "When there is nothing for a Corsican to do, he pulls down the wall and builds it further off." Of a different character is "Anglichemanne pointu," the sobriquet for Englishmen at Dinan and the other watering places of Brittany.

There is as little poetry as wit in most of these sayings. The dryness of the verse—

> "Tous les ans à la Dromme
> Il faut cheval ou homme"—

reminds one only by contrast of the Scotch lines—

> "Tweed said to Till,
> 'What gars ye rin sae still?'
> Till said to Tweed,
> 'Though ye rin wi speed
> And I rin sla,
> While ye droon ae man
> I droon twa.'"

One of the most entertaining paragraphs of the volume is the "placing" and definition of a word just making its way into the French language (not to be found in Littré), "les rastaquouères." It serves as the title of a book which has lately appeared, but so recently as a year ago last April it could be said of it (in *Le Soleil*): "One does not know precisely the meaning of this word. . . . All that is known is that it is used to designate the people of all sorts and all nationalities who come to Paris to fish in troubled waters. . . . It is the legion of cosmopolitan *déclassés* who obliterate themselves in the confusions of a great city, while living there as best they can." Another new substantive we find here, which perhaps deserves to be accepted, a "faradasse." It is the popular parody of Cavour's saying, "Italia farà da se." It will be obvious to our readers that MM. Gaidoz and Sébillot are omnivorous and gracious recipiendiaries.

Souvenirs d'Outre-Mer. Mes missions au crépuscule de la vie. Par l'Abbé Domenech. Paris: Gaume et Cie; New York: F. W. Christern. 1884.

THIS is the author's twenty-eighth volume, and it is to be his last. He has broken his pen and thrown it away. It was high time. Those who have made the Abbé's acquaintance in some of his foregoing writings will agree that nothing in his literary life so little becomes him as this his leaving of it. They find the keen observer and vivacious narrator of other days transformed into a querulous, spiteful old man, quarrelling with all the world, with which, as he admits, he has become "furieux," a fit subject for Lourdes, to which favored spot he finally betakes himself, though it is to be feared that his bad temper will be incurable even by the miracle-working waters.

It is, certainly, a varied life which is thus, so far as the public is concerned, brought to a close. Leaving his seminary at twenty-one, Emmanuel Domenech went, in 1846, as a Catholic missionary to what were then the wilds of Texas and New Mexico. Those regions, with Old Mexico, were the theatre of his self-denying labors for many years. In 1862 we find him with the French army of occupation in Mexico, its chaplain. Later on he served in Maximilian's Cabinet as Director of the Press. None too soon, he returned to Paris in 1866. After travels in Ireland and in our Northwest, he settled down in France as a country priest. At the end of this part of his life the 'Souvenirs' introduce him to us. It is the spring of 1883. The miserly allowances of the Government are cutting his stipend to a very low point. He no longer has the zeal of his missionary days. He is restless under his diminishing income, which means diminishing comfort. "C'est bien commode de dire: *Ite et docete*—allez, prêchez et *débrouillez-vous* comme vous le pourrez; mais ce système, très-apostolique, j'en conviens, a bien des désagréments." He throws up his situation and goes to seek counsel of his old missionary bishop. Out of two or three alternatives presented, the most feasible seems to be the proposition to return to the scene of his youthful labors and offer himself as a missionary to northwestern Texas. He confidently undertakes the long journey only to find disappointment and rebuff at its end. Bishop after bishop refuses his services: he is too old; he is a Frenchman; he is this and that. Finally, after six weeks of dismal life at Uvalde, taking the place of a temporarily absent priest, he abandons the field in despair and sets his face like a flint toward Lourdes. But, alas! no sooner does he reach Paris than an old friend with "influence," whom he dares not offend by refusing the offer, gets him appointed to just such another starveling living in the country as the one he had fled from six months before. He goes out from the episcopal residence plunged in melancholy. Gloomily he descends the stairway, when, happy thought! he slips, he falls, he breaks his leg. Nothing but Lourdes water will restore him, so off he goes in triumph to the convent by the famous grotto.

The aim of the book is to tell the story of these last travels of his, and to furnish outlet for his opinion of America and Americans. The travels we have given the gist of; what is to be said of his observations on life and society among us? Frankly, they are of small value. He saves us the trouble of indicating the fundamental error underlying all his splenetic remarks about Americans by his own bold declaration that the true American type is to be principally encountered in Kentucky and Arkansas. In fact, the good Abbé practically identifies the American with the Texan, and so makes the work of fault-finding easy. Even then he does not escape falling into inconsistencies and some errors. The old charge of being unduly eager in the pursuit of the dollar does not come with the best grace from one who himself, especially for a priest, so unmistakably shows his thorough appreciation of the good things of life. He brings the accusation against us that we are guilty of great coarseness and rudeness; yet this very book contains pages of detailed description of the most disgusting and unmentionable phenomena of sea-sickness, and the author tells with great complacency of the way he met the remark of a sea-sick passenger, into whose face he was puffing tobacco smoke, "Smoking is offensive to me," by replying, "Very well; then don't smoke."

He twice makes the curious assertion that old men are very rare in the United States. Where were his eyes? In 1879, out of some thirty American cities, there were but three in which the average length of life was not greater than that of Paris. It is but another case of saying United States and meaning Texas. There, doubtless, old age *is* rare. Evidences are not wanting that the book was intended for home consumption. It is said that the instruction given in the Catholic colleges is the best in the country (p. 321); that Grant's failure to secure renomination in 1880 was due to his anti-Catholic proclivities (p. 334); and that Catholicism is the thing which has produced what little refinement we have (p. 324, cf. p. 333).

It would be wrong to give the impression that the volume has not an interest of its own. The author is a Frenchman, hence witty, epigrammatic, vivacious. Such nice touches as the following are not uncommon: "Trop de bottes et pas assez de savon dans le budget des Texiens." The light, tripping style is enough of itself to hold the reader's attention; though we must, in fairness, except chapter xii, an account of his supposedly remarkable fancies during the delirium of a fever. Madness lies that way, in more senses than one.

The Fishes of the East Atlantic Coast that are Caught with Hook and Line. By Louis O. Van Doren. Including the Fishes of the East Coast of Florida, by Samuel C. Clarke. Illustrated. New York: *The American Angler.*

THIS is intended to be a text-book of the fishes of our East Atlantic coast, and in addition to describing them it gives the approved methods for their capture, thus combining interest with instruction. In fact, the book says but little of the history and habits of the fishes except what may be of use to sportsmen, but to them it gives much information, particularly about the Florida coast, which has not until lately been thoroughly explored by the angler, though it affords him a new and wonderful field. Chapters xi and xii give a general idea of what can be caught there, from the mullet to the shark, and a description of the tarpon, a fish of great beauty, weighing from 20 to 200 lbs., and of incredible strength and vigor, has all the charm of a romance, and should induce many ambitious anglers to attempt the difficult feat of capturing one on a rod and line. The illustrations, which are said to be taken from photographs, are miserably executed, and the paper and print are almost equally bad.

BOOKS OF THE WEEK.

Berlitz, M. D., and Dubois, E. Méthode pour l'Enseignement de la Langue Française. Methode für den deutschen Unterricht. Boston: Karl Schoenhof. 2 vols. each.

In Handsome Lithographed Double Covers.

*LIBRARY OF FAMILIAR QUO*tations from English, American, French, German, Spanish, Latin, and Greek Authors. By Rev. C. T. Ramage, LL.D., and J. C. Grocott. A new and much-improved edition. 5 volumes, 12mo. Price per set, cloth, $10.00; half calf, $17.50; three-quarters Levant morocco, $25.00.

The volumes will be sold separately, in cloth, as follows:

Familiar Quotations, with parallel passages from various writers. By J. C. Grocott, with Quotations from American Authors. By Anna L. Ward, editor of 'The Cyclopædia of Practical Quotations.' $2.00.

French and Italian Authors, with English Translations. By C. T. Ramage. $2.00.

German and Spanish Authors, with English Translations. By C. T. Ramage. $2.00.

Greek Authors, with English Translations. By C. T. Ramage. $2.00.

Latin Authors, with English Translations. By C. T. Ramage. $2.00.

POEMS AND SONGS FOR Young People. Edited by Helen Kendrick Johnson. Copiously illustrated. Boards, $1.50; cloth, $2.

LABOULAYE'S ILLUSTRATED Fairy Tales. A new and very beautiful edition, with 227 illustrations. Boards, $1.50; cloth, $2.

WOOD'S POPULAR NATURAL History. By Rev. J. G. Wood, author of Illustrated Natural History, etc., profusely illustrated by Wolf, Harrison Weir, and others. Handsome cover, 8vo, cloth, $1.75.

RECORD OF POLITICS and Politicians in the United States, 1865-1882: An analytical index to the *Nation* for that period (with occasional parallel references to McPherson's Political Handbooks and other sources). This index supplements the chiefly literary index to the *Nation* published in 1880. Valuable to all libraries, students, and editors. Price, in paper, $1 00. (Purchasers will please remit with order; accounts cannot be opened.) Address PUBLISHER of the *Nation*, Box 794, New York City.

The Nation.

NEW YORK, THURSDAY, OCTOBER 23, 1884.

The Week.

COMPLETE returns are now coming to hand from Ohio, and they are full of ominous significance for the Republicans. In the first place the plurality of 19,000 which the Republican ticket had in October, 1880, has been reduced to 11,000 this year. The Republican majority of 9,000 over Democrats, Greenbackers, and Prohibitionists in October, 1880, has disappeared entirely, and the Republicans are in a minority of over 1,300 on the total vote. The total vote of the State this year exceeds 784,000, an increase of 66,000 over that of October, 1880. Of this increase the Republicans have received 29,000 and the Democrats 37,000. The increase over the vote of November, 1880, is about 60,000, and of this the Democrats have received 39,000, and the Republicans only 16,000, and the Prohibitionists about 5,000. In other words, the Democrats have secured three-fifths of the increased vote, and have polled nearly 40,000 more votes than they cast for Hancock, while the Republicans, in a Republican State, after a canvass led by their candidate in person, have cast only 16,000 more votes than they cast for Garfield, though the poll is 60,000 greater.

We do not think it is necessary to dwell upon the significance of these figures. They show that the Democratic party, instead of diminishing, is growing. If it has secured three-fifths of the increased vote in Ohio, is there not the best of reasons for believing that it will secure an equal proportion in New York and other States? If it is securing this large proportion of the new voters, is it not apparent that the young men of the country are turning away from the Republican party? Finally, if three-fifths of the increased vote goes to Cleveland in the doubtful States, how is Mr. Blaine to be elected?

The West Virginia returns are a source of almost as much uneasiness to the Blaine managers as those from Ohio. They persistently misrepresent the facts about them, and we have not the slightest idea of being able to induce them to do anything else. The simple truth is that the Democrats have won a great victory there. In the Presidential election of 1880 they had a majority over the Republicans and Greenbackers combined of only 2,069. Their total vote was 57,391, the Republican total vote was 46,243, and the Greenback vote 9,079. This year the Republicans and Greenbackers united on a fusion ticket, and were confident of being able thereby to overcome the small Democratic majority. The result is that the Democrats have won over both Republicans and Greenbackers, and have increased their majority of 2,000 in 1880 to nearly or quite 5,000. This is not a mere plurality, but a clean majority, and is a gain of 3,000 votes in an October election over the vote cast in the Presidential election four years ago. Contrast that with the Republican "victory" in Ohio, where the Republican majority of four years ago has been quite lost.

The result in West Virginia appears to have convinced the National Republican Committee that it will be useless to waste more "taffy" upon the solid South. Already there is displayed a tendency to lapse into the old talk about "bloody-shirt methods" and the "shotgun policy," and it is not improbable that within a week that fine old campaign document about seven or eight billions of Rebel claims may be put in circulation again. The most distressing feature of the West Virginia result is, that it shows so poor an appreciation of the bid for the State's electoral vote which Mr. Blaine put into his 'History,' and which we have in vain tried to get his admirers to discuss. The question of paying the $15,000,000 of Virginia's debt which had been apportioned to West Virginia as its share of the old indebtedness before the two States were divided, entered actively into the recent campaign, and Mr. Blaine's unique idea that everything could be made lovely by having it paid out of the United States Treasury, was urged as a powerful argument in favor of a Republican victory.

The denial which the Acting-Commissioner of Pensions has made of the charges concerning Mr. Dudley's disgraceful conduct in Ohio is no denial at all. It does not meet the case, and the President cannot fail to see that it does not. The main charge was, that Mr. Dudley as Commissioner of Pensions was using the whole influence of the Pension Bureau to induce voters in Ohio, who are pensioners, to support Blaine. The Civil-Service Law explicitly prohibits this kind of work. The denial which comes from the Bureau is that Mr. Dudley has given no orders there to the effect that pensioners residing in Ohio or Indiana shall be entitled to precedence in the order of settlement. Of course he has not. There has never been any expectation that he would give such an order, or that if given it would be of any benefit whatever to the pensioners named. Mr. Dudley's offence has stopped at the point of making the pensioners believe that, if they voted for Blaine, they would be helped on the sly. The fact that his promises are worthless does not lessen his offence as an officer of the Government in making them. It is as a Government officer only that his promises have any influence, and if he is to be allowed to make them in Indiana, as he did in Ohio, he ought to be forced to make his resignation take effect immediately instead of November 10.

The Blaine organs have suddenly seen a great light, and have decided that the real test of their strength in Ohio was the vote on Congressmen rather than the vote on Secretary of State. But, in the first place, the Democrats have elected a majority of the Congressional delegation. They have eleven of the Congressmen to ten for the Republicans. In 1880, when Garfield had 19,000 plurality in the State, the Republicans elected fifteen Congressmen and the Democrats only five. In the second place, thousands of Republicans all over the country who have made up their minds to vote against Blaine, will vote for Republican members of Congress. Mr. Blaine's candidacy did not enter at all into the Congressional contest in Ohio, but it did enter into that over State officers. On the State ticket thousands of Prohibitionists voted with the Republicans, because their candidate for Secretary of State was known to be in sympathy with them. All these will vote for St. John in November. In Cincinnati there are known to have been large numbers of Germans and Independents who voted with the Republicans on Tuesday, who will vote against Mr. Blaine in November. We have never heard of a "kicker" who carried his revolt so far as to contemplate voting for Democratic members of Congress. On the contrary, the assurance that a Republican majority was likely to be maintained in Congress would encourage thousands of timid Republicans, who have decided not to vote for Blaine, to go a step further and vote for Cleveland.

Steve Elkins has been interviewed on the result in Ohio, and has emitted a "clarion note" which is certain to have a powerful effect upon the country. He defines the issue as it has not been defined before. "Everywhere," he says, "laboring men recognize this as their fight—the contest of Americanism against the world; of American homes, American schools, American labor, American industry, and American progress." Steve's idea of "Americanism" was well explained by himself when, in his letter of June 18, 1882, he wrote of the Hocking Valley consolidation scheme: "Uniting the two interests would not only put the Standard stock to par, *but would create a monopoly* that would control the coal and iron of the Hocking Valley." A monopoly was created. Among its directors were S. B. Elkins and James G. Blaine, and one of its first effects was the cutting down to starvation point of the wages of the American laborers employed by the monopoly. When those laborers refused to work, labor-saving machinery was introduced, and their places were filled by imported Hungarian and Italian laborers. The riots which ensued were the outcome of this "Americanism" by Mr. Blaine and his friends, and Mr. Elkins says that it is this same Americanism which makes the laboring men everywhere recognize the candidacy of Blaine as "their fight." Steve ought to take the stump and dwell on "Americanism" exclusively.

One of the most serious results of Blaine's success would be one to which the Young Democrats in Brooklyn are for the first time directing attention. It consists in the fact that no less than four vacancies will occur on the bench of the Supreme Court during his term of office should he be elected. In other words, a man who has probably been more identified than any other politican of equal prominence with the great railroad corporations of the

country, and who, as Mr. Edmunds said, was on their side in resisting legislation directed against them in 1878, will in that case have it in his power to fill nearly half the seats in the Court which construes all attempts of the Legislature to regulate or control these corporations. That he would have any scruple about putting into these places lawyers named or recommended by great corporations, nobody who has followed his career will for one moment suppose. He would not feel any such scruple now ; he would feel it still less after having received the assurance at the polls that the Republican party thought none the worse of him on account of his long course of jobbery and mendacity.

In this connection, we invite attention to the following telegram, which was published in all the newspapers about two years ago :

"NEW YORK, May 11, '82.
"*To Senator P. B. Plumb :*
"I will be pleased to comply with your request in your letter to Mr. Coley. Can you consistently vote for the confirmation of Matthews ?
"JAY GOULD."

The authenticity of this telegram has never been questioned by either the sender or the receiver. Of course, it would be an unwarranted assumption to suppose that Mr. Justice Matthews is beholden to Jay Gould for a seat on the Supreme bench, or that he is anything else than an independent as well as an able jurist. But it is evident that Gould was reaching out for the Supreme Court when he sent his telegram to Plumb, and that he could not have a more obsequious servant in future endeavors in that line than the Plumed Knight.

Mr. Blaine is working away diligently over the tariff, and delivered a real protectionist speech at South Bend, Indiana, on Saturday, in which he ascribed the progress made by the country since 1860 to the high tariff. But is it possible that the soil, and climate, and 7,500,000 immigrants, and American intelligence, skill, and industry were doing nothing or very little all this time? Moreover, the distillers might well ask, Did whiskey contribute nothing to this result? Since 1860, hundreds of millions of gallons of whiskey have been consumed in the United States, and the result has been—has it not?—such prosperity as the world never saw. Moreover, the importance of the tariff can be a reason for electing the author of the Mulligan letters only in case there is some chance of its abolition or great reduction in case he is not elected. As yet it has never been pointed out what effect Cleveland's election would or could have on the tariff. He could not change it if he would, any more than Mr. Blaine. A good deal of the Republican talk on this subject sounds like an American article from the *Saturday Review*. No matter who is elected President, Congress will retain its control of the Federal taxation, and the right to raise the revenue in such a way as the majority in both houses may determine. That Congress, and Congress exclusively, possesses this right will apparently be news to many of Mr. Blaine's supporters. The true way for protectionists to take care of the tariff is to elect high-tariff men to Congress, to raise revenue off foreign products, and then put an honest man in the Presidency who will prevent the money from being stolen after it gets into the Treasury.

We presume that few people have ever had much doubt about the real object of Butler's candidacy, or about its close sympathy with Blaine's. The "*Tallapoosa* Treaty" between Butler and Chandler was never denied, and it was tacitly admitted long ago that the funds for Butler's campaign are supplied by the National Republican Committee. Proof positive of this seems to have been furnished now through the statements of General W. H. Parsons, Chairman of the National Greenback Labor Committee of Maryland, which are published in the *Times*. General Parsons says he visited the Butler Headquarters in this city to get Butler to go to Maryland and speak, and was referred by the Butler managers to the National Republican Committee as the proper authority. On going to them, he was astonished at their frank admission that they were furnishing the funds for Butler's campaign, and were directing his movements, and that they could not afford to send Butler to Maryland, as it was not a doubtful State and they had no money to spend in experiments. General Parsons is very indignant that Butler should be riding about the country in a palace car, at the expense of Blaine's campaign fund, soliciting votes as the friend of the laboring man and the uncompromising foe of monopoly, but we must say that he has been very slow in discovering the truth about Butler.

Signals of distress, in the form of addresses, are being displayed in great profusion by the Republican managers. Chairman Jones, of Pittsburgh, issued a remarkable one last week. Mr. Warren, of the State Committee, put forth two on Tuesday, and the "boys" of the County Committee followed with another later in the day. One of Mr. Warren's is short and was sent to all the employees of the Custom-house and Post-office. It is the third one of the kind which they have received. It contains this pregnant sentence: "The expenditures have been greater than usual, and the receipts of the Committee have not come up to those of former Presidential years." In his public address Mr. Warren is less confidential, and, we regret to notice, less truthful. He opens it with a statement that "Ohio answers to the shout of victory from the granite hills and the pine trees with 18,000 majority on the Congressional ticket and an average of 15,000 on the State—a gain of 27,000 over last year. West Virginia responds with 13,500 Republican gains." Ohio does not answer in that way, as we have shown in another column. Mr. Warren adds, further on in his appeal, that "while the prospect is bright, much remains to be done before success is assured," and we quite agree with his conclusion.

The speech of Henry Ward Beecher at the Academy of Music on Wednesday evening, the 15th inst., had the true Beecher ring :

"One blast upon his bugle horn is worth ten thousand men."

The meeting was a tremendous demonstration of the strength of Governor Cleveland in the city of New York, and of the antipathy aroused among all the better elements of society to the practices and associations of James G. Blaine. The personal greeting which Governor Cleveland received was so vociferous and enthusiastic that he was visibly embarrassed. All this took place before the later returns from Ohio, cutting down the Republican majority to one-half of the October majority of 1880, had been received. It was supposed by nearly everybody that the majority was from 15,000 to 20,000, and that West Virginia was doubtful, yet the people turned out with invincible determination to fight corruption to the bitter end. Nothing in the campaign in New York has been so significant of victory in November as Wednesday's meeting, and Mr. Beecher's speech was the embodied voice and spirit of the whole assemblage.

Mr. Phelps has declined to meet his competitor for Congress on the stump in joint debate, upon the ground that the latter had called him a liar and Mr. Blaine a corrupt rascal, and is therefore no gentleman. His competitor has replied that he never called Mr. Phelps a liar, but that he had pointed out glaring misstatements in his letter to the *Evening Post*, and that all he asks is, that Mr. Phelps shall meet him in public debate and make good what he said in that letter. These statements, he contends, are of the very essence of the campaign, and therefore it is fitting that the people should know whether Mr. Phelps was misleading the public when he wrote the letter or whether he was himself misled. This is in the interest of Mr. Phelps even more than in that of his constituents; for it must be admitted by his friends that he is a man easily deceived by anybody to whom he takes a liking. He thought that Mr. John C. Eno was an honest man, and it cost him a great deal of money to find out his mistake. He thought that the Straitsville Coal and Iron Co. was properly listed at the Stock Exchange, and it cost other people, and perhaps himself, a great deal of money to find out that mistake. May he not be equally deceived in thinking that Mr. Blaine is an honest man ? No better way of answering this question can be thought of than by meeting his competitor in joint debate. If he does not do this he has lost his case in the forum of intelligent public opinion, whatever may be the result of the election in his district.

Without doubt the most misleading document thrown into the campaign of the present year was Mr. Phelps's letter to the *Nation* of May 1, of which tens of thousands of copies have been circulated without cost to himself or to the Blaine party. That this letter was written with Mr. Blaine's approval and sanction is manifest from internal evidence. Probably Senator Edmunds was right in saying that he recognized it by its style as Mr. Blaine's composition. But since Mr. Phelps fathered it he must be held responsible for its misstatements of fact. "Am I claiming too much," said Mr. Phelps, "in claiming that there is not one among you who would regard me as capable of an attempt to mislead the public in any way ?" We will let that question rest, and see whether he did mislead the public in any way. The first thing which Mr. Phelps stated was, that Mr. Blaine obtained his Little Rock bonds

"by purchase on the same terms as they were sold on the Boston market to all applicants—sold to Josiah Bardwell, to Elisha Atkins, and to other reputable merchants. He negotiated," continued Mr. Phelps, "for a block of the securities, which were divided, as is usual in such enterprises, into three kinds—first-mortgage bonds, second-mortgage bonds, and stock. The price, I think, was *three for one*. That is, the purchaser got first-mortgage bonds for his money, and an equal amount of second-mortgage or land-grant bonds and of stock thrown in as the basis of possible profit."

Now what are the facts? This is a question in simple arithmetic, and we use no other data than such as were open to Mr. Phelps at that time. Assuming for the moment that Mr. Blaine made any purchase at all, what did he get? Mr. Phelps says "three for one." In point of fact, he got *four and a quarter for one*, and no other purchaser got the securities at any such rate. In the contract with Fisher of September 5, 1869, there was to be paid $130,000, and for this sum there were to be delivered the following securities:

First-mortgage bonds	$162,500
Preferred stock	130,000
Common stock	130,000
Land-grant bonds	130,000
	$552,500

which is exactly 425 per cent. of $130,000, instead of 300 per cent., as Mr. Phelps stated it. The testimony may be searched in vain for any other sale of Little Rock securities before the road became insolvent, at any such price. Even Elisha Atkins, a director in the enterprise, did not get his on so favorable terms. We trust that Mr. Phelps will be asked on the stump to explain this part of his statement, which is really the gist of his whole letter of April 26, so that the people of his district may know whether he is "capable of misleading the public in any way," or whether he was led into a humiliating blunder by Mr. Blaine.

The *Tribune* some time ago reprinted with great conspicuousness the *Nation's* article on the Cleveland scandal entitled, "What We Think about It Now." Mr. Cyrus Field has now reprinted it also in his little paper, the *Mail and Express*, for all of which we have to express our acknowledgments. The article—like all our articles—was written with a view to having it read as widely as possible; but what we most feared was, that it would not reach the supporters of Blaine, owing to the persistent practice of suppression pursued by his organs in the press. We do not know of their having made any other exception to their rule. Mr. Field, however, makes some absurd comments on it, which he ought to have avoided, ascribing its views in some way to John Stuart Mill. If he knew anything about John Stuart Mill, he would not mention him, because he would know what Mill, if he were alive to-day, would say of Blaine and his backers.

It was the venerable ex-President Woolsey, we believe, who made the memorable remark that Mr. Tilden was in 1876 "seeking the Presidency with uncommon anxiety." The remark at the time gave the Republicans great delight, and the *Tribune* used it almost daily during the campaign with much effect against Mr. Tilden. The basis for the charge was that he was managing his own canvass. The worst of his offences was the establishing of a "Bureau" in this city, from which Tilden editorial articles and other documents were issued. We recall the remark now for the sake of comparing Mr. Tilden's conduct with that of Mr. Blaine. Was there ever such "uncommon anxiety" shown by any candidate as the Plumed Knight is showing now? Was there ever in this country such a spectacle as the procession of Blaine and his gang of corruptionists through the Western States? He is not only managing his campaign in person, but he is his own chief stump speaker, and his first deputy speaker is his associate on the ticket. His allies and agents are the most notorious corrupters of the ballot in American politics.

The Treasury order prohibiting the importation of rags, without regard to the place of exportation and without regard even to the chances of cholera infection, is likely to work enormous injury to the cheap newspapers all over the country, as well as to paper manufacturers. It is estimated by good authority that if the order stands in force six months, it will cause such an advance in the price of printing paper that it will kill nearly all of the one-cent papers and seriously cripple the two-cent papers, the margin between the cost of white paper and the selling price of the journals being very small. It is extremely doubtful whether the Acting Secretary of the Treasury has any authority to prohibit the importation of anything which the law allows to be imported. The only things prohibited by statute are obscene books, counterfeit money, and ships. Rags, whether infected or not infected, are not embraced in this category. Yet no objection would probably be made to an order prohibiting the importation of rags from Marseilles, Naples, or other cholera-stricken ports, although the conclusions of Dr. Koch and of the recent Berlin cholera conference were decided upon the point that cholera germs are killed by drying, and that no cases of the spread of cholera by means of dry rags can be found.

Mr. Vanderbilt's gift of $500,000 to the College of Physicians and Surgeons for the erection of a new building is one of the pleasantest incidents of what has been financially a very gloomy year. One of the most melancholy features of New York life, in which very rich men fill so prominent a place, is that the newspapers are filled day by day with gossip about what they are doing on Wall Street, and conjectures as to which side of the market they are on; but we rarely meet with any account of what they are doing for art, or science, or literature, or charity. Some of the greatest fortunes of the last forty years have really passed away from this city in which they were made, without leaving the smallest mark on its public buildings, colleges, libraries, galleries, laboratories, or museums. In fact, what has been done for these things—and we admit that much has been done—has come in the main from men of comparatively moderate means. Mr. Vanderbilt's splendid donation, we hope, is the beginning of a better era in this respect. It could hardly have been better bestowed, for it blesses that one of the arts which does most directly for humanity.

The *Economist*, of this city, has recently published an interesting résumé of the arguments of Judge Hill and Senator Edmunds in the great Drawbaugh telephone suit. From these, and the brief abstracts of the arguments that have appeared in the daily press, it seems that the testimony on the Drawbaugh side tends to show that Drawbaugh invented a "talking machine," which he insists is the same thing as the telephone, in 1867 or 1868—that is, not less than sixteen years ago. Now, whether this be true or not, the mere fact that it makes the validity of the Bell telephone patent-rights and the value of the vast amount of private property invested in the rival company doubtful, seems to show that the law governing patents is not in a satisfactory state. So far as we know, there is no limit to the time within which the priority of an invention may be disputed. It does not depend on the date of the patent, and the whole value of a patent long established, and in which millions of money have been invested, may be destroyed by the sudden discovery that the process was understood or invented by some one before the patent was taken out. This, too, although we know that almost all great inventions, like the telegraph or telephone, are actually discovered by different people, in different places, at about the same period. There surely ought to be some statute of peace and repose in such a matter.

The appearance of Carlyle's diary in the new volume of his life by Froude is likely to revive some of the bitterness which was roused by the Reminiscences, and of late has been dying out. It most probably contains a good many more of the savage criticisms of contemporaries which have had so large a share in destroying Carlyle's position as a moral philosopher. His abuse of Mr. Gladstone, of which a specimen has come over by cable, will generally be received as a piece of ignorant denunciation of one of the greatest workers of the world by a man who, while always preaching work, did nothing but talk. Mr. Froude's chief claim for him now is that he was strictly honest and pure in his private life; but this is bringing him down a terribly long way from the old position of a guide and exemplar for all who longed for fields of noble and active usefulness. An apostle of the higher life ought surely to have something better to say for himself than that he cheated no man and was faithful to his wife.

The success of the Belgian Liberals in the municipal elections in the cities reveals nothing except what everybody knew already, that the Liberals were strong in the great towns. Nothing has happened to show that opinion has undergone any change in the country districts. On the contrary, the virulence of party feeling is there so great that the commercial travellers from the cities which return Liberal majorities, and which have been strongest in their opposition to the Education Bill, report that not only do they find themselves unable to make sales to the country stores, but they are frequently insulted and threatened with violence.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 15, to TUESDAY, October 21, 1884, inclusive.]

DOMESTIC.

GOVERNOR CLEVELAND arrived in this city from Albany at 10:30 A. M. on Wednesday. A committee of prominent Democrats met the Governor at the depot. While driving to the Fifth Avenue Hotel he was compelled to stop frequently in order to shake hands with the people who crowded around his carriage. In the evening an immense mass meeting was held at the Academy of Music, under the auspices of the Cleveland and Hendricks clubs of the various Exchanges. The Rev. Henry Ward Beecher delivered an address, which was enthusiastically received. Governor Cleveland entered the building while Mr. Beecher was speaking, and was received with tremendous cheering. The whole audience rose to its feet. When silence was restored Governor Cleveland made a short address, in which he said: "It has often seemed to me that one reason why we as a people do not receive the full advantages of our forms of government has been found in the fact that our business men were too apt to neglect their political duties. The idea is quite too common that there is heroism and virtue in a refusal to hold office, and that a stern denial of any interest in politics is a strong asseveration of personal virtue and business integrity. The interests which this class have in charge, and the protection and safety of them, are intimately connected with the wise administration of the Government. And it seems to me that if their duty as citizens does not compel them to take a part in political affairs, their desire and need of protection and self-defence should lead them in that direction. I believe, too, that a government is never better administered than when it is conducted on business principles, and it is quite evident to me that there is no better way of impressing this upon the administration of public affairs than by the active interference of our business men in public affairs." A cordial letter from Samuel J. Tilden was then read. Effective speeches followed. Governor Cleveland reviewed a great Democratic torchlight procession in front of the Fifth Avenue Hotel between 10 and 11 o'clock.

On Thursday Governor Cleveland was given an enthusiastic reception in Brooklyn. There was a procession, a public reception, and numerous speeches.

As Governor Cleveland was going from the Executive Mansion, in Albany, to the Capitol about 9 o'clock on Monday morning, he was assaulted in front of the Medical College, on Eagle Street, by Samuel Boone, of Elmira, who struck at the Governor with his right hand. The blow was warded off, and the man repeated his blows several times without hitting the Governor's face. He then darted toward a pile of cobblestones, but was intercepted by Dr. George H. Houghton before he obtained a missile. Boone returned to the attack on the Governor, when Doctor Houghton seized and held him, and the Governor deliberately resumed his walk. Boone, with his wife, has been in Albany for several weeks seeking to obtain a pardon for his brother-in-law. The two previously annoyed the Governor at the Capitol, and Boone is believed to be a crank. His wife is hysterical.

Mr. Blaine spent the week in making an election tour in Michigan and Indiana.

There was a large business men's meeting of Blaine men in Wall Street, on Monday afternoon. Secretary Gresham was one of the speakers.

Carl Schurz addressed a large meeting of Independent Republicans in Albany on Saturday evening. Matthew Hale, who was the Republican candidate for Judge of the Supreme Court last year, was unable to be present, and a letter from him was read, in which he said: "It has long been seen by observing men that the greatest danger to our Government is from political corruption. The obtaining of office by money and the use of political positions as a means to make fortunes, are now threatening, more than anything else, the integrity and stability of our institutions. Upon this question we see James G. Blaine and Grover Cleveland ranged on opposite sides. We in Albany know how faithfully and firmly Mr. Cleveland as Governor of this State has maintained the right side of this question. We who have witnessed his quiet and unostentatious life here and his constant devotion to the duties of his office know how vile are the slanders which the 'baser sort' of his enemies are industriously sowing broadcast through the land. Though we who are Republicans regret that he is a Democrat, we rejoice to know that he is an honest and independent man. As such we much prefer him to one who, though gifted with 'money-takin' arts,' with which 'the people's hearts he steals awa,' is the representative to-day of all that is most corrupting and dangerous in our politics."

The public reception and address of welcome to Daniel McSweeney, "the American suspect," at the Academy of Music in this city on Friday night, brought out an immense gathering of Irish-Americans. Mayor Edson presided. Mr. McSweeney gave the audience a detailed account of his arrest and imprisonment for eighteen months in Dundalk Jail, without information as to the charge against him, and without trial, without the slightest recognition of his American citizenship, at a time when Mr. Blaine had undisputed authority in the State Department.

A Baltimore despatch published in the *Times* of this city on Sunday said: "The Butler movement in Baltimore has gone to smash, owing to positive information having come to the knowledge of the head of the organization here that Butler is acting under orders of the Republican National Committee, and has his expenses paid by the Republicans, who also control his movements." The assertion was made on the authority of Gen. W. H. Parsons, Chairman of the Greenback-Labor Committee of Maryland. Butler says there is not one word of truth in it.

At a conference of the Anti-Fusion Greenbackers in Iowa on Friday, an address to the Greenbackers of the State was issued, urging the erasure of the names of all Democrats from the electoral, State, Congressional, and county Fusion tickets now in the field. The question of a full, straight Greenback ticket was discussed, but, owing to the nearness of the election, it was voted down.

Flourishing Independent Republican clubs have been organized in Elizabeth and Paterson, N. J.

C. J. Amidon, of Hinsdale, N. H., State Senator and a life-long and prominent Republican, and one of the leading woollen manufacturers in New England, has decided to vote against Blaine because of his public record.

Complete returns by counties in Ohio show that the plurality for the Republican Secretary of State, Robinson, is only 11,321. The Prohibition and Greenback vote is 12,447, or 1,126 more than Robinson's plurality. The rest of the Republican State ticket has an average majority over all of over 5,000. The total vote is 780,373; last year it was 718,168. In October, 1880, it was 716,186, and in November, 1880, it was 724,967. The Republicans elected 10 Congressmen and the Democrats 11. Frank Hurd (Dem.) was defeated.

From the latest West Virginia returns the Democrats claim 4,200 majority, and the Republicans concede 3,100.

The Democratic National Committee has issued an address to the people, reviewing the October elections, and predicting that Ohio will give a majority for Cleveland and Hendricks in November.

Ex-Mayor William R. Grace has been agreed upon as the anti-Tammany candidate for Mayor of this city by most of the Democratic and Citizens' organizations that are opposed to Tammany. An enthusiastic meeting, under the auspices of the Citizens' Committee, was held at the Academy of Music on Monday evening, and nominated Mr. Grace.

The Treasury Department has just decided an interesting question arising out of the Chinese Restriction Act. The Presbyterian Board of Foreign Missions shipped at Canton two converted Chinese women, with the object of installing them as teachers in the Home Mission at San Francisco. Upon their arrival it was found that they were not provided with the certificate required by law, and the Department was applied to for instructions. The Collector of Customs has been notified not to permit them to land, and to see that they are returned to China.

Quartermaster-General Holabird, in his annual report to the Secretary of War, shows that the amount to the credit of the Quartermaster's Department at the beginning of the last fiscal year was $12,100,068. The amount expended during the year was $10,906,106, leaving a balance in the Treasury undrawn June 30, 1884, of $1,193,962.

The International Meridian Congress at Washington has adopted a resolution "That the universal day is to be a mean solar day, is to begin for all the world at the moment of mean midnight of the initial meridian, coinciding with the beginning of the civil day and date of that meridian, and is to be counted from zero up to twenty-four hours."

The war of railroad rates, which the Pennsylvania Road precipitated in this city by refusing to allow the Baltimore and Ohio Road to run into New York over its tracks, assumed serious proportions on Thursday, when the West Shore Road, inspired, it is supposed, by its new ally, the Baltimore and Ohio Road, reduced its rates exactly one-half to Albany, Buffalo, and local stations along its line. This at once brought down the price of tickets to Chicago to $15, to Buffalo $4.65, to Albany $1.

The four steamers of the American Line of Philadelphia have been sold to the International Navigation Company, which company contracts to continue the service between Liverpool and Philadelphia, and also to organize a branch line between Liverpool and New York. The four steamers thus sold have been the only ones flying the American flag engaged in the North Atlantic trade between the United States and Europe, and their sale indicates the final abandonment of the effort to maintain American vessels in this trade.

The steamer *Faraday*, with the end of the second Mackey-Bennett cable, arrived off Coney Island early Thursday morning and anchored about two miles from the Manhattan Hotel. The end of the cable was to have been brought ashore during the day, but rough water delayed it. There were speeches and other ceremonies on Thursday. The landing of the cable was made on Saturday afternoon at 12:15 o'clock.

At a meeting of the Trustees of the College of Physicians and Surgeons of this city on Saturday evening the announcement was officially made that Mr. William H. Vanderbilt had given to that institution the sum of $500,000 as a building fund. A site, including twenty-nine city lots at Sixty-eighth and Sixty-ninth Streets and Tenth Avenue, has been purchased, and it is understood that building operations will be begun at an early day.

A fire in West Carthage, N. Y., on Monday afternoon destroyed 160 dwellings, and a large number of the factories, churches, and schoolhouses in the place. Many people are destitute. The loss is more than $500,000.

J. Robert Williams, of David City, Neb., a Presidential elector on the St. John ticket, has absconded with $27,000, borrowed from confidential friends in church and political circles.

Brigadier-General Benjamin Alvord, U. S. A., died in Washington on Thursday at the age of 71. He was graduated at West Point in 1833. He took part in the Seminole war and in the war with Mexico, where he was engaged in the battle of Palo Alto and Resaca de la Palma, Texas. For gallant conduct in these he was bre-

vetted Captain May 9, 1846. For bravery at Cerro Gordo and other places he was brevetted Major in August, 1847. He served during the civil war and was in command of the District of Oregon from 1862 to 1865, and was brevetted Brigadier-General, U. S. Army, April 9, 1865, for faithful services during the Rebellion. He was the author of a number of mathematical treatises.

David C. Anderson, the veteran actor, died in this city on Thursday at the age of 71. He was the friend of Edwin Booth, and acted for many years in his company. One of his best parts was *Polonius* in "Hamlet."

James Wormley, the colored Washington hotel proprietor, died in Boston on Saturday.

FOREIGN.

A telegram reached Paris on Wednesday from General Delisle, dated October 13, at Chu, on the Loo-Chuan River. It said: "Colonel Donnier, after a brilliant engagement on Friday, carried the heights commanding the fortress of Chu, forming the *point-d'appui* of a large entrenched Chinese camp, which was defended by five casemated forts. The Chinese forces were very large. Their losses during the engagement were heavy. On Saturday they attempted to assume the offensive, but our artillery strewed the ground with Chinese bodies. After losing all their positions the Chinese fled toward Langson. They halted near Phu-Tru ong-Khanh. The French loss was 20 killed, including one officer, and 90 wounded. Two officers received slight wounds. Our troops were animated with the greatest ardor. The Chinese in this engagement were a part of the best troops in the Empire. They were perfectly armed, and manœuvred in European style. The Chinese losses were 3,000 killed, including their chief commander. The Chinese invasion of Tonquin has been arrested in the direction of Langson."

The Paris *Figaro* says that the Chinese force defeated at Chu was only a column of the left wing of the army invading Tonquin. It explains the slaughter of the 3,000 Chinese by the fact that no quarter was given or taken. The right column is passing along the River Song-Cau.

It was reported from Tien-Tsin on Saturday that two battles were fought at Lang-Kiang, between Langson and Bacninh, one resulting in the defeat of the Chinese and the other in the defeat of the French. The losses of the French were considerable and those of the Chinese heavy.

General Brière Delisle telegraphed from Hai-Phong on Monday that large masses of the enemy appeared in the Red River region on October 13 and made an attack on Tuyen-Kwang. They were defeated with great loss. No French were killed.

It is asserted that 60 of the French troops were killed during the recent unsuccessful attack on Tamsui.

Admiral Courbet held a council of war at Kelung, and decided to blockade the northern coast of the island of Formosa before he ordered the renewal of the attack by the French fleet on Tamsui. The Admiral telegraphed on Thursday to his Government that he expected to resume offensive operations both on land and sea within a few days. Five French men-of-war are stationed before Kelung and eight before Tamsui.

The Chinese Government has forbidden any trade in firearms between Europeans and the Chinese. The general opinion in Hong Kong is that the arbitrary regulations of the Chinese officials are rapidly increasing the anti-English feeling among the natives.

The loan of $3,000,000, which the Chinese Government recently obtained from the Hong Kong and Shanghai Bank, has been offered by the bank to public competition, and proved a complete failure. The total tenders received were $1,600,000 at par and $500,000 at 4 per cent. below par. The bank refused the latter offers. It is believed that China will soon be in straits for cash with which to carry on the war, and that the financial difficulty will lead to an earlier settlement of the struggle than has been anticipated of late.

A riot occurred at Hong Kong on Thursday. The police were obliged to fire upon the mob and several were killed.

The differences between the French Government and the Budget Committee threatened on Friday to precipitate a Cabinet crisis. M. Tirard, Minister of Finance, and General Campenon, Minister of War, talked of resigning.

M. Paul Lacroix ("Bibliophile Jacob") is dead. He was born in Paris, February 27, 1806, and was the author of numerous novels, dramas, and antiquarian works.

The Belgian Liberals were victorious in the election at Brussels, Antwerp, Ostend, Liége, and fifteen other towns. The Clericals succeeded in electing their candidates at Bruges, Nivelles, and nine other places. This is an important triumph for the Liberals, who consider that the Education Act has been condemned by the people, and they demand that the Chamber be dissolved and the Government resign.

It is announced that Prince Bismarck has acceded to the demands made by Earl Granville, that the business to be considered by the projected Congo Conference shall be limited to the regulation of the commerce of nations with the Congo country.

It is asserted in Europe that the United States has accepted the invitation to take part in the Congo Conference.

The Tory election agents throughout Great Britain, in reporting to headquarters in London as to the effect of the Government Redistribution scheme, declare that it will be destructive to the fortunes of the party.

Lord Randolph Churchill has declined to endorse any compromise with the Liberals on the Franchise Bill.

The Council of the Conservative party at Manchester has adopted a resolution deprecating any retaliatory acts on the part of the Conservatives for the recent violent attack of the Liberals at Birmingham.

The private negotiations between Mr. Gladstone and Mr. Parnell have been broken off. It is rumored that Earl Spencer, Lord Lieutenant of Ireland, desires to resign, and that he will be succeeded by the Duke of Connaught.

Alexander Martin Sullivan, the well-known Irish leader, died at Dublin on Friday at the age of fifty-four. He was editor and proprietor of the Dublin *Nation* from 1855 to 1876, when he removed to London to practise law. He was twice prosecuted by the Government in 1868 for sedition arising out of the Manchester executions, and was imprisoned for four months. During his imprisonment he was nominated for Lord Mayor of London, but at once stopped the proceedings. He was a member of Parliament from 1874 to 1882. Being one of the original founders of the home-rule movement, he always took a leading part in it as well as in many movements for social reform. He was Vice-President of the Dublin Workingmen's Club. Among his best known books is 'New Ireland' (1877).

On the opening of the British Parliament a commission will be appointed to inquire into the state of the navy, and the Admiralty will ask for an increased grant for ship-building to enable it to give orders to private firms for the construction of swift heavy-armed light-armored vessels.

Professor Huxley has been ordered by his physicians to take an absolute rest from all literary labors for several months, and he will go to Venice for that purpose.

The last volume of Froude's 'Life of Carlyle' has been issued. In the preface to this volume Froude defends the revelations of the inner life of Carlyle contained therein, and says that reticence upon that subject would have implied that there was something to hide from the public. Mr. Froude says: "Taking Carlyle altogether, there never was a man whose conduct throughout his life could better bear the fiercest light. He had frailties and impatiences, but he had no dishonest or impure thoughts. He lived a life of single-minded effort to do right." The diary of Carlyle, which is printed with this volume, presents the same characteristics that have marked the preceding volumes. In it Carlyle calls Mr. Gladstone "a representative of the multitudinous cants of the age, and, in his religious, social, moral, and political life, one of the contemptiblest men I ever looked upon—a spectral kind of phantasm of a man—incapable of seeing, veritably, any fact whatever."

Wilson Barrett appeared as *Hamlet* at the Princess's Theatre, London, on Thursday night, and was enthusiastically received.

Madame Christine Nilsson will not sing in America this year.

The famous Tichborne claimant was discharged on Monday morning, on ticket-of-leave. He was sentenced in 1873 to fourteen years' imprisonment for forgery and perjury. His term has been shortened by good behavior.

As the passengers were disembarking on Wednesday evening at Liverpool from the American Line steamer *Lord Clive*, from Philadelphia, an Irish detective arrested a Hungarian steerage passenger on suspicion. His luggage was subjected to search, with the result of discovering thirty packages of dynamite, making about a pound and a half of that explosive. He, however, showed that he was a miner and not a conspirator.

The Guion Line steamer *Nevada* arrived at Queenstown, on Friday morning, from New York, with a fire burning in her hold. It started on Wednesday and had been fought persistently by the officers and crew. There was great excitement among the passengers. A gang of laborers was sent on board and the fire was soon extinguished. It is supposed to have been caused by spontaneous combustion. The vessel started for Liverpool on Friday evening and arrived on Saturday.

Lord Northbrook has returned to Cairo from his tour up the Nile, and has reported to the Government that he is convinced that a reduction of taxation in Upper Egypt is inevitable.

An Arab from the Mahdi's camp has arrived at Dongola. He reports that there is much sickness among the Mahdi's forces, and that the defection of the tribes at the Mahdi's rear still continues.

Osman Narredin, an inhabitant of Korte, arrived at Wady Halfa on Thursday from Khartum, having been fourteen days on the way. He was present at Khartum during the whole siege, and saw General Gordon capture a quantity of guns and rifles of the rebels. He says the road from Khartum to Sennaar is free of rebels.

The Latin Monetary Conference to be held at Berne, Switzerland, has been postponed to Nov. 25.

Wilhelm I., the Duke of Brunswick, died on Saturday. He was born April 25, 1806, and was the younger son of Duke Frederic William, who died in 1823, and brother of the ex-Duke Charles Frederic Augustus William. He assumed the reins of Government April 25, 1831, at the request of the Germanic Diet, upon the compulsory flight of his elder brother, the Duke of Brunswick, whose name afterward became well known in London circles. He was a Field Marshal in the Kingdom of Hanover, and a General of cavalry in the Prussian service. The Duke of Cumberland is heir to the throne, but it is not believed that Bismarck will sanction his succession.

The Pope has presented his portrait with an autograph letter to Father Curci as a mark of favor, the recent recantation by the latter of his peculiar views having been accepted as altogether satisfactory.

A mob of University students on Friday smashed the windows of the publication office of the Moscow *Gazette*. One hundred of the rioters were arrested.

THE ELECTORAL VOTE.

THE October elections have settled two things beyond a question. The first is that in the Northern States Mr. Blaine is a much weaker candidate than Mr. Garfield was. The second is that the 153 electoral votes of the South will be cast solidly for Cleveland. This confirms the view which all competent observers have held from the outset—that New York is the battlefield of the contest, and that the candidate who receives its 36 electoral votes will be the next President. We have seen many ingenious combinations by which Mr. Blaine's election has been figured out without the vote of New York, but there are none of them which even a Blaine enthusiast could contemplate without misgivings. The most sanguine claim which we have seen of the Blaine outlook was published in the Philadelphia *Press* on Thursday morning, when the jubilant editor was still under the impression that there had been a "sweeping Republican victory" in Ohio. The following States were therein set down as beyond a reasonable doubt "safely for Blaine and Logan."

California	8	Nevada	3
Colorado	3	New Hampshire	4
Connecticut	6	New York	36
Illinois	22	Ohio	23
Indiana	15	Oregon	3
Iowa	13	Pennsylvania	30
Kansas	9	Rhode Island	4
Maine	6	Vermont	4
Massachusetts	14	Wisconsin	11
Michigan	13		
Minnesota	7	Total	239
Nebraska	5		

The weakness of this calculation is apparent at a glance. The full Electoral College comprises 401 votes, and 201 will be required to elect. The *Press* calculation gives Blaine only 38 votes to spare, and yet it includes New York's 36, Indiana's 15, Connecticut's 6, New Hampshire's 4, and the Pacific Coast's entire 14. Taking out New York alone, the margin is narrowed to two, and Connecticut's six or Nevada's three would elect Cleveland; and there can be no question that these States, as well as Indiana, are more likely to go Democratic than Republican. Every impartial observer will admit that the States which are even reasonably probable for Blaine and Logan today will all be found in the following list:

California	8	Nevada	3
Colorado	3	New Hampshire	4
Illinois	22	Ohio	23
Iowa	13	Oregon	3
Kansas	9	Pennsylvania	30
Maine	6	Rhode Island	4
Massachusetts	14	Vermont	4
Michigan	13	Wisconsin	11
Minnesota	7		
Nebraska	5	Total	182

This includes several States which may well be called doubtful. What will be the result in the Pacific Coast States, California, Oregon, and Nevada, is pure surmise. They are always close, and there are no definite indications as to how they will go next month. Two of them, California and Nevada, were carried by Hancock. With Butler out of the field, Massachusetts would undoubtedly be carried for Cleveland, and there are not lacking many good judges who think that such a thing may happen in spite of Butler's sideshow. New Hampshire and Wisconsin are also very doubtful, and there is more or less uncertainty about Michigan and Illinois. The narrow plurality in Ohio shows that State also to be fairly doubtful for November, especially if the vote for St. John be much increased over that cast for the Prohibition local ticket on Tuesday week. Yet, giving Mr. Blaine the benefit of the doubt in all these States, they leave him 19 votes short of a majority.

Turning now to the Democratic column, it becomes at once apparent that Cleveland's prospects are clouded with many less elements of uncertainty. The table of sure Democratic States stands as follows:

Alabama	10	Missouri	16
Arkansas	7	New Jersey	9
Delaware	3	North Carolina	11
Florida	4	South Carolina	9
Georgia	12	Tennessee	12
Kentucky	13	Texas	13
Louisiana	8	Virginia	12
Maryland	8	West Virginia	6
Mississippi	9		
		Total	162

All these States are conceded to Cleveland by the Republicans. We have not put Indiana in the list, but it might reasonably be included. By general consent it is believed to be safe for Cleveland to-day, in spite of the announcement that Commissioner Dudley is going to devote himself especially to it as soon as he can settle his little difficulty at Washington, growing out of the charge that he has grossly violated the civil-service laws in his work for Blaine in Ohio. He secured his present office by his coöperation with Dorsey in the "soap" victory in Indiana in 1880, and is undoubtedly a great expert in that kind of political work; still, we do not believe he can turn Indiana about within the next two weeks. As for New York State, the chances are at least two to one that Cleveland will receive its electoral vote by a very large majority. With New York and Indiana added to his 162 assured votes, he would have 213, a majority of 12. Or leaving out Indiana and adding Connecticut, he would have 207 votes, a majority of 6. Leaving out Connecticut and Indiana, and adding Nevada, he would have 201 votes, precisely a majority. But he has better chances than Mr. Blaine in all these States—Indiana, New York, Connecticut, and Nevada—and the four combined with his sure States would give him 223 votes, a majority of 22.

It is evident, therefore, that neither candidate can succeed without the vote of New York. That is the aspect of the contest which has given us unvarying confidence in the certainty of Mr. Blaine's defeat from the outset of the campaign down to the present time. He comes for his final verdict before a jury which is better qualified to judge him on his merits than can be found in any other State in the Union. Magnetism will not dazzle it, and humbug will not deceive it. Even Steve Elkins and Filley and Dudley are not powerful enough or rich enough to buy from it a verdict. It is as certain as any future event can be that this jury's mind is already made up. We have the most indubitable evidence in our possession that there are Independent Republicans enough in the State who are committed against Blaine to reverse Garfield's majority of 21,000 and give Cleveland a much greater one. There is evidence, equally indubitable, that this majority will be greatly swelled by the votes of the old Stalwart party who have not forgotten that Blaine's first act, in becoming the chief adviser of Garfield, was to turn the whole power of the Administration against them, and that it was through Blaine's personal advice that Judge Folger's defeat, by the same man who is now running against Blaine, was made so overwhelming. In addition to these two forces of opposition, Mr. Blaine is confronted with the loss of the business vote of this city, which Garfield had, and with the loss of thousands of Prohibition votes which will go to St. John. In every national election for many years Connecticut has voted with New York. Its majority is always small, seldom exceeding 3,000, and a change of 1,500 votes this year will wipe out the 2,660 majority which Garfield had there in 1880. That there are at least 1,500 Independents in the State, we believe even the Blaine organs will admit.

THE FILTH OF THE CANVASS.

WE were not mistaken when we predicted, two months ago, what the result would be of the peculiar mode of defending Blaine resorted to by his followers, when they found that the exposure of his railroad transactions was really affecting public opinion. He was nominated at Chicago—in defiance of the warnings and protests of the best part of the Republican press—in the belief that his letters to Fisher would prove an old story, to which people would refuse to give ear, as it was eight years since they were first published. This was not an unnatural calculation on the part of men to whom his nomination was on personal grounds exceedingly desirable. But it was upset by the fact that Blaine's failure to get the nomination both in 1876 and in 1880 prevented the letters from having more than a very limited circulation. In 1876 they had hardly got abroad when the Convention met and the nomination was given to Hayes. In 1880 everybody was occupied with Grant's chances, and not with Blaine's. In fact, Blaine was rather encouraged by those who most disliked him as a means of defeating Grant. The result was in both cases that Blaine's record attracted very little attention outside of the newspapers. It was not surprising, therefore, that his backers should have supposed last July that that particular danger was past, or might be met by the "exploded slander" cry. It was not until they found that the Independent movement was really formidable, and not a mere passing burst of disappointment, and that the official misdeeds of their candidate would be thoroughly exposed, that they made up their minds to do what American politicians had never done before, let the unclean beasts of society loose on his competitor's private life, and drag women into the political arena.

Against Cleveland's public career they had nothing to say that was not ridiculously untrue and easily answered. But they knew of one flaw in his private life, and they knew it was a kind of flaw which was sure to find and excite every filthy imagination in the country, and give full occupation to the social vermin who are found in all callings, but in larger proportion in the press than in any other. Ordinary campaign lying is usually done by a small number of persons who are deeply interested in politics, and their lies usually have a political cast which makes them rather dry reading. But when the signal once went out from the Republican camp that what we may call sexual lies would now for the first time in American history be welcome, it en-

listed in the canvass hundreds of filthy-minded wretches, who care nothing about politics at all, but whose fancy revels in uncleanness. They knew well, too, that this kind of lies would rouse a certain class of ministers who could never be induced to wade through the details of official dishonesty, and who could not understand them if they tried, and a class of women who seldom think of a man in any capacity but that of a male animal. To these last, scholars, soldiers, heroes, statesmen are simply or chiefly males, and their valor, wisdom, or learning counts for very little against the smallest blot in their career as males.

That it was a good mode of defending a mendacious jobber, who has no answer on the merits against any charge made against him, there is no denying. Without this, it is safe to say the Blaine canvass would have gone to pieces last August. He has been running ever since on the filthy stories put in circulation about Cleveland. In other words, for over two months the Republicans have been dependent, as we predicted early in that month that they would be dependent, on the diligence and zeal of social scavengers for the smallest chance of winning the Presidency. The first story they put in circulation was promptly met first by Cleveland and then by his friends, and, when stripped of its falsehood, lost most of its value, and was losing the rest very rapidly when the second batch of Blaine letters appeared. This led to a fresh outburst of indecent malignity, over which tens of thousands of Americans are blushing to-day as a national shame and humiliation. Stories are printed and spread broadcast as campaign documents which are on their face both so improbable and so filthy that they seem to have been hatched by street-walkers and sold to Dr. Ball for a dollar apiece. They are spread, too, in a way which makes one feel as if the jobbers and speculators who are trying to clutch the Presidency, are losing their hold on civilization itself. They actually sent their disgusting inventions to Governor Cleveland's sisters. They sent them a few days ago to the ladies who met him at a dinner party at the house of a leading citizen of Buffalo, on his last visit to that city. They distributed them some weeks ago among the girls who went in wagons to attend a Cleveland meeting in Illinois. They have flooded the parsonages all over the country with them, and have through them actually set Methodist and Baptist ministers in the West to telling their congregations that Governor Cleveland is excluded from all decent houses in the city of which he has long been and now is one of the most honored and trusted residents.

Party contests have never before reached so low a depth of degradation in this or any other country. In no other country has an appeal been made to the lewd, and vicious, and prurient to bring their crapulous minds and foul tongues to the decision of a great political controversy. But we repeat that the last resort of men who support a public liar and self-convicted jobber for the greatest of political trusts must needs be something unprecedented in its shamelessness. When once you, for any motive whatever, refuse to accept the evidence of a man's own letters that he is untruthful and dishonest, everything else becomes easy. "In for a penny in for a pound" has to be the motto of the mendacious man and his friends. But happily, in this case, they cannot work in secret like their candidate—there is nothing "confidential" about their operations; and assuredly they will find out on the first Tuesday in November what loathing the various channels in which they are now making themselves useful, inspire in the majority of the American people.

THE USE OF DEMOCRATS.

Many good Republicans of the older generation, while feeling very strongly the force of the objections to Blaine, have so much dread of what they call bringing "the Democrats into power," that they cannot make up their minds to vote against him or to refrain from voting. We confess we have for this class of Blaine supporters a good deal of respect, when we compare it to the other class, who deny that there is either spot or blemish in their candidate. A man who acknowledges Blaine's badness, but thinks that, bad as he is, he is safer than anybody whom the Democrats would elect, is, we think, very much mistaken, but he may be perfectly honest. But the man, be he senator, judge, divine, or merchant, who gets up and says that he sees nothing wrong—no lies, no evasions, no proof of official misconduct—in Blaine's speeches and letters, can only be relieved from the charge of moral obliquity by attacking his sincerity. With him upright men can in this canvass have nothing that can be called discussion. Whether he sees nothing wrong in Blaine, or sees it, but pretends not to see it, any contention with him in the forum of morals would be vain, even though he preached to large congregations every Sunday.

But the people who dread the Democrats so much that, though they see Blaine as the Independents see him, are ready to take him, sooner than put the Government in Democratic hands, are in our minds the victims of a hallucination which we acknowledge to have a good deal of justification. There is no doubt there has been a time in American history when the Democrats might almost have been called public enemies, and when their possession of the Government might have led to its destruction. Where the older Republican errs is in supposing that in politics time brings no changes; that what was true of any body of men in the middle of the century is sure to remain true until its close, and that what was sound policy when a man was young is sure to remain sound policy until he is old. The Democratic party in its earlier days held some of the best political doctrine which American history has produced. It became dangerous through sympathy with a slaveholding and seceding South. The slaveholding and seceding South has utterly passed away. There is as little of it left as of the Holy Roman Empire. The Democrats who sympathized with it are mostly old or dead. The Union which saw the war of secession break out, is changed in all respects, moral, social, political, commercial, more than any country has ever changed before in half a century. To talk of the Democrats now as the same party as that which tried to elect Breckinridge, is like talking of the English Tories of to-day as the same party which intrigued against the first two Georges for the restoration of the Stuarts.

Moreover, whatever we may think of the past of the Democratic party, we cannot overlook the fact that it now contains almost one-half of the American people. This is a tremendous fact which no rational man will overlook in considering his political duty at this crisis. The popular vote for Garfield in 1880 was 4,449,053. The vote for Hancock was 4,442,035. Garfield's popular majority was, therefore, just 7,018! Now, it is not unnatural that, to a man who remembers the war, the name "Democratic party" should be a name of ill omen. But can anything be more demoralizing, more destructive of real patriotism and political good sense, than to go on cultivating the belief that half the voting population of the United States are enemies of the country and unfit to govern it? This is what the French Legitimists think about the great majority of Frenchmen, but they differ from the older American Republicans only in the number whom their malediction covers. We for our part say unhesitatingly, that any man who thinks half the American people cannot be trusted with the conduct of the Government is himself a dangerous citizen, whose influence in politics is unwholesome as being in the highest degree hopeless and pessimistic, and whose removal to some other country would be a political gain.

Do we then think one party is just as good as another, and that it makes no difference which has possession of the Administration? By no means. We acknowledge fully that we believe the Republican voters at the North, taken in the mass, are superior to the Democrats in education and intelligence. The public credit and the execution of the laws are on the whole safer in their hands than in that of the Democrats, in spite of the silver craze and the recent legal-tender decision of the Republican Supreme Court. But on the other hand we believe that neither the Republican party nor any other party in any country is fit for perennial possession of power, or can fail to become in the long run a sink of corruption, if it has nothing to dread from the opposition. Party government, old Republicans are apt to forget, means government by one of two parties, not government by one party ever and only. A party in power which is in no danger of expulsion to make way for the other party, and which has succeeded in persuading the voters that it is itself the Government, and that its deposition would be a revolution, is probably one of the greatest curses inflicted on a free people, and is as sure sooner or later to develop Grantism or Blaineism as a rosebush to bear thorns. A party can no more be intrusted with irresponsible power than a single man, and a party which is sure not to be deprived of the administration, no matter how it abuses it, has irresponsible power of the worst sort. Therefore, if we had no other use for the Democratic party than to serve as an occasional alternate for the Republicans, it would still be necessary to the political health of the American people. It is Democratic weakness which has really produced Republican corruption, and which has finally led to the supreme audacity of nominating the

firm of James G. Blaine & Co. to fill the Presidential chair. The state of mind which makes Republicans, whether good or bad, whether Lincoln, Seward, and Chase, or Blaine, Elkins, and Clayton, the only proper custodians of the public honor and fortune, is in fact a diseased state of mind left behind by the war, and of which it is now, nineteen years after the last shot was fired, the duty of every American to rid himself. For the old, we know it is hard to do so, but age has its duties as well as its rights. It is entitled to its prejudices as long as they only minister to personal comfort; when they become fountains of public calamity it is the duty even of octogenarians to surrender them.

DECOY INVESTORS.

THE attention of the public has been a good deal drawn of recent years to the devices of speculators for marketing stock by means of getting well-known men, supposed to have influence of some kind, to make conditional subscriptions, they being, however, secured against loss by a secret agreement or guaranty in the event of the investment turning out unprofitable. Is such an agreement valid in law, or is it void as being a fraud upon the stockholders who buy their stock without any such guaranty, and without the knowledge that other stockholders are protected, while they are not, and in the full faith that all subscriptions are on the same terms? The answer is that in law, as in morals, such agreements are fraudulent and void. An interesting case has just been decided by Judge Lawrence, of the Supreme Court, which illustrated the principles of law and morals applicable to secret agreements of this nature. The title of the case is Meyer vs. Thomas S. Blair and Thomas Struthers. It was brought upon an agreement made in 1873, when Messrs. Blair and Struthers undertook to place 6,000 shares of the Blair Iron and Steel Company upon the market. They got the plaintiff to take 600 of them, by giving him a secret guaranty that they would at a future time, in case he was dissatisfied with the purchase, take it off his hands.

Blair and Struthers began their work with a prospectus stating that "The capital stock of the Blair Iron and Steel Company is 25,000 shares of $100 each—$2,500,000. This capital has been paid up by the transfer of the patents for the Blair process, and the works at Greenwood, Twenty-third Ward of Pittsburgh, Pa., to the company (the deed for the Greenwood property to be made as soon as any empowering act can be obtained from the Pennsylvania Legislature, which we have bound ourselves to procure), *and the whole stock of said company issued to us* in payment thereof. *We have agreed* to place in the hands of General A. S. Diven, as trustee, 9,000 shares of this stock, to be used as working capital for the company, subject to the order of the Board of Trustees of said company, excepting $50,000 of the proceeds thereof, first to be paid to us by the said trustee. The trustees of the company *have with our consent* ordered the sale of 6,000 of said shares for the purpose of raising a present working capital, and paying said $50,000, the minimum price to be $50 per share. And the said trustees, with the approbation of the Board of Trustees, now offer said 6,000 shares at said minimum price of $50 per share to be paid for as follows, viz.: One-third part thereof as soon as the whole 6,000 shares shall be subscribed for, and the remainder in such instalments as the Board of Trustees may call for the same for the purpose of the business, the certificates to be delivered when the whole shall be paid."

The subscription paper reads as follows: "We, the undersigned, hereby subscribe to the number of shares set opposite to our names respectively, *to be paid for according to the terms above set forth; but this subscription not to be binding until the whole 6,000 shares shall have been reliably subscribed for.*"

This subscription paper was signed by the plaintiff and by the other parties who subscribed for the 6,000 shares of the capital stock of the company. The question is, says Judge Lawrence, Can it justly be contended that the plaintiff was a *reliable subscriber* within the meaning of the subscription paper? It cannot.

The evidence showed that some of the other subscribers had an agreement with the defendants similar to that upon which it was brought, but it was also quite clear that several of the other subscribers did not receive any collateral agreement or guaranty, and that they did not know that such a guaranty had been given to the plaintiff or others. It would therefore appear, Judge Lawrence continues, that the agreement in question, in spirit and effect, stands upon the same principles as those which govern in the construction of composition agreements; and that the cases which hold that every agreement or arrangement, when a composition is made with creditors by which an advantage is secured to any one of the creditors that is withheld from the others, is a fraud upon the creditors from whom it is concealed (although it has never had, nor can have, the effect of depriving them of any portion of the amount which they had agreed to receive), must control this case. (See Breck vs. Cole, 4 Sand. Superior Court Reports, p. 79. Pinner vs. Higgins, 12 Abb. Pr. Rep., p. 334. Lawrence vs. Clark, 36 N. Y. Rep., p. 128.)

Finally,

"It is contended by the counsel for the plaintiff, that this case is not analogous to the cases referred to, because the agreement, which is the subject of this action, is entirely collateral, and was made with an outside party who was only indirectly interested in having the agreement carried out. I cannot adopt that view of the case. Blair and Struthers, in the transaction referred to, represented the company, and they recited in their prospectus that the whole capital stock had been issued to them and to Foster, in payment for the Blair process and the works at Glenwood. They made the agreement to place 9,000 shares of the stock in the hands of Mr. Diven, the trustee, and the trustees of the company, *with their consent*, had ordered the sale of the 6,000 shares in question. It seems to me that Blair and Struthers, then, should be regarded in the eye of the law as principals in the transaction, and that each subscriber to a portion of the 6,000 shares had a right to require that each one of his co-subscribers should be a reliable subscriber—that is, an absolute subscriber, not possessing a collateral guaranty from the very parties who had consented to place the 6,000 shares upon the market, that they would at a future time, in case such subscriber was dissatisfied with his purchase, take the same off his hands. At all events, I think that each subscriber was entitled to know that such a guaranty had been given, and that the concealment of such fact, from any or all of the subscribers, brings the case within the principles laid down by the authorities to which I have referred."

We have room for reference to only one or two of the numerous authorities which the Judge cites in support of his opinion. In Adams vs. Outhouse, 45 N. Y., p. 318, 322, Judge Allen, in delivering the opinion of the Court, in commenting upon the case of Bliss vs. Matteson, 45 N. Y., p. 22, states that "the case is authority for holding that the principles of Russell vs. Rogers, 10th Wend., 473, and kindred cases, apply to all cases within the reason of the rule, and absolutely disables every one acting with others in a matter of common interest, from securing to himself any particular profit or advantage over his associates by any secret or undisclosed agreement or understanding." (See also Blodgett vs. Merrill, 20 Vermont, p. 509.) In the case of the White Mountains Railroad Company vs. Eastman, 34 New Hampshire Rep., p. 124, it was held that "a secret agreement entered into between the directors of a railroad corporation and a subscriber for shares in its capital stock, that he may within a specified time reduce the number of shares thus subscribed for—the subscription being held out as bona fide for the full amount, in order to induce others to become subscribers—is void as a fraud upon the other subscribers, and the original subscription may be enforced for its full amount between the corporation and the subscriber."

In that case Sawyer, J., most clearly stated the principles which control cases of this description. At page 141 he says:

"It is the secret stipulation alone which operates in fraud of others, and upon that the law leaves the parties where they stand, declining to enforce it for the benefit of either; while, as to the other part of the contract, to enforce it between the parties is what is necessary to defeat their fraudulent purpose as to other innocent persons. That the proceeding is a fraud upon third persons is clear from the relation in which subscribers for stock in a corporation of this kind stand toward each other. *In the subscription of each person, every other subscriber has a direct interest.* Their respective subscriptions are contributions or advancements for a common object. The action of each in his subscription may be supposed to be influenced by that of the others, and every subscription to be based upon the ground *that the others are what upon their face they purport to be.* The fact that one man has bound himself to place a certain amount of his money upon the risk involved in the enterprise, is an inducement to others to venture in like manner. Seeing who are his associates and the extent of the liability which they have assumed, he regulates his own upon that consideration; and though in form and legal effect the contract of each is with the corporation, yet, among the subscribers themselves, it is to be regarded as an agreement with every other subscriber, to bear that proportion of the common burthen to which he professes to bind himself by the contract which he holds out to them, as his contract with the corporation. . . . The books abound with cases in which the principle is applied that a secret agreement between the parties to a contract, changing its character from what it ostensibly is to the prejudice of others collaterally interested, is a fraud on them, and therefore void even as between the parties themselves. (Jackson vs. Duchaire, 3 T. R., 551; Wayburd vs. Stanton, 4 Esp., 179.")

Such is the law. It is additionally interesting just now from the fact that one of the candidates for the Presidency this year seems to have been concerned in a similar stock operation, at least according to his friend Mr. W. D. Lee's recent account of the transaction:

To the Editor of The Tribune:

SIR: I have read the statement in the *Evening Post* of this date, signed by J. Henry Brooks, of Boston, with head lines, "*Hocking Valley—Another Blaine Falsehood Exposed.*" In justice to Mr. Blaine I desire to say that his letter to the Hon. H. S. Bundy, dated Bar Harbor,

Me., July 22, set forth in said statement, is true. In 1880 I solicited Mr. Blaine, through the Hon. Thos. Ewing, my attorney, to subscribe for one share in what was styled the "Hope Furnace Tract Association," which he did, and for which he was to pay $25,000. This subscription was made and paid upon the condition that if at the end of two years Mr. Blaine should decide not to take the one share, then, upon notice to that effect, I agreed to refund the amount paid with 6 per cent. interest, and the transaction should be regarded as a loan.

At the end of the two years Mr. Blaine notified me he preferred not to take the share, and demanded repayment of the money, which I promised to make and give him security.

The $50,000 of the first mortgage bonds of the Standard Coal and Iron Company delivered to Mr. Elkins by Mr. Brooks and receipted for by him on the 25th of May, 1882, as set forth in the statement of Brooks, were deposited by Mr. Brooks and myself as collateral security to secure the payment of the amount advanced or loaned to me by Mr. Blaine and for no other purpose, and are so held to-day.

The whole transaction was purely of a business character, fair on the part of Mr. Blaine in every respect, and satisfactory to myself.

W. D. Lee.

Fifth Avenue Hotel, New York City, September 30, 1884.

THE GERMAN SUGAR CRISIS.

The crisis in the sugar-manufacturing districts—not only of Germany, but also of the neighboring countries—assumes daily a more and more threatening aspect. In Austria they already call it a "krach" (a word first used in 1873 in Vienna, and meaning an utter breakdown). In Bohemia the largest company is on the eve of bankruptcy, and the banks involved with it have to come to its assistance at the rate of nearly four millions of florins. Germany is not much better off. Several companies have already repudiated their contracts for beets, and must temporarily limit, if not stop, their business. Others will follow. In Poland and Russia, England and France, although partly from other causes, the same calamity is spreading rapidly, and millions on millions are being lost in the present condition of the overdone markets. There has seldom been a chapter of political economy so instructive as that on German protection of sugar. It seems as if the Government had tried to prove how much injury can be done to the most vital interests of the nation, without making itself felt for a long while. Besides a high protective duty, heavy drawbacks have contributed to force the sugar manufactured with hot-house heat. Whoever wishes to learn how *not* to do it, ought to study the Prussian financial policy in this respect. We can here only indicate the leading points in this compound of shortsightedness and error.

The duty on cane sugar was laid in Prussia when beet sugar first sprang into existence, and its manufacturers, on account of competition, demanded some protection of their interest. This duty, in the eyes of the Government, recommended itself for several reasons. Prussia was then a country still exhausted by former wars. Comparatively rich and fertile lands in the province of Saxony and the adjacent territory, in spite of rich harvests, did not clear enough profit by the mere cultivation of breadstuffs. They yielded more by the raising of beets for sugar manufacture, but the competition of colonial sugar was too powerful, and home industry required some consideration. The Government consequently not only granted the desired protection, but also a bonus on exports. From the rich bottoms of the Elbe the beet-raising spread over the adjoining districts, and the sugar industry, on account of its large profits, soon became a dominant factor in the economical development of the country, and now leads in several eastern provinces, such as Posen, Prussia, parts of Pomerania, and some smaller States like Anhalt and Brunswick. In 1869, shortly before the proclamation of the Empire, and in 1883, the duty and the export bonus were fixed at the present rates.

In the history of legislation there is scarcely a more injudicious and unjust duty than the measure favoring the Prussian sugar manufacturers. First, a tax of 80 pfennigs (about 20 cents) is laid on the hundredweight of beets, from ten to ten and a half of which are required to manufacture a hundredweight of sugar, which thus pays an average tax of 8.40 marks (about $2), while the duty on foreign sugar amounts to 15 marks. As long as the domestic manufacture was not equal to the home wants, by this protection it had a benefit of 6.60 marks per hundredweight, or of 6.6 pfennigs per pound, which the domestic consumer paid to the manufacturer. This profit is divided between the farmer who produces the beet and the manufacturer who makes the sugar. In beet-raising districts the producer nets about one mark per hundredweight of beets, which, when not employed in making sugar, hardly yields 70 pfennigs, so that the difference of 30 pfennigs forms a special benefit; and as an acre of beets regularly furnishes a harvest of 150 hundredweight, the farmer profits 45 marks by the protection. This extraordinary advantage explains the fact that on the establishment of a sugar manufactory the rent and profit of the neighboring acres rise in proportion. The greater part of the gain, however, flows into the pockets of the sugar manufacturers, especially in good years, in which the beets are rich in sugar. Not a few establishments, in spite of considerable writings-off, have for years declared dividends equal to 60, 70, and 90 per cent. of the capital invested, and in a single instance even 125 per cent.

Under these favorable circumstances the sugar interest of course largely expanded, and now Germany produces more than double the amount she consumes. The surplus, although at present at a standstill, of course has been exported, and will be exported as long as foreign markets will take it, the manufacturer obtaining, as we have said, a bonus of 9 marks (up to 1883 even 9.40 marks) for each hundredweight exported. As long, therefore, as foreign countries were customers of German sugar, manufacturers realized large profits, and more than the Government had had in view at the passage of the law. Owing to recent improvements in chemical and mechanical methods, the manufacturers have lately succeeded in separating from the molasses a great part of the crystalline sugar. Thus the gain from the beet is now considerably larger than formerly, for less than nine hundredweight of beets suffices to manufacture one hundredweight of sugar. Nine hundredweight of beets, as above stated, pays a tax of 7.20 marks, and the manufacturer at present receives 9 marks, by way of bonus, for one hundred pounds of sugar exported; so that the Government makes him a present of 1.80 marks.

And here we will introduce some statistics taken from the publications of the official Statistical Bureau, and from an organ of the sugar manufacturers, *Die Deutsche Zucker-Industrie*. The former says that in the sugar season of 1883 to 1884 (August 1-July 31) the quantity of beets used for the manufacture of sugar did not rise, but that the export of sugar was much higher than in the two preceding years. The beets taxed in 1881-82 were in round numbers 125,000,000, in 1882-83 were 175,000,000, in 1883-84 were 178,000,000 hundredweight, while the export of sugar in the corresponding years amounted respectively to 6,000,000, 9,000,000, and 12,000,000. The taxes on beets which the Government received in the same years amounted to 100,000,000, 140,000,000 and 142,000,000, of marks. It paid, on the other hand, as a bonus on exports, in 1881–82 58,000,000, in 1882–83 89,000,000, in 1883–84 111,000,000. Its receipts from sugars, which were 42,000,000 in 1881–82, and 51,000,000 in 1882–83, were reduced in 1883–84 to 32,000,000 of marks; the revenue decreasing with the increase of the sugar export.

As instructive as the foregoing figures are those which specify the import and export of sugar for the last five years. (All sorts of sugar have been reduced to raw sugar.) In the season of

	Were Imported. Double cwt.	Exported. Double cwt.
1879–80	72,175	1,373,939
1880–1	66,681	2,972,151
1881–2	63,281	3,193,786
1882–3	72,108	4,789,899
1883–4	58,370	6,074,960

While the import of refined sugar was constantly decreasing, and that of the raw (colonial) sugar fluctuating, the exports of German sugar grew in almost gigantic proportions. If we take the season of 1879–80 as a basis, the increase of the following years rose to 116, 132, and 149 per cent., and in 1883–84 even to 342 per cent., and the present season of 1884–85 will bring a still larger extension.

All European markets are overdone, prices have fallen more than 50 per cent. within the last six months, and there is no prospect of an improvement. In Germany alone there are some twenty to thirty establishments which swell the amount of cheap offers without meeting with any demand. Has there ever been a protectionist who was satisfied with ever so high a duty when it was in his favor? They always cry for more, and call those who do not approve of their greediness enemies of national labor. One of the most impudent manifestations of this kind is the petition of the beet-planting farmers in the district of Glogau (Silesia), who ask a Government guarantee of three marks for every hundredweight of beets for the next three years. Although a tremendous crisis has been produced by the fault of the sugar manufacturers, who still cling to their bonus, these same men call upon the Government, which, in spite of its enormous contributions to their dividends, could not prevent the crisis, to intervene in their behalf and to pay about one-third more for the beets than they can at present realize otherwise.

The immense profits which within the last few years have been secured to the farmers

ought to have helped them through the present crisis; but they have spent their money as if the years of plenty would never come to an end. The rich manufacturers, instead of sharing with them the export bonus, stand behind them, and through them appeal to the Government's sympathy for the agricultural interest, in order to obtain their protection at the expense of the taxpayers and to enrich themselves afresh. Yet there is only one road to salvation, and that is to do away entirely with the export bonus and to reduce considerably the tax on beets. In this way sugar will become much cheaper and find readier markets. Five pounds' more consumption per head of the population would create an equilibrium between production and consumption; but of course the manufacturers will implore the Chancellor to maintain the present system, and the crisis will proceed. The German sugar manufacture, in consequence of the disproportion between the inland tax and the export bonus, has received an unhealthy and precarious stimulus. It will no longer do to fix the export duty at the same rate as the domestic taxation. In the present instance, even protectionists admit that the crisis is due to the bonus system, which alone has raised the production of sugar to an extraordinary degree. On the other hand, it has damaged the real interest of the national labor by preventing the manufacture of refined sugar, for which no bonus is paid, and by overdoing the world's markets with raw sugar which, if it were refined, would largely contribute toward strengthening the German manufacturing capacity and increasing the national wealth.

TELEPATHY.

THE Proceedings of the Society for Psychic Research, which have now reached their sixth number, represent a unique organization, whether we consider its constitution or its objects. Its President is Prof. Henry Sidgwick, of Cambridge, whose ethical publications are widely known, and who for many years has spent a great deal of time and money in visiting all sorts of people making supernatural claims, to test their power. Its Vice-President is Lord Rayleigh, and it has a council, honorary members, corresponding members, members, and associates, with a view, we presume, to providing in its periphery receptacles for people who are interested in the supernatural, but would not be desirable members of its controlling board. Among its members are Balfour Stewart, Edmund Gurney, and Professor Barrett, of Dublin; and nearly every class of professional men is represented. The objects of the Society, which have each been intrusted to special committees, are: 1, the influence of mind on mind apart from ordinary modes of perception; 2, hypnotism, mesmerism, clairvoyance; 3, a study of "sensitives" in the sense of Reichenbach; 4, apparitions at the moment of death, and haunted houses; 5, the physical phenomena of spiritualism; 6, a collection of all printed matter bearing on any of these subjects.

The publications of the Society have thus far been devoted, more than to any other subject, to the phenomenon of thought-transference upon varying methods somewhat like the following: A "sensitive" is blindfolded and seated at a table provided with paper and pencil, and constantly observed by a committee of trusty persons. A second committee take another person, who is to influence the sensitive, into another room, and allow him to gaze at a rough drawing, as of a circle, triangle, horse, or often very complex figures. After fixing some drawing in his mind he is led back to the sensitive, and placed behind him. In the earlier experiments he was allowed to place his hand upon the head of the sensitive, but, later, was not allowed to touch him at all, but merely to stand a few feet behind him and concentrate his mind intently upon the figure he had seen. At length the sensitive takes up the pencil and reproduces something like the original drawing. Many facsimiles of the original and copies thus obtained are given side by side in the published Proceedings. In other experiments the agent held up objects selected at random by any one present and without a word or noise of any kind; the percipient, who was blindfolded, was able to describe it in many cases. Many other variations of experiments of this kind of thought-transference are reported, and seem to have become now connected in the mind of the committee with the phenomena of apparition at the instant of death, and with reported cases of effects produced on wives, and parents, and children at the instant of accidents to their relatives in distant lands. It is for this whole class of phenomena that the name "Telepathy"—being affected at a distance—is proposed.

That these classes of phenomena need investigation has long been admitted, but the feeling that trickery of the most subtile sort, and morbid nervous manifestation not yet understood—both liable to baffle the most careful experiments—were involved in them, has hitherto prevented any adequate study of them. Even the manifestations of hypnotism studied by the physiologists Heidenhain, Preyer, and others in Germany a few years ago, were pronounced by Du Bois-Reymond as *Psychosen*, and therefore, by a prime article of his scientific creed, outside the field of science. Even Helmholtz lately told a British physicist that if all his friends should assert the phenomena reported in the Proceedings of the Society for Psychic Research, and if then he were to see them all with his own eyes and with all the precautions he could devise, he would not believe them. If this is a scientific attitude of mind, then alas for science and its future. It, too, has become dogma with a fixed and changeless world of thought and is no longer accessible to larger possibilities. The question is, Can scientific men approach the subject from outside with the same reasonable hope of results by a careful use of their methods as in other fields of research? If one were dependent solely on professed mediums, who made their own conditions, investigation would be folly. If they allow us to make the conditions, submitting to some inconvenience in our laboratories, it is then a question of our experimental and observational acuteness, although even then it must not be forgotten that almost any man who will give years to a single trick can very often deceive the most skilful observer, who must be physiologist, physicist, and alienist in one.

The need of exploring this dark side of modern culture is very great. Here, more than in all other fields combined, superstition and every outgrown creed back to the lowest savagery flourish rankly all about us. The mental and moral energy, the strength and money, that are yearly lost to the work of ameliorating the condition of mankind—the influences centring here that are working against all that teachers of every grade and kind are striving for—cannot be estimated. In view of all these circumstances, which are now deeply impressing some of the most serious scientific men in several of the larger cities in the Eastern part of this country, it seems as if there might be an American Association that would stimulate fruitful work on at least one side of this vast field. Our country abounds with organizations which are what Reichenbach would have termed "sensitives"—people of exquisitely nervous constitution, of variable moods and abnormally concentrative habit, on whom, wherever found, systematic observations as to the extreme limit of abnormally sharpened senses might be made. There is certainly a wide tract to be explored here before we can affirm anything confidently of these limits; and before these are determined it does not seem scientific to have recourse to explanations of extraordinary perceptions or thought-transference by means of ethereal vibrations, or spiritual agencies, or any other hypothesis of a natural or supernatural kind. If by such methods results are reached that compel presuppositions new to science, so be it, but let the object be to study abnormal psychoneural phenomena. Even if it should be found that impressions can be conveyed by other than sensuous means, it by no means follows, as some of the writers in the English Proceedings seem to infer, that distance is not a factor, and that cases of simultaneous impressions with continents intervening are made more plausible.

It is, of course, an obstacle to the proposed American Association that the necessary researches are very expensive and almost require an endowment fund. But money has, we understand, been abundantly forthcoming in England, and why should it not be here?

THE MUSEUM OF SAINT-GERMAIN.

PARIS, September 16.

I HAVE just returned from a visit to a museum of which I imagine few of our visitors to Paris know even the name, viz.: that containing the prehistoric collections and special Gallic antiquities at St.-Germain-en-Laye, a forty minutes' railway journey from Paris. It is certainly the most admirably arranged museum I have ever seen, and to an archæologist or ethnologist it is certain to be of great interest—out of all proportion to its magnitude, indeed. It begins with the first indications of human existence, the burnt flints, which possibly denote the introduction of fire, but hardly, I am persuaded, any intentional operation on the stone itself through fire. But the prolonged action of fire as we see it in these examples can be attributed only to its employment for the use of man. From this, through the (in some cases) dubiously fractured flints, the series of the results of palæolithic as well as neolithic art, the gradations are perfectly shown by the finest degrees, finishing in polished stone lances of the most admirable workmanship, and so large and delicate in proportion that they seem to be really rather made for state and display than in view of any definite use. In a separate series are the specimens of art works, engraved or carved—bone, stone, etc.; then the bronze implements in immense variety and of wide range of provenance, some of them being the most remarkable for quality of metal and beauty of form that I have ever seen; one in particular, a small axe, keeping its fine cutting edge with almost the hardness of tempered steel.

The prehistoric collection contains contributions from all the countries thus far explored, and we can thus compare the beginnings of civilization in various quarters of the earth with those results which are most profitable in general anthropology. But the special value of the museum is, as might be expected, in the Gallic divisions, owing in great measure to the exact notation of all the conditions of discovery, the lack of record of which, on the spot and at the moment, has rendered of little value so many researches crowned with success, which might also have been important but for this failure. In this respect the excavations in France have been generally most admirable, and the series of bronze

and polished stone implements, catalogued in this museum, with all their circumstances of discovery, give us the outlines of ethnical history with a curious lucidity. Every specimen is marked, and all the finds are so preserved that the relation of each object to the others is clear. There is no confusion of provenance or priority, and this tabular arrangement, made with all the characteristic French clearness and largeness of generalization, gives the museum its value to the student of archæology. There are especially, from the examination of the tomb series, certain most suggestive and surprising deductions to be made, viz.: that the period of copper implements, in France at least, is later than that of bronze; and that every advance in the conditions of civilization, as far as they are shown in these implements, was a sudden one and evidently due to an invasion of some more advanced race—the most perfect implements in every case coming from the earlier interments, while the successive deposits show a technique slowly degenerating in quality of material as well as skill of execution, as if the traditions were gradually becoming obscured and lost, when another advance comes on suddenly with a new invasion.

I have no intention of writing an essay on the development of civilization, but desire simply to call attention to the Museum of St.-Germain, which, in its system and clearness of grouping, for all purposes of instruction, shames both the Louvre and the British Museum. The series of hatchets, revealing all the minutest changes in form from improvements in the method of mounting, is curiously complete, and those of swords and lances very abundant—the swords showing, in one case which I noticed especially, the adaptation of the forms from those of the small-handed invading race to the uses of the large-handed and technically inferior race, which we may suppose to have finally absorbed and assimilated the invaders without learning all they brought of arts and manufactures.

There are models of the menhirs and dolmens which were the depositories of the implements in the various modes of interment; and the date of the beginning of that measure of respect for the abandoned body is shown to be of the second period, since no indication of interment either as burying or burning is discoverable in the first, all the tombs and tomb-finds belonging to the second and later periods. There are certain curious correspondences in the ornament and forms of various objects with objects found at Mykenæ by Doctor Schliemann, and these in France are supposed to date from not before the third or fourth century B. C. The engraved tombstones which were found above the graves at Mykenæ are very like similar stones of Gallic inhumations, and there are bronze swords inlaid with iron which are apparently the precursors of those found in the tombs at Mykenæ.

The museum follows French civilization down to the Carlovingian epoch. M. Mortillet, the director, gave me a curious instance of the impositions which are inflicted on the museums by the dealers in antiquities, in the history of a celebrated Roman bronze horn, of admirable preservation, apparently, and of the form known from the ancient bas-reliefs—not unlike the French *cor de chasse*. This was sold to the late Emperor by Castellani, and given to the museum as an inestimable and unique treasure, and kept as such until some time since, when, in moving it, it fell to the floor, and, breaking in many pieces, was seen to be an ingenious falsification, made up of pieces of various bronze instruments and implements.

I hope I may be allowed to acknowledge publicly the extreme politeness and attention shown me by M. Mortillet, *fils*, the assistant keeper, who accompanied me through the museum, even keeping it open long after the hour of closing, that my examination might not be cut short.

W. J. Stillman.

DOCTOR SCHLIEMANN'S EXCAVATIONS AT TIRYNS.

Athens, Sept. 13 (25), 1884.

Ten days ago I returned to Athens from a country-house near Tiryns, where I had spent the first half of September with my family. My morning and evening walks while there were particularly devoted to the ruins of that prehistoric city (with which I was acquainted, though in a different condition, from my former journeys in the Peloponnesus), and to observation of the works undertaken by Doctor Schliemann. Although the results of these excavations, begun in the middle of March last, and concluded, or, rather, interrupted, at the end of May, may be already known, in a general way, to the American public that cares for these things, through Schliemann's telegrams and reports, still it may not be without interest to hear also the voice of an impartial judge concerning them.

My honored friend Doctor Schliemann had, as early as August, 1876, made tentative excavations at Tiryns; that is to say, he had drawn a few trenches and sunk sundry shafts, with the result of finding terracottas, potsherds, and obsidian knives. In the shafts of the upper Acropolis he also laid bare house walls and aqueducts. But in making many pits Schliemann, at that time, without recognizing it, broke through the pavement mosaically constructed of cement and small stones, and three centimetres thick, of the prehistoric palace court now uncovered by him. This is the more surprising inasmuch as Alexander Rh. Rhangabé had already, in the first volume of his 'History of Ancient Art,' published in this city in Greek in 1865, written (p. 63): "On the northwest side of Tiryns, in the year 1832, Thiersch discovered a level floor of a hard white substance, showing the bases of columns nine feet apart. It is highly probable that these are the remains of the primitive palace of Proetus." I cite this passage in order thus publicly to claim for Thiersch and Rhangabé their rightful priority in this matter.

The base of the palace, which now lies before us in its entire extent, and which is all the more valuable to archæology as furnishing the best commentary on the palaces described by Homer, was buried less than a metre deep. On the north side of the great court surrounded by porticos lay, to use a modern expression, the throne chamber, whose roof was supported by four columns; west of this smaller chambers occurred, among which the bathroom (whose floor consisted of a single block of marble more than three metres long) is to our eyes most striking; east of this are grouped about a second, smaller court the women's quarters. In the middle of the south side of the great court stood the altar. No columnar tympans were found, and the pillars must consequently have been of wood; for had they been built up of stone or adobe, and covered with mastic, remnants must certainly have been found on the spot.

Let it not be inferred, however, from the wooden supports that this prehistoric palace must have represented an inferior stage of decorative art. On the contrary, painted stucco fragments have been found with lively coloring and beautiful ornamentation, such as we are already familiar with from Orchomenos, Spata, and Menidhi, and as were likewise found, though but scantily, in Mykenæ, which, to be sure, Schliemann, in his catalogue of the treasures of Mykenæ, regards as art productions of the Macedonian period. Especially worthy of admiration is a stucco fragment depicting a running bull with a clown clinging to its neck, his legs "streaming" behind. While the walls, both inner and outer, were thus adorned with lively paintings, the socle of the great hall seems to have been formed of alabaster laminæ some seventy-five centimetres broad and forty-five high, on which were large incised ornaments, into whose square and round channellings, for the sake of greater color brilliancy, pieces of a bluish vitreous substance had been fitted.

The citadel of Tiryns, as it is commonly called, lay "on a long, low, narrow rocky hill (*Felshügel*)," according to Brandis; "on the westernmost of the rocky hills (*Felshügel*) which rise from the eastern side of the plain," according to Bursian; "on the lowest and flattest of those rocky heights (*Felshöhen*)," according to Schliemann. I think these descriptions are calculated to give an altogether false idea to the reader; for the fortress was situated not on the hill but in the plain, inasmuch as the foundations of the cyclopean circumvallation are almost on a level with the field which surrounds them, or in other words, their original bed. The highest part of the citadel rock is three or four metres lower than the palace pavement, which again is elevated scarcely twelve metres above the circumadjacent field. Moreover, the rocky base on which the lower Acropolis rests, with a N. N. W. extension, probably emerged scarcely more than a few metres above the primitive soil. The entire ground within the circumvallation has been shaped and levelled by human industry, yet not, as on the Acropolis of Athens, by evening off and smoothing the rock, but by substructions and a heaping up of stones and earth. (The substructions are plainly visible under the huge block of limestone that forms the floor of the bath, and in various other places.) For this reason, also, the southern half of the great palace court, and generally the entire southern portion of the upper citadel, have sunk considerably, seeing that precisely at this point the rocky base serving as the undersetting lay very deep. For the same reason, in consequence of two rains which occurred during my sojourn at Tiryns, the northerly portion also of the palace court sank in divers places, together with the pavement of many of the chambers.

So much for the nature of the ground and the results of the diggings. Concerning the latter we must assuredly await a trustworthy scientific account, after my friend Dr. Dörpfeld has elaborated the architectural part of the excavations, and Dr. Schliemann has availed himself of the competent assistance of Dr. Fabricius in interpreting the objects found. This coöperation, we trust, is an assurance that the tin basin (*Kreisslergefäss*) which the laborers in 1876 used for drinking purposes till one of them dropped it down a shaft, and which, by the irony of fate, came to light again during the last excavations, will not figure in the forthcoming work on Tiryns as a silver double cup (Homer's δέπας ἀμφικύπελλον).

If I am now called upon to express myself openly concerning the mode in which the excavations have been conducted, my judgment is by no means favorable. Friend Schliemann has dug over the whole upper and middle Acropolis, which, as I have already said, was covered with a débris nearly a metre in thickness. He made it very easy for himself, however, by merely dumping the rubbish on the cyclopean walls. To be sure, the Cultus-Ministry, with excessive compliance, finally permitted the stuff to be temporarily thrown down over the walls, after Dr. Schliemann had pledged himself by telegraph to remove it from the citadel at the conclusion of the excavations.

I think that respect for these walls ought to have restrained Dr. Schliemann from encumber-

ing them, or, if absolutely no other course was open, that he ought to have removed the rubbish as soon as possible. Has he, then, forgotten that in his book on Mykenæ he wrote: "In all antiquity the walls of Tiryns were looked upon as marvellous works; as such, Pausanias ranks them above the Pyramids of Egypt, and Homer expresses his admiration for them by the epithet τειχιόεσσα (the well-walled-about)"? How could he, the unselfish enthusiast for prehistoric art, induce himself to cover up those cyclopean walls, which in his opinion are "the oldest monument in Greece," and to convert the low, narrow, 900 feet long citadel into a virtual *railway embankment?* And yet he terminates his excavations, lets the rubbish lie, and assures the Ministry that it has been removed!

I am greatly distressed by this impiety, which borders on vandalism, and God knows that it rendered my stay and walks in Tiryns disagreeable; and if this article vexes my friend, let him recognize in it my revenge for the vexation which he repeatedly caused me. But I am by no means the only person who passes this judgment on Schliemann's excavations at Tiryns; whoever spoke of them at Argos and Nauplia, expressed in bitter terms his indignation at them. And if the Cultus-Ministry intends, as I am informed, to prosecute Schliemann on account of them, it will only be doing its duty.

The total impression of the citadel will be permanently injured, even if the encircling walls and the mass of blocks of stone which for centuries have lain precipitated below and frame in the foot of the citadel, be sooner or later freed from the débris. For on the superficies of the blocks of stone which have been weathering for ages and grown gray, and now for some time have been covered by moist earth and perhaps already penetrated by it, there will, even after a removal that can hardly be complete, always remain strata which will markedly distinguish the long-covered mural remains from those left uncovered, and will make upon the eye the appearance of a disturbing interruption of the unity.

I said above that Schliemann had not concluded the excavations, but rather broken them off. For there remains to be explored not only the southernmost part of the Acropolis between and before the two galleries, which is now likewise covered with rubbish, and where an entrance must have been, provided the galleries subserved military purposes, but also the field round about it. Doctor Schliemann is convinced that the royal tombs of Tiryns "should be sought in the neighborhood of Nauplia." I think the example of Mykenæ might have taught him that he need not go so far abroad. It almost seems as if the non-turning-up of gold ornaments and vessels, which he had been accustomed to find in his previous diggings, had disgusted him with those at Tiryns. It will now be the task of the Greek Archæological Society to effect the removal of the rubbish at Doctor Schliemann's cost, and then to bring the excavations to a proper end.

And the maintenance of the uncovered base of the palace? For this, in spite of his constant professions of enthusiasm for science, Doctor Schliemann appears to care not a farthing. I have pointed out above how the pavement of the court and of the various smaller chambers has already suffered after two rains and is sinking, and how here and there gaps exist. If that is to go on during the winter, it were to be wished that the rubbish might be thrown back, in order on the one hand to preserve the remains of the palace, and on the other to restore the cyclopean walls to view and to appreciation. However, it is to be hoped that the Archæological Society will cause the entire upper Acropolis to be covered over as soon as possible.

Friend Schliemann could certainly make no nobler use of the surplus revenue of his gigantic possessions, which he figures up with noteworthy modesty in his book on Ilios (he calculates for us in his Autobiography that in spite of all his outlay for excavations he is yet able to add 100,000 marks yearly to his capital), than to defray the expense of covering up the palace of King Proetus burnt in prehistoric times; then I too would let myself be persuaded that he digs "par pur amour pour la science," and forgive him the righteous anger which he has caused me by his burying the cyclopean walls of Tiryns under rubbish.

No offence! We will still be good friends! *Amicus Socrates, sed magis amica Veritas!*

DR. MICHAEL DEFFNER,
Librarian of the United National and University Library at Athens.

Correspondence.

MR. BLAINE AS A FINANCIER.

TO THE EDITOR OF THE NATION:

SIR: In all the discussions about Mr. Blaine's financial ventures one very striking point seems to have been quite overlooked. Those of his speculations which have come to light turned out disastrously, if the explanations given in his behalf are truthful. For instance, in the Little Rock matter he was a victim of the crafty Fisher, and not only made nothing but even took back bonds which his friends had bought on his advice. Again, the Hocking Valley business was most unfortunate in its results. The $25,000 which he invested or loaned, as the case may be, he has nothing to show for except bonds to the nominal value of $50,000, which he says he would gladly surrender to anybody who will reimburse him for his original outlay.

Notwithstanding these heavy losses, he is universally looked upon as a very rich man. The question naturally arises, where did all the money come from? How did he make all the money that he sank and all that he still has left? Of course, this is, in a measure, "private business," and it may seem indelicate to inquire too curiously concerning it: but the world has always taken an affectionate interest in its great financiers, and is never tired of hearing how the Barings and the Rothschilds, the Astors and the Vanderbilts, the Jay Goulds and the Mackeys, accumulated their immense fortunes. It has been hastily taken for granted that all the highways to wealth had been surveyed, and that in this department of human activity there was no room for pathfinders. But here comes a man who is not a banker nor a merchant, nor an "operator" in stocks, or grain, or pork, or real-estate, who has "struck" neither oil, nor gold, nor silver, who, so to speak, has never dealt in anything but patriotism, whose waking hours have been devoted to statesmanship and diplomacy, and who has, no doubt, sat up o' nights, thinking how he could best serve the commonwealth, and yet has amassed something more than a competence. Does it not seem that to crown the various benefits he has conferred on his age, such as his 'History,' etc., he should disclose his secret of making money? Of course, ordinary men could not hope to achieve such results as his genius has produced; still, he might help to smooth the road for many who now stagger under a heavy burden of poverty. Although it lacks not quite three weeks of the election, there is still time for at least a partial revelation of the marvel, especially as the Ohio election is said to have rendered any further anxiety on Mr. Blaine's part superfluous, and he could devote his whole time to this task, thereby making a considerable difference in the number of votes cast for him. A. T.

October 16, 1884.

WHEN DOCTORS DISAGREE.

TO THE EDITOR OF THE NATION:

SIR: It is curious how much trouble the Blaine men find in agreeing upon any theory which will explain their chief's railroad transactions. One would think that all they need do is to apply to him for the facts in the case, and simply state these; but he unkindly keeps his mouth shut and leaves them to make out for themselves the best explanation they can. This they loyally do, only the results do not correspond with one another, or with the facts. First came Mr. William Walter Phelps with his statement that Mr. Blaine bought a block of securities—"first-mortgage bonds, second-mortgage bonds, and stock"—sold the first and third at the price of the whole, and kept the second-mortgage bonds as profit. A very pretty theory, only that it is directly contradicted by the memorandum in the Mulligan papers, which says not a word of second-mortgage bonds, but makes his profit to consist in land bonds—share for share for all he had disposed of as an agent—and a bonus of $32,500 first-mortgage bonds.

Now comes Rev. Mr. Goodenow, in a long paper upon "Mr. Blaine's Noble Course through the Little Rock Transactions," in the Boston *Journal* (of October 4), and works out for himself a new theory, which has the merit of appearing to account for the bonus here described. Mr. Goodenow's theory is that Mr. Blaine's purchase consisted of $162,500 first-mortgage bonds, at a wholesale rate of 80 per cent.; that of these he sold $130,000 at their face value, thus getting his money back, and retained the $32,500 as his profit, besides the extra bonus of $130,000 land bonds. This, too, is a very neat theory; unfortunately, it likewise is directly contradicted by the documents, as well as by Mr. Blaine's speech of April 24, 1876, and his draft of a letter sent to Mr. Fisher the same month. In both of these last it is positively asserted that whatever he bought he bought at the market rate, while Mr. Goodenow ingeniously declares that he bought them at 80 per cent. And the contract with Mr. Fisher shows clearly that, instead of buying a lot of securities on his own account, and then selling a portion on speculation—as both Mr. Phelps and Mr. Goodenow assert—he acted as agent, negotiating for the sale of $130,000 to "A. & P. Coburn and sundry other parties," and taking his pay in the securities described.

Now let somebody else try his hand at an explanation. A.

THE ETYMOLOGY OF "BUG."

TO THE EDITOR OF THE NATION:

SIR: A correspondent in your last issue inquires the origin of the word "bug" as applied to lighthouses. To one who has always been used from childhood to calling fireflies "lightning-bugs," and knows that this name is common in New England, the name presents no mystery. I may, of course, be wrong, and the name may have originated otherwise; but it seems to me most probable that the resemblance of an intermittent light to the fitful flashes from these "lightning-bugs" has caused the fanciful term to be applied.—Truly yours, F. M.

HARTFORD, CONN., October 17, 1884.

Notes.

THE second printed volume of the Archives of the State of Maryland is now ready for publication, a completed copy having been laid before

the Maryland Historical Society at its regular meeting, October 13. It has been carried through the press by the same committee who superintended the first volume, Messrs. B. T. Johnson, H. Stockbridge, and J. W. M. Lee, and the editorial work has been performed by Dr. Wm. Hand Browne, who edited the earlier volume. There has been no change in the plan or the typography. The period covered extends from 1666 to 1676, and the record is simply that of the assemblies held between those years. By the indexes all important subjects may readily be found. Work like this is rarely appreciated as it deserves. Patience, accuracy, and expertness in deciphering antiquated and often almost illegible manuscripts are constantly required. The society under whose auspices this work is done, and the Legislature which has provided the pecuniary support for the undertaking, are fortunate in having secured as the directors of the publication men who have the right idea of what such work should be.

Delbrück's 'Introduction to the Study of Language,' translated by Edward Channing, is in the press of Ginn, Heath & Co.

Mr. Ainger's edition of Lamb's 'Miscellaneous Essays and Poems' will be published at once by Macmillan & Co. of London and simultaneously in New York by A. C. Armstrong & Son. It will contain all Lamb's miscellaneous writings that he had himself selected for preservation in a permanent form, and whatever else in the shape of new materials Mr. Ainger has derived from Lamb's annotations to George Wither, his interleaved copy of which is now in the possession of Mr. Swinburne. This edition will also contain quotations from several unpublished letters of Lamb, in various hands.

Bernard Quaritch, 15 Piccadilly, London, will print in a limited edition of 250 copies, for subscribers only, 'The Princess of Wales,' an illustrated monograph by Mrs. Herbert Jones. Eleven of the fifteen plates will be facsimile reproductions of exquisite miniatures.

The Palestine Pilgrims' Text Society has been established for the translation and publication, with explanatory notes, of the curious records of pilgrimages which begin with the unknown Pilgrim of Bordeaux, and follow in almost unbroken line to the present day. The publications are sent to subscribers (at $5.00) only, and the first number has been already issued.

Mr. Austin Dobson's 'Thomas Bewick and His Pupils' (Boston: Osgood) will be recognized by readers of the *Century* as composed chiefly of two articles contributed to that magazine in 1881-2. What the exigencies of space then compelled the writer to omit he has now restored, with especial advantage in the case of Bewick's brother John. He has also made numerous amendments in facts and in style, enlarging his literary embellishments, and at the same time multiplying his illustrative woodcuts till they now number nearly one hundred. Several of these were derived from *Harper's Magazine* for September, 1878, and it is a pity that from the same source were not also procured the excellent "process" plates of the vignettes on pp. 122, 123, instead of using the recut blocks originally published in Jackson & Chatto's treatise, of which the inferiority (and injustice to Bewick & Clennell) is apparent at a glance. Mr. Dobson's work is a substantial addition to the history of wood-engraving, and may also take its place among the most attractive holiday books of the season.

For the same publishers Mr. W. J. Rolfe has edited 'Select Poems of Alfred Lord Tennyson,' with notes for school use. A peculiar hardship is related in the preface. Miss Peabody, afterwards Mrs. Nathaniel Hawthorne, made a Flaxmanesque drawing to illustrate a description in the "Lady of Shalott," as given in the edition of 1832. The poet subsequently, with the same indifference to remote consequences which marks the protectionist legislator, altered the description and deprived the design of its excuse for being.

A compact and fairly handsome edition of the Complete Works of Burns, following that edited by Alexander Smith, has been issued with illustrations, gilt edges, and showy binding, by T. Y. Crowell & Co. The paper is thin, and the print necessarily small, but entirely legible.

'My Farm at Edgewood' comes to us from Charles Scribner's Sons in the uniform series of the works of Donald G. Mitchell.

That clever designer, Mr. A. B. Frost, we prefer in his serious work, to which one may look for some of the best studies of American characteristics. His comic venture in 'Stuff and Nonsense' (Chas. Scribner's Sons) will not add to his reputation. Mr. Frost's humor is not original, and the grade of it is not high. Violent exaggeration soon tires in art as in language.

In the two pretty volumes issued by White, Stokes & Allen, viz.: 'The Poems of Frederick Locker' and Mr. Locker's 'Lyra Elegantiarum,' the book-buyer may possess a collection of *vers de société* sufficient to supply his reasonable needs, but in which Mr. Locker himself (in his special volume) is the only living writer represented. The first-named is the better-made book.

Parts 8 and 9 of Stormonth's 'Dictionary of the English Language,' in Harper's Franklin Square Library series, carry this work on to *interfere*, and hence nearly to the half-way point.

Mr. W. M. Griswold puts forth another edition of his Q. P. Index, No. 13, the so-called 'Index to Essays' (in History, Biography, Literature, Society, and Travel). He has revised his key, which was not found clear in practice, and he has taken the opportunity to add a few errata, these being printed in red ink, and the key in red, for the sake of distinguishing the present from the earlier edition.

Our school-books commonly steer clear of controverted topics in our recent politics, and it is refreshing to meet with a very candid characterization of our "seventh period" in 'A Thousand Questions on American History' (Syracuse: C. W. Bardeen). The period in question was that of reconstruction. As usual in such manuals, the anti-slavery agitation is very inadequately treated; and, in the six lines given to it, *Owen* Lovejoy is made to undergo the fate of his brother, the martyr of Alton.

In the *Magazine of American History* for October, Mr. James Schouler discusses the relations of Monroe and Jackson growing out of the latter's unwarranted capture of the Spanish posts in Florida during the Seminole war. The so-called Rhea letter of 1831, intended to prove that Monroe granted the authority for this act, Mr. Schouler concludes to have been a fabrication by Rhea and other Jackson men for use in the quarrel with Calhoun. Articles of this sort would be welcome if more frequent in the *Magazine*. Among the original documents is a very characteristic letter from Governor Sam Houston, in response (January 2, 1861) to overtures from Alabama to join in secession. Houston was reluctant, and offered many cogent reasons against precipitancy, insisting that Texas was not to be dragooned into leaving the Union or joining "a confederacy which may be broken and destroyed at any moment by the caprice or dissatisfaction of one of its members."

The contents of the September *Antiquary* are for the most part of no very solid character: an article upon the Griffin, by Mr. Peacock; the Adelphi and its Site (Part III.), by Mr. Wheatley; Lanarkshire Folk-lore, by Mr. Black; a useful genealogical paper upon the Nevills of Raby (Part I.), by Mr. Wake, and two or three others. The one of most interest to American readers is that by W. Carew Hazlitt, upon the visit of his great-grandfather, Rev. William Hazlitt (father of the writer of the same name), in 1783. Mr. Hazlitt, a Unitarian minister, came to this country with his family in the ship which brought the news of the treaty of peace, and remained about four years; the account of the visit was written by his daughter Margaret. The party came with the expectation, cherished by so many emigrants in those days, of finding "an ideal terrestrial paradise, . . . a perfect land, where no tyrants were to rule, no bigots to hate and persecute their brethren, no intrigues to feed the flame of discord and fill the land with woe." So far as appears from the present extract (it is to be continued), they were not dissatisfied with what they found, and Mr. Hazlitt was well received. "I cannot help remarking," Miss Hazlitt writes, "how strange it seems that my father, who openly preached the doctrine of the Divine Unity from Maryland to Kennebec, should have been so entirely overlooked, and the whole work ascribed to Dr. Priestley, who went there so many years after him. But it is so!" The family found a home at last at Weymouth, Mass., near to the Quincys, to whom they were related in some way, and here the close of the article leaves them.

A little document which will surely survive the political campaign that has evoked it is Mr. David A. Wells's 'Primer of Tariff Reform,' published by the New York State Revenue Reform League at 39 Nassau Street. It is in the form of question and answer, the following being the answer to the question if our protective policy has secured high wages: "No; and the proof is, that wages are the highest in the United States—absolutely and in comparison with the Old World rates—in those industries which do not have, or confessedly do not need, protection." Illustrations follow.

Mr. J. Parker Norris finishes his valuable series of articles on "The Portraits of Shakspere" in *Shakespeariana* for September. He ends with the Ward statue in Central Park.

A bibliography of the "Dies Iræ" of Thomas de Celano is begun in the October Bulletin of the Mercantile Library of Philadelphia, by Mr. John Edmands, librarian. The references are chiefly to works in English.

Every one who has a large correspondence must have noticed that type-writers are gradually coming into very general use. Most of these, however, are worked by pressing knobs, which is fatiguing. But news comes from Berlin that a Herr H. Noeh has succeeded in making a writer in which it is only necessary to move a needle around a quadrant on which are marked the letters of the alphabet, as in some old-fashioned telegraphic machines.

The Bibliothèque Professionelle d'Art et d'Industrie, made possible by M. Formey's legacy of 200,000 francs, has been organized. About 500 works have been purchased at a cost of 25,000 francs. The Paris municipal libraries have already introduced the innovation of lending pieces of music; this library goes further, and has bought a considerable number of drawings and engravings with the intention of lending them out.

Habent sua fata libelli. Book rarities are not always good investments. The magnificent illuminated manuscript 'Chroniques de Normandie,' which six years ago brought 51,000 francs at the Firmin-Didot sale, was knocked down recently at London for £980, less than half as much.

Stonehenge is paralleled in the Sahara. Captain Bernard, one of the survivors of the Flatters expedition, relates that he found monuments of

huge untrimmed stones in the form of enclosures and of alleys, also tumuli and dolmens. He supposes them to be tombs.

Those who are fond of setting on the genealogical sleuth-hounds or of tracing literary genealogies, will find it worth their while to look into an old French poem of the thirteenth century, called 'Li Dis dou Vrai Aniel,' just edited in Germany for the second time by A. Tobler. There they will find the undoubted original of the celebrated story of 'The Three Rings,' which Lessing, in his 'Nathan der Weise,' has made so effective. The same allegorical application to the three world-religions, Jewish, Mohammedan, and Christian, that Lessing makes is made by the unknown poet. So true it is that there is nothing new under the (literary) sun.

F. W. Christern has received from Frederik Muller & Co., Amsterdam, a catalogue of engravings, ancient and modern, from the collection of M. E. W. Van Nest, to be sold by this house on November 25 and 26; and a still more curious document from the same source: "Catalogue d'une Collection unique de Dessins, Gravures, et Eaux-Fortes composés ou exécutés par des Femmes." No other special catalogue of the works of female artists, say the eminent Dutch bibliographers and booksellers, is known to them; and they show why, in this age of the emancipation of woman, such a collection is eminently proper, and why the friends of the sex that is struggling for its rights and its just recognition should buy the present collection *en bloc*. To this worthy object we cheerfully lend the publicity of our columns. Royalty and nobility figure in these 912 numbers along with the striking number of daughters, sisters, and wives of celebrated masters. "What a theme for a zealous disciple of Darwin is this hereditary faculty in the graphic arts!" The sale will be kept open till January 1, 1885.

—Three of the sheets in the great folio 'Atlas of New Jersey,' prepared under the auspices of the Geological Survey of that State, have now been issued. These are numbered 3 (Central Highlands), 4 (Northeastern Highlands), and 7 (Northeastern Red Sandstone), respectively, and delineate the major part of the State north of the parallel of 40° 30′, or, in other words, the glacial district. Three more, Nos. 2 (Southwestern Highlands), 6 (Central Red Sandstone), and 16 (Egg Harbor), will be printed before the close of the year, Nos. 2 and 6 covering the gaps in the series now under our eyes. The total number is to be seventeen, which are skilfully overlapped so that no region suffers by being just on the border; and such are the necessities of the case that the cities of New York and Brooklyn, Easton, Philadelphia, and Wilmington, though lying, of course, out of bounds, are embraced in the scheme. That is to say, this Atlas will describe a territory peopled by some five millions of inhabitants. The uniform scale is one mile to the inch, which allows all the main roads to be set down, as well as the contour lines of the topography, with the heights annexed. The execution of these maps (by Julius Bien & Co.) is beyond praise, and not only represents the highest state of the cartographical art of the country, but will compare with the work which issues from any of the great Continental establishments. Nor do we need to insist on the utility of this Atlas, which, so far as the physical features are concerned, is finished for all time, and will serve as a basis for periodical revisions to keep pace with the political and economic changes. Its missionary potency also seems to us very great. Those States whose area is relatively small, like New Jersey's, and which, being on the seaboard, have the assistance of the United States Coast Survey in the most difficult portion of their mapping, would, we are sure, if this Atlas were shown to their legislators, soon be engaged in a similar undertaking. They would find an additional inducement (if they could imitate it) in the inexpensiveness of the conduct of the Geologic Survey to the State of New Jersey.

—Sir William Thomson has just closed an interesting course of lectures at the Johns Hopkins University, the object of which was to discuss the possibility of placing the wave theory of light on a more satisfactory basis. The first portion of each lecture was devoted to the theory of elastic solids, the second to the dynamics of a working model of a molecule—a heavy-weighted nucleus made sensitive to the vibrations of the ether by successive elastic atmospheres. Of Sir William Thomson's contributions to molecular physics, none have been more striking than his skilful realizations of mathematical formulæ by the construction of working models. He is himself of the opinion that any theory of the intimate constitution of matter has never been properly conceived until it has been put into action on a visible scale: that Cauchy, for instance, would never have supposed that there is a definite relation between compressibility and rigidity in solids if he had been perfectly familiar with the properties of jelly.

—Sylvester, Cayley, and Sir William Thomson, the three great English names in mathematics and mathematical physics, have now within a few years manifested themselves in person to American audiences. They might furnish the scientific observer with material for an interesting study of the man of genius as a teacher. Professor Sylvester and Sir William Thomson are both full of enthusiasm, and both penetrated with a burning desire to put their hearers in possession of the knowledge with which they are overflowing. Sylvester and Cayley are careful to make easy the reception of new ideas by frequent repetition of the meaning of their terms and symbols. Sir William Thomson did not wound the feelings of his audience by explaining the phenomenon of anomalous dispersion, although he confessed that he was himself unaware of its existence a few years ago. All three are distinguished from the ordinary lecturer by the absence of bookishness, by a power of fresh and vivid presentation which one may naturally expect from a man who speaks on a subject which is largely his own creation. Sylvester is the most unequal—perhaps the most stimulating as well as enjoyable when full of triumph and enthusiasm, and the least so when uninspired by fresh achievement. Cayley is the most even and methodical; nothing ruffles the serenity of his steady progress, either in exposition or in research. Sir William Thomson has in the highest degree the power of putting himself *en rapport* with his hearers—of making them, as he has said, his coefficients in the work before him. His numerous mechanical inventions show the practical bent of his mind. All three are splendid examples of the frank kindliness, the desire to lend a friendly helping hand to all with whom they come in contact, which are so much the secret of the English charm of manner.

—It is not impossible that the scientific world and the world at large may have been somewhat hasty in accepting Doctor Koch's interpretation of the nature of choleraic disease. That the affection is in some way connected with an undue development in the system of micro-organisms, there seems to be no reason to doubt (though, perhaps, absolute proof on this point is still wanting); but whether that form of organism designated the "comma-shaped bacillus" is actually at the bottom of the disorder, as has been asserted by the eminent German investigator, or not, may still be considered an open question. All of Doctor Koch's researches, as well as those which follow his, show conclusively that this "comma-shaped bacillus" is present, in greater or less abundance, in practically all true cases of cholera; and, further, that the same form is recognizable in cholera subjects so far removed from each other as Egypt and India. On the other hand, it has been alleged that no bacilli of the description here referred to have ever been detected in cases other than those of cholera. From these premises it would appear impossible to draw any conclusion but that which has been reached by Doctor Koch. In a recent communication (September 25) to *Nature*, however, Surgeon-Major T. R. Lewis, Assistant Professor of Pathology in the English Army Medical School, while confirming the results of Koch's investigations in so far as they pertain to the universality of the comma-shaped bacillus in all true cases of cholera, essays to show, and apparently with good reason, that the conclusion reached is not necessarily a legitimate one, inasmuch as his own observations prove the existence, even in large quantities, of the same micro-organism in the secretions of the mouth and fauces of the normally healthy subject. Therefore, it is contended, the cholera process may in some manner merely promote the development of the bacilli, rather than that these last should be the actual *materies morbi*. Doctor Lewis, whose experience extends over a period of upward of fifteen years, can ask respectful consideration of his investigations, and doubtless many will be found to follow him in regarding the "comma-like bacilli found in cholera, to which such virulent properties have been ascribed," as "identical in their nature with those ordinarily present in the saliva, until it has been clearly demonstrated that they are physiologically different."

—Signor Tommasi-Crudeli, member of the Italian Parliament and professor of hygiene in the Roman University, sent a letter last month to the *Popolo Romano*, protesting against quarantines. It has now only an historical interest, for the quarantines have been given up. He declares that on land they were proved utterly useless in the great epidemic of cholera that ravaged Europe from 1830 to 1838. They only stop the well-to-do; the poor, who are most likely to have the cholera, are never kept out by them, for as they travel on foot they easily evade all the cordons. The unfortunate travellers who are detained are herded together for five or seven days, and if by chance any one of them is infected they all become; they may all get the seeds of the disease and be released just in time to propagate it wherever they go. The real prophylactic is a good sanitary condition of cities. A few hundred Italians fled home from Marseilles and Toulon. The Government did what it could to keep them out; but they and the cholera entered, and in Naples people died by hundreds daily, because everything there favored the spread of the disease. Thousands of Frenchmen fled from the same cities throughout France, and yet the cholera did not get a foothold anywhere, because France was comparatively clean. One of the absurd results of the system was that the International Congress at Copenhagen was not attended by the official deputies from Italy, because the Italians, on their return, though they were to come from a country that was free from the scourge and would have passed through countries equally free, would have been compelled before they could reënter their own country, in which the disease was raging, to spend a week in infected lazarettos, where they ran great risk of catching the disease. The professor says that such folly has made his countrymen the laughing-stock of Europe, and the panic from which it proceeds has given additional power to the cholera.

—A discussion has arisen as to the low condition of local historical societies in France and Germany, and the remedies for it. The reader has no doubt seen an historical and philosophical museum in a New England country town or small seaport—a few Indian relics, dusty; a few curious stones, dried plants, stuffed birds or animals, and, at the seaport, some East Indian curiosities, likewise dusty. Now and then a stranger is brought in to see them, but the inhabitants of the town have long since lost their interest in the collection. Such a museum is typical of the small historical societies of the French provinces. Herr Haag, in his 'Die Territorial-Geschichte und ihre Berechtigung' (Gotha, 1882), and Herr G. Bossert, in 'Die historischen Vereine vor dem Tribunal der Wissenschaft' (Heilbronn, 1883), and M. Stein, in 'Le Congrès des Sociétés Savantes' (Lyons, 1884), state the difficulty, and M. Stein proposes to remedy it by putting them under the direction of the Comité des Travaux Historiques—a truly French remedy, centralization. M. Bourm, in *Polybiblion*, however, sees more hope in the influence of the accomplished scholars whom the École des Chartes is sending out to become departmental archivists. They are trained in a scientific method; they are young and enthusiastic; they will stir up a spirit of research, and keep alive the interest in the history of their neighborhoods. This seems to us a very judicious combination of centralization and localization.

—American students of Germanic philology at Bonn in 1870 will remember a certain touching and venerable figure that used to appear on the streets at stated intervals every afternoon, led by an elderly lady, the two seeming to be out for the purpose of breathing the delightful air of the Rhine and answering the innumerable greetings which a friendly acquaintance showered right and left on them. The old man in the cap, almost blind, but with an expression of benignity on his face as unmistakable as its intelligence, was the great Germanist Friedrich Diez, a man of world-wide celebrity, no less famed as an authority in Romance philology and general South-European linguistics. Diez was then fast approaching the termination of his busy and epoch-making career. His great 'Grammar of the Romance Languages' had been published; his 'Dictionary of the Romance Languages' had long been in the hands of scholars; and nothing more seemed possible to be expected from his expiring pen. It was forgotten—only temporarily, however—that Diez had been an active contributor to the numerous philological journals of his day, and that many of these essays, careful, erudite, and thorough, had stirred the scholarly world of Germany, and given new depth to criticism in the many departments which they touched. Twenty-four of these essays and reviews have now been collected and republished in admirable form by a loving disciple of the master ('Friedrich Diez: Kleinere Arbeiten und Recensionen; herausgegeben von H. Breymann,' Munich). Here we have the noteworthy review of Bekker's edition of the Provençal 'Fierabras,' the essays on Spanish poetry, and the remarkable review of Faber's 'Floresta,' in which Diez strikingly formulates the principles of treatment which must govern the historian of a nation's antique poetry. He had already spoken of the work of translation as "eine heilige Arbeit" and laid down its principles—principles which he not only enunciated clearly, but practised conscientiously in his own numerous translations from the Spanish, Provençal, and English. Animated and poetic renderings into German of Byron's "Corsair" and "Lara" are added as an appendix to the volume, the romantic story of the Louisiana pirate Lafitte being given in a note in illustration of a print in the former. The immense intellectual activity of the professor is shown in another appendix, where a bewildering *Uebersicht* of his courses of lectures is given.

—Dr. F. X. von Neumann-Spallart's *Uebersichten der Weltwirthschaft* (Stuttgart: Julius Maier) is an extremely useful annual of industrial statistics. It has hitherto been almost unknown in America, but is likely to be more extensively used as its merits become appreciated. It differs from works like the *Almanach de Gotha* or the *Statesman's Year Book* in several respects. First, it confines itself exclusively to industrial statistics, and is thus able to present these in much greater fulness without making the book too large, or the print too small. Second, it is arranged by branches of industry instead of by countries. This does not make it any easier to find individual facts, but it makes it very much easier to find groups of facts and draw comparisons between them. It also makes it possible to do justice to matters of international development. Third, it does not confine itself to statistics of one or two years only, but often gives them for a series of years; so that we can see not merely where the strength now is, but also where the growth is most marked. In some of these respects it is not unlike the works of Mr. Mulhall; but it is incomparably fuller and more scientific. Mulhall aims to make an entertaining book for the general reader; Neumann aims to make a serviceable and trustworthy book of reference.

—That Neumann has met a real want may be inferred from the way his book has grown to what it is now. For some years it was simply one among a number of essays in Behm's *Geographisches Jahrbuch*. About seven years ago it appeared for the first time as an independent book of some 200 pages. Each successive number has been fuller as well as better than its predecessor, and we now have a volume of nearly 500 pages. Seventy of these are devoted to an account of the more general industrial conditions, dealing with trade as a whole; with prices, wages, and interest; with failures, strikes, and emigration; and other similar statistics. Eighty pages are then devoted to the production and movement of grain; followed by much shorter accounts concerning meat, sugar, and a variety of other articles of consumption, and also concerning coal, iron, cotton, wool, and other materials of manufacture. These statistics of production occupy about half the book. Then we have sixty pages devoted to the precious metals, money, and its substitutes; and seventy pages devoted to the means of communication—post-office, telegraph, shipping, and, above all, railroads. The indexes are short but serviceable. Not the least valuable thing about the book is its frequent reference to authorities where the matters in question are treated more in detail. These authorities are of the most varied description. In his American work Neumann seems equally familiar with the *Financial Chronicle* and with Poor's 'Manual,' with the Reports of the Department of Agriculture and with those of the Bureau of Statistics. The title-page offers an example of praiseworthy candor. The volume just issued only purports to cover the "Year 1881-'82, with many references to the year 1883." Practically, however, its statistics come down about as late as what we are likely to find six months hence in the year-books for 1885. For detailed criticism we have no space. We cannot fairly expect that a book of this scope should satisfy us in every particular. We may well be content to find so many merits and so few defects.

—Buddhist missions from India to China began as early as the first century of our era. Many pious translators labored to set forth the doctrines of Buddhism to the Celestials in their own tongue. And, on the other hand, there journeyed to the land of Buddha many Chinese pilgrims, most famous of whom were Fa-hian (400-415) and Hiouen-thsang (629-645). The latter's travels have been translated from Chinese into French by Stanislas Julien. Hiouen-thsang tells us that he carried back from India 657 works. It was the publication of his travels, thirty years ago, that suggested to Professor Wilson, of Oxford, the possibility of finding some of these ancient Sanskrit manuscripts in China. Although Wilson's efforts were unsuccessful, there is reason to hope that some of these old books may yet be discovered. Buddhism became the established religion of Japan about 600 A. D., and was received not directly from China, but from Corea, which had been converted a couple of hundred years before. Afterward, Japanese students went to China and received instruction from the renowned Hiouen-thsang and others, and we hear of Japanese who were not only good Chinese scholars, but good Sanskrit scholars as well. Now, some ten or twelve centuries later, it happens that young Japanese students go, not to China, but to Oxford, to learn Sanskrit and Pali. Among Prof. F. M. Müller's students some five years ago was a young priest of a Buddhist monastery near Kioto, Mr. Bunyiu Nanjio. Through his aid Müller has obtained several interesting Buddhist Sanskrit texts from Japan. The first was the chapter about The Happy Land (*sukhavatī*), and was published in the Journal of the Royal Asiatic Society in April, 1880. Meantime Müller came upon evidence that Sanskrit Buddhist books, written on palm-leaves, existed as late as 1727 in Horiuzhi, a monastery founded near the beginning of the seventh century. Search was made by Mr. Nanjio's fellow-priests, and in June, 1880, they found two palm-leaves containing a very ancient Sanskrit manuscript. These palm-leaves had been in the monastery of Horiuzhi since A. D. 609. The manuscript is therefore, as far as we know, the oldest Sanskrit manuscript in existence. This is now published in the third part of the first volume of the 'Anecdota Oxoniensia,' Aryan series, by Müller and Nanjio (Oxford: Clarendon Press). The full history of the discovery was given in the first part. Inasmuch as these leaves are the earliest specimens of any Sanskrit alphabet applied to literary purposes, their chief interest is palæographical, and they are accordingly reproduced with perfect exactness in autotypes, as well as in several facsimiles. The principal content of the leaves is a well-known Buddhist tract called 'The Quintessence of the Perfection of Wisdom.' In itself it is of little interest to the layman; but that scholars of the extreme Orient should join hands with Western scholars in investigating the history, antiquities, and religion of the Far East is certainly nothing less than a sign of the times, which promises great things for the future. Mr. Nanjio has recently returned to Kioto, and it is hoped that he and the friends whom his example may influence will do much to throw light on the early connection of India with Eastern Asia.

FRANCE IN TONQUIN.

Tonkin; or, France in the Far East. By C. B. Norman, author of 'Armenia and the Campaign of 1877.' London: Chapman & Hall.

THIS book is timely and convenient. Captain Norman has spared no labor to make himself a thorough master of the subject before sitting down to write. He has, he tells us, "perused almost every scrap of writing that has appeared on the subject," and he has arranged his facts in a clear, vigorous, and very readable narrative. It is perhaps somewhat to be regretted that he

has not confined himself to narrative. The story of French action in Tonquin is a story of gross cruelty and fraud, and it is only natural that Captain Norman—belonging as he does to a nation whose manifold possessions throughout the world testify in such unequivocal language to its mild, inoffensive character—should be moved to indignation while he recounts it. But he need not tear a passion to tatters. France is not the only nation which, in the East, has preyed upon weaker peoples. The recollection of Chinese opium wars, and invasions of Burmah as cruel and indefensible as the French invasion of Tonquin, ought to induce an Englishman to observe moderation in his use of the language of denunciation when speaking of the aggressive policy of France. And moderation of speech would have been especially appropriate in the present instance, because it is clear from Captain Norman's own narrative that a reasonable dread of England's grasping and aggressive policy in Asia conduced, more than any other cause, to mould the action of France in Tonquin into the shape which it has actually taken.

There is another cause which largely detracts from the lofty moral tone which Captain Norman thinks fit to assume when speaking of the crimes of France, and that is his excessive alarm at what may be the consequences of those crimes to Great Britain. The reader is never quite certain whether his indignation is being invoked on account of the sufferings of the Tonquinese, or the damages to British trade which are ikely to proceed therefrom. It is not improbable that Captain Norman considers that the French are as much deserving of censure on the latter score as on the former. "British trade," in the eyes of most Englishmen, is the most sacred thing in the universe. They will produce it as an obvious and abundant justification for anything which they are pleased to do; and, conversely, an injury inflicted upon British trade is analogous to the sin against the Holy Ghost—not to be forgiven either in this world or the next. Captain Norman is full of this lofty enthusiasm for the interests of the national trade; and when he reflects upon the duties which France will impose upon British commerce should she obtain command of the navigation of the Red River, he feels that a European coalition—as in the days of Napoleon—ought to be formed against a Power so evil and so perfidious.

The relations between France and Tonquin go back to a period before the great Revolution. In the reign of Louis XVI., French troops were engaged in the dynastic wars for the sovereignty of Anam, and French engineers built the fortifications at Hanoi, Sontay, and other places which French troops have lately had to capture. French missionaries have, for more than a century, been engaged in the work of preaching and conversion in Tonquin; and the persecution to which these missionaries have from time to time been subjected, in defiance of treaty engagements, was one of the causes of the French Government again actively intervening in the internal politics of Tonquin. The present war, however, was not a result of the severities practised upon the Jesuit missions. It grew out of a trading venture conducted by a Frenchman—a M. Dupuis—which developed, as is the manner with such ventures when conducted by Europeans among an Oriental people, into piracy upon a large and aggressive scale. M. Dupuis, a Frenchman resident at Shanghai for several years, appears to have been the first man to conceive the project of using the Red River as a channel to open up the southern provinces of the Celestial Empire to European commerce. This was in 1868. It was plainly impossible for a single Frenchman to ascend the Red River from its mouth in the face of the certain opposition of the Anamite authorities; but the Chinese Government was, at that time, engaged in the suppression of the Mohammedan rebellion in Western China—the Governor of the Province of Yunnan having the chief conduct of the military operations. M. Dupuis, after an adventurous journey by land, waited upon the Governor of Yunnan, and entered into contracts with him for a supply of modern arms of precision, the more speedily to crush the insurrection. Returning to France, M. Dupuis fitted out a small flotilla, loaded his ships with the arms for which he had contracted with the Governor of Yunnan, placed on them a carefully trained guard of two hundred men armed with chassepots and revolvers, and then sailed to the mouth of the Red River, where he displayed the Chinese flag, as an inducement to the Anamite authorities to allow him to ascend the river and deliver his cargo to the Governor of Yunnan.

His adventures and his difficulties in the course of this enterprise are too long to relate here. They are, however, told with much spirit by Captain Norman. Suffice it to say that, after considerable delay, Dupuis was allowed to pass up the river, and delivered the arms to the Governor of Yunnan as he had undertaken to do. His commercial business being thus brought to a successful close, M. Dupuis bethought himself of filling up his leisure time with the equally congenial occupation of piracy. The particular form of piracy which he selected was that which also commended itself to the servants of the East India Company when first it became a power in India. He bought a quantity of salt, and insisted upon his right to sell it without paying the dues which the Anam Government levied upon all other dealers in that commodity. This high-handed act brought Dupuis into collision with the Governor of Hanoi. Reference was made to Yunnan to ascertain if the Governor of that Province had in any way given the Frenchman authority for these proceedings; and on an answer in the negative being returned, Dupuis found himself surrounded upon all sides by vastly superior numbers. His position was a perilous one. He had been disavowed by China; he had nothing to show that his presence at Hanoi was with the sanction or even the knowledge of his own Government.

"From all sides," writes Captain Norman, "large bodies of armed men were converged on Hanoi; barriers were constructed above and below the stream to cut off the retreat of the squadron, and it was clear that only audacity could save the French. Dupuis, whose courage throughout the conflict never flinched, was equal to the emergency; he ran up the tricolor and despatched his second in command to Saigon for the assistance of the French Admiral."

This unexpected move discomfited his adversaries. The kingdom of Anam had already been shorn of some of its richest provinces by provoking the enmity of France, and the King and his officers hesitated to take any action which might give occasion to armed intervention on the part of the French. They maintained a defensive attitude toward M. Dupuis and his flotilla, and despatched an embassy to Saigon to represent the presence of M. Dupuis at Hanoi as a breach of treaty stipulations, and to request that he should be ordered to withdraw.

Out of this incident originated the war which has now developed into one with the Chinese Empire. Captain Norman shows indisputably that if the French, upon receiving the news of the collision between M. Dupuis and the Government of Tonquin, had acted—we will not say with justice, but with the smallest amount of prudence and circumspection—they would by this time have acquired complete control over the navigation of the Red River without having to fire a shot, and without any breach of amity with either the Tonquinese or the Chinese. But in their eagerness to grasp the coveted prize, and to anticipate the endeavors of the English to open up the southern provinces of China by way of Burmah, they were blind to everything but what seemed the shortest road to the object in view. They grievously underrated the strength of the resistance which they would have to encounter; and they thought that they could safely ignore the protectorate exercised by China over Tonquin, as well as the far more important fact that Chinese regular soldiers constituted an important part of the garrisons which guarded the course of the Red River. Hence the defeats sustained in succession by the expeditions under the command of Captains Garnier and Rivière.

Both these officers were in command of forces far too weak for the work they wished to do; but, ignorant of this, they not simply made no effort to conciliate the Tonquinese—they treated them with the grossest perfidy and cruelty. Captain Rivière, without apparently any provocation at all, erected a gallows at Hanoi, on which he hung scores of the inhabitants. The result was that the extreme anxiety of the Tonquinese to keep on terms with the French was changed into an equally bitter hatred. They beleaguered the French in Hanoi, and it was in an unsuccessful attempt to raise this blockade that Garnier met his death, and, subsequently, Captain Rivière. General Bouet was then sent to Hanoi, and the forces under him increased by several thousand men; but for several months his operations were attended with no better success than those of his less powerfully equipped predecessors. Thus, bit by bit, the operations on the Red River increased in magnitude till they had attained the dimensions of a regular war, in which the French were employing a considerable fleet at sea, and on land 9,000 French soldiers, with fifty pieces of artillery.

To appreciate the monstrous character of this war it is necessary to bear in mind that the sole offence of which the Tonquin authorities had been guilty was their refusal to allow a French adventurer to carry on a contraband trade in salt within their territories. Nevertheless, the French commanders carried on their operations with a ferocity such as if they had a long series of grievous outrages to revenge. Towns were bombarded, and all prisoners taken in action were shot or hanged without a touch of pity or compunction—to the eternal reproach and dishonor of General Bouet and Admiral Courbet. All this time the French Ministry in Paris were not left without warning that in pursuing their career of aggression in Tonquin they were rushing blindly into a war with China. In spite of repeated cautions from their ambassadors in China on the formidable character of the opposition they were exciting, the French Government refused to look upon China otherwise than as a "facteur négligeable" on the banks of the Red River, and this at the very time when they knew that French soldiers had been actually engaged with Chinese regulars.

Captain Norman devotes a good many pages to a comparative estimate of the military and naval resources of China and the French Republic, and, on paper at least, the resources of the former Power are made to appear very considerable. She can, according to our author, expand her army in case of need to the gigantic total of a million of men, and her fleet, both from the nature of its armament and the hardy and courageous character of her sailors, will compel France to put forth all her strength in order to maintain an ascendency at sea. Such estimates, however, are altogether fallacious in the case of Oriental Powers. These are ready enough to spend vast sums of money in the purchase of modern arms of precision, but show very little capacity for turning their purchases to good account when the hour for using them arrives. It is not in actual

encounter with the forces of the enemy, either by land or sea, that the French will experience their greatest difficulty, but in carrying on military operations in an unhealthy country, at a great distance from their base of supply, and with an army recruited upon the short-service system.

"Exclusive," writes Captain Norman, "of the marine army, which has up to the present furnished by far the greater part of the force under Admiral Courbet's command, France possesses, in round numbers, 500,000 men with the colors, inclusive of officers and train. Of these, 140,000 joined their regiments in December, 1883, and may be dismissed from further consideration; and 127,000 joined in October, 1882, and can scarcely be looked upon as very valuable lads to embark on a European campaign. In fact, at the present moment there is not a battalion in the French army which could put 150 effective bayonets into line of battle, while the proportion of reliable non-commissioned officers each one could furnish is far less. I have been assured by a French officer of experience and distinction that, in order to put a complete division into the field, it would be necessary not only to call out all the men of the active army now at their homes, and all men of the reserve that are borne on the rolls of the mobilized regiments, but also to demand 4,000 volunteer privates and at least 300 non-commissioned officers, together with a very strong contingent of officers."

The French army has only partially recovered from the disorganization caused by the operations in Tunis; and a prolonged campaign in Tonquin, or a march upon Pekin, would throw it once more into confusion. The revenues of the republic, also, are not in a condition to bear the burden of a distant and costly war; and although, if China is resolute to stand the hazard of a war, France will probably in the end come out of it victorious, it will be with her resources so exhausted and her military strength so impaired that for many a year after she will be in a measure effaced from the politics of Europe. That the possession of Tonquin will be the source of any profit to France, few can anticipate who know the unfortunate result of French colonial enterprises hitherto. It will occasion, like Algiers, a perennial drain upon the national exchequer; while the European trade with the southern provinces of China by way of the Red River will be, almost to a certainty, monopolized by English and German merchants.

CHILDREN'S BOOKS.

'Suwanee River Tales' (Boston, Roberts Bros.) is a collection of stories, by Sherwood Bonner, which have already been published in different periodicals. Well do they deserve to appear together, and they are sure to please both young and old, though children will not appreciate the artistic perfection of these simple, humorous, graphic tales. The old colored "Granmammy" who is the central figure of several of them, seems with us in living presence as we read. Her droll dialect, her heart-warm motherliness, her glow of religious faith, are all admirably rendered. A pathetic and powerful scene is that in which, by the aid of Scriptural quotations, she breaks *joyful* news to an afflicted mother who believes her son to have died on the battlefield—one of those of our Civil War. The child spectator of this exciting scene, at its conclusion, slides down the balusters to be present at the meeting of mother and son—a touch of nature which by no means detracts from the lifelikeness of the picture. Another character which makes a strong impression on us is that of Aunt Hannah, a victim of frightful superstitions, who nearly dies of an imaginary trouble, induced, she thinks, through the arts of an old witch, Aunt Sini, and who is cured by an absurd hocus-pocus practised on her by a young physician, who evidently thinks humbug one of the legitimate curative arts. There are many other pleasant personages in the book besides the colored folks, and the scenes are not all laid on the Suwanee River; but no matter who the person or where the scene, the charm of piquant reality invests all, and a perfect diction lends an added grace. An exception to this air of reality is indeed found in the story of "C. G.," the finale of which seems a sort of second ending or afterthought, and makes an unnatural anti-climax. But in general the book is thoroughly delightful, and will be a boon to the family circle as well as to the solitary reader.

In his preface to 'Queer Stories for Boys and Girls' (Scribners) Edward Eggleston states that they have already seen the light at long intervals in sundry juvenile periodicals, and that some of them have been published together, but that this is "the first fair and square issue in book form." To readers of fairy-tales they will seem for the most part less "queer" than lively, chatty, bright. An excellent *morale* combines with genial humor and vivacious fancy to make them instructive as well as charming. Little girls will pronounce them "perfectly lovely." Boys will like some very much, but find others too near the nursery level. Many of the stories are very short, but all are pithy. In general, they are best adapted to readers of eight to twelve years of age.

'The Hunter Cats of Connorloa' (Roberts Bros.) is a short story of a California home and its inmates, by Mrs. Helen Jackson ("H. H."). The two little orphans who come there to live with their bachelor uncle have been transplanted from an Italian palace, and know well how to appreciate the freedom and varied interests of their new life. The army of cats kept by Mr. Connor to exterminate the enemies of his vegetation, gives name to the little volume. Children will find it very pleasant reading, and, moreover, pick up some crumbs of information.

'Tip Cat' comes to us from the same publishers, and is written by the author of 'Miss Toosey's Mission.' It is certainly not uninteresting, despite much dreariness which seems, unfortunately, more life-like than the pleasanter parts of the story, these being almost "too good to be true." It is one of the many hybrid works which, though in large part adapted to children, yet contain elements suitable only for older readers, thus offending the sense of moral fitness as well as of artistic congruity.

A charming story is 'A Sea Change,' by Flora L. Shaw (Roberts Bros.). The little maiden Marina is rescued from the ocean in night and storm, so nearly drowned, and with so many of her memories gone from her, that she may be said to begin a new life. As the story goes on, her character is seen to be very sweet and noble, and its loveliness is in striking contrast to the persistent selfishness of the young girls with whom she is compelled to associate. In the account of Marina's London life, the educational *forcing* process is well described. The book is interesting throughout, though the action drags in the middle, and is hurried toward the end, making the dénouement, which is not too probable, seem sudden and confused. But the story as a whole is so sound and sweet that we lay it down with regret, wishing that all literature for children were as pure and wholesome. It is a book especially suitable for girls.

'The Ice Queen' is one of the most interesting serials which Harper & Brothers have published in their *Young People*. They now present it in a pretty and appropriate binding, and with excellent type and illustrations. In it Ernest Ingersoll graphically tells the story of the journey of four young persons over ice-bound Lake Erie. It is a little hard at the outset to believe that such thoughtful heads as they seem to possess could ever have resolved on so foolhardy a project; but apart from that, the story has a very natural ring. Many are the perils to which the travellers are exposed, but these are finally all surmounted by a combination of grit, long-headedness, and good fortune. Boys will enjoy the book very much.

Mr. Thomas W. Knox's 'Voyage of the Vivian to the North Pole and Beyond' (Harpers) is a very handsome book, on good paper, well printed, and with a neatly illuminated cover. It is profusely illustrated from the store of Arctic illustrations which have appeared in the publications of the firm or of the Government Printing Office. It contains a number of illustrations which have no particular pertinence to the text, it is true, but they generally relate to Arctic matters and are unobjectionable. The story, if the extremely prosy thread of narrative upon which the items of a sort of Arctic encyclopædia are strung can be called a story, is that of a French and an American ship which visit Kamchatka, pass through Bering Strait, enter the pack, drift like the *Jeannette*, but without mishaps, find an open polar sea, which they cross, and drift down on either side of Greenland into the waters of the Atlantic. There is a doctor who lectures on the Arctic regions all through the book to two lads who kill polar bears, a very prosy whaling skipper, and a Bunsbyish naval officer. We have noticed, besides the adoption of some more than questionable theories, a few errors which seem to be the result of carelessness rather than want of knowledge. The fossil elephant of Siberia is not known in America as the mastodon, nor is the East Cape of Asia on the Arctic Circle. The dramatis personæ are very wooden, and the humor elephantine. Nevertheless, there is a good store of authentic information on the Polar regions in the book, and every bright child will enjoy looking at the pictures. Meanwhile the race of Mayne Reids, who can make their boy heroes *live*, seems to be becoming extinct

In 'Jack Archer: A Tale of the Crimea' (Roberts Bros.), Mr. Henty depicts one of those boy heroes whose adventures seem so much more entertaining to youthful readers than probable to adult ones. Endowed with the most reckless courage, which is not an unusual attribute of young midshipmen, Jack displays a quick-wittedness, presence of mind, and even wisdom, which, to say the least, are far beyond his years. The book is not immoral or coarse, in the ordinary sense, but a scrupulous author might do better than to portray, without a word of reprehension, the free use of champagne, brandy, and cigars by a lad of sixteen. At about that age, Jack falls in love, and, strange to say, he preserves his regard for the lady during a separation of several years, at the end of which the Russian count, her father, seeks him out, encourages his attachment, and soon presents the young pair with a fine estate in Surrey, on which our hitherto adventurous hero settles down to family life! The story is written partly to give an idea of the Crimean War, and that purpose it may serve, to readers who prefer poor fiction to good history. Even in the historical parts of the book, however, the author shows lack of judgment, by introducing unnecessary and cumbrous detail. The style is mediocre; the type and illustrations deserve no praise.

Base-ball is not really the most absorbing interest of all mankind, but Noah Brooks has made it seem so, in 'Our Base-Ball Club' (E. P. Dutton & Co.); and to lovers of the famous game this should be the strongest commendation. The story consists mainly of full details of the games supposed to be played by the Catalpas with their various opponents. It is, however, spiced with a little jealousy and treachery, and does poetic justice by making the prettiest girl fall in love with the champion player. Clear, bold type, good illustrations, and a gay cover decorated

with base-ball subjects, add to the attractiveness of the volume.

It is enough to say that Hawthorne's 'Wonder Book for Girls and Boys' has been manufactured in a new quarto edition, in their best style, by Houghton, Mifflin & Co., to recommend it to all who wish at once to make a child happy and to improve its taste for art and for literature. Mr. F. S. Church has furnished the illustrations, not, perhaps, maintaining the level of his pretty fancy throughout, yet lending much to the adornment of the book. His designs, in their freedom from convention, are quite in sympathy with the handling which Hawthorne gave to Lempriere.

We take it that 'The Princess Nobody,' Mr. Andrew Lang's fairy-tale written into (rather than after) the designs of the late Richard Doyle, antedates the death of that genial artist. At least, the "Ballade of Dedication" in the edition before us (London: Longmans; New York: E. P. Dutton & Co.), which tells of Mr. Lang's "interpreting each cut and plate—The works of Dicky Doyle," suggests an ante-mortem familiarity. Be this as it may, and also whether the same Ballade does not as clearly betray its origin beyond Tweed by the verse—

"Though ne'er I'll match the drawings great"—

as by this other—

"The Teviot roars in 'spate'"—

childhood is entitled to all that the great humorist bequeathed to it in his elfen-land fantasies; and the oftener these are reproduced, the better. Some of the drawings in the present instance are effectively printed in color. In all, the fun is combined with a decorative grace of composition peculiar to Doyle. Happy the boy or girl permitted to wander here in Mushroom-Land, and to explore the ingenious labyrinth of elves asleep on the boughs of a great yew after their midnight revels.

The allowances for inaccuracy which we are accustomed to make for Mr. James Parton in his works light or serious—rather let us say, slight or elaborate, for this writer is always serious—begin with the title in 'Captains of Industry' (Houghton, Mifflin & Co.). The sub-title reads: "Or, Men of Business who did something besides making money." As men of business are not necessarily captains of industry, there is an apparent incongruity in this equation. The first sentence of the preface offers a third phase of the subject: "In this volume are presented examples of men who shed lustre upon ordinary pursuits, either by the superior manner in which they exercised them, or by the noble use they made of the leisure which success in them usually gives." Many of the brief sketches of which this volume consists refuse to fit in any of the foregoing categories, and, in truth, the heterogeneous contents can have no more precise common designation than that they are biographical. They were originally contributed to the *Youth's Companion* and the New York *Ledger*. A large number of them are what might be called juvenile reviews of current lives, such as Washburn's Edward Coles, Elizur Wright's Myron Holley, Frothingham's Gerrit Smith, Peter Burnett's Autobiography, the lives of Greeley and Bennett, of Thomas Edward, Robert Dick, and John Duncan. A considerable proportion of the examples are English. Mr. Parton's style is as well calculated to interest the young as their elders, and what he offers is wholesome reading. A few slips have caught our eye, such as the description, on p. 65, of Faneuil Hall (the largest in Boston) as "a quaint little interior," and the conflicting statements in regard to the age of Sir Moses Montefiore on pp. 379, 383. In the one place we are told that "his hundredth birthday was celebrated in 1883," and in the other, correctly, "in October [1884] he completes his hundredth year." The book contains eight portraits, those of John Bright, Gerrit Smith, and Peter Cooper being noticeably well done.

The 'Boys' and Girls' Herodotus' is a companion volume to the 'Boys' and Girls' Plutarch,' both edited by Mr. John S. White, and published by G. P. Putnam's Sons. The book is in quarto form, handsomely illustrated, and the print so large and clear that no one need fear that it will foster a tendency to near-sightedness on the part of boy or girl. In a neat introduction Mr. White says: "I have discarded from the text only what is indelicate to the modern ear, or what the young reader might find tedious, redundant, or irrelevant to the main story. But so small a part comes under this head that I am sure I can say to you, 'This is Herodotus himself.'" We hardly think this statement can be justified. From a careful and somewhat minute calculation of the relative bulk of the two texts we find that the 'Boys' and Girls' Herodotus' is about half as large as Cary's translation (more exactly, four-ninths). We do not think that even the young reader would find the larger half of Herodotus "indelicate" or "tedious, redundant, or irrelevant to the main story"; nor can so large an omission be called a "small part." But in making the assertion Mr. White has been unjust to himself. The book really contains those parts of Herodotus which a judicious parent would most like to have his boys and girls acquainted with, and Mr. White has succeeded in condensing these by omitting multitudes of phrases which were inserted in the Greek text by Herodotus not from necessity, but for the sake of giving his sentences that rhythmical flow and that fulness, completeness, and finish which the æsthetic sense of the Greeks demanded.

RECENT LAW BOOKS.

Prof. Henry John Roby's 'Introduction to the Study of Justinian's Digest' (Cambridge, Eng., University Press) is an admirable beginning in the matter of a thorough edition of the Digest—undertaking to furnish a desideratum of legal students, "help of the same kind as that which is expected and given in many editions of classical authors." The name of the writer is one of high rank in classical scholarship, although, it is said, he is now a cotton spinner near Manchester. He has laid English-speaking students of the Roman law under a great obligation, by bringing his solid learning and his sympathetic English good-sense to bear upon the great task of making the Digest intelligible. The author does not, indeed, promise any further instalment of his work; and in this substantial volume of more than 500 pages he handles critically only a very small fraction of the Latin text. To the twenty-five pages of this text there are added no less than 223 pages of the most learned and illuminating notes. The whole is prefaced with a general Introduction to the Digest; and this makes the largest part of the book. One of the most curious things in this valuable introduction is the fifth chapter, in which Justinian's extracts from Gaius and several other jurists are compared with the original texts; the comparison is not reassuring. Strangely enough, no reference is made by Mr. Roby to Walker's small volumes of 'Selected Titles from the Digest,' issued, with a translation and a few notes, from the same press in 1879 and later.

The author of 'The Law of Nations Considered as Independent Political Communities,' Sir Travers Twiss, has increased by about a hundred pages the compass of the former edition of his work, published in 1861 (Oxford: The Clarendon Press; New York: Macmillan & Co.). A valuable introduction is added, giving an historical account of the treatises on the subject in hand, and also two new chapters on "The Kingdoms of the Lower Danube" and the "Capitulations of the Ottoman Porte." Much has happened since 1861, and it is, at first, surprising that the wars and treaties of the last two decades have not required more space and more changes than they have. But the limited scope of the present treatise is to be remembered: it relates to times of peace. The author published in 1863 a second volume dealing with the rights and duties of nations in time of war; and much of the later harvest to which we have referred was gathered into a second edition of that work in 1875. The author draws an interesting parallel between the operations of the American Colonization Society in Liberia and those of the philanthropic Brussels association on the Congo:

"That the rights of dominion in the sense of the 'dominium eminens,' as distinct from the rights of property, are capable of being acquired by private associations of a philanthropic character in Africa is, we think, established by the two instances of Liberia and Maryland [a settlement near Liberia], . . . the former of which has been recognized as a member of the family of nations—not, indeed, by a European Congress, but after the example of the United States of America itself, by a *catena*, so to say, of separate treaties with the leading states of the civilized world."

Now, as heretofore, the author insists, in opposition to the well-known views of Austin and others, that the law of nations is, in a proper sense, law:

"The history of the European Law of Nations shows that the more powerful nations have, as occasion required, used their individual strength to enforce its rules, and that the less powerful nations have combined their forces from time to time, and by their united strength compelled the more powerful states to respect them. . . . Wherever a rule of conduct is thus capable of being enforced, it ceases to be a mere rule of morality, binding on the conscience of men, and may in contradistinction be termed, without risk of confusion, a rule of law."

The absence of an index of cases in such a book is an inexcusable fault.

The appearance within nine or ten years of its first publication of a third edition of Digby's excellent 'Introduction to the History of the Law of Real Property, with Original Authorities' (Oxford: The Clarendon Press; New York: Macmillan & Co.), is a fact of good omen. It has been a great help in that historical method of studying the law which is by far the most fruitful one. The changes in this edition are but slight, being mainly such as were needed to adapt it to recent English legislation. For a notice of the first edition, the reader is referred to the *Nation*, vol. xxi, p. 373.

The 'Treatise on the Law of Sheriffs and Other Ministerial Officers,' by William Murfree, sr. (St. Louis: F. H. Thomas & Co.), is a good and sensible work, "intended to be a compendium of the law now in force in each of the United States relating to sheriffs and other ministerial officers."

A German translation, by Dr. F. von Holtzendorff, of Westlake's 'Treatise on Private International Law, with Principal Reference to its Practice in England,' has lately been published ('Lehrbuch des Internationalen Privatrechts,' Berlin, Carl Habel). Westlake's treatise, originally printed in 1858, and again, in a new form, in 1880, is particularly intended for students; and from its special endeavor to illustrate the subject by references to Continental law—"when it is necessary to look outside"—it may be supposed to be well adapted for use on the Continent.

A Little Tour in France. By Henry James. Boston: James R. Osgood & Co. 1884.

Mr. James characterizes the papers which form this book as "light pages," and in truth all that

is not almost volatile about them is the touch. The author appears in the same professed character as in his very enjoyable 'Transatlantic Sketches' of a dozen years ago—the character of "the sentimental tourist." But the years elapsed since then, themselves years of travel probably, have apparently dulled the edge of the tourist's interest; and though they have left him all his sentimentality, they have advanced him, too, well into the comfortable and conservative period of human life when travel is no longer the thing it once was, and the traveller's impressions, however wilfully sentimental, become more personal and less objective than the reader of travels cares to have them. Mr. James finds himself resenting "the porterless platforms" of the French *gares*, and longing for "the eager British mercenary, clad in velveteen and clinging to the door of the carriage as it glides into the station"; he resents, too, having to take an inside angle in a carriage whose windows are occupied as if they were "strategical positions" by greedy Germans who were seated before his advent; he is forced by the tedium of long waits to "read all sorts of disagreeable things in certain radical newspapers," and to wonder, first, if he is losing all his "radicalism," and, second, whether he "had any to lose." He is nearly frightened at "a terrible pattern of man" whom he met at Carcassonne, "extremely intelligent, full of special knowledge, and yet remaining essentially of the people, and showing his intelligence with a kind of ferocity, of defiance"; he is pained to observe that this type is "untouched by the desire which one finds in the Englishman, in proportion as he rises in the world, to approximate to the figure of a gentleman." He longs for English lawns, and copses, and ivy, and repose; he is nervously affected at seeing a café-waiter at Bourges serve a gentleman "with a horrible little portfolio, covered with shiny black cloth." Encountering on the Cher a gondola brought from Venice by a fancy of the mistress of Chenonceaux, he finds "the image not less irritating, if less injurious, than the spectacle of a steamer in the Grand Canal which had driven me away from Venice a year and a half before."

The little tour, really one of considerable extent, began at Tours, the capital of the well-known "Garden of France," and the centre whence excursions are usually made to the châteaux, which, with the cathedrals, form perhaps the most complete and interesting monuments of the Middle Ages in Europe. Balzac was a native of this city, and Mr. James, who has written admirably of him, was a little "shocked" to find that he was born in a house in "a row." Thence he went to Blois and Chambord; his drive when the light began to fade reminded him of "a passage in some rural novel of George Sand" (which one is not specified), and later on, as he "moved through the evening air," he "thought of Francis I. and Henry IV." Amboise, Chaumont, Chenonceaux, and Azay-le-Rideau were next visited. At the last place the inn was dirty, and the only uncivil words the traveller had addressed to him during his six weeks' trip were there spoken. In returning to Tours from Langeais, there was an occasional spatter of rain, but there was something in the jog-trot through the darkening land beside the flowing river which it was very possible to enjoy. In taking the train to Loches, which, owing to threatening weather, is only done after a delay of a page, the tourist "snatched a fearful joy," as he says, but found the afternoon quite long enough for the visit. Whether his trip to Bourges was a journey or an excursion is doubtful; at all events he did not return till the third day to Tours. On the way down the journey, or excursion, was disagreeable, owing to the presence of a talkative family which might just as well have been in another compartment, as there were other carriages which contained no travellers at all. The *commis-voyageur*, too, first made his appearance on this trip. Mr. James "was destined to see a good deal of him for several weeks after," and it is easy to perceive that, though he calls him "inoffensive," he does not at all like him—that his "fat hands" are repulsive, and his unblacked boots irritating, to a sentimental tourist. It was late when Bourges was reached, but as, however late in the evening he may arrive at a place, Mr. James says he is unable to go to bed without an impression, he went out at once to get one from the cathedral. The best impression of all, however, to our mind, he obtained at Le Mans, whither, by the way, "it was a journey and not an excursion; for I had no intention of coming back." As he took a *bitter-et-curaçao* before dinner at one of the market-place cafés, the afternoon being warm and still, and the air admirably soft, there came over him "an impression which both included and excluded all possible disappointments." This impression, obtained "in the mild October afternoon, suffused with human sounds," figures in the tourist's mind as "the most *definite* thing" he brought away from Le Mans. Angers, Nantes, La Rochelle, Poitiers, Bordeaux, Toulouse, Carcassonne (where he spent a few hours of "rounded felicity" and enjoyed "a great emotion"), Narbonne (where he must breakfast "with a hundred hungry marketers, fat, brown, greasy men, with a good deal of the rich soil of Languedoc adhering to their hands and their boots"), Montpellier, Nîmes, Arles, Tarascon, Avignon, Mâcon, and Dijon, bring him back to Paris.

The point of view throughout is the sentimental, the dilettante. The superficial aspect treated is the purely picturesque. Now, in France this is a great mistake. In England and Italy, for which Mr. James therefore is always longing, and which he treats so sympathetically in 'Transatlantic Sketches,' the picturesque plays an important part, and the dilettante, especially the American dilettante, is naturally and powerfully attracted by it. But it hardly exists in France. The Renaissance in Paris and the Revolution in the provinces were fatal to it. Since then, with other feudal *impedimenta*, it is in France to be sought mainly in the museums. Mr. James has so little sympathy with this condition of things—with the devotion of an entire society to the intelligible and the artistic, and its exclusion of the emotional and the fortuitously attractive—that his interest in museums themselves is sentimental. He speaks of this interest as "a weakness," depending little on the value of the collection, and is touched by "the snuffy custodian in a black skull-cap." At Dijon he lingered too long in the Parc ("a dear old place, with little blue-green perspectives," etc.) to visit the Puits de Moïse, which he describes as "an ancient cistern, with a sculptured figure of the Hebrew lawgiver." The inexhaustibly interesting tombs of Philippe-le-Hardi and Jean-sans-Peur have for him but "a limited interest," owing to their having been transplanted to a museum. Nothing will recompense him for the melancholy fact that Dijon "is not high and overhanging," that "it is not to the eye what the Burgundian capital should be." Speaking of the choirless Nantes Cathedral, he says: "There is much entertainment in France in seeing what a cathedral will take upon itself to lack. There are a hundred possibilities of poverty and wealth," etc. Very likely; but the traveller who attaches great value to this order of "entertainment" is in France doomed to disappointment.

Heat. By P. G. Tait, M.A., Professor of Natural Philosophy in the University of Edinburgh. London and New York: Macmillan & Co. 1884. 8vo, pp. xi, 368.

Light. By P. G. Tait. Edinburgh: Adam & Charles Black; New York: Macmillan. 1884. 8vo, pp. viii, 276.

Professor Tait ranks among the ablest mathematicians of Great Britain, especially in the application of mathematics to the physical sciences. He is well versed in the history of those sciences, well acquainted with the most recent investigations. He rivals Tyndall in clearness of statement and felicity of illustration, and for a large part of his scientific career he has been on terms of the closest personal intimacy with Sir William Thomson and the late Clerk Maxwell. Under such circumstances, Professor Tait must expect that his readers will be somewhat more exacting than they would be in the case of a man of lower position and fewer advantages. In these two treatises he has striven to avoid the use of mathematics wherever it was possible to do so; and wherever the nature of the subject rendered the use of mathematical processes and formulæ unavoidable, he has presented them in an elementary form, requiring only a knowledge of algebra, geometry, and trigonometry, and never introducing the higher and, as he justly remarks, often really simpler methods of the calculus. In the preface to 'Heat,' Professor Tait says that he has endeavored to produce a work "suitable for students who, without any intention of entering on a scientific career, whether theoretical or experimental, are yet desirous of knowing accurately the more prominent facts and theories of modern science to such an extent as to give them an intelligent interest in physical phenomena." In the same preface he tells us that a large portion of the work was written as long ago as 1876-77, and, after stating some of the hindrances which have interfered with its completion, he adds: "I have at last managed to finish the book as nearly as possible on the lines laid down at starting; but it cannot, under the circumstances, be expected to have the unity which it might have secured by being continuously written." Substantially the same complaint of the interference of other occupations is made in the preface to 'Light.' Of the time occupied in the preparation of the latter treatise we have no indication; but as the preface to the 'Heat,' which the author "managed to finish" with great difficulty, bears date December 1, 1883, and that to 'Light' March 1, 1884, it seems reasonable to infer that the latter treatise was prepared with extraordinary haste.

A careful perusal of both works has impressed us with the idea that Professor Tait's complaints of the ill effects of continual interruptions and distracting avocations are true, to an extent which he himself, perhaps, did not suspect. The books contain nothing new, and Professor Tait is too well versed in his subjects to insert anything admittedly erroneous. But both books seem to have been written, either without a sufficiently well-digested general plan, or, if such plan existed in the author's mind, under conditions which prevented his carrying it out. To those students who enjoy the privilege of attending Professor Tait's lectures, the perusal of these works will, doubtless, prove of the highest advantage. But such as have a very limited knowledge of the "prominent facts and theories of modern science," and must depend solely upon books to increase that knowledge, will hardly find these treatises suitable to begin with. On the other hand, those who have a taste for scientific study, and have already such an acquaintance with physics as is usually imparted in our high schools and colleges, will peruse these volumes with pleasure and profit.

In regard to the theory of light there is only one point to which our space will permit us to call attention. The "theory of emission," or, as it is now most commonly called, the "corpuscular theory" of light, is so frequently introduced throughout the work in connection with or even in anticipation of the "undulatory" or "wave-theory," that a comparison of the two would seem to have been one of the principal objects of the treatise. The present state of the long contest waged between the advocates of these two theories may perhaps be fairly stated as follows: The "wave-theory" is regarded by nearly all scientists, perhaps by all worthy of the name, as probable to a degree but little short of certainty. But most scientists, and Professor Tait among them, do not regard it as demonstrated, or as proved in the same overwhelming manner in which the theory of gravitation has been proved. But, on the other hand, the "corpuscular theory" is simply dead. Facts, in regard to which there is and can be no doubt, are irreconcilable with it. On p. 177 of 'Light' Professor Tait gives a mathematical statement of one of these facts, and adds: "This finally disposed of the corpuscular theory." That theory is not and cannot be true. If hereafter facts should be discovered equally irreconcilable with the wave-theory, it also would have to be abandoned; but we should not go back to the corpuscular theory. Until some new and more satisfactory hypothesis should be formed, our science of light would consist merely of an orderly and systematic statement of facts—a condition of things which many philosophers of the positive school would by no means regret. The predominating influence which the corpuscular theory so long exercised over the minds of scientific men will always render an account of it an important and interesting chapter in the history of science. Professor Tait, instead of giving it a separate treatment from this point of view, continually introduces its exploded explanations of the facts and laws of light as if he considered their exposition of almost equal importance with the development of the subject according to the wave-theory, which he believes to be true. Thus (p. 64) he says:

"The explanation of the law of reflection which is furnished by the corpuscular theory is excessively simple."

Then, after giving that explanation, he continues:

"The undulatory theory gives an explanation which is, in reality, quite as simple, but requires a little more detail for those who are not familiar with the common facts of wave-motion. We therefore reserve it for a time."

In this and other similar cases the first impression made upon the mind of the student is admittedly false, and we do not think he can be wholly protected against the bad effects of such an impression by telling him that the explanation is false and the truth will be told him at some later period.

What we now want in physics is a full and, so far as possible, complete treatment of the subjects of heat and light, based upon the wave-theory pure and simple. We know no one better fitted for the task than Professor Tait. May we not hope that inclination and opportunity will yet concur in leading him to its accomplishment?

Amateur Photography: a Practical Instructor. By D. J. Tapley. S. W. Green's Son. 1884.

Photography for Amateurs: a Non-Technical Manual for the Use of All. By T. C. Hepworth, Lecturer to the late Royal Polytechnic Institution. London and New York: Cassell & Co. 1884.

THE introduction of photography as a recreation since the perfection of the dry-plate processes has gone on rapidly, and in England, where the class of people who have leisure, means, and cultivation is large, the amateurs of photography are numerous, and have contributed more than the professionals to all the improvements in processes and apparatus. The extent of experimenting, and the elaborateness of it involved in perfecting the gelatine dry process alone, can hardly be estimated by any one not sufficiently interested to follow the photographic periodical literature of the day. The discovery of the gradual improvements in this important process, as of the working of photography in most directions, has been empirical, and only in few details due to proper scientific research. The most of the investigators, and some of the most successful, knew only enough of chemistry to perform the operations which are involved in the process; and not only were the most competent experimenters amateurs, both in science and photography, but the most successful photographers as well. There is no name on the roll of practical photographic triumphs so high as that of Russell Manners Gordon, whose work approaches as near to art as photography can; and few of his working generation have done so much to perfect the various processes then in use.

It is surprising to find so few of our men of means and leisure interested in this fascinating recreation, or to find so little culture connected with it in any shape. Mr. Tapley's book is not calculated to impress any student with the affinities between photography and education. It is written in the would-be jocose but really absurd and wordy manner of the semi-educated American, and with much less than the average English amateur's knowledge of the details of photography. A sample of his treatment is the following:

"It makes the old young.

"I have learned this new trick in spite of the difficulty of being an old dog and not so apt as my young and middle-aged readers.

"I am fifty years old. To be concise, I was just forty-nine on the 22d of last February—the eminent George W. and myself having been born at the same inclement season of the year. It would naturally be supposed that the enthusiasm and follies that inhere in adolescent manhood would be nearly outgrown by this time, and in point of fact they are."

What is as offensive as the slangy, jocose manner of writing is the intrusion of useless matter whose only effect is to swell the volume to twice the needed size. Mr. Tapley's science, moreover, is very slender, and his directions for work not always as lucid as they might be. He says that "the effect of the stop (diaphragm) at one side of the lens is to curve the vertical lines." This is doubly incorrect, as the curvature is due to the lens, not the stop, and it is inherent in the horizontal lines as well as in the vertical. We must, however, give this author credit for one piece of sound advice: "The amateur photographer will do well to disclaim the ability to make portraits." To do this well requires a room lighted specially for it, and a certain experience in managing direct and reflective light. Out-of-door and picturesque portraits made by landscape photographers at the solicitations of their friends are, as portraits, very disappointing, and nothing is so ugly as an ugly photograph.

Mr. Hepworth's book is in every way more satisfactory, smaller, in better taste as literature, more clear in its directions, and avoiding all the semi-scientific explanations of photographic phenomena which are a part of Mr. Tapley's book and no addition: who wants to know optics will find a special treatise on it. The knowledge of early processes is, however, so limited that it is clear that Mr. Hepworth is not an old student. He says: "Some of these [the old dry processes] gave very beautiful results, but yet not good enough to tempt the professional photographer from his old groove." There have never been any results finer from any process than were obtained from some of the collodio-albumen processes: the objection was in the preparation of the plates, which was tedious and difficult. Mr. Hepworth's knowledge of physical geography is incomplete, or he would hardly have talked so loosely of "photographers visiting Northern latitudes where the daylight is continuous for many months of the year." What he says, however, as to practical photography is sound, and the slips are very few. He does not distinctly warn the reader of the danger in using sour paste to mount photographs with, and in directing how to mount with glue he does not add the glycerine which is so useful—one ounce to ten of solution of glue. The mounting directions are excellent. In the section on intensification, Mr. Hepworth does not sufficiently insist on previous removal of all trace of the previous operations; and in that on the platinotype process he ought to have said that a very fully exposed and intense negative, with minute passages of deep shadow and much middle tint, gives by far the best prints, while an insufficiently exposed negative with large masses of deep shadow will fail to satisfy the amateur.

Mr. Hepworth's book may be frankly recommended to any one who wants to learn photography and is capable of doing it from a book; but some people, we find, are incapable of that degree of abstraction. Still, the book will serve even them when once they have grasped the way of working.

Some Literary Recollections. By James Payn. Harper & Bros. 1884.

WHEN written with an honest literary purpose, and not for the sake of discharging a sheaf of Parthian arrows at one's private enemies, there is no book more respectable than a volume of Personal Recollections. It is at the opposite pole from the Memoir, compiled after a man's demise by a surviving friend, and perfunctorily erected, like a tombstone, over his remains. It generally differs from the latter in being readable, and always in being likely to be true. With nearly all readers a specially taking sort of reminiscence is that of a professional writer concerning his literary brethren and the haps and mishaps of the literary career. There is a perennial interest in the intimate fortunes of the great names we have known in books, particularly when divulged, not from the point of view of the "valet," but of the fellow-"hero."

The author's purpose in the present volume has not been, perhaps, what would be called a very serious one, but he has succeeded in making an entertaining book. His good-humor is conspicuous, and, if it often becomes jocularity, it plays on the surface of a good deal of sober insight into men and things. His school-days seem to awaken somewhat grim recollections, as in the case of Anthony Trollope, and are treated in a similarly mingled tone of fun and surviving resentment:

"Nothing that I ever suffered since—and I have suffered, like other men, in many ways—has been comparable with the misery of that time. I am well aware, of course, that I was not a fair specimen of the British school-boy; but when I hear what he calls 'old buffers' talk of the delights of school, and wish themselves back there, I think of the Cretans to whom the Apostle has given the palm for lying. I always learned my lessons, but without the least interest in them. I pitied and liked the ushers. The head-master I did not like; he was a pompous, lethargic fellow. I remember on one occasion inquiring of him how Castor and Pollux could have had immortality conferred upon them *alternately*. 'You young fool,' he replied, 'how could they ever have had immortality conferred upon them *at all?*' I was but seven years old, or so, but I perceived from that moment—for how could he otherwise have

missed the whole point of my difficulty?—that it was possible for a man to be at once a scholar and an ass. That view has on more than one occasion been since corroborated."

His university life was more agreeable, for there he found "dons" of whom he testifies (in what he calls an "old joke," but it is not too old to be commended still to college faculties):

"These gentlemen were not merely scholars, but men of wide human sympathies, to whom the particle *de* was not so absorbing as to shut out all interest in the particle *men*."

In recounting his entrance into literature through Leigh Hunt's *Journal*, he takes occasion to say some pleasant things of that much misrepresented man:

"I suppose no writer has ever preached the love of books so eloquently as he has done, or gained more disciples. Leigh Hunt combined with a fine 'brain' the tenderest of human hearts. His ignorance of business matters and his poverty made him to natures of the baser sort an object of ridicule. Carlyle used to keep three sovereigns in a little packet on his mantel-piece, which he called 'Leigh Hunt's sovereigns,' because he occasionally lent them to him, and was wont to narrate the circumstance to all whom it did not concern. Hunt would have lent *him* 3,000 sovereigns, had he possessed them, and never disclosed the circumstance. There was nothing in his literary life that Dickens regretted so much as the unintentional wrong he did Leigh Hunt in his portrait of Harold Skimpole. It was true that he drew one side of it from his friend, but the other side—the selfishness and the baseness—had nought to do with him. They were, indeed, so utterly opposed to his character, that it perhaps seemed to Dickens that no one could associate them with the original of the picture"

—a charitable view, certainly, of the methods of his fellow-novelist, and one which we should be glad to be able to adopt.

Professional reminiscences of the peculiar joys and pains of editors are rare in literature. The author gives some very good ones:

"Their articles, they would assure us, had been written with a view to our 'particular needs,' and 'had been sent to no other periodical'—which was not always true. We 'We's' have an almost infallible test for ascertaining whether our magazine is the first love of a contributor, and I have known language of virgin passion to be applied to us after it had been addressed, in vain, to several other quarters. The most amazing of these hypocritical appeals were, however, personal, and directed to my coadjutor himself. The writers had admired his genius from the first moment they had begun to appreciate literary excellence, and held his name as a household word—yet never by any accident did they spell it right. . . . A similar feeling causes some contributors to endeavor to recommend themselves to the notice of an editor in the following conciliatory manner: 'Without self-flattery, I think I may venture to say that the paper I send to you, however modest in merit, is, at all events, superior to the majority of the articles in your esteemed magazine.'"

Of other literary men, and of the craft in general, our author has only kindly words to say:

"People talk of the vanity of authors; of their crying out 'Whip behind!' when some poor fellow would hang on to the foot-board of the chariot in which they themselves ride forth so triumphantly. My experience of men and women of letters—which has been continuous, and extends over thirty years—is that for kindness of heart they have no equals. I have never known but one absolutely offensive man of letters, and even he was said to be pleasant when sober; though, as I only met him some half-a-dozen times, and his habits were peculiar, I never had a fair chance of finding him in that condition."

As writers of all sorts seem nowadays to be turning novelists, it is well enough that occasionally a novelist should betake himself to other writing. It is to be wished they may all succeed as well as Mr. Trollope and Mr. Payn.

BOOKS OF THE WEEK.

Adam, Madame. La Patrie Hongroise: Souvenirs personnels. 2d ed. Paris: *Nouvelle Revue;* New York: F. W. Christern.
Anecdotes Illustrative of New Testament Texts. A. C. Armstrong & Son. $1.50.

This will afford a splendid opportunity to purchase strictly reliable Furs direct from manufacturer, and save retailer's profits. Fashion Book mailed free.

LITTLE, BROWN & COMPANY'S

LATEST LEGAL PUBLICATIONS:

Kent's Commentaries.

Thirteenth Edition. 4 vols., 8vo, sheep, $20.00.

This edition—the thirteenth—of this most essential of all American law-books has been thoroughly revised and brought down to date by Charles M. Barnes, of the Boston Bar, who in his preface acknowledges valuable assistance from Hon. O. W. Holmes, Jr., the editor of the twelfth edition, and others.

Seton's Decrees.

Forms of Decrees, Judgments, and Orders; with Practical Notes. First American, from the Fourth English Edition. By Franklin Fiske Heard. 860 pages, 8vo, sheep, $6.00 *net.*

The Decrees are accompanied with Notes, in which the Rules of Law and Equity are stated in short and intelligent propositions, and are confirmed by references to the best authorities; in the judicial language of Mr. Justice Denman, the Notes "contain an admirable summary of all the cases on the subject."

The Forms are adapted to either the old or new method of Procedure. The practitioner, by attentively considering the principles of Equity Jurisprudence and the operative words of the Statutes and Rules which obtain in his jurisdiction, can readily adapt the Forms given to the case required.

The Forms of Decrees are useful with a view to framing Bills: the Prayer of the Bill being that part upon which the frame of it principally depends, and the Decree being obviously the best guide to the Prayer. The great utility of consulting them, and the adva[illegible]es of adhering to the settled and well-understood [illegible]d language of Decrees, have been repeatedly adv[illegible]dially.

The present edition is printed from [illegible]English. By excluding those portions which are no[illegible]ll-cable to American Equity Jurisprudence, the [illegible] been able to bring the work within the compass of [illegible] gle volume.

The List of "Equity Judges from 1660" has been revised and brought down to date. The cases decided to date have also been noted.

The *Law Journal* said: "It has scarcely ever been our fortune to see a more complete law-book than this. Extensive in sphere and exhaustive in treatise, comprehensive in matter, yet apposite in details, it presents all the features of an excellent work."

Transfer of Stock IN Private Corporations.

By Abbott Lawrence Lowell and Francis C. Lowell. 8vo, $3.00 *net.*

Preble's Patent Case Index.

Second Edition. Enlarged by the addition of 387 pages. This edition of Preble's Patent Case Index contains 711 pages, bound in law sheep. 12mo, price $6.00 *net.*

Schouler on Personal Property.

Second Edition. 2 vols., 8vo, $12.00.

The author has carefully revised the entire work, making suitable references to the latest English and American cases and leading text-books on the various topics discussed. He has also divided his materials by sections, and inserted head lines. He has introduced various alterations, in order to increase the practical usefulness of the work to the utmost, without enlarging its size.

Vol. I. treats of the Nature and General Incidents of Personal Property, and Leading Classes of Personal Property, and contains 758 pages. Vol. II. deals with Title to Personal Property by Original Acquisition, Title to Personal Property by Gift, and Title to Personal Property by Sale, and embraces 747 pages.

Parsons on Contracts.

Seventh Edition. By William V. Kellen. 3 vols., 8vo, $18.00.

This edition includes citations of and references to more than five thousand additional cases. Among the comments which have been thus far made regarding the new edition are the following:

The Boston Courier.

"Of all the American treatises on the subject of contracts, none other has been received with so great and lasting favor by the profession as that of Professor Parsons. . . . In its completeness, as a careful, trustworthy, and comprehensive treatise on the Law of Contracts, it stands to-day as the highest authority published in this country. If a lawyer can possess but one work on contracts, that work should certainly be Professor Parsons's. . . . The editing of this edition is most judicious; and we are sure that in its present form the work will command a continuance of the favor with which for thirty years it has been regarded by the profession."

The Nation.

"As far as we have been able to examine the new editor's work, it has been well done, and [illegible]y adds to the value of a text-book which e[illegible]awyer must constantly consult. Of the original treatise, while not exactly a classic—not a work that can be compared with Kent, or with Story at his best, or with Greenleaf—it may be termed one of the indispensable law-books. There is nothing which exactly takes its place on either side of the Atlantic. We doubt if a lawyer ever feels that he has thoroughly worked up a difficult case turning upon a question of contract, without looking carefully to see whether he cannot find something to his purpose in Parsons."

Boston Daily Advertiser.

"Mr. Kellen's additions are all made in separate notes, clearly distinguished from the work of the original author. In these new notes, more than five thousand additional cases are referred to; and it is a pleasure to say that these references are always made so as fitly to supplement the original work, by presenting concisely and accurately the illustrations and modifications, as well as the developments, of the law which have been made by the recent decisions. . . . We are convinced that this valuable work will continue to receive the same great favor which its peculiar merits have heretofore commanded."

Boston Post.

"The value of this book before us, both in its original text and in Mr. Kellen's additions, is that in it one may view the subject of contracts as a whole, and may be intelligently referred to cases upon a great variety of points with a sufficiency of apt illustration. The scheme of this book has for more than a quarter of a century found favor with the American bar, and the work is now brought down to the present time with authorities from the latest reports and illustrations from the latest phases of modern and domestic business life. No treatise is superior to it in the clearness and accuracy of statement of principles, nor in the ease and handiness with which it may be consulted. Its citations are full, reliable, and pertinent. It is a work which should find a place in every lawyer's library—in fact, almost supplies a library upon the matters embraced in it."

It is a recognition of the value of this standard work that Ten Thousand copies have been sold of the sixth edition alone.

Greenleaf's Evidence.

Fourteenth Edition. By Simon Greenleaf Croswell. 3 vols., 8vo, $18.

In the new edition the additions to the notes increase the number of pages by an average of thirty pages in each volume, and add several hundred new cases to each volume. Among the topics which have received special attention are: Circumstantial Evidence, Presumptions, Law and Fact in Cases of Negligence, Hearsay, and the Competency of Witnesses as affected by Statutes, in Vol. I.; Carriers and Care, including many cases on the law of Negligence, in Vol. II.; the Preliminary Observations on Evidence in Criminal Cases and Evidence in Admiralty, in Vol. III.

The Index has been revised and enlarged by cross references.

The merits of the editor's work have been fully recognized, as will be seen from the following opinions:

Letter from Hon. Samuel Blatchford.

"The work of Mr. Croswell, the editor, is well done. The separation of the text and notes of the author from the editor's notes is of service. In view of the changes in the law of evidence made by statute in late years, the bringing down to the latest period the decisions in the State and Federal Courts renders this edition especially valuable."

From Hon. Stanley Matthews.

"It is a model law book, as elegant in its style as it is complete in its method, and accurate in every detail of execution. I commend the present editor, not only for the industry with which he has collected and arranged the new matter and cases in notes, but also for distinguishing the notes of the author from those of the successive editors since."

From Hon. Samuel F. Miller.

"The earliest edition, contemporaneous with my student days, was to me the most delightful of all the elementary works ever placed in my hands. The present edition, under the judicious editorship of Mr. Croswell, brings the work up to the present time, with careful work and within reasonable limits. It will retain its place as the leading work on the law of evidence, in America at least."

From Hon. Stephen J. Field.

"The work itself is a classic in legal literature, and this edition has the excellence of type and paper which characterizes and distinguishes your publications."

The Albany Law Journal.

"All things considered, this classic must be regarded as good and as authoritative a work as any on the subject, either English or American, and it is not probable that it will ever be supplanted. The present edition is edited with great thoroughness and with excellent judgment. The work is now brought fully up to the demands of the modern practitioner, and is one of the few that may be pronounced indispensable. It is admirably printed, in three volumes."

The Boston Courier.

"To the busy practitioner in either country 'Greenleaf on Evidence' is indispensable, while no young lawyer in America, however modest may be the beginning of his professional library, can afford to omit from the short list of his authorities this standard and invaluable treatise. . . . In presenting this standard treatise in its revised form, Mr. Croswell has rendered to the profession the highest service. The work has been well and faithfully done, and in law it is especially true that the last edition of a work is the only one to be consulted."

254 WASHINGTON STREET, BOSTON, MASS.

The Nation.

NEW YORK, THURSDAY, OCTOBER 30, 1884.

The Week.

MR. THEODORE ROOSEVELT made a speech on Wednesday week in which he tried to explain his position. He laid it down that it "may be right to bolt," but "you must be certain that the time is right." This is true not only of bolting, but of all forms of human action, and his speech would have been more forcible if he had given his reasons for thinking that now is not a good time to bolt. The Independents do not deny the great general truth laid down by Mr. Roosevelt. What they say is, that the present is an excellent time, and give their reasons, too. What we should like from Mr. Roosevelt is a reply to these. His speech is less an explanation than an apology. In the course of it he made the surprising assertion that Governor Cleveland had not yet acted on the charges against the Sheriff: "Nor has he yet acted upon the serious charges brought against the leader of the Committee of Irving Hall." Mr. Roosevelt must have known, for it had been published in every newspaper in New York, that Governor Cleveland had served notice on the Sheriff to answer the charges, which is all he could do, unless he were to remove him without a hearing, which no one has yet suggested. Mr. Roosevelt's statement was worse than misleading, and we are surprised that he should have permitted himself to make it.

It seems impossible for Mr. Evarts to appear in public in this canvass without making either blunders or misstatements. His attack on Cleveland in his first speech for not removing Hubert O. Thompson, when the law gives the power of removing him to the Mayor only, is still fresh in the memory of many of our readers as an illustration of his carelessness and inaccuracy. In his recent speech in Brooklyn he was guilty of something which, even in a criminal lawyer pleading before a jury, would not be creditable. He attempted a defence of the Mulligan letters in greater detail than any of Blaine's other defenders; and in what did it consist? In a citation of three wholly immaterial errors committed in the *Nation's* first article on Blaine before the nomination, and which we have since ourselves corrected, and allowed William Walter Phelps to correct in our columns immediately. The charges against Blaine, which have been repeated on a hundred stumps, and in thousands of articles, and in millions of pamphlets during the last three months, are, that he tried to get a "bed-rock interest" in a railroad franchise from the holder of it by reminding him of a ruling he had made in its favor in the Speaker's chair; that he obtained the selling agency of the bonds of this road on commission, and obtained a large commission, and lied about the whole transaction in Congress; that the land grant of the road derived some of its value from Congressional legislation, obtained after he became selling agent—and he lied in Congress about this too; that he had to take back large numbers of the bonds from persons to whom he had sold them in Maine, and got rid of them by selling them to other railroad companies far above their market value; that he became possessor of an interest in the Northern Pacific Railroad in a way he has never explained, and made merchandise of it, after it had been greatly increased in value by Congressional legislation, while he was either Speaker or member of the House; that he has been convicted of all these things, except the sale of the bonds to the railroad companies, and of numerous falsehoods of the grossest character, showing complete unscrupulousness and audacity, by letters in his own handwriting, the authenticity of which has never been questioned, or by the *Congressional Record*.

Not one of these charges rests in the smallest degree, directly or indirectly, on the errors which the *Nation* has acknowledged. In publicly treating the case against Blaine as consisting of these errors solely, therefore, Mr. Evarts has been guilty of a piece of misrepresentation, which, whether intentional or not, he owes it to himself—we don't believe the public will care much about the matter—to correct promptly. We must remind him and several other prominent Republicans of good standing, that Blaine may be defeated—we have no doubt he will be—and that they have characters to maintain after he shall have disappeared from the scene. We advise Mr. Evarts to do this, moreover, as a measure of what we may call political economy. He is throwing away nearly all his value as a party orator by recklessness in assertion. A meaner man might do this with impunity, but if you deprive a great lawyer of his accuracy, there is little left of him as an influence on public opinion, even if he have the tongue of angels.

Mr. Evarts's allusions to Cleveland do not merit examination. They are excellent specimens of the kind of innuendo for which the epithet "dastardly" has been most fitly reserved. He does not venture to attack Cleveland's personal character openly, but he jokes and winks over it, and, while "avoiding a single aspersion, and discrediting every exaggeration"—the careful, cautious man that he is—suggests there is something about it which "the matrons" would do well to look into. Most good matrons, however, are much better employed than trying to find out the meaning of Mr. Evarts's jokes. They have the stockings to darn, and the washing to count, and the children's clothes to mend.

Senator Hoar has written a letter to the Boston *Daily Advertiser* which is curious but characteristic. It is an answer to the charge of having denounced Blaine for dishonesty before the nomination, and then having preached his honesty after the nomination. This charge, if true, would have convicted him of nothing worse—though we admit that this is pretty bad—than insincerity or hypocrisy practised for party purposes. People might still have said: "Senator Hoar really sees the mischief and corruption of Blaine's acts, and would not be guilty of them for worlds himself, but is ready to deny this for the purpose of maintaining his standing in the party." In the letter to the *Advertiser*, however, he boldly announces that he only opposed Blaine's nomination at Chicago because he knew that other people thought him dishonest, and feared that his nomination would probably split the party, but that he himself believed—with the Mulligan letters before him—that "Mr. Blaine was an honest and able man." In other words, he admits now that his standard of political morality is not, and never has been, higher than Blaine's. This confession comes, too, from a gentleman who has rather made a profession of political puritanism. We hope to give him a lesson in political ethics in this State on Tuesday next which will do him good.

The Rev. Dr. Bartol, of Boston, is one of the clergymen who, to the astonishment of their numerous friends and admirers, have been led into supporting Blaine and refusing to see anything very wrong with his character. He appears to be suffering on account of his course, and writes a pathetic letter to the Boston *Herald*, in which he says:

> "I am publicly denounced as unfit to teach because I do not call Mr. Blaine a liar and a thief, and privately reproached for admitting that when sorely pressed he may have been tempted to prevaricate. I trust I am no extremist. A prisoner at the bar pleads not guilty. The crime charged is in part a creation, and may be a fiction, of the law, and the penalty excessive or unjust. So it is right he should demand proof, not criminate himself or show his own hand. When a man's foes are hot after his blood, whether he stand or run, fight or retreat, he has military warrant according to the circumstances of the case. In Mr. Blaine's speech and conduct I see not falsehood or fraud, but sometimes perhaps a weak or wavering quality, not unlikely to come out of or be incident to the marked sensibility to which he owes, as did Henry Clay, his power to lead and win. Craft is attributed to him—an excellent trait in a ruler, after the German sense, to make him a needed match for Bismarck. Mr. Blaine certainly does not prevaricate or equivocate in any way different from or worse than that in which do all sharply accused persons, or lawyers in their exculpation or defence. I know how tricky a member of the bar in good standing may be."

It is very extraordinary that Dr. Bartol should not perceive that an innocent man who has nothing to conceal cannot be driven into a corner and does not have to prevaricate. In fact, prevarication is the last thing an innocent man thinks of. He tells his tale, and shows his books and letters, and there, in ninety-nine cases out of a hundred, is the end of it. Stranger still is it that Dr. Bartol does not perceive that nobody is hunting Mr. Blaine down as a man, and therefore he is not in the position of a poor prisoner at the bar. He is a candidate for one of the highest honors on earth, and all his opponents say is, that, whatever else he may be, for this he is not fit. In fact, Dr. Bartol acknowledges his unfitness in admitting his prevarication. Even if a man may prevaricate, a man who *prevaricates in order to get the Presidency*, which is what Blaine has done, surely ought not to have it. The same observation applies to Dr. Bartol's comparing him to

a tricky member of the bar. Surely members of the bar ought not to be tricky. Surely it ought not to be mentioned by a clergyman in proof of a man's qualifications for the Chief Magistracy of this great nation, that he is no trickier than a tricky criminal lawyer, and has lied no worse in order to get the place than hired advocates of low standing sometimes lie in order to save their clients from the State prison.

President Anderson, of Rochester University, wrote to Governor Cleveland in March, 1883, warmly thanking him for the course he had taken with regard to the Five-Cent Bill, as a "rebuke to demagogism" and as "an exhibition of the principles which should govern the action of men" in high places. In this letter he informed the Governor that he had expounded the matter to his students, and that, "as a teacher of young men, he felt grateful to any public functionary who illustrated in his person the lessons he was so anxious to impress on their minds." He has since announced, however, that he is going to vote just the same for James G. Blaine for the Presidency, and is probably now using *him* to his class as an illustration of his lessons. What a picture this presents to us of the times—the president of a university showing his students that there was nothing wrong in the Mulligan letters; that the *Evening Post's* "Tabulated Falsehoods" were a series of "malignant slanders"; that it was quite right for the Speaker to try to get on the "bed-rock" of schemes created by Congressional legislation; and that in the Hocking Valley affair Blaine was no liar at all—only a decoy investor.

There is probably no more edifying sight to be seen in the streets of New York to-day than Mr. George Bliss walking about as a Pharisee with "a holier-than-thou" air. We do not mention it by way of either ridicule or reproach. We simply say that it is instructive. He has not hesitated to declare himself holier than O'Brien, Spencer, and divers other Republican worthies, and to walk out of a Republican caucus because the nominations did not suit him. Yet, according to his ethics hitherto, anybody who goes into a caucus is bound to abide by its decisions—that is, according to the latest commentators, not only vote its ticket, but advise others to vote it, and pretend, no matter how bad he knows it to be, to think it very good. All this shows that Colonel Bliss, after many wanderings and much tribulation, has at last had his eyes opened to the fact that civilized society is organized on the "holier-than-thou" principle, and that to attempt to carry on a political party or any other organization by repudiating it was and is absurd. All the prohibitions to be found in the laws, all the exhortations and condemnations to be heard from the pulpit and the press, are based on the assumption that the constant assertion of the "holier-than-thou principle" is absolutely necessary to prevent the State from being taken possession of by murderers, thieves, brothel-keepers, cheats, and liars.

The circular which John C. New, Chairman of the State Committee in Indiana, has addressed to the Federal office-holders from that State, shows that the statute is defective in not prohibiting the use of threats or intimidation by any person, whether in or out of the Federal service, to compel Federal employees to contribute to campaign funds. He has issued a peremptory demand on them for money for the present campaign, accompanied with the announcement that "a list of the names and amounts given by each person will be carefully made, and the same reported to the National Committee, and a list will also be made of all persons who do not contribute." This is just as likely to intimidate as any threat from an officer in the service, and yet it seems as if New and his kind can escape all punishment, except such as reaches them through the defeat of their party at the polls.

The intention of the Blaine managers to capture New Jersey by the same disgraceful methods which they employed in Ohio, and are now employing in Indiana, is very perceptible. They will flood the State with money, and try to buy the electoral vote which they know they cannot get in a fair election. Letters come to us from all portions of the State asking us to warn the honest citizens there of this outrageous scheme of debauchery. In addition to the direct purchase of votes, the indirect system of purchase by the appointment of scores of deputy marshals in all the larger cities will be resorted to. Under the law the marshal of the district in which any city or town of 20,000 or more inhabitants is situated, can, on the application of at least two citizens, appoint special deputies to assist him in supervising the election. As there is no limit placed to the number of special deputies, an unscrupulous marshal can appoint as many as he pleases. In Cincinnati the number appointed is said to have been 2,500. By selecting these men from the purchasable element of the voters, their pay becomes a bribe for votes. There is absolutely no excuse for appointing them. In no other election in a Northern State have such means been resorted to heretofore, and they would not be now were not the Blaine managers desperate as well as unscrupulous. The appointment is a gross abuse of official power, and is one more illustration of the way in which the entire public service would be used were Blaine and his gang of corruptionists to get into office.

With the single exception of the State of Maine (in which peculiar and abnormal influences were at work four years ago), every State that has voted since Mr. Blaine's nomination has shown a relative shrinkage of the Republican vote. Four years ago Vermont, at her September election, gave a Republican majority of 26,603. This year it is 21,600—a loss of 5,000. Four years ago Ohio, at her October election, gave a Republican plurality of 19,005 and a Republican majority of 9,404 over the combined Democratic, Greenback, and Prohibition vote. This year the Republican plurality is reduced to 11,324, while the majority has disappeared altogether, and in place of it we find a minority of 2,113. Complete returns from West Virginia have not been received for the present year, but it is quite certain that the Democratic majority over all is larger than it was four years ago. If the same percentage of loss on the Republican vote runs throughout the United States, Governor Cleveland will carry New York, New Jersey, Indiana, Connecticut, California, Nevada, New Hampshire, and Oregon.

Mr. Deming, of the Independent Committee, has given the *Herald* some figures concerning the Independent strength in this State which show that the dudes and pharisees have good grounds for their confidence in Mr. Blaine's defeat. He says it is a conservative estimate to put the number of Anti-Blaine Republicans in the State, outside of this city and Brooklyn, at 60,000. What the number is in these two cities he does not estimate, and for very excellent reasons. Nobody knows what it is, but everybody, including the Blaine managers, knows that it is very large. For ourselves we do not believe that Mr. Blaine's agents and brokers expect to carry this State. They are subsoiling a little for the Irish vote and the labor vote, but are expending most of their money and strength upon New Jersey and Indiana. While they are at work there, New Hampshire, Connecticut, Massachusetts, and several Western States are in great danger of slipping away from them.

We have received a copy of an eight-page address "to all patriotic citizens of the Southern States," issued at Bel Air, Albemarle County, Virginia, October 4, 1884, in behalf of the election of Mr. Blaine to the Presidency. It closes with ten or a dozen reasons why Virginians should vote for Blaine, from which we select the following:

> "James G. Blaine favors, as soon as the revenue from this source is not needed for the support of the national Government, the distribution of the proceeds of the Federal liquor tax among the States, thereby enabling them, if they so desire, to dispense with all State taxation."
>
> "James G. Blaine favors an appropriation by the national Government to be applied to the payment of the debt of the 'Old Dominion,' as she was despoiled of a large portion of her territory through the necessities of war."

This is the first recognition we have seen by the South of the "bid" for Southern votes which Mr. Blaine put into his 'History,' and which we have in vain tried to induce his admirers and supporters to discuss. The "bid," like the surplus-distribution scheme, was a genuine product of Blaine statesmanship. Both were in no way connected with Mulligan, or Fisher, or Caldwell, or the Hocking Valley, and were in no sense "exploded slanders." Both were evolved and published during the present year, and were two of the most astounding feats of this "great leader." Yet we cannot induce a Blaine admirer anywhere to say a word about either of them.

The disgraceful business of circulating in secret innumerable slanders against Governor Cleveland is pursued with unabated vigor by the Blaine managers, and seems to have its headquarters in the National Republican Committee rooms. We have a letter from a member of a manufacturing firm in Connecticut, enclosing several circulars sent out by the National Committee and "Tom" Platt, asking for names of employees and for various other kinds of information. In some mysterious way the em

ployees whose names are sent soon afterward begin to receive a series of documents of all kinds. "These documents," writes our informant, "come in floods and are in all tints. The latest is the Cleveland scandal as it originally came out in the Buffalo papers." It has been evident from the beginning of this filth business that it had a systematic organization behind, otherwise the flood could not be kept up in such profusion and regularity.

Another "tariff card," very similar to the forgery of 1880 which S. W. Dorsey so stoutly repudiated, but which is now being circulated afresh in Blaine's interest in the workshops of New York, has been published to deceive the workingmen. It is in the German language, and it purports to give the rates of wages in some twenty-five industries in this country and in England, together with a statement of what "one dollar" will buy in both countries. It is stated, among other things, that one dollar will buy twelve pounds of sugar both here and in England. Now the facts are these: The price of granulated sugar in England is 3¾ cents per pound. The price of the same sugar in New York is 7 cents a pound. One dollar will buy in England as near as possible 26 2-3 pounds, while the same money will buy in New York 14 2-7 pounds. The selling price of raw sugar in England is exactly the same as the *duty on sugar* in this country, and the selling price of refined sugar in England is only half a cent per pound more than the duty imposed upon the article by our tariff. Therefore it is impossible that one dollar should buy more than one-half as much raw sugar here as in England, or that it should buy much more than one-half as much of the refined article.

It is not often that an agricultural address at a county fair is anything more than a matter of local interest. An exception to the rule is that recently delivered by Mr. Rowland Hazard, President of the Washington County Agricultural Society, in Rhode Island. Mr. Hazard, as a manufacturer of large experience and observation, succeeds in showing, with greater clearness than has perhaps ever before been done, the influence of the tariff legislation during the last twenty years upon the woollen industry of the country. The tables accompanying the printed report of the address show unmistakably three things: first, that the price of wool has not been appreciably affected by the tariff laws; secondly, that the number of sheep in the country has grown less; and, thirdly, that the amount of wool manufactured has also been diminished. Taking the United States agricultural reports as authority, Mr. Hazard finds that the number of sheep in the Western States, exclusive of Texas and California, since the high tariff of 1867 was adopted, has gone down from 29,879,222 to 14,761,150. The decrease in manufactures has been scarcely less marked. The figures of the national census show that the number of woollen cards decreased in every part of the country between 1870 and 1880, notwithstanding the great increase of our population and the greatly augmented demand for the kind of cloths our wools are fitted to produce. During the ten years the decline was as follows: in New England, from 3,358 to 2,922; in the Middle States, from 2,273 to 1,570; in the Southern States, from 1,226 to 705; and in the Western States from 1,442 to 681; while in the Pacific States there has been an increase simply from 67 to 83. In the country, as a whole, the sets of cards in use have diminished under the influence of the high tariff from 8,366 to 5,961. Another table, giving the average prices of wool each year since 1847, and the several tariffs that have prevailed during that period, shows that no perceptible influence on prices has been exerted by the rate of duty. While wool, as before the war, was admitted free, the price averaged as high as it has done with the duty at from 40 to 60 per cent. Mr. Hazard's explanation is that the high tariff on varieties absolutely indispensable in certain processes of manufacture, discourages the making of cloth, diminishes the demand for domestic wools, lowers the price of wool, and drives the sheep out of existence. The figures force Mr. Hazard to conclude that the high duty on wool protects nobody.

The great controversy between Butler and Parsons on the question of whether or not Butler is running in the interest of Blaine, and at the Blaine campaign fund's expense, is proceeding with much animation. Butler is making denials which do not cover the case at all, and Parsons is producing evidence which shows his main charge, that Butler is paid to run by the Blaine managers, to be true. Few people have doubted this from the beginning. If Butler is not running as a side-show for Blaine, why is he running at all? He has no hope of election, and nobody who knows him will believe for a moment that he is paying the expenses of his palace-car trip out of his own pocket. If he were getting some fun out of it, he might be willing to pay the expense, but his recent observations show that he is not enjoying himself a bit. He is very cross and bitter in his talk, and appears to realize that he and Grady and the *Sun* combined do not constitute a great laboring man's party.

Fresh and astonishing evidence of Mr. Blaine's "uncommon anxiety" to secure the Presidency is furnished in Thursday's papers. It is shown by facsimiles of the manuscript that a series of editorial articles against Logan, Conkling, Cameron, and Grant, which were published in the *Tribune* in May, 1880, just previous to the assembling of the National Republican Convention, were written by Gail Hamilton and forwarded for publication by Mr. Blaine himself. The articles are full of bitter references to Logan and Cameron, but are rather careful of Mr. Conkling. In one of them, called the "Real Issue," occurs this passage:

> "The distrust engendered by the doublings and turnings of Cameron has developed into disgust under the bludgeon of Logan. Logan's candid brutality has cleared the air. The unscrupulous fraud, the unparalleled violence, which have been employed to bring Grant in, have roused the people to a resolve that he shall stay out."

It is intimated that there are many other articles of similar purport in the series, all of them being more or less severe upon Blaine's associate candidate Logan. The significant points about this revelation are that it presents Blaine once more in his true character as an intriguer and trickster. The author of these articles is the same member of his family who, at a critical stage in the civil-service-reform movement, poured out, through many weary columns of the *Tribune*, ridicule and contempt upon the reform and all its advocates. Behind the petticoats of a woman this Plumed Knight stood in ambush, levelling his lance, which his admirers speak of so proudly, not only at civil-service reform, but at the Republican leaders who stood in the way of his political ambition.

The 'Cape Cod Folks' libel suit has been argued before the full bench of the Massachusetts Supreme Court on appeal, and the decision of the Judges will be looked for with interest. The plaintiff, Lorenzo L. Nightingale, brought the suit against the firm of Cupples, Upham & Co. to recover damages for publishing 'Cape Cod Folks,' a story in which he was introduced in the first edition by name. He is the hero of the story, and figures in it as "champion fiddler, inventor, whale-fisher, cranberry-picker, and potato-bugger." Their counsel argue that this is not libellous, but laudatory, and that the law furnishes no redress in such cases. If it turns out that this is so, we trust that the Massachusetts Legislature will amend the law; for the temptation to make a profit out of your friends and acquaintances by putting them in a novel, especially with their real names, will otherwise speedily produce literary fruits of a very serious character.

The English Franchise Bill is once more on its passage through the House of Commons, Mr. Gladstone introducing it in a speech which contained a threat of reform in the House of Lords. This, as being very delicate work, he is reported to have read from a manuscript, contrary to his usual custom. There are still various contradictory reports as to what will be done by way of compromise with the Lords. Lord Salisbury insists still that they must have the Redistribution Bill before them before they will pass the Franchise Bill. The Ministry, on the other hand, say they shall not have it before them, though they may see it. That is, after the Franchise Bill has been passed in the Commons, the Redistribution Bill will be promptly introduced, and the Lords will thus have an opportunity of reading it as individuals, but will have no chance of debating it until they have acted on the Franchise Bill. It may be that this will be sufficient to break down the Salisbury resistance, but apparently not if he can help it. His aim is to force a dissolution of Parliament and an appeal to the country on the bill, but this, if we may judge from recent speeches of Lord Hartington and Mr. Chamberlain, the Liberals are determined he shall not have. They will probably sooner reduce him by threatening to create new peers, and following it up with an attempt to reform the upper House. The *Times* is apparently so satisfied of the gravity of the situation as regards the Lords, that it advises them to begin their reformation themselves.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 22, to TUESDAY, October 28, 1884, inclusive.]

DOMESTIC.

PRESIDENT ARTHUR, on Tuesday, appointed ex-Secretary Hugh McCulloch to be Secretary of the Treasury, and Secretary W. Q. Gresham to be Circuit Judge of the Seventh Circuit, to succeed Judge Thomas Drummond, resigned. Mr. McCulloch was Secretary of the Treasury from 1865 to 1869.

Secretary Gresham has modified the Treasury order in regard to the importation of rags "so as to limit it to infected ports only, and all Mediterranean ports are deemed infected ports within the meaning of this order; provided, however, that no old rags shall be landed at any port of the United States, except on a certificate of the United States consular officer at the point of departure that such rags were not gathered or baled at or shipped from any infected place or any region contiguous thereto."

The report of the Director of the Mint shows a falling off in the gold coinage of the United States for the year of about $1,000,000, and an increase in the silver coinage of about $35,000,000.

Commodore Schley's report on the finding of the Greely party is published. In it he says: "In preparing the bodies of the dead for transportation in alcohol to St. Johns, it was found that six of them—Lieutenant Kislingbury, Sergeants Jewell and Ralston, Privates Whistler, Henry, and Ellis—had been cut and the fleshy parts removed to a greater or less extent. All other bodies were found intact."

General Hazen, Chief Signal Officer of the Army, in his annual report, severely condemns Lieutenant Garlington of the *Yantic* for not having left stores at Cape Sabine. He places on him the responsibility for the sufferings of the Greely party.

The Examiners in Chief of the Patent Office have made an important decision in Prof. Graham Bell's favor, in the celebrated telephonic interference patent case. The final settlement of the question will, however, be ultimately made by the courts.

Hiram Price, Commissioner of Indian Affairs, in his annual report to the Secretary of the Interior, says: "It shows that along the pathway of progress in the last twelve months some dark spots have been removed and some bright spots made brighter. More Indians are living in houses and fewer in tepees than there were one year ago. Taken altogether, an impartial view of the situation warrants the belief that some time in the near future it is fair to presume that, with the aid of such industrial, mechanical, and agricultural schools as are now being carried on, the Indian will be able to care for himself, and be no longer a burden but a help to the Government."

Every Federal officer whose voting place is in Indiana has received a demand for a contribution from the State Republican Committee. The call says: "A list of the names and amounts given by each person will be carefully made, and the same reported to the National Committee, and a list will also be made of all persons in office who do not contribute."

Mr. William M. Evarts made a defence of Blaine in the Brooklyn Academy of Music on Thursday night.

The Rev. Henry Ward Beecher made a great speech before the Independents of Brooklyn on Wednesday evening. The meeting was one of the most imposing in numbers and quality of this campaign. Mr. Beecher, in concluding his speech, read a private letter from Governor Cleveland in reply to one from Mrs. Beecher which enclosed certain scandalous stories in regard to the Governor's life in Albany. In the letter Governor Cleveland said: "Your letter, as you may well suppose, has affected me deeply. What shall I say to one who writes so like my mother? I say so like my mother, but I do not altogether mean that, for she died in the belief that her son was true and noble, as she knew he was dutiful and kind. I am shocked and dumbfounded by the clippings from the newspaper that you sent me, because it purports to give what a man actually knows, and not a mere report, as the other four or five lies do, which I have read or heard, about my life in Albany. I have never seen in Albany a woman whom I have had any reason to suspect was in any way bad. The contemptible creatures who coin and pass these things appear to think that the affair which I have not denied makes me defenceless against any and all slanderers. As to my outward life in Buffalo, the manifestation of confidence and attachment which was tendered me there by all the citizens, must be proof that I have not lived a disgraceful life in that city. And as to my life in Albany, all statements that tend to show that it has been other than laborious and perfectly correct are utterly and in every shape untrue. I do not wonder that your good husband is perplexed. I honestly think I desire his good opinion more than any aid he is disposed to render me. I do not want him to think any better of me than I deserve, nor to be deceived."

Mr. J. F. Joy, having returned from England, on Tuesday published a letter denying that he ever said that Mr. Blaine, while Speaker, made him an offer, "that he would appoint a committee to suit me or put a man upon that committee such as I wished, if I would buy Little Rock and Fort Smith bonds of him at par or otherwise." Mr. Beecher immediately wrote a letter emphatically reaffirming his statement, and naming a number of witnesses to prove it.

Mr. Carl Schurz addressed a large and enthusiastic Independent meeting in New Haven on Monday night.

Bainbridge Wadleigh, who was a Republican United States Senator from New Hampshire for the years 1873–79, made a speech at Manchester, N. H., recently, in which he declared that he could not support Blaine.

State Senator J. L. Powell, of Spottsylvania County, Va., one of Mahone's stanchest followers, has addressed an open letter to his constituents, repudiating Blaine and coming out in favor of Cleveland.

One of the largest meetings ever held in Cohoes, N. Y., took place Saturday night in favor of Cleveland, at which H. J. Johnston, Superintendent of the Harmony Mills, presided. He discussed the question of free trade and protection at length, showing that there was no such thing as a free-trade question in the approaching election. He represents the largest cotton-manufacturing establishment in this country.

Governor Cleveland left Albany for Newark, N. J., on Monday morning, by the West Shore Railroad. He was enthusiastically received at many towns along the route.

The crowd which greeted Governor Cleveland on his arrival at Newark on Monday afternoon was so great as to be almost unmanageable. Workingmen were among the most enthusiastic of those who welcomed him. He was given a reception at a private house, and in the evening at the opera-house. He made a short speech at the latter place, in which he said: "We surely must condemn a system which takes from the pockets of the people millions of dollars not needed for the support of the Government, and which tends to the inauguration of corrupt schemes and extravagant expenditures. The Democratic party has declared that all taxation shall be limited by the requirements of an economical Government. This is plain and direct, and it distinctly recognizes the value of labor, and its right to governmental care, when it further declares that the necessary reduction in taxation and limitation thereof to the country's needs should be effected without depriving American labor of the ability to compete successfully with foreign labor, and without injuring the interests of our laboring population." On Tuesday afternoon Governor Cleveland reviewed the National Guard of this city. He returned to Albany that night.

Governor Cleveland has emphatically denied the story that he sent a convict as his substitute to the war.

The Catholic *Telegraph*, of Albany, the only publication of its character between New York and Buffalo, has deserted Blaine, and come out squarely for Cleveland. Its previous course was pursued because of a misapprehension of the circumstances connecting the Governor's name with the Freedom of Worship Bill and with the Catholic Protectory item which he vetoed. An investigation of them by a committee of laymen and clergymen removed the feeling of dissatisfaction with Governor Cleveland.

Governor Cleveland's assailant, Boone, was discharged on Wednesday, the Governor not appearing against him.

Gen. W. H. Parsons prints another letter exposing Butler's sell-out to the Republicans, in which he says: "To-day we renew the specific charges, and in confirmation allege that since the pending campaign has opened, General Butler's political manager, Noah A. Plympton, has received and accepted from the Hon. B. F. Jones, Chairman of the Republican National Committee, checks drawn on the First National Bank of New York (John Sherman's) to the amount of $22,000, which were cashed."

Butler is rapidly losing supporters in Massachusetts through his collusion with the Republicans.

The official returns of the recent Ohio election give the following vote for Secretary of State: Robinson (Rep.), 391,599; Newman (Dem.), 380,275; Morris (Proh.), 9,857; Herold (Grbk.), 3,580.

The Regular Republicans of this city on Wednesday night nominated Lewis J. Phillips for Mayor, Charles Spear for Comptroller, Charles S. Spencer for District Attorney, George Hilliard for President of the Board of Aldermen, and other city officers. The ticket was agreed upon in a caucus of the party leaders held in the afternoon. The caucus was not attended by any representative of the Eleventh Assembly District, and was completely under the control of the John J. O'Brien Machine. Col. George Bliss made a speech against the Machine nominees, declaring them utterly unfit men for the offices. Cornelius N. Bliss said that he could not support the ticket, and that the party had committed moral suicide. He was greeted with cries of "Get out" and "Good-by," and, heading the delegation from the Eleventh District, he left the convention. The ticket met with great opposition, as it was understood to have been put up to be traded on with Tammany. Mr. Phillips, on Friday, declined the nomination for Mayor, for the good of the Republican party.

The Republican County Convention, on Monday evening, owing to resignations and dissatisfaction with its previous work, almost entirely reconstructed its ticket. Frederick S. Gibbs was nominated for Mayor, and J. F. Plummer for Comptroller. New candidates for Common Pleas Judges and President of the Board of Aldermen were also nominated.

Mayor Edson, of this city, on Tuesday afternoon, appointed General Fitz-John Porter to be Police Commissioner to succeed the late Sidney P. Nichols.

The Supreme Court of Ohio—three judges assenting and two dissenting—on Tuesday declared the Scott liquor-tax law unconstitutional.

At the boarding-school of the New England yearly meeting of Friends in Providence, R. I., on Friday, there was celebrated the presentation of a portrait of the poet Whittier, by Charles F. Coffin, of Lynn, Mass. Mr. Coffin was a pupil at the school fifty years ago, and later was a teacher and then a committeeman, which office he still holds. The gift was the result of a desire to give to the institution a lasting memorial of the Quaker poet. The portrait is by Edgar Parker, of Boston,

The first snow of the season fell in Pennsylvania, Ohio, New York, and Illinois on Thursday.

An attempt was made on Wednesday to wreck a train near Knoxville, Ill., by placing obstructions on the track. General Logan was one of the passengers.

By an explosion of fire-damp, on Monday, in the mine of the Youngstown Coke Co., near Uniontown, Pa., fourteen miners were killed and eight injured.

The private banking-house of H. D. Cooke & Co., of Washington, temporarily suspended on Thursday; liabilities $140,000.

Professor Lewis R. Packard, of Yale College, the well-known Greek scholar, died in New Haven on Sunday, in the forty-ninth year of his age. His widow is a daughter of Dr. Storrs, of Brooklyn.

Wilbur F. Storey, proprietor of the Chicago *Times*, died on Monday night at his home in Chicago, aged sixty-five. He was born at Salisbury, Vt., and received a meagre education. In 1861 he took possession of the Chicago *Times*, and made it the organ of the Democrats of the West. It became noted for its strong secessionist proclivities, and on one occasion the Government suspended it. Notwithstanding its political unpopularity, the newspaper flourished on account of its enterprise in getting the news. It was bitterly personal and sensational. It has since gained a large circulation, and is valued at $1,500,000. About five years ago Mr Storey became a spiritualist and greatly modified its acrimony.

FOREIGN

The British Parliament reassembled on Thursday. Queen Victoria's speech was very brief. In it she said: "I have brought you together to enable you to further consider the great subject of the representation of the people. I continue to maintain relations of amity with all foreign Powers. The information from the Sudan includes painful uncertainties, but the energy, courage, and resource conspicuously displayed by General Gordon in the successful defence of Khartum deserve my warm recognition. The advance of my troops to Dongola has for its object the rescue and security of that gallant officer, and of those who have so faithfully coöperated with him I am using my best endeavors in Egypt to promote further improvement of affairs in that country. I have given my support to the Egyptian Government in the difficult financial position in which it was left through the failure of the recent Conference. I regret the occurrences in the Transvaal, and am considering with the Cape Government means to secure the observance of the convention. The operations in the Sudan render it necessary to ask of you further pecuniary provision."

In the House of Commons on Thursday Mr. Gladstone said that on Monday he would ask that priority be given to the Franchise Bill throughout the session. He vaguely referred to the Congo question, the Cape troubles, Egyptian affairs, and Lord Northbrook's mission. He insisted that redistribution must follow the passage of the Franchise Bill, and deprecated the disorders in Birmingham and elsewhere, but said he hoped the Opposition had seen that the country wanted the Franchise Bill passed. He would warn them that, while insisting that their labors should include the redistribution scheme, they should not include another question, the issue of which he was unable to foresee. Speeches made by other Conservatives showed that they objected to Mr. Gladstone's menacing tone. Mr. Labouchere said he hoped the House of Lords would persist in rejecting the Franchise Bill, and thus hasten the abolishment of that body. The Marquis of Salisbury, Conservative, in the House of Lords, announced that the House was willing to pass the complete franchise measure, together with a redistribution act, at the earliest date. Earl Granville urged a calm discussion of the bill. The House then adjourned to November 3. The members of the Irish party are left free to support the Franchise Bill or to refrain from voting, as they think fit.

In the House of Commons, on Friday night, the Franchise Bill passed its first reading without debate.

A monster Radical demonstration in favor of the abolition of the House of Lords was held in Hyde Park, London, on Sunday. Over 100,000 persons were present. A long procession with bands, flags, etc., marched through the principal streets. Many banners were displayed bearing such inscriptions as "Down with the Lords!" and "The Lords are opponents of civil and religious liberty, and must be abolished!" Speeches were delivered from nine platforms. Resolutions were passed declaring that the House of Lords is useless and dangerous, and ought to be abolished.

It is proposed to raise by subscription a fund of £10,000 for the benefit of the family of the late Alexander M. Sullivan, the Irish leader.

The Right Hon. George J. Dodson, Chancellor of the Duchy of Lancaster, has been created a peer. He will be succeeded by George Otto Trevelyan, Chief Secretary for Ireland, with a seat in the Cabinet. H. Campbell Bannerman, Secretary to the Admiralty, has been appointed Chief Secretary for Ireland. The Dublin *Freeman's Journal* asserts that Mr. Trevelyan withdrew from the Chief Secretaryship of Ireland because he was unwilling to continue as the mouthpiece of Earl Spencer's policy, and because he was disgusted with the Castle officials.

Earl Spencer, Lord Lieutenant of Ireland, will continue at his post until the close of the session of Parliament in 1885, when Lord Rosebery will probably succeed him. Earl Spencer urges the imprisonment of the Limerick authorities if they persist in refusing to pay the police tax.

For the Nile expedition the proposed British credit is $10,000,000, and it is said that an additional penny will be added to the income tax to meet the expense.

It is reported that at the close of the present session of Parliament the Right Hon. Hugh C. Childers, Chancellor of the Exchequer, will be elevated to the peerage.

The recent official correspondence relating to Egyptian affairs has been made public in London. The letter of instructions from the Government to General Lord Wolseley stated that the object of the expedition was to bring General Gordon and Colonel Stewart back from Khartum. No further offensive operations than should prove necessary to secure this end would be permitted. In a letter dated April 22 General Gordon writes that he has offered freedom and pay to slaves who desert the Mahdi. This policy, he hopes, will sound the doom of slavery in the Sudan. He declares that if Shendy is captured by the rebels it will be due to the Government's failure to send Sebehr Pasha to him.

It is officially announced at Cairo that no doubt exists that Colonel Stewart and his party were massacred by Arabs near Meraweh.

Rumors were current at Cairo, on Tuesday, of the fall of Khartum, but they were not credited by the Government.

Sir Moses Montefiore received hundreds of telegrams on Friday, congratulating him on attaining his hundredth birthday. They came from all parts of the world, and there were many from America. The event was celebrated in many places on Sunday and Monday.

The Rev. Stopford Brooke is about to leave the English Church to join the Unitarian.

A violent storm prevailed throughout the British Isles and neighboring seas on Monday night and Tuesday, doing great damage to shipping. Many small wrecks were reported along the coast.

The Duke of Cumberland issued on Thursday a proclamation assuming the government of the Duchy of Brunswick, and reserving the right to issue the necessary orders in relation to the oath of allegiance. He says he intends to govern the country in accordance with the imperial and provincial constitutions. Prince Albert, of Prussia, is also a candidate for the throne, and his claim is favored by the court of Berlin. It is said that before the death of the Duke of Brunswick, Prussia indirectly informed the Duke of Cumberland that she would recognize him as the Duke of Brunswick, provided he would renounce all claims to the throne of Hanover. The Duke of Cumberland replied: "My father's son shall be King of Hanover and Duke of Brunswick or remain the Duke of Cumberland." The Regency Council of the Duchy of Brunswick has refused to countersign the manifesto of the Duke of Cumberland, assuming the government of the duchy. The Emperor William has also rejected his claims.

The question of the Brunswick succession was discussed on Thursday by the German Bundesrath. A majority of the body resolved not to admit the claims of the Duke of Cumberland to the throne.

Prince Bismarck on Tuesday, in private conversation, denied absolutely that he had any designs against the independence of the free cities of Germany. The Empire, he said, was greatly interested in their continued freedom, and especially in that of Hamburg.

It is asserted in Paris that Germany has assumed a protectorate over Zanzibar, at the request of its Sultan.

The political ferment in Belgium is serious. Frequent riots occur. On Thursday the Prime Minister resigned. M. Bernaerdt, Minister of Agriculture in the retiring Cabinet, was called by the King to form a new Cabinet. He retained all the old Cabinet except the Ministers of Agriculture, the Interior, and Justice, whose portfolios he filled with new men. The Liberals are dissatisfied with the new Cabinet, as all the new members are Catholic sympathizers.

At a French Cabinet Council on Thursday it was agreed to make a reduction of 3,600,000 francs in the appropriations for the Ministries of War, Finance, Instruction, and Public Works. M. Jules Roche proposes to the Budget Committee to tax religious congregations 3 per cent., which will produce 4,000,000 francs annually, and to reduce the state subsidies to railways.

The French Cabinet decided on Wednesday to send 12,000 reinforcements to China. The first contingent will be drawn from Algeria. General Delisle will get 9,000 and Admiral Courbet 3,000.

Admiral Courbet promulgated on Wednesday an edict ordering the blockade of Formosa, including the north and west coasts.

Sarah Bernhardt, the actress, has been ordered by her physicians to take a long rest.

Jacques Auguste Adolphe Regnier, the French philologist, is dead.

M. Faustin Hélie, a well-known French jurist, is dead. He was born at Nantes, May 31, 1799, was educated at the Lyceum of his native town, and studied law at Rennes. He was in 1879 made Vice-President of the Council of State. In 1855 M. Hélie was elected a member of the Academy of Moral and Political Sciences. He was promoted officer of the Legion of Honor in 1859 and commander in 1874. He was one of the founders and original editors of the *Journal du Droit Criminel*, and he was the author of numerous important treatises on the criminal law.

Recent developments show that the explosions in the Quebec Parliament house were not the work of Irish dynamiters, but of the enemies of the contracting builder.

Japanese advices state that the Mikado has informed the European missions of the creation of a Japanese peerage. This consists of 11 princes, 24 marquises, 76 counts, 374 viscounts, and 74 barons,

WHAT IS "THE REPUBLICAN PARTY"?

We believe that it is now well known that the Blaine managers have given up all hope of this State, and are simply engaged in trying to prevent Cleveland's receiving the three votes in addition which, after getting those of New York and of New Jersey, will be all that he needs to be elected. He may get these in Indiana; he may get them in Connecticut; he may get them in Nevada or in California. All these are doubtful States with the chances in Cleveland's favor, so that the probability that he will get the three votes in one or other of them is exceedingly strong, and the Republican chance of carrying all of them in the present state of the party, seeing that it was unable to carry them all in 1876 or 1880, when it was united and enthusiastic, is of course exceedingly small. In this State, the question now of most interest is the size of Cleveland's majority. It is to be hoped that it will not be simply an ordinary majority, such as Tilden or Garfield received—that is, a majority indicating a simple preference—but one, like Cleveland's in 1882, large enough to stamp with deep popular reprobation both Blaine and his methods. New York occupies the proud position in the Union of being the one State which no politician can calculate on as sure for his party, under all circumstances. It is never sure for any party two elections in succession. It holds a body of voters who cannot be either cajoled or bought, who represent better than any other body in the country that ideal public of which we hear so much in speeches and articles, which watches both parties with an equal and unclouded eye, and makes its vote at the polls dependent on performance and not on promises. It is almost the only State in the Union which has ever cast a distinctly punitive vote—that is, which not simply defeated rascally politicians, but defeated them with a blow so sudden and stunning that they never tried to explain it away. They simply tied up their heads in silence and retired to their homes. It will, therefore, be preëminently its rôle on Tuesday next not simply to deny the Presidency to James G. Blaine & Co., but to warn the band of speculators who make up the firm, that they must dismiss, for this generation at least, all hopes of getting hold of the Government.

There are Republicans who, being friends of good government, look forward to this with so great apprehension that they prefer, in the first century of the Republic, and in the eyes of all the world, putting a mendacious jobber in the chair of Washington to seeing the Democrats once more in possession of the Administration. We would ask them, with perfect comprehension of their feeling, to consider for one moment carefully what it is they mean when they talk and think of "the Republican party." In ninety-nine cases out of one hundred what they have in mind when they use this phrase is the Republican half of the American people, which possesses the larger share of the intelligence, public spirit, thrift, industry, foresight, and accumulated property of the country. It is not surprising that they should think this half safer custodians of the Government than the other half. So it would be if its virtues were at every election brought to bear on the transaction of public business—that is, if the Republican party which votes were the Republican party which administers. But the fact is—and it is the great fact of the present situation—the Republican party which votes and the Republican party which acts have become two different things in virtue of a law which seems to govern all human organizations. Wherever you have organization you have to have leaders or managers, and the tendency of the leaders and managers, if assured of their tenure of power, exempt from criticism which they really dread, and plentifully supplied with money, is to drift away from the main body of their constituents, to lose sympathy with them and comprehension of them. They get, in short, into the state of mind in which absolute hereditary monarchs pass their lives—a state of mind, that is, in which force and money seem the greatest things on earth, opinion and feeling of small consequence, and high aims ludicrous vanities.

That this scission between Republican managers and Republican voters began to show itself soon after the war, and has gone on increasing, no intelligent observer can deny. It is now complete. In fact, we consider the nomination of Blaine a sign of its completeness. Every time Republican voters say to a Dorsey, or a Robeson, or a Blaine, or an Elkins, or a Clayton, that they will stand anything from "the Republican party" sooner than vote the Democratic ticket, they practically give him a blank check on the national exchequer. They take away all the motive for reform by which most politicians, bad or good, are most powerfully influenced. They promise power to these men for which no men are fit, not even Washington, or Lincoln, or Pitt, or Gladstone.

It must be remembered, in fact, that the goodness of the Republican voters does no good as long as it does not reach the Government. The quality of the individual members of a party is of no sort of use politically unless it affects legislation and administration. It is useful, indeed, only in so far as it affects legislation and administration. For practical purposes, in every party government, the party is not the voters but the men whom it puts in power. It is only in the men whom it puts in power that a party manifests itself as a political force. What the voters think about the commonwealth, how much they love it, how much they hate corruption or disorder, is of itself of no more political consequence than what a religious congregation thinks or feels about faith, hope, and charity. Nor is their desire or motive in voting of any political importance. The thing to be considered in estimating the value of a party to the State is the kind of men whom it chooses to execute the laws and take care of the public money. Telling people, when you are reproached with putting thieves in office, that you cannot forget the war, is very like the remark of Colonel Yell of Yellville, that though the accounts of his bank were not quite straight, his heart beat warmly for his native land. The war was fought in the interest of good government, and the only use of remembering the war lies in the help it affords in keeping the government good. Patriotism, in short, is not a virtue to be cultivated for its own sake, and neither is party fidelity. A patriot who does not care what kind of men he puts in charge of his country is a contradiction in terms, like an excellent husband and father who, while possessing a tender heart and a strong sense of duty, refuses to support either his wife or family, and squanders his substance on profligate companions.

DEMAGOGISM IN THE CAMPAIGN.

Within the past few weeks it has come to our attention in many ways that the Blaine managers are making innumerable secret efforts to convince the workingmen that Cleveland is their enemy. Documents misrepresenting his veto of the Five-Cent Fare Bill, of the Horse-Car Conductors' Bill, the Mechanics' Lien Bill, and other measures have been disseminated with great ingenuity among the working classes all over the country; all placing his action in such a light as to give the impression that he is the bitter foe of laboring men and the persistent defender of monopoly. It seems to us that campaigning of this sort is likely to cut in two directions. It may result in deceiving a few workingmen who do not stop to think about the matter, and to whose attention the real facts in the case may not be brought; but upon thinking men of all classes the effect cannot fail to be to raise the Governor in their estimation. If he had been a demagogue, he would have signed every one of those bills. To a man without convictions or a strong sense of public duty, it would have been the easiest thing in the world to sign the bills, and pose before the country as the friend of the workingman. There would have been thousands of votes in such action. He knew well enough how his refusal to betray his trusts would be misinterpreted against him, but he had the courage to do his duty.

In one of his private letters to his friend President Hinsdale, Garfield wrote: "You know that I have always said that my whole public life was an experiment to determine whether an intelligent people would sustain a man in acting sensibly on each proposition that arose, and in doing nothing for mere show or for demagogical effect. Perhaps it is true that the demagogue will succeed when honorable statesmanship will fail; if so, public life is the hollowest of all shams." That applies peculiarly to the present canvass. If Cleveland is defeated, it will be solely because the "demagogue will succeed when honorable statesmanship will fail." The supporters of Mr. Blaine admit the case when they say that the loss of the Independents will be made good by the Irish vote and the labor vote. Both these elements, if they go to Blaine, will go there because of his demagogism, and will desert Cleveland because of his absence of demagogism. Thoughtful men realize this, and it is one of the main reasons for their faith in Cleveland as the man preëminently fitted for this crisis.

Take for example the veto of the Five-Cent-Fare Bill. What a chance there was in that

for a demagogue to make capital. It was a blow aimed at a monopoly whose controlling spirits are the most unpopular capitalists in America. The popular dislike of them is so intense that any measure, just or unjust, which is designed to cripple their power, is certain to be hailed as in the interest of the people. That was the case with the Five-Cent-Fare Bill. Its passage was advocated by journals and leaders who were so carried away by the sentiment against the owners of the roads affected that they forgot to take into account the public faith of the State. But the Governor did not forget his duty or shrink from it. He vetoed the bill because it was a breach of the public faith, and his courage called forth high praise from many quarters, including some from men who are joining now in the efforts of demagogues to defeat him. Andrew D. White, President of Cornell University, thus wrote about it:

"I will say frankly that I am coming to have a very great respect and admiration for our new Governor. His course on the Elevated Railroad Bill first commended him to me. Personally I should have been glad to have seen that company receive a slap. But the method of administering it seemed to me very insidious and even dangerous, and glad was I to see that the Governor rose above all the noise and clap-trap which was raised about the question, went to the fundamental point of the matter, and vetoed the bill. I think his course at that time gained him the respect of every thinking man in the State."

The Governor did indeed "rise above the noise and clap-trap," but we regret to observe that Mr. White has found himself incapable of rising to a similar height in this campaign. Another spontaneous tribute to the Governor's courage came from the President of Rochester University, as follows:

"ROCHESTER, March 4, 1883.

"*Governor Cleveland:*

"Sir: I cannot, in justice to my convictions, refrain from expressing my gratitude for your veto message, which I have just read. I have no personal interest in any of the great corporations which were directly or indirectly affected by the bill from which you have so wisely withheld your approval. But the just and statesmanlike positions taken in your message seem to me a most fitting rebuke to the demagogism which is ready to trifle with those sacred rights of property guaranteed by our State and National Constitutions. In these safeguards of property the poor man has a more vital interest than the capitalist, for they make secure the poor man's savings, which constitute his only means of support. I have taken occasion to commend your message to the careful consideration of my students as an exhibition of the principles which should govern their actions, should they be called to fill public station in their future lives. I trust you will pardon me for obtruding myself upon your attention. As a teacher of young men, I feel grateful to any public functionary who illustrates in his person the lessons which I am so anxious to impress upon their minds. Again I thank you for the courageous and worthy action which you have adopted to secure sound government for our great State.—Yours very respectfully,

"MARTIN B. ANDERSON."

Among the advocates of the bill when it was driven by "noise and clap-trap" through the Legislature, was Theodore Roosevelt. He has probably not forgotten the manly confession which he made of his error when, in the light of the Governor's veto message, he changed about and voted to sustain the Governor's position.

On all the other measures upon which his action is now brought up against him, the Governor's course was equally brave and sound. Nobody has ever successfully questioned the statesmanship and wisdom of any of his acts. His public record has been assailed openly only to be vindicated. It is an everlasting humiliation to the Republican party that in this campaign its candidate stands forth as the avowed advocate of demagogism, while the Democratic candidate would have been assured of overwhelming triumph from the moment of his nomination had he not risen in every case of trial "above the noise and clap-trap."

INTERNATIONAL COPYRIGHT AT BERNE.

THE question of international copyright, while it has dropped out of sight for a time in this country, is making rapid progress in Europe. It has been the chief subject of discussion at the Literary and Artistic Congress recently held under royal and distinguished patronage at Brussels, and the two following important resolutions were proposed by the Committee and voted by the Congress:

"(1) The right of reproduction of a work of art belongs to the artist independently of the material property of the work. Consequently, the disposal of a work of art does not imply on the part of the artist, unless in case of express stipulation, the alienation of the right of reproduction. (2) All reproduction unauthorized by the artist, even by a different art, is an infringement of the artist's right."

It was the opinion of the Congress, however, that the artist who sells his work to the State, parts with his right of making or authorizing the reproduction of it, except, of course, in case of contrary stipulation.

The Conference of the Association for the Promotion of an International Copyright in Literary and Artistic Works, which has just concluded its second annual meeting at Berne, was of greater importance, and has given an exhaustive report on the subject. It was founded in 1878, under the title of "The International Literary Association," with the avowed object of "propagating and defending in all countries the principles of intellectual property, and of studying, with a view to their improvement, the various conventions bearing on the subject." The first meeting was held at Rome in 1882, when it was determined to convoke a conference at Berne for the following year, to draw up a programme as a basis for an "International Convention." This conference at Berne, in September, 1883, was attended by numbers of delegates from literary societies, universities, academies, societies of artists, editors, journalists, and diplomats. Great satisfaction was expressed at so influential and intellectual a gathering. The programme for discussion was as follows:

"(1) To study the legislative enactments affecting literary property in all civilized countries. (2) To study important points of these enactments, with a view to a unification and the foundation of a 'Union of Literary Property.' (3) The drawing up of certain articles, clear and concise, setting forth the principles that are most likely to be accepted by the various Powers, and which should constitute the text of a universal convention."

After three days' discussion a "project of convention" was unanimously adopted and submitted to the Federal Council. By this body it was approved and embodied in a circular note to all the governments of civilized countries, inviting them to send a diplomatic representative to a conference which should consider the copyright laws of each country, and then report upon the feasibility of "international rights." To this an affirmative reply was received from eleven States, as follows: England, Germany, France, Austria, Italy, Guatemala, Luxembourg, Salvador, Sweden, Norway, and the Argentine Republic. A direct negative reply was received from six others—the Republics of San Domingo and Nicaragua, Mexico, Greece, the Low Countries, and Denmark. Two others sent an ambiguous answer, not stating their intentions with regard to the proposed conference. These were Bulgaria and the United States.

"In practice," wrote the latter, "the American Government believes that it would be found that great obstacles would embarrass the working of a single convention to embrace all countries. The difference of tariffs, and the fact that, besides the author and artist, several other industries are interested in the production or reproduction of a work in any country, must not be left out of the calculation when an agitation is set on foot to accord to an author of a work the right to produce, or to prevent reproduction of, a work in any country not his own."

A second circular from the Federal Council converted two more countries, so that thirteen were represented at this year's Conference. It is stated that our own Government entirely ignored the second circular. Costa Rica and Paraguay also joined the convention toward its close. The principal points of discussion during the ten days' sitting were the duration of copyright, the nature of the formalities of registration, and the rights of translation. The Conference sat with closed doors, and the details of the provisory convention, which was unanimously signed, will not be made known until the first of November. It is confidently hoped that next year's Conference will be able to give a definite character to the convention.

Notwithstanding the reticence which has been observed on the subject, it is understood that the following are the principal heads of the convention already arrived at: (1) Authors placing themselves within the jurisdiction of the contracting countries will be afforded protection for their works, whether in print or manuscript, and will have all the advantages of the laws of the different nations embraced in the Union. (2) These privileges will be dependent upon the carrying out of the conditions and formalities prescribed by the legislation of the author's native country, or of the country in which he chooses to first publish his work; such country being of course one of those included in the convention. (3) These stipulations apply alike to editors and authors of literary works, as well as to works of art published or created in any country of the Union. (4) Authors within the jurisdiction of the Union will enjoy in all the countries the exclusive rights of translation of their works during a period of ten years after publication, in any one country of the Union, of an authorized translation. (5) It is proposed that it shall be made legal to publish extracts from works which have appeared in any country of the Union, provided that such publications are adapted for teaching or have a scientific character. The reciprocal publication of books composed of fragments of various authors will also be permitted. It will be an indispensable condition, however, that the source of such extracts shall at all times be acknowledged. (6) On the other hand, it will be unlawful to publish without special permission of the holder of the copyright any

piece of music in any collection of music used in musical academies. (7) The rights of protection accorded to musical works will prohibit arrangements of music containing fragments from other composers, unless the consent of such composer be first obtained.

THE WATTS EXHIBITION.

LONDON, October 11, 1884.

IN a few days an American public will, *mari permittente*, have an opportunity of seeing and judging fairly the most distinguished and, on the whole, the greatest artist whom England has produced in the present generation, and who with Turner enjoys the preëminent good fortune of being appreciated by the educated in art, and accepted by the general public without being appreciated. One of your London correspondents has spoken of the general futility of the art-criticism of the English press, and I shall add nothing to his testimony except to give it what is in this case its due—that it, and especially the *Pall Mall Gazette*, has labored to give Mr. G. F. Watts his true position, if not from genuine comprehension of his artistic merits, yet from a sympathetic reading of the work through the man. Turner was indebted for the position he holds still to the appreciation mainly of the artists, and then to the enthusiastic propaganda of Ruskin; but to this day, in the public apprehension, he is judged by the least characteristic and least artistic of his works—those in which what people choose to call his common-sense and his commonplace views of nature are dominant; the most Turnerian of all being commonly spoken of as the things he did when he had gone half mad, as his vagaries, etc.

Watts has been more fortunate in this respect than his great compatriot, and he owes it mainly to the fact that the intellectual themes on which his art has been bestowed have been such as the public mind was capable of sympathy with, and in part, too, to his potent and poetic personality. Like our own Page, but in even a greater degree, he imposes his ideals on those who come in contact with him, by his earnestness and profoundly artistic nature, predisposing even those who have but slight knowledge of art, to see things through his eyes and accept his standards and aims as those of the highest art. Himself devoted to it with supreme devotion, and giving to its problems a mind of extraordinary power of insight and idealism, gifted by nature not alone with the keenest susceptibility to the qualities of art, but to those poetic inspirations which are allied to art as poetry is to music, it is impossible to come within the range of his influence without feeling that to this man, at least, art and all its outcome are the supreme reality, or without coming to sympathize with this unfaltering devotion to his æsthetic creed. To see the world of the artist through his eyes, even for the moment, is to see a metamorphosis in it, and to realize the possibility of finer things than our common sense aspires to. It is this power of the man which, perhaps even more than that of his art, has obtained for him a present recognition which no English contemporary has reached in England. You will find people who profess to be admirers of Turner, but who cannot sufficiently revile his later work; and the only two painters besides worthy of being classed with Watts as successful students of art for art's sake, Rossetti and Burne-Jones, are, while they have their special public, neither so equal in their work nor so generally accepted as entitled to the upper seats in the assembly of artists as Watts. Rossetti's imaginative intensity and his singular individuality, his extraordinary fecundity of design and wealth of color, have given him, in spite of all his technical shortcomings, a permanent position in English art—apart, and in his province supreme. Burne-Jones, in another vein of design as fertile and far more fluent, extraordinary in invention, and subtle and refined in color as any modern of any school—reminding one in his best work of the Bellini or the early work of Titian—is distinctly a follower of Italian art, and carries one back to the Italian Renaissance irresistibly. His work, seen collectively, is like an eclectic adaptation of Italian treatment with themes ranging from classical to mediæval. Mythology, fable, allegory, Greek, Hebrew, fairy—all that lies within the inexhaustible realm of the ideal—Burne-Jones roves over; the actual he never touches by intention or by chance, and every coin from his mint bears his image and superscription—he need put no *B.-J. fecit*. Both these are, like Watts, highly individualized products of modern art culture, but not of English exclusively, as Millais is, and as are the whole brood of story-tellers and incident and commonplace life painters, from Hogarth to Frith. Yet Watts, Burne-Jones, and Rossetti have two traits only in common—they are artists as opposed to the naturalists and realists of the day, and their art is vivified by the life that expired in Italy in the sixteenth century; Rossetti maintaining most an elemental independence—his very fibre is individual—and Burne-Jones yielding most to the fascination of the elder art, and measuring his steps by the old footprints; while Watts, between the two in this respect, towers above both by a larger view of the intellectual side of art, while, at the same time, he has a firmer grasp of the real as shown in his portraiture. In this he stands alone in England, and, in my opinion, in his epoch, and in a certain way is the first since Velasquez in one vein and the great Venetians in another. Certainly England in this generation has produced no such portraits for profound reading of character as some that will be seen in the exhibition at New York.

I wish that the portrait of Mr. Gladstone could have been among them, but it was regarded as too valuable to be risked afloat. Mr. Gladstone has been painted within a few years both by Millais and Watts, and the two portraits are so thoroughly characteristic of the difference between the two painters that I can illustrate them better by a comparison than in any other way. I knew both heads well before I had more than a casual chance to study the original, but it so happened one summer that I passed several days in the Dolomites with Mr. Gladstone, just after what was supposed to be his definitive retirement from public affairs, prior to the last general elections. We walked together every day, and the conversation was on Italy, Greece, and Montenegro generally, and of a purely philosophic character, except that now and then he spoke of America, but always in the vein of his actual feeling—deflective, and with remote interest in the actualities. It was no longer the politician, the tribune who spoke, but the man of letters and humanist, and his face was habitually that of Mr. Watts's portrait—a quiet, meditative, almost dreamy face, which no one would suspect to be that of a great statesman; and it was this phase of his character which Watts's portrait brought up and tells absolutely. Some time later, when Fenian attempts on the lives of members of the Government were apprehended, and they were commonly watched over by policemen, I met Mr. Gladstone going up Regent Street on foot and alone, looking straight before him, with no deflection of his vision or line of motion, as if he saw a Parliamentary conflict ahead and meant to be there in time for the first hot word, going with the rapid, resolute step of a man of forty at most; and I saw at the instant Mr. Millais's portrait of him—all surface, but a more or less agitated surface. Watts's head of the Prince de Joinville, which also remains here, is another grand head, which, but for the execution, one might mistake for a portrait by Titian. But the head of Burne-Jones, which has gone to New York, is one of Watts's best, and is, both as execution and color, a most characteristic work, and will enable our public to see what he can do in this noble branch of his art. As portrait, it is surpassed by nothing I know of.

What Watts, in common with the other English artists I have mentioned, not to speak of his contemporaries in general, will show a deficiency in, is the power of execution as compared with men of equal natural and not finer poetic powers in the great Italian schools. The modern training is absolutely and universally in default in the development of executive powers, when we measure them by the standard of Titian, Rembrandt, and Velasquez. To paint and draw with rapidity and precision was the basis of the training of the early painters—training which began at eight or ten years of age; and their lives were not burthened with superfluous education in useless sciences and accomplishments. Painting was a craft and not a learned profession, though some knowledge of letters was requisite, as we see from the fact that when Giotto became the pupil of Cimabue he was set at once to study Latin, clearly in order that he might read the Bible, from which his chief subjects were to be drawn. But there was not, as now, the general diversion of the intellectual powers into the various channels comprised in our modern system of even common education. To draw well and readily was the first object of all the training of the apprentice-painter, and all other education was quite incidental; and until these conditions are again observed, it will be useless to look for a school of art equally great in executive powers—*i. e.*, as painters.

Under this rule, Mr. Watts, as well as any and all of his contemporaries and predecessors since Rembrandt, falls in comparison of his executive ability with the older masters. In his portraits, under the immediate inspiration of the nature which he reproduces, the lines of expression are clearer, more rapid, and more precise; they approach more nearly to the ideal of execution—the highest precision given with the greatest rapidity. In the ideal pictures, where nature could not be the subject of simple portraiture, the execution is more recherché; it attains, in neither lightness nor precision, to the degree shown in the portraits; the conscious effort of will is in all parts apparent, and in the unimportant and therefore least inspiring portions of his work most so. But even in this respect it is with the great old masters that he must be compared, not with the frivolous realism of to-day, whether English or French. It is easy for a man to be glib in execution when he has only surfaces to imitate and models to follow, as in the art of Alma-Tadema, where the best work is in the least important details; and easy to seem to be masterly in execution when, like Whistler, an artist shirks all the difficult problems, and spends days in struggling to give an appearance of ease to a really labored effort, so that the public may imagine it the work of minutes, which is in fact only a kind of legerdemain. But to carry out a grave and complicated perception like those of Mr. Watts, in which the highest technical problems of color, composition, and light and shade are more or less involved, is quite another matter, and one in which nothing less than the supreme power and training of a Titian, a Correggio, or Velasquez would be absolutely triumphant. In Watts's ideal works the execution is, if always honest and manly, and consequent with the gravity of his theme, still marked by the shade of hesitancy which follows the necessity to think over every touch—the unfailing

consequence of the want of that early training of apprenticeship in which the artist learned to execute almost unconsciously and before thinking.

As for the subjects of Mr. Watts's pictures, the public appreciation will differ widely in America, as it has done in England, the artists generally preferring his portraits to the ideal subjects, and other people such subjects as his "Love and Death" and "Love and Life" to everything else. The pathos and power of the "Love and Death" as design have, to my mind, never been surpassed, and serve to mark the highest attainment of art in this direction. Love stands on the threshold of the menaced home, and passionately but with unequal strength strives to bar the way to Death—a hopeless agony of struggle. It is not allegory but impersonation, and the personation is not of the conventional familiar type, but created by the thought. Death is not the familiar fleshless skeleton, but a mighty, mysterious being, whose power over his opponent is not merely in the strength that pushes, but in the dread that paralyzes. As colorist, Watts lies between the Venetians and Turner, and in the "Love and Life," in which the theme, more cheerful than in "Love and Death," takes a more joyous tone of color, he resembles Turner most.

The public unused to Watts's work must not expect to understand it as they do the surface work of the popular French painters. His exhibition will be important as art education, but not a primary lesson. Something about art, in all its bearings, must have been learned before it can be profited by. W. J. Stillman.

"SAINTS AND SINNERS."

London, October 15, 1884.

Mr. Henry A. Jones, the joint author of the "Silver King" and "Chatterton," and a weighty contributor to the recent papers on the methods of English playwrights, has just opened the Playgoers' Club in London with an inaugural address of great interest and suggestiveness. The new club consists chiefly of veteran "first-nighters," and its meetings will be occupied with regular discussion and votes upon each new event in the theatrical world, thus producing in time, it is confidently hoped, a body of deliberate and authoritative opinion which playwrights, actors, managers, and the public will alike be bound to consider. The subject of Mr. Jones's inaugural address was "The Modern Drama," and it consisted of an exposition of some of the principles of the dramatic art which are most obscured at the present day, and an eloquent plea for a school of English playwriting, just as there are schools of English poetry, music, landscape, and portrait-painting. In each of these latter, Mr. Jones said, it would be as impossible for a man to rise to sudden distinction, influence, and wealth upon some worthless piece of work, as it would be for him to produce a work of great merit without something like adequate recognition; whereas, with regard to dramatic work, he added, "I can only assure you that the success or failure of any piece at any theatre is to all human judgment a complete lottery, and is as impossible to predict as to predict which side of a penny will fall uppermost when you toss it into the air." Great additional interest, however, is given to Mr. Jones's address by the fact that his latest play, "Saints and Sinners," in which the ideas here presented theoretically are doubtless practically embodied, was successfully produced at the Vaudeville Theatre almost simultaneously with the delivery of the lecture. An excellent opportunity, therefore, of a kind dear to the heart of the true critic, is thus afforded for judging this dramatist's professions by his performances—his theories by his practice; an opportunity all the more valuable here because the theories, if not new, are old ones resuscitated, and because the play in question has half puzzled critics and audiences by its fearless breaking of new ground.

The two things which would strike a stranger coming to England to report on the drama would be, Mr. Jones thinks, the enormous and ever-growing popularity of the theatre with all classes, and the comparative scarcity of original modern plays of high excellence and serious import. Looking back through any recent year, we must have been forced to confess that, though the reapers have been numerous, the harvest of good, sound, ripe grain, fit to nourish human brains and hearts, has been miserably small. There are many reasons for fear and anxiety, the lecturer went on to say—none, however, for despair, and some for congratulation; but "while our hands have as yet barely touched the plough-shafts, it is not time to chant harvest thanksgivings." The grounds for fear lie in the word "serious" used above. Mr. Jones laid special emphasis on the fact that this does not mean the opposite of "gay and cheerful," but the opposite of "farcical and burlesque"; that is, a serious play is not a dull and gloomy one, but one of direct and sincere intention—the "School for Scandal," for example. The rapid growth of the custom of realistic accessories, of the efforts of managers to convince us, by architectural structures, by shipwrecks, by explosions, by earthquakes, by crowds of supers, by tricks of all kinds, that what we are seeing on the stage is the real thing itself, has led, Mr. Jones holds, to a gradual but thorough lack of faith on the part of playgoers, as they have reflected on the attempts thus made to dupe them, in the deeper and essential realities of the drama. From being forced, in mere self-defence, to bear constantly in mind that the hero's palace is wood and painted canvas, and the thunder and lightning which play round him sheet-tin and rosin, it is but a short step to the conviction that the passion and despair he personifies are no less flimsy. Hence the prevalence of a habit of mocking at seriousness in a play, and even at the most necessary conventions of the stage. Hence the growing number of theatres devoted to plays in which everything is avowedly absurd, outrageous, and impossible, and where there are therefore no opportunities for any ridicule more serious than the pieces themselves.

To return to Mr. Jones's own words, "there is a certain spirit of raillery abroad, which is rapidly driving all serious work from the stage," and the proof of this is furnished by the fact that many men whose talent and culture fit them for work of "sincere study of human life and lasting literary value" are employing their pens on farcical comedies and burlesques. Mr. Jones, therefore, laid the chief emphasis of his address upon the following proposition:

"Everything that tricks or deceives an audience, or that attempts to trick and deceive an audience, into believing that what they are seeing is real life, instead of being what it is, a suggestion, a representation, a transcript, an abstract of real life, is false, ignoble, unworthy of art, and must sooner or later be abandoned and surrendered."

The two tests to be applied to any play, Mr. Jones told his audience of playgoers, are: "Does it truly paint character?" and "Is it literature?" And the kind of influence most needed on the stage to-day is one akin to that which Wordsworth brought into English poetry at the beginning of this century—"the influence of naturalness, simplicity, thoughtfulness, sincerity, reverence, sheer hard devotion to nature and truth."

Turning now to "Saints and Sinners," as acted at the Vaudeville, we are able at once to see what Mr. Jones means by relying upon the deeper aspects of human life for attraction, and how far he has ventured to follow out his own teachings about sheer, hard truth to nature. And we may say at once that so clearly does "Saints and Sinners" express the first of these, and so frankly—indeed, almost so recklessly—does it attempt the second, that a brief account of the plot and characters is all that is necessary to complete the comparison. The plot is substantially that of the 'Vicar of Wakefield.' The *Rev. Jacob Fletcher* is the old minister of Bethel Chapel in Steepleford. *Letty* is his charming and innocent daughter. *Captain Eustace Fanshawe* is the (married) villain who steals her away from her home and her lover *George Kingswill*, a farmer. *Samuel Hoggard* is a tanner and the senior deacon of Bethel, and *Prabble* is a grocer and the junior deacon. *Hoggard* is a sanctimonious rascal, of whom the minister makes an enemy by insisting upon an outsider's valuation of some property *Hoggard* holds belonging to a widow whose trustee he (the minister) is. *Prabble* he offends by refusing to "make a pulpit question" of the coöperative stores and preach against them. *Hoggard* and *Prabble* meet outside the Bethel on Sunday morning before the service. "If I find something against the minister, will you support me?" says the former to the latter. "Certainly Brother Hoggard," is the reply. "Very well, then, I'll make Bethel too hot to hold him!—How welcome is the Sabbath morn, 'and how pleasant it is for brethren to dwell together in unity!'" and the two deacons pass into chapel together.

A similar scene is when *Hoggard* is instructing his foreman to claim against the railroad company for damages in transit on some leather which has just arrived in perfect condition. "How much shall I claim?" asks the unwilling foreman. "Oh," replies the pious deacon, reflectively, "claim five pounds. Business is business. You remember the Scripture, 'See'st thou a man diligent in business, he shall stand before kings.' Make it seven pounds!" With similar feeling, the children at the Sunday-school treat are heard singing the hymn "Abide with me," as they gather to go home, while on the stage *Fanshawe* is just luring the helpless *Letty* to her fate. *Peter Greenacre*, the drunkard of the piece—a marvellous piece of character-acting, by the way, equal so far as it goes to Irving's *Louis*—describes himself as "a monument o' grace."

As may be imagined, such ruthless handling of hypocrisy and selfishness under the cloak of religion has led to a good deal of more or less angry controversy. No one has ventured to impugn the truth of the character-painting, the literary ability of the dialogue, or the dramatic skill shown in the construction of the play. But many people have protested against thus touching places where everybody pretends to be tender. One ingenious clergyman, among many who ask for the excision of the Scripture quotations, takes the trouble to give a list of them. They are: Psalms cxxxiii, 1, 2; Proverbs xxii, 29; Zechariah iii, 2; St. Matthew xxiii, 12; I Cor. iv, 7; Hebrews xiii, 4, besides many vestiges of other texts. It must be added, however, that many clergymen have written both public and private letters to the author, thanking him for his courageous characterization of this privileged humbug. How close the play comes to nature may be judged by the fact that not only were there frequent loud expressions of personal approval from the gallery, but also, when the present writer witnessed it, there were actually to be heard several times in the stalls frank expressions of "Hear, hear!" Such a thing is almost unparalleled among the indifferent fashionable occupants of a London theatre.

The play ends in a more conventional manner: *Jacob Fletcher*, dismissed from his ministry by *Hoggard's* wiles, based upon *Letty's* disgrace, finds an occasion of repaying evil with good by

sheltering *Hoggard* when the latter is pursued by an angry mob from the village for having robbed the Penny Bank, of which he was president; and is at last, all the shame having been bravely "lived down," invited to resume his old ministry at a higher salary, the chapel "having prospered greatly since the Wesleyans shut up." *George Kingswill* follows *Fanshawe* to India to fight with him, but finds him dying on the battlefield and buries him, and returns home when he has done well in Australia, to marry *Letty* at last. There can be no doubt that Mr. Jones comes out well from the trying test of comparison of principles and practice. Endeavoring to work in the spirit of Wordsworth, he has succeeded, in Wordsworth's own words, in "mixing more lowly matter" with a higher theme, to express the image of a better time, more wise desires and simpler manners. O. R.

GRETRY.

PARIS, October 9, 1884.

AMONG the musicians of the French school who devoted themselves to dramatic music, few are more popular and better known than Grétry. He was born at Liége on February 11, 1741. His most recent biographer, M. Michel Brenet (his biography has been crowned by the Royal Academy of Belgium), gives us some details about his family and his infancy. He was educated, as many children were in those times, as a church-musician. He played the violin in the church of the College of Saint Denis at Liége, and took lessons from Leclerc, who became Capellmeister at Strasbourg. He learned to write a *motet*, a fugue, a symphony. He studied with an organist, with Moreau, who was Capellmeister at Saint Paul, and, as he showed talent, he was sent to Rome at the expense of a generous canon. There was at that time in Rome a Collège Liégeois, on the Piazza Monte d'Oro, with eighteen rooms for students in law, medicine, music, painting, sculpture, architecture. The students were bound to wear the clerical costume. Grétry spent several years in this college, becoming acquainted with the music of Pergolesi, of Galuppi, of Piccini. His professor was Casali, of the Church of Saint John Lateran. Grétry was not a good pupil in so far that he did not like music as a science, and when he left Rome for Geneva the Abbé Casali gave him this singular letter of recommendation to a friend: "My dear friend, I consign to you one of my pupils, a real donkey and ignoramus in music, but an amiable and well-behaved young man." It is quite true that Grétry had no disposition for classical music, for its traditional forms and combinations; his independent nature looked for the wider horizon of the opera and of dramatic music.

Grétry left Rome on January 1, 1767, and went to Geneva. He had not wasted his time during the eight years which he had spent in Rome, even if the Abbé Casali did call him a donkey. He had made up his mind that the dry and conventional *recitativo* of the opera was defective, and that there ought to be a continual fusion between the action and the song in the opera. He wrote to Voltaire, who was then at Ferney, and begged permission to see him. Voltaire received him very amiably. Grétry asked him for a libretto, but Voltaire had not the time to write it; and Grétry contented himself with setting an existing play to music, Favart's "Isabella and Gertrude." This was played at Geneva with great success, and Voltaire pressed Gréty to go at once to Paris.

A great battle was raging at that time on the question of dramatic music, or, to speak more exactly, between the school of instrumental music and the school of the opera. Grétry was all ready to adopt the maxim, "Outside of the theatre, no music." He had been educated for concert music, but he left it all the more rapidly because he was not a good symphonist. In his Essays he speaks of the symphony as an inferior form of art, "reserved for the artist who has an original mind, but who has not sufficient taste and tact to classify new and striking thoughts, in unison with the expression and prosody of language." In his eyes, in order to render the symphonies of Haydn perfect, words ought to be added to them; as it is, they are a mere dictionary for the writer of operas, and their author is "like a botanist who discovers a plant, waiting till the doctor discovers its properties." It is very interesting to compare these opinions with those of Wagner, and one is forcibly reminded of the proverb, "There is nothing new under the sun." Wagner also, like the philosophers of the eighteenth century, considers the opera, the alliance of words and sounds, as the most powerful form of music. He will not leave the thoughts of the audience at liberty, allowing each mind to wander in the infinite world of emotions and to accommodate its own passions to the movement of music. No; he will bind all the hearers to his own thought, attract them all with an overwhelming force. There must be no vagueness, no indecision: the orchestra, the chorus, the singers, all must tend to some definite end.

French æsthetics of the eighteenth century, though differing in its means, did not differ in the ends which it proposed to itself from modern æsthetics; it preferred dramatic music because it offered more precision in the expression and in the imitation of nature. Grétry became, as soon as he arrived in Paris, acquainted with the philosophers. He was patronized by Count Creutz, the Ambassador of Sweden, who had a great passion for music. He saw Suard and Marmontel, who, in order to please Count Creutz, made for him a libretto out of a new *conte* of Voltaire's, 'L'Ingénu.' The opera was called "The Huron," and was represented on the 20th of August, 1768, at the Italian Comedy. It had an immense success. "M. Grétry," wrote Grimm to his correspondents, "is a young man who has made his first attempt, but his attempt is the masterpiece of a master who places himself at once in the first rank. The style of Grétry is purely Italian. . . . The purity of his style is enchanting. . . . From the most tragical to the comical, from grace to the refinement of a quiet and passionless declamation, there are in his opera models of every character." It is quite true that "The Huron" contains the germ of all the best qualities of Grétry.

Five months after "The Huron," Grétry gave "Lucile," a comedy with *ariettes*. The poetry had been written by Marmontel; it was extremely feeble, but full of what was then called sensibility, and sensibility was the order of the day. One air of "Lucile" has survived; it is the quatuor: "Où peut-on être mieux qu'au sein de sa famille?" It became so popular that, during the wars of the Revolution, *émigrés* and Republican officers, when they were united accidentally by an exchange of prisoners, sang it together. When Charette, the famous Vendean General, entered Nantes, his band played it. During the dismal retreat from Russia, when the French army, pursued by the Cossacks, left Smolensk, the Comte de Ségur tells us in his 'Memoirs': "The enemy, seeing this column marching in good order, did not dare to attack it otherwise than by artillery. Their bullets were despised, and soon we left them behind us. When the turn came for the grenadiers of the Guard to go through this fire, they walked close around Napoleon, like a fortress in motion, proud to protect him. Their band expressed their pride. In the midst of the greatest danger it played the famous tune, "Où peut-on être mieux qu'au sein de sa famille?"

This double triumph persuaded the French public that Grétry was *par excellence* the interpreter of sensibility, of pathetic emotions, of gentle affection, of delicate and tender sentiments. He had made his reputation by certain qualities, and these qualities were developed by his reputation. He surprised the public, however, by the exhibition of gayety in his new opera, the "Tableau Parlant," with which he initiated the French into what the Italians call *opera buffa*. Hitherto the French opera had not dared to be so comic. Grétry became the idol of the public; his scores were heard everywhere. He was received in all the châteaux; he was invited to all the suppers. Mme. Vigée-Lebrun calls him, in her 'Memoirs,' "cet aimable Grétry." He was twenty eight years old, and his health was somewhat delicate.

Marmontel wrote for him a new libretto—he tells us himself in his charming 'Memoirs,' under what circumstances:

"In the interval between 'Lucile' and 'Silvain' I had composed a comic opera in three acts out of my *conte* which is entitled 'The Connoisseur.' I read it to a small company. Grétry was charmed with it, Mme. la Ruette and Clairval applauded, but Caillot was cold and mute [they were all three actors at the Italian Comedy]. 'You are not pleased,' said I; 'speak freely.' Caillot gave his reasons. 'Ladies and gentlemen,' said I, 'we are all fools: Caillot alone is right,' and I threw my manuscript in the fire. Grétry wept with sorrow and left me so desolate that it made me unhappy. My impatience to see him out of this state kept me awake, and I wrote the first scenes of 'Silvain.' In the morning Grétry arrived: 'I have not slept all night.' 'Nor I,' said I. 'Sit down and listen,' and I read him my plan and two scenes. 'This time,' said I, 'I am sure of my affair, and I promise you a success.'"

The success came, and was very great. I cannot follow Grétry in the development of his full career. The list of his operas is very long, extending from 1767 to 1803, and occupies as many as four pages in the work of M. Brenet. This work is full of curious anecdotes. After the representation of one of his operas, Grétry was presented to Rousseau, and they left the theatre together. In the street they found a heap of stones; Grétry offered his arm to Rousseau to get over it. The philosopher at once became irritated: "Let me use my own strength," said he, with an angry voice, and their relations came to an end.

The success of Gluck at the Opera interrupted the triumph of Grétry. Gluck gave in 1774 his "Iphigenia at Aulis" and his "Orpheus and Eurydice." A new style was created, and the public compared the two musicians. The enthusiasts did not think it possible to admire at the same time Gluck and Grétry. The latter had the audacity to try his hand at the theatre where Gluck was frantically applauded; but his "Cephalus and Procris" could bear no comparison with its rivals. "This music," writes Mlle. de Lespinasse, "has the green sickness. My friend Grétry must content himself with the agreeable, sensible, witty style; it is quite enough. And when a man is well proportioned in his small size, it is often dangerous for him to go on stilts: he falls on his nose, and the passers by laugh." Grétry quarrelled with Marmontel, and sought his libretti from d'Hèle, Sedaine, and some others. Sedaine wrote for him "Richard Cœur de Lion," an opera which has become classical and is still popular. A great admirer of Wagner, M. Schuré, who has written an interesting work on 'The Music Drama' and the great reformer of the modern opera, highly praises the "Richard" of Grétry. "If we hear it," he says, "after some of the modern operas, we have the sensation of a man who finds himself transported from one of our vulgar public gardens into the midst of the real country, with its undulating hills and its refreshing breezes." The scene in

which *Richard*, from his prison, "hears the voice of his minstrel in the air, 'Une fièvre brûlante,' and in which he sings it in his turn, is one of the finest we know; the song becomes a part of the action, and is all the more eloquent."

Towards 1786 Grétry began to write about his art, and continued to do so for a long time. In 1789 he published the first volume of his 'Essays on Music.' His fortune and reputation were made when the Revolution broke out. On the 1st of August, 1793, the Convention issued this decree: "Any theatre which dares to represent plays tending to resuscitate the superstition of royalty will be closed, and the directors will be punished with the full rigor of the law." This was no time for "Richard." Grétry was obliged to write the music for the first representation of the "Fête de la Raison" (the words were by Silvain Maréchal), which became afterward the "Rosière Républicaine," a piece which outraged religion and was a vulgar manifestation of atheism. This was, alas! not the only play of the Revolutionary period which he wrote. The only excuse for his weakness must be found in the fear which also determined Méhul, Cherubini, Dalayrac to become his collaborators in the music of "Le Congrès des Rois." He was ruined; he had lost all his places. His republicanism was soon reconciled to the Empire. He retired to the Ermitage of Rousseau, spent in the valley of Montmorency his last years, and died on the 24th of September, 1813.

Correspondence.

MORE LIGHT ON THE LITTLE ROCK FRANCHISE.

To the Editor of The Nation:

Sir: In his personal explanation in the House of Representatives on the 25th day of April, 1876, Mr. Blaine made the following statement:

"The [Little Rock and Fort Smith] Company derived its life, franchise, and value wholly from the State [of Arkansas], and to the State the company is amenable and answerable, *and not in any sense to Congress. . . . The Little Rock Road derived all that it had from the State of Arkansas, and not from Congress.*"

The falsity of this statement has already been established beyond a peradventure by a mere examination of the acts of Congress touching the land grant to the State for the benefit of the road. Congress granted the lands to the State to aid in the construction of a road with certain termini; the Little Rock Company was the beneficiary of that grant, and the lands were to be received by the State "subject to the disposal of the Legislature thereof, *for the purposes aforesaid, and no other.*" The Act also provided that if the road should not be completed within ten years, the unsold lands were to revert to the United States (Act of February 9, 1853, 10 Stats., 155).

The time within which the company might earn its grant was twice afterwards extended: first, by the Act of July 28, 1866 (14 Stats., 338), and secondly, by the Act of April 10, 1869 (16 Stats., 46). A still later Act, that of March 8, 1870 (do., 76), repealed the oft-mentioned *proviso* that the granted lands should "be sold to actual settlers only, in quantities not greater than one-quarter section to one purchaser, for a price not exceeding two dollars and fifty cents per acre."

In addition to this, there is another consideration, which I have never seen adverted to, and which wholly disposes of Mr. Blaine's assertion in this particular. The object of his assertion was to give the impression that, after having made the grant to the State, for the purposes of the road "and no other," Congress could have nothing further to do with the subject in the way of legislation. Certain Acts of Congress and of its committees at the last session throw an interesting light upon this feature of Mr. Blaine's really audacious defence.

At the last session many bills for the forfeiture of land grants were introduced into both houses; among the roads concerned being the Northern Pacific and a great number of roads in Mississippi, Louisiana, Kansas, Iowa, Michigan, California, Oregon, and other States. In nearly all these cases the grants were similar to the Little Rock and Fort Smith grants; that is, the grants were made to the States, with the provisions, (1) that when the States should certify to the General Land Office that specified lengths of road had been completed, patents should issue accordingly; and (2) that in case of non-completion of the roads within a given time the unpatented (or unsold) lands within the limits of the grants should revert to the United States.

The roads in question not having been completed within the designated time, it became necessary to consider whether the grants *ipso facto* reverted to the United States, or whether further action by Congress or the courts was necessary to that end. The latter view prevailed; and then these inquiries arose:

1. Does Congress (as against the courts) possess the power to declare a forfeiture of the lands?

2. If Congress does possess such power, does a sound public policy require that it should be exercised?

Both these inquiries the Committees on Public Lands answered in the affirmative, notwithstanding the first of them is a question about which able lawyers differ; and in at least one case Congress acted accordingly, by forfeiting a grant. In a dozen or more cases reports favorable to forfeiture were submitted and now await action at the hands of Congress.

Suppose that those two inquiries had arisen with respect to the Little Rock and Fort Smith Road—as they might well have done—during Mr. Blaine's continuance in Congress: how would he have answered them? how much would his answer have depended upon his determination not to "prove a deadhead in the enterprise"? and how forcibly would Caldwell and Fisher have realized that "Blaine [was] an important man to have feel all right toward" them?—Respectfully,

Henry E. Davis.

Washington, October 21, 1884.

APROPOS OF THE CINCINNATI VOTE.

To the Editor of The Nation:

Sir: A friend employed in the Cincinnati Post-office (at $75 per month) writes October 20: "I am just now run very close; for there have been a multitude of expenses. . . . Then, too, came our '*gift*' for party purposes. Still, since Tuesday [election day] I don't regret that $18 one iota. By the way, most of the boys did not pay it [*sic*] until the last day or two, so it was not *wasted*, as it sometimes is." Italics, etc., are his own.

The monthly pay-roll at the Cincinnati Post-office amounts to many thousands of dollars. The assessment was evidently one-fourth of one month's salary. What a corruption fund from this single source alone! And in the great majority of cases extorted by methods as outrageous as the "Money, or your life!" of the footpad.

But this virtual robbery of Government employees is a trifling thing compared with the crime against the national life, in superseding (so far as possible) the free, spontaneous expression of the popular will with coerced and purchased votes. Is it not time to call a halt in this matter? Can the American people afford to accept Steve Elkins's dictum that the settling of a Presidential election is "mainly a matter of finance"? The prætorian guards used to put up the imperial purple at auction; but that, as all know, was in the evil days of Rome. Is it possible that these our times have become not merely so degenerate that the Presidency of the Republic can be bought by an unscrupulous jobber, but also become so party-blind, so insensate, as to let him buy it with money he has rifled from the pockets of honest men? As an original Republican (who was "no dead-head" in the times when Republicanism meant *principles*, and not chiefly position or plunder) I am not prepared to believe it—not yet, at least.—Yours respectfully,

E. Hannaford.

St. Louis, Mo.

[We have circumstantial evidence that the party tax on Federal employees in the light-houses and custom-houses along the Lake and Canadian frontier was $15, and that numerous checks for this amount from that region have come to this city for the endorsement and use of the National Republican Committee.—Ed. Nation.]

BLAINE NOT VINDICATED BY THE HOUSE.

To the Editor of The Nation:

Sir: Will you please state in your columns whether or not the House of Representatives by a vote vindicated Mr. Blaine upon the charges upon which he was being investigated, and from which investigation he was relieved by a timely attack of sickness, sunstroke or something?

I ask the above because many Republicans in this section contend that, subsequently to Mr. Blaine's attack, the House had a vote on the matter and fully vindicated Mr. B., and affirm that he was nominated to the Senate before the time of adjournment of the investigating committee expired, and the House, having no jurisdiction over a Senator, did not call up the matter. I have written to several papers in this section of the country about this, but can get no answer. A. N. X.

Fort Leavenworth, Kan., October 19, 1884.

[There was no such vindication by the House.—Ed. Nation.]

CORRUPTION BY EXAMPLE IN HIGH PLACES.

To the Editor of The Nation:

Sir: As some of your correspondents have lately been quoting the classics, relative to the present political contest, I offer this from the 'De Legibus' of Cicero III., 14, 31.

"Nec enim tantum mali est peccare principes, quamquam est magnum hoc per se ipsum malum, quantum illud, quod permulti imitatores principum exsistunt. Nam licet videre, si velis replicare memoriam temporum, qualescumque summi civitatis viri fuerunt, talem civitatem fuisse; quaecunque mutatio morum in principibus exstitit, eandem in populo secutam. . . . Quo perniciosius de republica merentur vitiosi principes, quod non solum vitia concipiunt ipsi, sed ea infundunt in civitatem; neque solum obsunt, ipsi quod corrumpuntur, sed etiam quod corrumpunt, plusque exemplo quam peccato nocent. . . . *Fauci enim, atque admodum pauci*, honore et gloria amplificati, vel corrumpere mores civitatis, ver corrigere possunt."

Independents here are few, but steadfast.

W. A. M.

Cincinnati, October 20.

THE REPUBLICAN REFUSAL TO EXPLAIN.

To the Editor of The Nation:

Sir: Your recent observations on the debasing influence of the Republican nominations has al-

ready been remarkably verified by a friend of mine. This gentleman has never voted other than the Republican ticket, but it is known that he may decline to vote for Mr. Blaine. He has offered at different times to five partisans of Mr. Blaine, men usually reasonable and of excellent reputation, that if even a plausible explanation could be given of contradictions in Mr. Blaine's letters to Mr. Fisher, he would vote the Republican ticket in November. He cited three contradictions whose elucidation would satisfy him. Each one of the gentlemen to whom he applied declined to offer any explanation, and each stated that if there was any conflict it did not matter. Each one of them acknowledged that Mr. Blaine while Speaker sold bonds on commission for Mr. Fisher, but that in doing so he did nothing wrong. This is the magnetism of their candidate. T.

OHIO, October 20, 1884.

A CLEAN SINNER AND A DIRTY SAINT.

TO THE EDITOR OF THE NATION:

SIR: I have noted that the velvet knight from Maine is as smooth to the rub of the clergy as to a rub from any other direction whatever. It is a matter of surprise to me that the straightforward, business-like New York Governor has not superior charms to men especially trained to appreciate such differences as the two men present. To my own clerical vision it seems very much like a choice between a clean sinner and a dirty saint. Knowing as I do that fastidiousness which makes the clerical nature gravitate to a clean heretic sooner than to an unsavory devotee, I wonder the more that in political types the latter is preferred to the former. Legions of ministers are swallowing the saintly demagogue from Maine who have no more confidence in his character than they have in Butler's. Quite a spectacle this: a lot of religious teachers shutting the eyes of their understandings and opening the eyes of their prejudices, and acting in politics precisely as the hoodlums act, and for the same reason. For the man who has an enlightened understanding and will not use it to seriously weigh unwelcome facts, lest they necessitate hostility to party, and courageous exposure of "magnetic" hypocrisy, is surely acting from no loftier motive than the man who has no understanding and does not miss it as he "hurrahs," shoulders his smoky torch, and votes. These brethren condemn Butler with a most holy unanimity; but behold! a worse than Butler is here, and yet they are constrained to preach him up as the "home preserver," because a few ministers in Buffalo, out of mistaken charity, form a ring around a fussy old clerical scandalmonger, to save him from the natural end of his filthy appetite. The only difference between the two B's is that Butler's type of demagogy is the less dangerous. One has a transient power to bewitch the hoodlums and the humble citizen ignorant of the ways of his betterment—the other the far more dangerous power to confuse, as we see, the teachers of morals and religion, and to render our highest and solidest political standards as hollow as a worm-eaten nut.

Clergymen ought, from the very nature of things, to show more downright political independence than any other class of men, because they have, without doubt, the two essentials to independent political action—intelligence, and a strong sense of right and wrong. If they would freely, fairly, and fearlessly use both in this contest, they would not choose the saint who fills two pews in an orthodox church, but is stained with the dirt of all the jobbery of our later politics, in preference to the sinner in the Capitol at Albany, who turns night into day that his whole duty to the people may be done.—Respectfully yours, BAPTIST CLERGYMAN.

MASSACHUSETTS, October 24, 1884.

CHINESE PERSECUTION IN CALIFORNIA.

TO THE EDITOR OF THE NATION:

SIR: As you have taken some interest in the Chinese question, so called, which so much agitates the public mind of the Pacific Coast, I take the liberty to bring to your attention a ruling of the California State Superintendent of Public Instruction upon the right of children born of Chinese parents in the United States to enter the public schools of California. The following is cut from the San Francisco *Chronicle* of Saturday, October 11, 1884:

"The following letter, just received, is self-explanatory:

"SACRAMENTO, October 7, 1884.

"*Hon. A. J. Moulder, Superintendent of Schools, etc.:*

"DEAR SIR: In your letter of yesterday you say that your attention has been called to a recent decision of Justices Field, Sawyer, Hoffman, and Sabin, to be found in full in . . ., stating that a child born in this country of Mongolian parents is a citizen of the United States and entitled to all the privileges of such citizen.

"You wish me to answer whether an exception to my ruling on the general question is admissible in the particular case of Joseph Tape, a Chinaman, who demands admittance to the public schools for his daughter, who, he alleges, is native born, and in similar cases. I beg leave to say that I do not think that an officer of the State is bound to take official notice of decisions of courts purporting to have been reported in the newspapers; that I have no knowledge that the Court had before them a case wherein arose the question of the right of native-born children to enter the public schools of the State. Finally, it is a question, as yet, in my mind, whether a Federal court has the power to condemn the State of California to undergo the expense of educating the children of Chinese, when the presence of such foreigners is declared by the Constitution 'to be dangerous to the well-being of the State.'

"Respectfully yours,

"WILLIAM T. WELCKER,

"Superintendent of Public Instruction.

"'The Chinese, as you are aware,' remarked Superintendent Moulder to a reporter of the *Chronicle*, 'are a nation of perjurers, and, if admitted, would doubtless soon overrun our schools, to the exclusion and detriment of the white children. You may say that, acting in conformity with the advice of the State Superintendent, I shall continue to deny any of the sons and daughters of Chinese the right of admittance into the public schools of San Francisco.'"

The Joseph Tape referred to in the above article is one of my neighbors. He is a Chinaman who has adopted the American costume, cut off his queue, adopted American customs, lives far removed from China Town, in a respectable neighborhood, and is a taxpayer. He is a member of the Presbyterian Church, and deacon thereof. His wife and children dress in the American costume. His three children were born in San Francisco, and are as well dressed and well behaved, as neat and clean, as any children in his neighborhood.

The "Superintendent Moulder" referred to in the above article is the Democratic Superintendent of Public Instruction of the city and county of San Francisco, State of California. What are we coming to?—Respectfully yours,

A CONSTANT READER.

"THE ACADIAN TRAGEDY."

TO THE EDITOR OF THE NATION:

SIR: That accomplished author and essayist, Francis Parkman, contributes a paper to *Harper's* for November, entitled "The Acadian Tragedy." The key-note to the article is given in the following sentence:

"Abbé Raynal, who knew nothing of these people except from hearsay, has drawn an ideal picture of them, which later writers have copied and embellished, till Acadia has become Arcadia."

Says Parkman:

"New England humanitarianism, melting into sentimentality at a tale of woe, has been unjust to its own. Whatever judgment may be passed on the cruel measure of wholesale expatriation, it was not put into execution until every source of patience and persuasion had been tried and failed. The agents of the French court, civil, military, and ecclesiastical, had made some act of force a necessity. The Government of Louis XV. began with making the Acadians its tools, and ended with making them its victims."

The foregoing, if we rightly understand it, may be reduced to this:

There was no wrong perpetrated against the Neutrals in this unhappy affair.

The wrong that the English perpetrated against the Neutrals was put into execution only as a last resort.

The wrong that was perpetrated against the Neutrals Louis XV. of France, and his agents, were alone responsible for.

Again: "It was a part of the scheme of operation, audacious as it was comprehensive, by which the British and Colonial authorities resolved this year to anticipate a declaration of war, and force back the French along the whole line of their alleged encroachments. Braddock was to attack Fort Duquesne on the Ohio, Johnson was to attack Brown Point on Lake Champlain, Shirley was to attack Fort Niagara, and Monckton was to attack Fort Beauséjour."

Thus it appears that the descent of the English upon Acadia was made in a time of peace. Besides, as Mr. Parkman elsewhere observes, the Acadians did not profess allegiance to France at all, but for more than forty years had constituted an English colony; in fact, most of them had been born under the British flag. According to his own showing, therefore, the English cannot justify the act as a war measure, done in time of actual hostilities against an armed enemy. We fully agree with him, that the scheme was an audacious one.

And again:

"Another war was plainly at hand, and France meditated the reconquest of Acadia. To this end, the Acadians must be kept French at heart, and ready, at a signal given, to rise against the English. France had acknowledged them as British subjects, but this did not prevent the agents of Louis XV. from seeking by incessant intrigues to stir them into bitter hostility against the British Government. . . . The loss of Acadia had been gall and wormwood to France. That she would soon seek to recover it was certain; and with the temper which she had infused into the population, there could be no doubt that at the appearance of the French squadron in the Bay of Fundy, the whole country would rise in arms. . . . The presence of this disaffected population in the province was for the French commanders a continual inducement to invasion, and Lawrence could not cope with attack from without and insurrection from within. Such are the reasons which explain and palliate measures too harsh to be wholly justified."

Thus we are told that the expulsion of the Acadian people was brought about not by what they had done, but by what the English thought they would do, in the war that had not yet taken place, but which the English thought would take place, with France.

Suppose we try the effect of the light of historical facts on the fine-spun theory of our learned essayist. If, as he avers, Lawrence and his coadjutors mainly justify their action on the alleged disposition of the Acadian people to take up arms with the French, we, on our part, purpose showing that not only did Lawrence, at the time, have positive knowledge that the Acadian French had proved themselves, on occasion, free from that disposition, but also that he had committed himself to that opinion.

In March, 1744, France declared war against England. Du Quesnal, the French Governor of Cape Breton, sent Du Vivier, his captain, to

attack the English posts in Acadia. The forts were in a ruinous condition, and feebly garrisoned; there were 4,000 Acadians capable of bearing arms; nothing was easier, could that people be induced to revolt, than to throw off the English yoke. Du Vivier took post at Grand Pré, from whence he issued orders impressing teams and drivers for his service, and requiring supplies of grain and meat, and calling upon the inhabitants to pledge fidelity to the King of France. Here then was just the opportunity for the Neutrals to exhibit the treasonable tendencies accorded them by British apologists. Did they seize on the occasion to cut the throats of their English neighbors? They replied in this strain:

"While there would be no difficulty, by virtue of the strong force you command, in supplying yourself with the quantity of grain and meat you have ordered, it would be quite impossible to furnish the quantity you demand without placing ourselves in great peril. We hope, gentlemen, that you will not plunge us and our families into a state of total loss; and that this consideration will cause you to withdraw your savages and troops from our districts. We live under a mild and tranquil government, and we have all good reason to be faithful to it.

"JACQUES LE BLANC AND OTHERS.
"MINAS, October 10, 1744."

Governor Mascarene writes in December of that year, referring to the failure of Du Vivier's expedition:

"To the breaking the French measures, to the timely succour received from Massachusetts, *and our French inhabitants refusing to take up arms against us*, we owe our preservation. . . . If the inhabitants had taken up arms they might have brought three or four thousand men against us."

If Mr. Parkman will consult the "Nova Scotia Archives," he will there find, in a letter written to the Board of Trade by Governor Lawrence, bearing date of Halifax, August 1, 1754, these words: "*I believe that a very large part of the inhabitants would submit to any terms rather than take up arms on either side.*" Another letter written by Lawrence to the Board of Trade in October, 1755, contains this statement, which may help to throw light on the motives of those engaged in this "audacious scheme":

"As soon as the French are gone, I shall use my best endeavors to encourage people to come from the Continent, to settle their lands, and if I succeed in this point we shall soon be in a condition of supplying ourselves with provisions, and I hope in time to be able to strike off the great expense of victualling the troops. This was one of the happy effects I proposed to myself from driving the French off the isthmus; and the additional circumstance of the inhabitants evacuating the country will, I flatter myself, greatly hasten this event, as it furnishes us with a large quantity of good land ready for immediate cultivation."

In the Archives already mentioned is a charge made by Captain Murray, that at one time the Neutrals "behaved with the greatest insolence, though just before they had been unusually submissive. He thought that this change of demeanor was due to a report that had got among them of a French fleet in the Bay of Fundy; for it had been observed that any rumor of an approaching French force always had a similar effect." The same likewise contains a letter from Governor Mascarene, in which is the following: "The frequent rumors we have had of war being declared against France have not as yet made any alteration in the temper of the inhabitants of this province, who appear in a good disposition of keeping to their oath of fidelity."

Here are two conflicting statements recorded in the same volume. The word of the Governor of a province ought to go as far as that of the captain of a blockhouse. Is it intentional on the part of Mr. Parkman, or is it through mere inadvertence, that he gives place only to the one statement which favors the English view of the question?

Our essayist states that Lawrence enlarged upon the treachery, obstinacy, and ingratitude of the Acadians for the favor, indulgence, and protection they had received from the English Government. When constrained to mention some overt act of which they had been guilty, he goes on to say that at the fall of Fort Beauséjour, "in it, along with the regular garrison, were found 300 Acadians, self-styled Neutrals, fighting against the power of whom most of them were the legal subjects." Can it be that Mr. Parkman has not learned that the "300 Acadians" who were present in the fort were there under threatening orders; and that Colonel Monckton, to whom the place capitulated, and who must have known the circumstances, granted them full and free pardon? Would he lay the pardoned offence of a few at the door of thousands of unoffending people? And this is the only instance in the whole forty years that the Acadians lived under English rule in the province, in which a considerable number of them were found under arms against the Government.

We notice one more statement by Mr. Parkman. He says, speaking of the preparations for embarkation: "It was also provided that the members of each family should remain together." Does he mean to parry the question, or does he intend the reader shall draw an inference that friends were not separated, without a committal on the part of himself? It is a fact conceded by all authorities, that the separation of families was the most cruel feature of the whole proceeding.

But we will not multiply objections further. If, as Mr. Parkman states, the affair has been "ill understood, both in its causes and its events," it is to be feared his article will not entirely remedy the difficulty. We would propound to British apologists one question: If the English concerned in the Acadian eviction were conscious of the rectitude of their intentions, and were secure in the belief their course would be justified by a full knowledge of attendant circumstances, why were the entire French records coming into their hands destroyed, and the archives of Nova Scotia rifled of the documents covering the year of expulsion? PHILIP H. SMITH.

PAWLING, N. Y., October 23.

THE CONSCIENTIOUS INDEPENDENT VOTE.

TO THE EDITOR OF THE NATION:

SIR: There are some of us Independents who accept fully the premise set forth in your editorial on "Political Neutrality," October 9th, that a man's vote is not his private property to be used for his own selfish gratification, but a sacred trust to be used for the welfare of the whole country, yet who derive from it a conclusion exactly the opposite of yours as to how it should be cast in this coming election. It seems to us, as Henry Cabot Lodge said to the Republican Convention last May, that the supreme demand of the country for its welfare is a Presidential candidate of "unblemished character"—assuming, of course, that he is intellectually capable, and that the platform he stands upon is not preponderably bad. Now, as regards the intellectual capacity of the candidates named in your article, whatever superiority one or two may have, each has enough of it for all the duties of the place; and as regards the platforms, each from the Independent standpoint is of about equal value, which is not saying much. The main difference is in the reputation of the men morally, one being of blemished character for honesty, and another of blemished character for chastity, but the third with nothing worse against him than that he is a Prohibitionist; and so, though we are not all Prohibitionists, yet believing with Mr. Cabot Lodge that the supreme demand of the country is for a capable man of unblemished character, and with you that the ballot is a sacred trust to be used for the country's welfare, we propose to vote for the man whose only drawback is a wish to deprive his fellow-citizens of the means of getting drunk.

Your argument that as either Blaine or Cleveland will be elected, the conscientious voter ought to vote for the best one of these two, and that to vote for a third man, however good he may be, is to throw his ballot away, has been the argument of "the practical politician" from the very beginning of political parties, and it is not a little astonishing to see it now brought forward by the *Nation* as new and solid logic. We who are Independents and mean to remain so, have long since learned not to let our heads be brought for punishment into any such "chancery." When the two great parties were the Whigs and Democrats, each pro-slavery, though in different degrees, and there was no possibility of electing an anti-slavery candidate, and we were told that therefore it was our duty as conscientious men to vote for the least bad of the pro-slavery candidates, we spurned the advice and gave our votes for the hopeless Fremont; and certainly the history of the country for the last twenty-eight years has not shown they were "thrown away."

The only way by which the little band of Independents in the country can hope to secure good nominations at political conventions is by refusing to vote at the polls for bad ones. If there were only two parties in the field, one with a good candidate and the other with a bad one—Blaine, for instance—no matter how hopeless the election of the good one might be, we should feel that the only honest use of our vote as a public trust would be to throw it for the one we believed in as a man; and because there are three parties in the field, two bad and strong, and one good but feeble, we do not see why we are not equally bound to use it in the same way now, rebuking with all our might both of the bad ones. Suppose that at the coming election a million of votes are cast against both Blaine and Cleveland, and for St. John, simply on the ground that voters do not approve of either the Republican or the Democratic nominee: what would these be but a million voices saying to the politicians of all parties that under no circumstances will we vote for a man who is morally unsound either in public or private life? And is there any other way in which those votes can be made to count so much for the country's welfare? Or, suppose that St. John were to be elected, as he would be if every citizen who really disapproves of each of the other candidates were to disregard the "practical politician's" argument, and vote for him not simply as a Prohibitionist, but as a clean man, just as we Independents should vote for Cleveland not as a Democrat but as a clean man, if he was unblemished—the influence of the lesson would be felt on political conventions as long as the country should live. It is in this direction that every vote for the third party counts. We cast it not for the present election alone, but for all the elections to come; and though it be apparently thrown away to-day, yet, like the old anti-slavery votes against both Whigs and Democrats, it shall count a thousand-fold to-morrow.

Your comparison that to vote for any one else than either Blaine or Cleveland would be like the conduct of a passenger on shipboard at sea who should refuse to vote for a successor to the deceased captain at all because the candidates were both profane, or should cast it in a corner by himself for some religious mariner on land, fails, because in this case the good mariner is not on land but on the ship, and has no drawback to his capability except that he believes the ship would be better off with no intoxicating liquor on board. A comparison truer to the facts would

be where the rowdies on one side had put up one of their set as candidate for the captaincy, and the thieves on the other one of theirs, and where the honest and peaceable passengers, numbering nine-tenths of all on board, were told they must choose between these two rather than one of fifty other good men on board, equally capable of running the ship, because, forsooth, the two bad men had been regularly nominated, while neither, or at best only one of the others, and he only by a handful, had been thus set up. It is advice that we Independents on the Ship of State do not mean to take. We shall vote against the blemished candidates any way, and many of us for the one fairly capable whose only fault is his being, perhaps, a little over-clean, as the best way in which to use our vote as a public trust.

K.

HARTFORD, CT.

TO THE EDITOR OF THE NATION:

SIR: In your criticism of the attitude of those who refuse to vote either for Blaine or Cleveland, you argue from an assumption to which they do not assent; and also, it seems to me, you defeat the end for which you contend. In the first place you assume that there is more at stake in the choice between these two candidates than appears to them to be the fact. To be sure, one or the other of them will be the next President. No one denies that. But it is a matter of indifference to them which, since they feel that either crew, headed by its respective captains, is equally objectionable, and that the real issue is not in the choice of one or the other candidate in the present canvass, but in influencing the nominations in the future.

First, they see that the Republican crew, as represented by Captain Blaine, stands for just that which must inevitably run the Ship of State on the rocks of political corruption, while the Democratic crew which stands back of Captain Cleveland, without saying anything about its political morality, has ever shown ability to make blunders when it had the best of opportunities to win the confidence of the country, and so does not promise any better to the Ship of State than the other crew.

Second, while totally repelled by that of which they believe Blaine stands convicted, viz., the use of public office and power for private gain, they are no less repelled by that which they believe is forced upon their attention in Cleveland's private character. They are, rather perhaps from reasons of sentiment than of clearly thought-out convictions, revolted at the thought of lending their hand to install in the White House, the social centre of the nation, a man they at least are not yet convinced is pure.

Now you may answer that, in such a case, questions of sentiment in reference to social character must give way to questions of principle in reference to political character. And you may say that in a storm you cannot be too particular about questions of chastity concerning the captain who must command the ship. They agree to all that, and, at such a time as the great slavery struggle, the personal purity of Calhoun would not have had a feather's weight with them as against the questionable private character of Webster. But they deny, first, the storm, second, that there is a choice between the crews. Of course you may reply that there is a storm, and that there is a choice between the crews, and argue that denial of it is evidence of moral blindness. But right here they take issue with you, and until you convince them of the actual presence of a storm now, and of the ability of the Democratic crew headed by Captain Cleveland to navigate them through it safely, they cannot go with you. Your able editorials, so convincing in reference to their duty to Mr. Blaine, have not led them out of this difficulty.

You may ask what do they propose to do? They propose to do what a great many did awhile ago, and, if I mistake not, under your advice—"to scratch," and so show that the party that desires their ballots in the next election must offer them a man who shocks their moral sense neither in social nor political matters, and that demonstrates to them its intention and ability to handle the ship wisely and honestly. In other words, the real living issue to them is, not the present matter of victory of one or the other side in this election, but the remoter matter of a moral elevation of the standard of both parties, and particularly of that one most subject to it, the Republican party, to which they are attached by ties of the past, many sympathies in the present, and hopes for the future. They look towards a wise restraint put upon whichever of the crews will man the ship for the next four years, and the preparation of a competent crew, wise and righteous, to take the helm in the years that follow.

In the second place, you seem to me to defeat in a measure the end for which you contend with these so-called political neutrals (they are not neutrals; they vote as much when they withold their votes as when they cast them for a third candidate), by driving many who are led by sentiment rather than by reason to finally cast their ballot for Blaine. You might contend that they ought to vote for Cleveland, but, if they cannot righteously do that, they can no more righteously vote for Blaine, and so must "scratch" the Republican ticket. This I fancy would serve your purpose better than your present course.

H. G. L.

[To "K." we have to say that we do not concede that each of the two candidates, Blaine and Cleveland, has enough "intellectual capacity" for "all the duties of the place." We hold, on the contrary, that in his intellectual capacity, as in his moral character, Blaine is fatally unfit for the place. We find the proof of this in his failure to identify himself during his twenty years in Congress with any useful or important measure of legislation; in his blundering management of the Panama Canal controversy—of his own making—with England, and his blundering and dangerous management of the controversy with Chili during his short term in the State Department, and in the wild character of such schemes as the distribution of the whiskey tax and the payment of the Virginia debt. As to "K.'s" argument on the proper use of the vote, it seems to have been written without a careful reading of the article which he criticises. We pointed out that in no way can a man refrain from voting for one of the two candidates, one of whom is certain to win, without giving a vote to the other, except by pairing. "K." does not show how it can be done. If a Republican fails to vote for Blaine, he gives a vote to Cleveland. If a Democrat fails to vote for Cleveland, he gives a vote to Blaine. Voting for a third candidate does not help him out of the difficulty. A Republican vote for St. John is a vote for Cleveland. A Democratic vote for Butler is a vote for Blaine. Moreover, a vote for St. John does not signify to the world at large dissatisfaction with the character of either Blaine or Cleveland. It signifies to the world at large belief that prohibition is the most important question of the day. The only way to let all the world know beyond mistake that you are rebuking unchastity, is to vote for a candidate who runs on his chastity; or that you are rebuking dishonesty, by voting for one who runs on his honesty.

It is true the good mariner is in the ship, but does not "K." see that he might, for the purposes of the argument, just as well be on shore, because under no circumstances can he get the command? His own "truer comparison" is fatally defective, because "nine-tenths of all on board" are not dissatisfied with the two candidates. The great bulk of both parties are quite satisfied. It is important to remember this, because it is this which makes the running of what we may call private candidates so absurd.

"H. G. L." wants us to convince him that there is now a storm, and that Captain Cleveland with a Democratic crew can navigate him through it with safety. A storm is one of those things which no dialectician is ever called on to prove. Every man fit to be argued with is supposed to know whether a storm is raging or not. In all these discussions over the comparative merits of Blaine and Cleveland, the existence of a storm is assumed. We are not called on, nor have we undertaken, to *prove* that Cleveland will navigate us through it in safety. We believe he will, and predict it freely. Our thesis is that there *is* a storm, and that circumstances have so shaped themselves that *either* Cleveland *or* Blaine is sure, let Independent or conscience-voters do what they please, to command the ship at this crisis, and that no man can escape the responsibility of helping to decide which it shall be. This, we make bold to say, we have proved. "H. G. L.'s" plan of getting out of the scrape by "scratching" is somewhat simple-minded. "Scratching" is, of course, as explained above, simply a mode of giving a vote to the other party without formally casting a ballot. Whoever scratches Blaine practically votes for Cleveland, and *e converso*.—ED. NATION.]

A PROTECTIONIST SUBTERFUGE.

TO THE EDITOR OF THE NATION:

SIR: The New York *Tribune* of 26th inst. says:

"The 2,500 employees of the Washington Cotton Mills, at Lawrence, Mass., must be anxiously looking forward to November 4, since their bread and butter largely depends upon the way the election goes. The business of the mills has been so injured by the tariff agitation of the last year that the owners have decided to shut down until the tariff questions which so largely affect their prosperity have been definitely settled. If Blaine is elected, the mills will start up again; if the Democrats are successful, they will stay closed. It would take considerable ingenuity to turn this situation into an argument for free trade."

This is too preposterous. Three years ago last January the Washington Mills, being then undoubtedly insolvent, declared a dividend of 4 per cent. Under the influence of this dividend, the knowing ones sold more or less of their shares to greenhorns, who were of course swindled. A few months afterward the prime manager of the concern died, and then its rottenness was developed.

Since then the struggle in it has been, not for existence even, but for a favorable time for liquidation. Finally, last February, a committee was appointed to arrange its obsequies. The better sentiment of that committee was in favor of stopping the wheels then, at once, but the majority prevailed to have the materials, then on hand, worked up; and all agreed that the whole

property, mills and all, should be sold as soon as practicable. Those materials have been worked up, and the mills are closed, waiting for a purchaser.

The "tariff agitation of last year," or of any other year, has had no more to do with the stopping of those mills than the Tenterden Steeple with the Goodwin Sands. **

VANDALISM AT THE CAPITOL.

To the Editor of The Nation:

Sir: For several months past a force of men has been at work holystoning the marble exteriors of the Capitol at Washington. The mellow, creamy tint which thirty years of exposure to the atmosphere had bestowed upon the marble wings of this stately building, and which blended so charmingly with the green lawns, abundant foliage, and glowing skies of the surrounding park, has all gone, and the stone is restored to the hardness and ghastliness which characterizes freshly-cut white marble.

The climax of vandalism was capped this morning, when a party of scrubbers was set to work upon the allegorical group of statuary in the pediment of the east portico of the Senate wing. The effect is as if the softly-toned figures had been treated to a coat of whitewash.

It will take a quarter of a century, at least, to repair the mischief done, and, worse yet, the pressure for "a job" and the average Congressman's ideas of a "cleaning up" are sure to lead to frequent repetitions of the mischief, unless the artists and architects of the country shall come to the rescue of our chief national building.

C. F. B.

Washington, October 24, 1884.

THE ETYMOLOGY OF "BUG."

To the Editor of The Nation:

Sir: In Skeat's 'Etymological Dictionary,' under *bug*, he compares Welsh *bwg*, Gallic *bocan*, Cornish *bucca*, a hobgoblin, a spectre, and Irish *puca*, an elf, a sprite. Now in Dyer's 'Folk-lore of Shakespeare' there is shown the identity, in the mind of the people, of Puck, Robin Goodfellow, Hobgoblin, Will-o'-the-wisp, Ignis-fatuus. Passages from "Midsummer Night's Dream" are quoted to prove it. For instance:

> "Or else you are that shrewd and knavish sprite
> Called Robin Goodfellow: are you not he
> That . . .
> Mislead night wanderers laughing at their harm?"

And *Puck's* answer:

> "I am that merry wanderer of the night."

There seems, then, to be a close connection between the use of bug as colloquially applied to a light-house, and Puck as the Ignis-fatuus or "fier-drake." The one link lacking, which some one else may be able to supply, is the earliest time at which this application of the term was made.

D. A. K.

Brick Church, N. J.

To the Editor of The Nation:

Sir: "F. M." is wrong in thinking the term "bug" light is applied solely to those which are intermittent; in fact, unless *I* am wrong, all "bug" lights are fixed. The phrase is used to designate a small harbor light, often placed on a beacon, which in comparison with a regular light-house gives no more light than a fire-bug—an Orientalism for firefly.—Very respectfully,

L.

Washington, D. C., October 25, 1884.

To the Editor of The Nation:

Sir: I have always supposed that the "bug light" derived its name from its being movable—creeping from one point to another of the shore. There are two bug lights at the entrance to Nantucket Harbor, a few rods apart. They stand in a certain relation to the channel, and when the channel changes they are moved to correspond.

W. F. Allen.

Madison, Wis., October 25, 1884.

To the Editor of The Nation:

Sir: The etymology of the word "bug," applied to lighthouses such as those in the Boston and Portland harbors, is, I think, incorrectly stated both in your footnote to the original inquiry and by "F. M." in your last issue.

Being a former resident of Boston, the "Bug Lighthouse" is familiar to me. It is a low hexagonal (or octagonal) building, painted brown, surmounted by the lantern and mounted on six (or eight) iron piles, or stilts, the whole structure resembling an enormous bug or beetle, which resemblance is rendered more striking by the light. I should suppose that the meaning of the word thus applied would be apparent to any one seeing "the bug." Not being acquainted with the Portland "bug" I cannot say whether it may be thus defined and explained.

An ex-Bostonian.

New Brunswick, N. J., October 27, 1884.

Notes.

A new edition of 'Edgar Poe and His Critics,' by Sarah Helen Whitman, will be issued about December 1, with an introduction by W. F. Channing, by Tibbitts & Preston, Providence.

The first impression of the first volume of Mr. Parkman's new work, 'Montcalm and Wolfe,' consisting of fifteen hundred copies, was disposed of upon the day of publication, and the publishers, Little, Brown & Co., are now printing a new edition. The second volume, completing the work, will be ready November 15.

The volume containing the Papers and Speeches given at the Ninth Church Congress, recently held at Detroit, will be issued at an early day by Thomas Whittaker.

We were misled as to the translation of 'Delbrück' announced by Ginn, Heath & Co. in our last issue. It is not by Edward Channing, but by Miss Eva Channing, granddaughter of the great divine. She is a graduate of Boston University, and was a student in philology at one or more German universities.

G. P. Putnam's Sons will shortly publish, by arrangement with the Vienna publisher, a translation, prepared by Dr. Barney Sachs, with the authorization of the author, of Doctor Meynert's 'Treatise on Psychiatrie.' The first part of the work, devoted to the anatomy and physiology of the brain, the publishers hope to have ready by the beginning of the new year. The work will be fully illustrated.

Mr. James Macfarlane announces through *Science* that he has begun to revise his 'American Geologic Railway Guide,' and would be thankful for notes of corrections and additions from those who have used the book. His address is Towanda, Pa.

M. Élisée Reclus, who is now engaged, at his home on the shore of Lake Geneva, on the tenth volume of his exhaustive description of the Earth, intends, as soon as he has finished Africa and the Islands of the East, to take up North America. Before doing so, however, he will visit this country to gather the necessary material.

Any text-book designed to promote the study of the Italian language and literature in this country deserves a welcome. Part II. of "The Italian Principia," being a 'First Italian Reading Book,' by Professor Ricci, of the City of London College (Harper & Brothers), has also intrinsic qualities which recommend it to beginners. The extracts are mainly in prose, and equally divided between ancient and modern writers. They are classified under fables, anecdotes, novels, history, letters, etc., are with hardly an exception entertaining, and are made intelligible by copious notes and a special vocabulary. The memoirs of Massimo d'Azeglio, Benvenuto Cellini, and Silvio Pellico are laid under contribution; a description of a tempest by Manzoni is followed by Leonardo da Vinci's receipt for painting one; the parable of the three rings is taken from Boccaccio, and from Galileo a discussion of the habitation of the planets. Manzoni yields also his Napoleonic ode, "Il Cinque Maggio," Leopardi his canzone, "All' Italia," Petrarch a sonnet, "In qual parte del ciel," etc. From Botta's History of the American Revolution is selected the passage on Franklin's Embassy to the Court of France. A capital letter of Joseph Baretti's heaps praises upon England, despite its insularity: "However, if we except their immeasurable partiality for their own country, and their rabid hatred of the French, and their unreasonable contempt for all the nations of the earth, the English are not such intolerably bad fellows."

The English publishers of M. Max O'Rell's new book, 'John Bull's Womankind,' have had recourse to a very curious and ingenious procedure to guard themselves against a threatened imposition. Soon after the book was announced with the above title, Field & Tuer learned privately that the title was to be stolen for some insignificant pamphlet or other, and then a large sum of money demanded of them for the use of it. To circumvent the would-be thief, therefore, Mr. Andrew W. Tuer instantly wrote a tiny brochure of eight pages on the English law of copyright in general, and this intended evasion of it in particular, and issued it under the title of 'John Bull's Womankind' at a farthing—the price, it will be remembered, at which R. H. Horne issued his *Orion*—thus securing the title for subsequent use. Registration of title, according to an eminent authority whose opinion Mr. Tuer obtained and (he adds) paid for, is not sufficient for this purpose; an honest and usual edition of a book must be published and *ready for sale*, for the entry of copyright to be valid. The brochure at once advanced in price to sixpence, and as only a thousand copies were issued it will probably become a literary rarity. The motto on the title-page of Mr. Tuer's booklet is the line from "Othello," "May his pernicious soul rot half a grain a day!"

Mr. Jessop's illustrations last year to Thomas Ingoldsby's "Pious Jackdaw" seemed too poor almost for mention. But they appear to have found encouragement, for now we have "St. Aloys" served up in the same wretched fashion (E. & J. B. Young & Co.). What insanity is it that makes so many designers nowadays fancy that their decorative purpose will be subserved by putting the letter-press in lettering of their own sweet fancy? Lettering is an art in itself.

The latest pamphlet contribution to spelling-reform is a treatise on that subject by Dr. E. Studer (St. Louis). The discussion leads up to a new set of phonetic characters, which are put to a practical test in transliterating passages in English, German, French, Spanish, Italian, Latin, Greek, and Hebrew. This international application is in the right direction. All other attempts we regard as compromises, leading to temporary confusion and ultimate disappointment.

General J. D. Cox, formerly Secretary of the Interior, has an article in the *Bibliotheca Sacra* for October on "Reforming our English," in sympathy with the new movement in that direction. He recommends the associated philologists to make lists of words "of which the old spelling is shorter and simpler than those in common use,

as well as of those in which an analogous reform of pronunciation is feasible"; and foresees the time when school dictionaries will distinguish English words from those of foreign birth, by form of type, to teach "that these are the better words to use."

A new and enlarged edition of Miss C. M. Hewins's 'Books for the Young' has been issued by the *Publishers' Weekly*. It is an excellent idea to bring this useful manual down to date from year to year.

Mrs. Lamb opens her *Magazine of American History* for November with an article on "Unsuccessful Presidential Candidates"; and, among numerous portraits, she gives as a frontispiece that of one who was "three times an unsuccessful candidate for the Presidency." The candidate in question was Henry Clay, but the legend will probably serve for a substituted portrait (the paper is unfinished) in the December number. We remark among the Unpublished Documents a letter of Governor Hutchinson's, transmitted by Franklin and Adams in 1778 to the Massachusetts authorities.

The *Magazine of Art* has for its frontispiece in the November issue a wood-engraving after Mr. F. A. Bridgman's painting, "The Bath at Home (Cairo)," now on exhibition in this city at Knoedler's. Noticeable also are the "process" illustrations of the Cast Museum of Ancient Art at Cambridge, England.

L'Art for September 1, 15 (J. W. Bouton) contains two interesting full-page etchings, of Amsterdam and of Marseilles, more specimens of the wood engraving of Christopher Jegher, of Antwerp, and various illustrations after Holbein, with a sketch of his life. The Puits de Moïse calvary pedestal preserved at Dijon is also fully described, with the aid of drawings which show the entire design of this venerable monument. In the accompanying *Courrier* for July 11, it is stated that the annual purchases of the American buyers at the Salon have been, in 1877, $701,000; 1878, $630,000; 1879, $1,051,000; 1880, $1,392,000; 1881, 1,668,000; 1882, $1,937,000; 1883, $1,754,000; "and that, independently of the paintings bought directly of our artists by rich individuals." These figures are almost incredible, but if true, they show the hopelessness of protection to the American artist, for, with some fluctuations, the tendency is steadily upward.

M. Dieulafoy traces in the *Revue Critique* the successive appearances of the legendary Isdubar in ancient sculpture as an Assyrian genius, a Phœnician god, a Grecian Hercules, a Grecian Theseus, and an Achemenid king; his antagonist changing at the same time from a man-headed bull into a Nemean lion or a minotaur. He asserts that for three thousand years the hero of these fights is the same figure, of undoubted affiliation. It is only another instance of evolution, showing how little there is of originality in human work; the thing that is, being the thing that has been and the thing that is to be.

The tenth number of the second series of the Johns Hopkins Historical Studies is 'Town and County Government in the English Colonies of North America,' by Dr. Edward Channing, Instructor in Harvard College. The paper, we are told, won the Toppan Prize, awarded "for the best essay on one of three subjects in Political Science," and was read at the first meeting of the American Historical Association at Saratoga in September. The most interesting part of the paper is in the introductory portion, where the identity of "town" and "parish" in English law is shown, and the American town institutions are derived directly from the parish institutions of England. This is a point which has been generally thought probable, but is here, we believe, proved for the first time. The most important single point in this derivation is that of the *selectmen*, whom he traces to the committee of assistance which existed in every parish, consisting "of such only as had before been churchwardens and constables." According to Mr. Toulmin Smith, this was developed into the *select vestry*. "If this last is true—and there is no reason, so far as I know, to doubt it—the origin of the New England selectmen and of the Virginia vestry is perfectly clear" (p. 19). This general introduction is followed by a survey of the town and county system in the several colonies, with an interesting table at the end, in which, in three parallel columns, the details of town administration—powers, obligations, officers, etc.—in England, Massachusetts, and Virginia, are placed side by side.

Among the multitude of papers on the civil war, prepared for officers' reunions, that on the engagement at Beverly Ford, June 9, 1863, by Capt. Daniel Oakey, of the Second Massachusetts Infantry, deserves mention for its graphic quality (Boston: Geo. H. Ellis). This not unimportant encounter gave the Confederates some idea of the improvement which Hooker had effected in the Federal cavalry. The attachment of the Massachusetts regiment for the Third Wisconsin led to a revision of the order by which the latter had originally been left out of the mixed expedition.

We have also received, from Mr. J. Willard Brown, West Medford, Mass., "historian" of the United States Veteran Signal Corps Association, a pamphlet copy of the Constitution of this body, which was organized in 1867, and holds annual reunions. A chapter on the creation and services of the corps during the war; a report of the reunion last August; and a roster of the corps, are added. The historical portion is incomplete, and will be extended in the annual issues hereafter, and Mr. Brown asks the aid of any one who can contribute to its thoroughness and picturesqueness. By 1890 he hopes thus to have told the entire story, and have it ready for publication independently.

Among Mr. Astor's recent gifts to the Astor Library are the manuscript collections made by Lord Chancellor Hardwicke and his sons, comprising original correspondence with foreign courts during the reigns of George I. and George II., and several interesting series of transcripts from state papers and correspondence of the sixteenth and seventeeth centuries, the whole in 140 volumes, folio and quarto. There is a volume containing contemporary copies of letters from John and Robert Bowes to Sir Francis Walsingham, 1582-90, and another containing contemporary copies of nine papers and letters of the Earl of Salisbury, 1609-10. The original correspondence embraces, among other things, two volumes of letters between the Earl of Stair and Mr. Craggs, Secretary of War after 1717, one containing letters of Mr. Whitworth from Berlin, 1719-20, and another containing letters and papers of Lord Whitworth and Lord Polwarth, Ambassador for England to the Congress at Cambray, 1722-23; six volumes of letters on the Court of Vienna and the affairs of Europe between M. de Saphorin and Sir Luke Schaub, 1717-1731; and eighteen volumes of correspondence of Sir Luke Schaub, Secretary of the King of England at Vienna, and afterward Resident at Paris from 1715 to 1732.

The *Old Style Calender* for 1885, published by George Falkner & Sons, Manchester, England, bears in this country the imprint of Ivison, Blakeman, Taylor & Co. It is "old style" not in the calendar proper, but in the borrowed ornamental borders, typography, and selected matter. The idea is well and takingly carried out.

The Mutual Library of Philadelphia chose last week a Board of Managers, consisting almost entirely of women, for the selection of books and the general conduct of the library. They subdivided themselves into five sub-committees for the purpose first named.

In *Science* for October 24 we read of Professor Pumpelly's success in making a composite photograph (*à la* Francis Galton) of the members of the National Academy of Sciences in May last. "Three composites had been made from the full-face views—one in which all were represented, and two in which the physicists and naturalists had been separately combined. The latter two showed marked differences, the physicists having a much more oval face and greater temporal breadth." We understand that *Science* will have these typical portraits engraved for a subsequent issue.

While England's struggles in the valley of the Nile and on the shores of the Red Sea for the sake of her dominion in India, form one of the absorbing topics of daily discussion, while France is noisily pushing ahead in her course of colonial aggrandizement both in Africa and Asia, and Germany energetically enters the lists among the colonizers of the Dark Continent, one of the greatest colonial Powers in the East, Holland, is almost entirely lost sight of. How uninterruptedly and prosperously active this thrifty maritime State continues to be in its Eastern insular world is exhibited in a pleasing and popular way by M. Jooris, a Belgian diplomatist, in his historico-statistical 'Aperçu politique et économique sur les Colonies Néerlandaises aux Indes Orientales' (Brussels, 1884). The little book is inspired by most friendly sentiments toward the State from which the author's native country violently seceded half a century ago, and is one of the daily multiplying indications of the fact that the "Belgians and Dutch have abdicated their dissensions," as M. Jooris expresses it, "and live side by side, as good neighbors, more happily than in the days when, as inimical brothers, they lived under the same roof." In fact, the too bright view which this sketch takes of the Dutch colonizing work in the Indian Archipelago impairs its value not a little.

The 'Étude pratique sur les Marées fluviales, et notamment sur le mascaret,' of M. Comoy, inspector-general of "ponts et chaussées" (New York: F. W. Christern), is a volume of nearly four hundred pages, accompanied by an atlas of ten plates. The opening chapter treats in a general way of the more common forms of wave motion, their causes, modes of propagation, and velocities. This is followed by a description of ocean tides, and a discussion of the complex character of the motion of the water in tidal rivers, the whole being introductory to a study of the physical conditions on which depend the formation and extent of the eagre or bore. The fluvial tide is shown to be in reality a compound wave, resulting from the union of a wave of translation and a wave of oscillation. It is to this compound character of the wave that the bore primarily owes its origin, though it is liable to be modified by secondary causes. The closing chapters include an examination of the effects produced on tidal phenomena by the various devices adopted for the improvement of navigation, and an account of some of the peculiarities of the tidal rivers of France. The author never loses sight of the practical bearings of his subject, and makes only a sparing use of mathematical formulæ.

—The *Atlantic* for November has a curious variation of the ordinary symposium article in the shape of a paper by Prof. N. S. Shaler, on "The Negro Problem," with annotations by Colonel Higginson, General Armstrong, and General Chamberlain, and a concluding rejoinder to these by the author. The discussion by Professor Shaler in the text is both comprehensive and searching, and the points successively made must appeal most convincingly to the scientific mind;

but the critics who use the footnotes as their vehicle of thought show rather the traces of the humanitarian habit of mind, and the real conflict seems to be between the two methods of viewing human affairs and their future. The one principle that underlies Professor Shaler's analysis and determines his prognostications is heredity. The difference between the whites and blacks is to his mind so much one of inherited capacity for certain associated modes of thought and emotion, that he makes civilization itself almost a thing only to be transmitted in the blood. Of course the physical basis that has been slowly laid through centuries of gradual growth from savagery, and has been modified with every advance of thought and feeling in individual men, is the best security of society against degradation, and practically represents the alliance of natural law with human aspiration and endeavor. But the question is not of the origination but of the transference of a civilization, and to imply even, in the examination of such a subject, that this physical basis of life cannot be built up rapidly in lower races by the tutelage of the higher, is as yet gratuitous. The speed of brain modification in animals under man's intelligent training, though the case is on so much lower a level, is indicative of the possibilities in the matter; and if it be granted that the negroes could never have developed a civilization had they been left alone, it cannot be doubted that they can adopt one provided the change necessitated in their physical environment is not so great as to destroy the vitality of the race, as seems to have been the case with some, at least, Indian and South Sea tribes. The assumption, however, that the negro could never have evolved an African society worthy to be called civilized, is wholly unnecessary, since it is so far easier to adopt than to create. The race is to be judged, so far as its capacities are concerned (merely from a physical standpoint), by the best examples of its blood, and there is already enough evidence to show that the brain of the negro is capable of perceiving the ends and being actuated by the motives of Aryan society. Great is science, and the doctrine of heredity is just now its cardinal faith; but the doctrine of education (and how potent a factor that has been in the evolution of society is plainly acknowledged) is the first article of the humanitarian creed. The negroes are to be civilized by the latter; and though Professor Shaler only presses the doubt of success suggested by the former, there is little occasion for discouragement at so early a stage. The principal contribution he makes to the practical matter is to say that he would establish technical schools for the negroes, as their chief need; in other words, he would endeavor to give first a more diversified industrial civilization to themselves rather than a literary education to their leaders, mainly with the idea that it would tend to loosen them from the soil, and thus prevent their becoming serfs of the South. The humanitarian would assent to the plan on the ground that the most education possible should be given; but it would certainly be unwise to disturb the facilities for literary education, or to lessen the effort to multiply them.

—*Harper's*, with an abundance of its common interesting matter, has a skilful and finished story by Mrs. Spofford, a sketchy notice of Sydney Smith by Lang, and another of the historical sketches which Francis Parkman has lately been publishing in advance of his new volume. In this the Acadian tragedy, which has truly passed from the realm of history into that of romance, is dealt with, and of the plants of the poet's garden not a flower is left. That pleasant picture we all have of the meadow, the orchard, the fields, the church with its village priest, the love-making, and the embarkation, is very much confused and blurred by what is to be read here. The priest is shown to have been a fanatic conspirator, who devoted more time to firing the heart of the savage Indian than serving at the altar of our Christian Arcadia; and the people themselves to have had a stubbornness, an insincerity, and a disposition to fight at the first favorable opportunity altogether repellent to one's notions of pastoral simplicity. The one thing that remains fixed is the sadness of the end—the burning and depopulation of a lovely country just won from the wilderness, and the scattering of the people. The brutal orders are declared to have been carried out with as much consideration as the case allowed, pains being taken to keep families and friends together. Nevertheless, while the commonplace cruelty of war has so many examples, most people, when they desire to know the true history of Acadia, will be content to read Longfellow and let Mr. Parkman be forgotten for the time: the history of events is not always that of humanity.

—The *Century* is noticeable for the beginning of a new story by Mr. Howells, whose inexhaustible charm and grace still make one forgive the triviality of his realism, though it is with a pang that one meets again Bartley Hubbard.

> "The times have been
> That when the brains were out the man would die,
> And there an end."

The first few woodcuts after Vedder's designs for Omar Khayyám are of great interest, and foretell what the spirit of the great work is to be; but criticism of them would be premature. The new enterprise of the *Century*, in giving a series of articles on the war of the Rebellion written by prominent actors in it, starts brilliantly with General Beauregard's account of the battle of Manassas. The General's view of it has been known, of course, from his official report, but it gains vividness from the freer style of a popular narrative. The landscape views, engraved after photographs, are a valuable assistance in comprehending the character of the field, though they cannot suggest the depth of the hollows, which would hardly be suspected by one not familiar with the topography. With the authentic portraits, however, and the maps, they make a fulness of illustration which gives a peculiar interest to the article. It is, of course, the Confederate side which is thus presented; but the footnotes by the editor indicate, without debating them, the controverted points, and the Northern public will profit by a careful reading of what the distinguished Southern officer has to say. General Beauregard goes somewhat beyond the history of the battle to criticise the military administration of Jefferson Davis, and to give his own view of the controversies which led to his being practically "shelved" by Mr. Davis's administration. The whole is spicy reading, and opens views of the internal bickerings within the Confederacy which may have had much influence upon results.

—*Lippincott's* opens with the first of two articles of travel in the region of the French Broad, which, although it is one of the few picturesque localities of the mountains of the South well known by name, is hardly more than a name to the public. The journey was made in the depth of winter, and was exceptionally rough and dangerous, and in the first portion, at least, much more attention is given to the people met than to the scenery. The novelist who is in search of particularly unfortunate characters, and a scene where the greatest rigor and degradation of poverty can easily be introduced as faithful realism, might make a similar trip with advantage to his note-book; but the slightest treatment that these topics receive in this sketch will be enough to inform the reader, without sickening all his sensibilities with an imaginary life of months among such people, who are, for the most part, of the poor-white and negro-convict class. The discussion of John Bright's temperance views is worth noting. The stories are fewer than is usual, but one of them, "Jack Miner's Wound," although its phrasing shows some lack of the last finish, is both entertaining and excellent in itself. Realistic as it is, the story and the interest are not in its picture of a crude Western town, minute and exact in detail as this is; but the human element is never obscured or subordinated by the setting of external fact, and this is a rare quality in our writers. The repulsiveness of much of our imaginative work nowadays, the exposure of the ugly in American life which is sometimes felt as unjustly humiliating to us as a people, is largely due to the mistake of artistic aim, and the defect of insight and sympathy, which presents life from the outside view of the observer, and usually of an observer so far removed from the condition of the persons he describes that he fails to see the less obvious compensation in their lot. Too often our secondary writers seem to confine their realism to the soiled clothes their characters wear, both physically and spiritually. The author of this story is in the true line of art, as well as a skilled realist.

—In a fresh group of school physiologies we find 'Practical Work in the School-room' (A. Lovell & Co.), a transcript of object lessons on the human body. This appears to be the actual text of a series of physiological lessons, with what may be called the alcoholic attachment, given in the primary department of one of the New York city schools. The explanations are so minute, and cover such elementary words and ideas, that either the children so taught are very young or are very ignorant. In either case, it appears to us that their time might be better employed in developing the mind sufficiently to retain and reason upon these facts before thus presenting them. It is a piteous illustration of the out-of-school life of these children, however, to find it assumed all through the book that they are perfectly familiar with the intoxicating power of alcoholic drinks in others, and with the wretchedness they induce. The physiology is ingeniously taught, and is fairly good for its purpose, although the not unusual exaggeration is visible in the discussion of alcohol. The moral evils of alcohol cannot be exaggerated, but it is common to fail to discriminate between moral and physical effects. 'The Man Wonderful in the House Beautiful,' by Drs. Chilion B. and Mary A. Allen (Fowler & Wells Co.), is an elaborate allegory upon physiology and hygiene, including alcohol and the narcotics. The method is not to our taste, although probably it will have admirers; and here too the teaching is marred by extravagance. Dr. Jerome Walker's 'Anatomy, Physiology, and Hygiene' (A. Lovell & Co.) appears an almost faultless treatise for colleges, schools, and general readers. Careful study has not revealed a serious blemish; its tone is good, its style is pleasant, and its statements are unimpeachable. We cordially commend it as a trustworthy book of reference to all seeking information about the body and how to preserve its integrity.

— Classical scholarship has met with a severe loss by the death of Prof. Lewis R. Packard, of Yale College, who died last Sunday in New Haven at the age of forty-eight. Professor Packard was born in Philadelphia August 22, 1836. He graduated at Yale College in 1856, where he afterward received the degrees of Master of Arts and Doctor of Philosophy. After leaving college he studied two years at home and one year in Germany;

and in 1859 he was made Tutor in Greek at Yale. He remained there as tutor until he was chosen Hillhouse Professor of the Greek Language and Literature in 1863. In this position he was the colleague of Professor Hadley until the death of the latter in 1872, since which time he has been the Senior Professor of Greek, but on the same foundation as before. He was President of the American Philological Association in 1880-1881, and was always an active member of this body, contributing largely and wisely to its publications. In 1883 he went to Athens as the second annual director of the American School of Classical Studies. He had been prepared for this position by a winter spent in Greece about ten years before, when he became acquainted with modern Greek and with the topography of Athens and its neighborhood. He was also singularly fitted for the directorship of the new school by his thorough and accurate scholarship, his enthusiasm for classical learning and all that concerns the life of the Greeks, and his deep interest in the school at Athens as a means of widening, deepening, and enlivening the scholarship of this country. But the insidious disease which had gradually undermined his constitution through many years of patient work—years during which he struggled heroically against a force to which most men would have succumbed—proved at last too much for his strength; and the hopes of his friends and his physicians that a winter in the sunny climate of Athens would benefit his health, were quickly proved to be vain. The journey to Athens taxed his powers too severely; and, after many tedious delays and disappointments, with alternating hope and discouragement, he arrived at the home of the American School at Athens, in October, 1883, completely prostrated in strength, and he hardly left the house during the whole winter. It is, indeed, melancholy to think of an enthusiastic lover of Greece, who had come full of zeal for his own studies and for directing the work of his pupils, compelled to remain a prisoner in his house nearly eight months—in full sight of Mt. Hymettus, the columns of the Olympieum, the Saronic Gulf encircling the beautiful island of Ægina, with the Argolic Hills beyond, and almost at the foot of the Acropolis—unable to visit any of these classic scenes or even to superintend the work of his students under his own roof. We cannot wonder that each month brought fresh discouragement and depression even to his brave spirit.
